Five Dollars per annum, in advance; Six months, Three Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

THE news of the week is almost entirely European war news. The only thing clear in it is that the Prussians have occupied Hanover and Saxony, and will probably make Dresden their base of operations. They appear to have stolen a march on the Austrians, but many critics are trying to persuade themselves that "strategy" is at the bottom of Benedek's delay. A more probable cause is the inertness of the whole Austrian military machine. The army is too well-dressed and well-drilled for any rapid fighting to be got out of it. Radetski was the only man who ever did so, and he only on a small scale. Benedek has the reputation of being a "genius;" but genius is very apt to evaporate at the head of 400,000 men; so we must wait and see. There is no way of looking at the seizure of Hanover and Saxony which will not make it a decided gain for Prussia. It transfers the war at once to foreign territory, furnishes a good base close on the Austrian frontier, and, what is more important, will probably demoralize the smaller states and weaken the contingents they have sent to Austria. The Prussians have the advantage in artillery, theirs being, perhaps, the finest in the world, and their needle gun is said to have wonderful powers, but it has not been tried in a great war. The Austrian artillery was miserable in 1849, but has since been re-organized and improved—how much, remains to be seen. In cavalry, the Austrian superiority is incontestable; and it is no mean advantage. There has never been such a body of horse seen in the whole history of war as she can bring into the field. Those who remember the kind of "news" we received from Pennsylvania during the week preceding the battle of Gettysburg will know what value to attach to the string of telegrams from the seat of war which we shall receive for the next month by every mail. They are, of course, nearly all based on rumors carried into the telegraph stations remote from the actual scene of hostilities, by panic-stricken fugitives, who see an army in every patrol, and a great battle in every skirmish. The "cutting to pieces" of the Darmstadt regiment, of which we have just heard, is probably a story of this kind. A regiment is never "cut to pieces" in modern warfare, except when it has to bear the brunt of an attack made on a larger force, or when it is so furious or so desperate as to refuse quarter. There is no reason to suppose that any encounter has taken place in Germany calling for the sacrifice of a regiment, and why should the Darmstadt troops be in such a condition of exaltation thus early in the contest, as to die on the field sooner than march into the Prussian camp and get their suppers? In Italy there is nothing new. The nut there is hard to crack, and La Marmora will probably find that the toughest part of the job has been imposed on him. If the Prussians were to meet with such a serious reverse as to disengage a portion of Benedek's army, Italy would have need of all her pluck and all her resources. There has not been for half a century such a convulsion in Europe, nor such a flood of misery let loose on it. War in highly civilized, thickly peopled, and wealthy countries like Italy and Germany, has horrors which in wilder and more thinly settled regions it does not carry with it.

A CORRESPONDENT of the New York *Times*, wishing to mark the change which has come over the political leaders of the South since the immediate cessation of hostilities, says that one of the best proofs of it is the ardent manner in which they are selecting their new friends. He hears, he says, Senators Cowan and Doolittle, Secretaries McCulloch and Seward, the President and Henry Ward Beecher, spoken of as kindly and as often as Lee and Davis. This is a sort of proof that does not seem to us perfectly conclusive. Altered relations imply a change of position on one side or the other—agreed; but can Mr. Truman tell us by what rule of inference he imputes virtue in the present instance? He asserts of the Southern leaders, from the Potomac to the Rio Grande, that they would cheerfully and most hospitably entertain the gentlemen named, whom, a few months ago, they would as gladly have hung. Does it make no difference whether these guests are invited or self-invited?

MR. SEWARD is said to have received printed directions for the "sure cure" of Rinderpest, pleuro-pneumonia, mange, ringworm, and grease-heel in barn-yard animals and horses, and for the relief of phthisis and tubercular affections of the lungs in the human patient. Who can doubt that the secretary will rejoice to send the beneficent remedy abroad throughout the Union, diminishing what remains of misery in a country which even yet is hardly "happy," though it is now four months and more since the 22d of February? If the British remedy is as efficacious as it is simple and cheap, the discoverer's countrymen will stand aghast merely to remember the tremendous sacrifice of personal property by the pole-axe within the last few months, and our own farmers will have every reason to be thankful to Dr. Dewor, who allows his discovery to be made known to all the world gratuitously. A small crucible is set in hot ashes, and a piece of stick sulphur of the size of a man's thumb dropped into it. The sulphurous acid gas thus generated is sufficient to fumigate thoroughly a large cattle shed in about twenty minutes. The process, which, by the way, the cattle are said to like, must be repeated four or five times a day, and the disease is soon got under. Congress will probably print Dr. Dewor's recipe, with full instructions, for general distribution.

The "National Convention of Union Men," which is to come off in Philadelphia in August, and which is intended to build up a new party, was at first denounced and sneered at by the Democrats of these parts, but they have lately thought better of it. The *World*, on Monday, acknowledged that it would probably turn out to be of some importance, but that all would depend on the number of Republicans it drew off. Its main function will probably be to give the Southern politicians the first opportunity they have yet enjoyed since the war of spouting before a sympathetic audience at the North, and it will doubtless present a sufficient appearance of strength to throw numbers of gentlemen of the Union party of a dubious turn of mind into a fearful state of embarrassment during the summer. The mental tortures through which these people pass at periods of political transition and disorganization like the present, when there is no knowing which will be the winning side, are such as their fellow-men have little idea of.

The investigating committee in Mr. Rousseau's assault and battery case have made a majority report, signed by Judge Spalding, Mr. Banks, and Mr. Thayer, which advocates Rousseau's expulsion; and a minority report, presented by Mr. Raymond and Mr. Hogan, in favor of a reprimand. Both reports, we are glad to see, recommend a reprimand to Mr. Grinnell for his unparliamentary and otherwise disgraceful language in debate, and they both also advise that those persons whom Rousseau had in his company, all of them armed with revolvers, shall be brought to the bar of the House to answer for contempt of its privileges. It is hardly probable that expulsion will be resorted to, for the provocation given by Grinnell is recognized as great; and whether or not Rousseau is a coward, the House probably knows that of the better part of valor the Kentucklan has but a small quantity. Yet, too, he showed a sufficiency of an evil sort of prudence when he collected his two or three ruffianly, high-toned gentlemen to assist him in the attack; and that circumstance may tell strongly against him when the House comes to a vote on his case. The whole shameful affair will hardly be regretted if it shall do something to raise the tone of Congressional debate.

Bayard Taylor writes to the *Tribune* from Kansas, that on the road from Leavenworth to Lawrence he witnessed a phenomenon which had never before come under his observation. This was "the spontaneous production of forests from prairie land." Hundreds of acres, which had been protected against the ravages of fire by cultivated fields beyond, were overgrown with hickory and oak trees, from four to six feet in height. If Kansas is a type, in this respect, of the far West, the plantations proposed by Government will have a double value: they will foster the settlement of that great territory, and the settlements, in their turn, will stimulate the spontaneous growth of woods.

It is certain that New York is to have a new post-office, and almost certain that, in consequence, we are to lose the southerly portion of the City Hall Park. The city is to sell the necessary ground for $500,000, which is said to be no more than one-third of its actual value, and the general Government is expected to erect a structure that, for size and beauty, shall be the pride of New York. At the open meeting of the commissioners, on Saturday last, the talk was mainly as between bargainor and bargainee; but Mr. Sinclair Tousey, having got leave to speak, put in a word for the inhabitants at large. Building on the park, he said, would be "robbing the poor people of a breathing-spot." Mr. Kelly answered him that "there is a river on either side of this portion of the city, distant only a few moments"—as if one could walk on the water or would walk on West Street. So Mr. Tousey's objection obtained but little attention, and a part of the park must go. As Mr. Courtney said, if it should not be taken for the post-office, it would soon be covered with horse-railroad tracks. It is quite probable. Our Common Council have done enough for glory in their public-spirited onslaught upon the wealthy owners of stoops and steps in Fifth Avenue, and it is time now for some little transactions with corporations. The fact is that the park is not so pretty a place that it has enlisted any very strong feeling in its favor, though, of course, nobody will be glad to see the green diminishing—or, rather, nobody would be glad if any other building than a decent post-office were to take its place. But the present building is altogether too bad to be suffered.

We may expect soon to hear cries of rage from the press of the British North American provinces. For some reason, which can only be conjectured—perhaps to vindicate his claim to the title of a far-seeing statesman—Representative Banks has introduced a bill laying down conditions for admitting into the Union, as States and Territories, Nova Scotia, New Brunswick, Canada East, Canada West, and the adjacent districts of Selkirk, Saskatchewan, and Columbia. They are to be declared States and Territories, by proclamation of the President, as soon as they, in conjunction with Great Britain, file in the State Department their acceptance of certain propositions contained in the second section of the bill. These are not given in full by the telegraph; but among them is one under which the United States assumes the public debt of the provinces, which amounts altogether to about $85,000,000, and also undertakes to pay $10,000,000 to the Hudson Bay Company. Mr. Banks's "earth hunger," as the Germans say when they speak of the Anglo-Saxon passion for territorial aggrandizement, is a perfectly natural appetite, we suppose, in American representatives. In this particular case, it will probably be appeased vicariously in the person of Mr. Banks's descendants in the next generation, but there is no harm in having everything ready.

The London *Times* is almost tender in its acknowledgments of the handsome manner in which the United States Government has put down the Fenians. Nothing can be suaver, smoother, and oilier than its manner of patting Mr. Johnson and Generals Grant and Meade on the back. All we have to do now is to wait for the philosophical article which will reach us in a week or two on Mr. Ancona's resolution in the House of Representatives, in which that body will be "handled without gloves," though "more in sorrow than in anger." We hope by that time Mr. Banks will be ready with his report on the propriety of repealing the neutrality laws. We expect great things of him, and trust we shall not be disappointed. The theme and the occasion are all tempting, and Sweeney and Roberts are waiting.

In England, the Gladstone Ministry have, after much tribulation, suffered defeat on the reform bill, which has driven them into resigning. The majority on the second reading, as we predicted at the time, was so small as to make this result, sooner or later, all but inevitable. What with this, the financial panic, the alarming state of things on the European Continent, the arrival of the American monitor at Queenstown after a swift passage across the Atlantic, the public mind in England is gloomy enough. Mr. Whiteside, a Tory of the Tories, has suggested arbitration on the question of the *Alabama* damages, in return for American energy against the Fenians.

We have received a great number of letters in reply to "L.'s" article on the obligation of telling the truth. We have published two, which we considered the ablest, but must decline to devote any more space to the discussion. We have been earnestly urged to repudiate "L.'s" sentiments in strong terms; but this, even though we do not agree with him, we do not feel called upon to do. We are of the number of those who believe the discussion of any question of moral or mental philosophy to be profitable, and that any code of morals or manners which will not bear discussion must be rotten. We may be sure that anybody who lies after reading "L.'s" letter lied before he read it; and the only advantage he is likely to derive from it is a supply of better excuses for his lying than he had been able to invent himself. Our advice to all liars is to lie no more; but we would also remind lovers of truth of the French proverb which declares that "toute verité n'est pas bonne à dire."

CONGRESS.

Thursday, June 28.—In the Senate a resolution was adopted looking to the re-organization of the Civil Service, and especially of the Post-Office, Treasury, and Interior Departments, that appointments may be made for specific terms, after examination by proper boards, and promotions on the score of merit or seniority, and dismissals upon trial or resignation; and that each branch of the service may be officered by experts. A bill was passed regulating the occupation of the mineral lands and extending the right of pre-emption.

In the House, news was read, with applause, of the ratification by Connecticut of the constitutional amendment. In the Committee of the Whole on the State of the Union, Mr. Morrill made an elaborate speech in explanation and support of the tariff bill, which was then considered for amendment.

June 29.—The Senate passed (yeas, 16; nays, 13) a bill in relation to telegraphs, of much the same purport as that freeing the railroads of the country from local monopolies; it provides, however, for Government aid in the construction of new lines that may accept its conditions, among which is the obligation to give priority to Government despatches, which are to be transmitted at rates fixed annually by the Postmaster-General. The United States also reserves to itself the right to buy all these lines at the expiration of five years.

In the House, the tariff bill was still further discussed and amended.

June 30.—The Senate insisted on its amendments to the Freedmen's Bureau bill, and ordered a committee of conference. The chief point of difference between the two Houses is the disposition of the Sea Island lands, now held by freedmen under General Sherman's order, the Senate allowing the former owners to recover them on paying for improvements, etc., while the House insists on the validity of the present tenure. A bill was passed granting lands to Kansas to aid in constructing the southern branch of the Union Pacific RR. The House Indian appropriation bill was taken up and discussed.

In the House, a bill was reported to provide a temporary government for the Territory of Lincoln. In Committee of the Whole some progress was made with the tax bill.

THE FREEDMEN.

Gens. Steedman and Fullerton have reached New Orleans. In Columbus, Miss., they discovered one outrage on a freedman that did not proceed from the Bureau. A colored man had come to town to collect money due him, and while sleeping in the house, was seized by four men with blackened faces, who carried him to the woods, offered him gross indignities, and then cut off his ears. In Grenada, they found the débris of Forrest's command in lawless control of the country. Assassinations were common—the last victim being Lieut. J. B. Blanding, V. R. C., an officer of the Freedmen's Bureau—his only known offence. The freedmen of the district are laboring well; and the bulk of complaint arises from breaches of contracts to which the poor whites are parties. The latter are also at the bottom of nearly every assault and battery on the freedmen. In Alabama, it was found that the most cruel and heartless persons in their conduct toward the freedmen were the police, with which every city, town, and village is liberally supplied. They are generally low Irish or poor whites, and two-thirds of the complaints of the blacks are against them. The planters in Mississippi are beginning to learn that the best way to keep the negroes from flocking to the cities is to establish schools on their plantations.

—Gen. Saxton has written a letter to the Secretary of War denying in detail the charges of Gens. Steedman and Fullerton. He shows that so far from wishing to conceal the facts or defects of his administration by carrying away the records with him (which he had a perfect right to do), he gave special orders to his adjutant-generals, who are now serving under Gen. Scott, to retain *all* the papers, and have copies made if desired.

—Capt. S. N. Clark, an inspector of the Bureau, reports discouragingly of the state of St. Mary's and Calvert Counties, Maryland, except that he found a considerable number of the colored people owners and lessees of land. Laborers' wages are $5 per month for women, and $12 and $18 for men, with rations and quarters. No schools have yet been established, and great opposition would be made to them. The apprenticing of colored children has been carried to a large extent, and the civil rights bill is quite disregarded. Judge Tuck, of Calvert, at the May term of the criminal court, sentenced five men to be sold into slavery for periods of from six to eighteen months—in one case the offence being a petty theft of a dollar's worth. These sentences were carried into effect on the 28th.

—A man in Macon Co., Tenn., is said to have acted on the idea that the abolition of the freedmen's courts was equivalent to the restoration of slavery. He was arrested and sent to Nashville.

Notes.

LITERARY.

Dr. Albert Reville, the friend and literary associate of M. Ernest Renan, is about to publish in London his essay on "Apollonius of Tyana, the Pagan or False Christ of the Third Century," a very interesting account of the attempt to revive paganism in the third century by means of a false Christ. The analysis of the book says:

"The principal events in the life of Apollonius are almost identical with the Gospel narrative. Apollonius is born in a mysterious way about the same time as Christ. Like him he goes through a period of preparation; afterwards come a passion, then a resurrection, and an ascension. The messengers of Apollo sing at his birth as the angels did at that of Jesus. He is exposed to the attacks of enemies, though always engaged in doing good. He goes from place to place accompanied by his favorite disciples; passes on to Rome, where Domitian is seeking to kill him, just as Jesus went up to Jerusalem and to certain death. In many other respects the parallel is equally extraordinary."

—An interesting book and a valuable contribution to anthropological science is a book by Dr. P. M. Duncan and Mr. William Millard, who have been for some years engaged in the endeavor to raise to the highest possible pitch the individual and social condition of the idiot, the latter being the superintendent of the Eastern Counties (England) Asylum for Idiots and Imbeciles. They give the results of their experience under the title of "A Manual for the Classification, Training, and Education of the Feeble-minded, Imbecile, and Idiotic."

—Mr. Adolphus W. Ward, fellow and assistant tutor of St. Peter's College, Cambridge, has been elected by the trustees of Owens College to the professorship of English language and literature and ancient and modern history in that institution. Mr. W. Stanley Jevons, fellow of University College, London, and author of the "Investigations on the Value of Gold" and on the "Extent of the British Coal-fields," which have recently excited such a sensation in England, has been elected professor of mental and moral philosophy and of political economy in the same college. The master and fellows of St. John's College, Cambridge, have nominated the Rev. Henry Whitehead Moss, B.A., fellow and classical lecturer of St. John's, to the head mastership of Shrewsbury School, as successor to Dr. Kennedy. The governors of Shrewsbury School elect on the nomination of St. John's College. Mr. Goldwin Smith, professor of history at Oxford, will give up his chair at the end of the present year. The term for which Mr. Matthew Arnold was elected professor of poetry expires at the same time, and there is already discussion as to who his successor shall be.

—The English papers announce the death of Dr. Robert Kaye Greville, the accomplished botanist, on the 4th of June. He did much for the advancement of the study of the cryptogamic plants. He was besides an accurate and skilful artist and an active philanthropist.

—Angelo Brofferio, one of the veterans of the Italian democracy, recently died very suddenly at Lago Maggiore. He was born in 1802, and pursued law studies at Turin, though he devoted himself fully as much to literary pursuits. In youth he wrote several tragedies; in 1830, on his release from a short political imprisonment, he published a volume of political poems in the Piedmontese dialect, which obtained for him the name of the Italian Béranger. A volume of memoirs of his, "I miei tempi," is entertaining. In 1852 he wrote the "History of Piedmont from 1814," strongly marked by party spirit. His greatest historical work was the "History of the Subalpine Parliament," which he unfortunately left unfinished. In 1848 he was the editor of the "Messagiere Torinese." Though a radical democrat, he was not a Mazzinist, but a partisan of the House of Savoy, and one of his last wishes was that he could take an active part in the coming war, in which the Italian armies march to his swan-song, the "Battle Hymn."

—To all persons who are endeavoring to understand the causes of the Austro-Prussian difficulty, and the relations existing between the different European states, two books will be very useful. One of them is "International Policy," consisting of seven essays on the foreign relations of England, by various writers, principally from Oxford.

The essays are "The West," by Richard Congreve, M.A.; "England and France," by Frederic Harrison, M.A.; "England and the Sea," by Prof. E. S. Beesly, of University College, London; "England and India," by E. H. Pember, M.A.; "England and China," by J. H. Bridges, M.B.; "England and Japan," by Charles A. Cookson, B.A.; and "England and the Uncivilized Communities," by Henry Dix Hutton, B.A., of Trinity College, Dublin. The other book which we allude to is "Etudes de la Diplomatie Contemporaine," by M. Julian Klaczko. These "studies" were principally written for the *Revue des Deux Mondes*, and a new series on "La Crise en Allemagne" is begun there. Two pamphlets by Louis Veuillot are attracting some attention at Paris, "A Propos de la Guerre" and "La Confédération Européenne." Just as the war breaks out which is to give a final death-blow to the treaties of 1815, appears a ponderous book in four large octavo volumes (2,200 pp.), "Le Congrès de Vienne et les Traités de 1815, par le Comte d'Angeberg." Prefixed is an historical introduction. Then follow, 1, Negotiations of 1813; 2, Negotiations of 1814 to the opening of the Congress of Vienna; 3, The Congress of Vienna to the Hundred Days; 4. The Congress of Vienna to its close, June 9, 1815; 5, Negotiations of 1815 to the second Peace of Paris, November 20, 1815; and 6, Treaties and Conventions arising out of the Congress of Vienna and the Treaties of 1815. The work concludes with a chronological table and an alphabetical index.

—The lexicon of Buxtorf is daily becoming rarer and dearer, and the demands of the student of the Semitic languages are daily greater, so that there is great need of a new lexical working-over of the whole wide field of Judean-Aramaic literature. But this is a work which probably no single scholar could thoroughly do, and answer all the demands of modern philological science. Rabbi Dr. J. Levy, in his "Chaldäisches Wörterbuch über die Targumine und einer grossen Theil des rabbinischen Schriftthums," has tried to cover a portion of this ground, but with very moderate success. Competent German critics consider this lexicon as but little in advance of Buxtorf. The Ethiopic language has found a better investigator in August Dillmann, who to his Ethiopic grammar, published in 1857, and his great lexicon, published in 1865, has now added an excellent "Chrestomathia Æthiopica."

—That most charming book, at first privately printed and not intended for other publication, "Anne Paule Dominique de Noailles, Marquise de Montagu," has already reached a fifth edition. Few biographies are so entertaining as this compilation from Madame de Montagu's journals, and from the letters of herself, her sisters, and their husbands. Her four sisters married the Vicomte de Noailles, son of the Maréchal de Mouchy; M. de la Fayette, the Vicomte du Roure, and subsequently the Vicomte de Thesau, and the Marquis de Grammont. Of all volumes of memoirs relating to the period of the French Revolution none give so perfect a picture of the inner life of the aristocracy of France immediately below the throne as will be found in the extracts which are the great charm of this volume.

—The opposition journals of Paris seem to be continually getting into hot water with the Minister of the Interior. But a short time ago the "Revue Nationale," a monthly periodical, was prevented from becoming a semi-monthly, as the minister held that it was necessary for the proprietor to receive a fresh permission to publish, and that he refused to grant. Now, the "Revue Contemporaine," which has just passed over from the Government to the opposition, has received two warnings for issuing its semi-monthly numbers in a new monthly part, containing exactly the same matter. The minister certainly, by a strict interpretation, has the law on his side; but his rigid enforcement of it shows the disposition of the Government to restrict the press as much as possible.

—The French Academy have given the prize to M. Charles Giraud for the best essay on the life and works of St. Evremond, the overrated wit and writer of the seventeenth century, a subject which was proposed last year by the Academy. M. Giraud has recently issued a complete edition of St. Evremond's works, which, previous to the award, was the subject of a long and spirited debate in the Academy. The first Gobert prize has been awarded to M. Gaston Paris for his "Histoire poétique de Charlemagne;" the second to M. Léon Gautier for his work, "Les Epopées Françaises, études sur les origines et l'histoire de la littérature nationale." The prize for the best work on French history has been a second time given to M. Théophile Lavallée for his last work, "Les Frontières de France." The book, published before the events that have brought on the actual crisis in Europe, draws from these events, apart from its scientific value, a singular interest. This second distinction given to it proves, in fact, that the French Academy openly profess, with regard to the treaties of 1815, the same aversion as the author of the Auxerre speech. This is very curious, when one recalls the opinions recently expressed by the most prominent political member of the Academy.

—When an American enumerates the chief sources of public instruction, he names the church, the school, the newspaper, and the lyceum. The Englishman knows nothing of the last. Such a thing as a lecture is not unknown, but a lecture system and a profession of lecturer have yet to exist in Great Britain. Now and then a mechanics' institute gets an address from some distinguished personage, and, as in corn-law times, a special occasion will give rise to a lecture organization *ad hoc*. Now and then, too, a member of Parliament returns to his constituents under an awful obligation to entertain them with his views of the state of the country or a record of his behavior. But men of character and learning—the lights of the pulpit and the bar, the Speaker of the House, the Attorney-General, the Chief-Justice, along with ex-office-holders and celebrities of every description—could never be induced, like their peers in this country, to traverse the kingdom in the winter season, satchel in hand, and perhaps a single well-conned discourse in the satchel, hurrying from point to point to meet their consecutive engagements now at some great city and the next night in an obscure village, for ten, twenty, or thirty pounds a night. Scarcely one of our republican "institutions" affords a more peculiar contrast between our civilization and that of the Old World than the lyceum. Mr. M. C. Tyler, a very creditable representative of "Young America" in its best sense, a graduate of one of our colleges, and for some time a minister in this State, has been for three years in England and Wales, for the most part occupied in lecturing, and we find in the British newspapers the most favorable notices of his performances. His repertory embraced lectures on America, literature, history, and education, some of the titles being "Muscular Ethics," "American Orators and Oratory," "Richard Brinsley Sheridan," "American Wit and Humor," etc., etc.

SCIENTIFIC.

The Dodo.—This is one of the few animals that have become extinct under man's observation, and, as Sir Charles Lyell has remarked, it is the only animal the date of the destruction of the more perishable parts of which is a matter of record. On the 8th of January, 1755, the vice-chancellor and curators of the Ashmolean Museum, at Oxford, voted that the stuffed skin of the dodo, bequeathed to them just a century before by Tradescant, should be removed, *ad lustrandum*, for the purification of the museum. Every feather of this bird would now be prized the world over as a relic of the extraordinary creature which the early navigators killed and ate in the Mauritius, and of which some of the Dutch painters have left drawings, among them the one with which every boy is familiar in his books of natural history. There is reason to believe from contemporary record that a live dodo was once exhibited in London. Luckily, in spite of the vote of the vice-chancellor and the curators, the head and one of the feet of the banished skin were saved, are still preserved at Oxford, and could not be bought for their weight in gold. A leg of another bird exists in the British Museum, and Reinhardt found, not long since, among some "venerable rubbish" in the museum at Copenhagen, another head. These, with a few bones, for a time constituted the only remains of this extinct animal. The history of the attempt to determine the natural affinities of this bird from the remains just referred to is an instructive one, and goes far to show that the reconstruction of an animal from a part—as a bone, a scale, or a tooth—is not the easy feat that the reading public have been led to believe. As matters now stand, he would be a hardy naturalist who would risk his reputation in the attempt.

With a head and one of the legs as a basis for an opinion, Vigons placed the dodo between the ostriches and the curassows; Blainville, followed by La Fresnaye and Gould, placed it near the vultures; and Owen regarded it as a modified bird of prey, though he subsequently changed his views. John Edward Gray, of the British Museum, pronounced the bird a fabrication, in which the trunk of one bird had received the head of a second and the legs of a third—not thinking, apparently, that this only made matters worse, since it would require one extinct animal to possess the head and another to own the feet. The masters in science were at fault. Reinhardt, of Copenhagen, first pointed out its affinities with the pigeon, and in this view was soon afterwards followed by Mr. Strickland and Dr. Melville in their admirable and exhaustive memoir. Led by the analogies of other portions of the animal kingdom, in which certain species are characterized by their retaining through life embryonic forms, these last-named naturalists brought forward the view that the dodo was a gigantic pigeon, as much larger than the existing pigeon as the moa of New Zealand is than ordinary birds, with this additional characteristic, that it had all the features of a nestling, with short wings and covering of down. For the credit of American science, we must not overlook the fact that, entirely independent of the labors of European naturalists, an eminent American ornithologist, Dr. Samuel Cabot, of Boston, from his own observations, arrived at precisely similar views, not only as to the affinity of the dodo to the pigeon, but as to the persistence of embryonic features. These views were printed in the "Boston Journal of Natural History" before the conclusions of Reinhardt, Strickland, and Melville had reached this country. The conclusions given above with regard to the nature of the dodo have been largely confirmed by recent discoveries. Some months since a considerable number of the bones of this bird were found in the Mauritius after the draining of a marsh. These have been examined by M. Alphonse Milne-Edwards, who finds them indicating a bird closely allied to the pigeons, like the vinagos, but still having certain features which make it not unlikely that a new natural family may be required to receive them.

The Rate of Motion of Nervous Force.—The quickness with which motion follows will and perception touch has generally been assumed to be immeasurable, though the astronomers long since learned that two persons observing simultaneously recorded the transit of a star at different times, in consequence of the different rates at which sensations, perceptions, volitions, and motions succeeded each other in the observers. Du Bois Raymond has recently made an attempt to measure the rapidity of the transmission of nervous force, by causing a muscle, when it contracts under the influence of a stimulus applied to a nerve, to move an index which traces a curve on a revolving cylinder or a plate of smoked glass moving at a uniform rate. If the nerve going to a muscle be stimulated at a certain point and the curve traced, and then the index be carried back to the starting point, and the nerve stimulated again at the same place as before, the second curve will be found to correspond exactly with the first. If, now, the experiment is so changed that the nerve at one trial is stimulated at a point near the muscle, and at another at a point the most distant possible from the muscle, the curves traced will no longer correspond, but will be separated by an interval determined by the difference in time required for the transmission of the nervous force over two different distances. By using an electric light, and throwing a highly magnified image upon a screen, these differences were made visible to an audience in the lecture-room of the Royal Institution.

Light moves at the rate of 300,000,000 metres per second, sound in air at 332, and a cannon ball at 552 metres per second. Nerve force, measured by the above method, is found to move only at the rate of about 28 metres, or 1,092 inches per second. Assuming the distance from the brain to the muscles on the sole of the foot at 60 inches, the transmission of a volition or a sensitive impression through that distance would require a little more than the one-eighteenth of a second. This is not far from the speed of an express train. He found that the rate of transmission was materially influenced by changes of temperature, the curves traced by the index being much wider apart when the nerve was cooled down by ice than when left at the temperature of the room.

FEMALE EDUCATION IN ITALY.*

"We desire the education of the women of Italy in order that, by their care, *men* may be trained worthily to bear the name of Italians." Thus wrote, a quarter of a century ago, that most patriotic Italian author, Pietro Giordani, at a period when there prevailed in enslaved Italy an emasculated system of education, and methods of instruction which, instead of forming commanding intellects suited to the wants of the nation, conscientious, just, and honorable leaders to instruct and guide the masses, aimed to fill the schools with pedants and captious disputants, and to produce contentious, obstinate, jealous, and therefore weak or profligate, men.

If we would make a people great and free, we must, above all, promote the education of its women; and if we would educate the Italian people, we must begin by training the future mothers of the nation. The more solid and comprehensive the education of our women, the broader and more fruitful will be the results of our national emancipation. The political question once resolved, Italy ought to apply her whole strength to the solution of the social question, among the first elements of which is the intellectual and moral regeneration of woman.

Among the Italian teachers who are laboring for this end with intelligent and affectionate zeal, we are happy in being able to count a lady who, by the importance of her writings, the solidity of her attainments, and the elevation of her life, is now universally admitted to have acquired the right of placing herself at the head of the movement for that regeneration. Not to speak of her works on the general rights and position of women, which have been noticed with great praise by both the Italian and the foreign press,† Anna Maria Mozzoni has recently published an essay, small in volume, but pregnant with instruction, under the modest title of "A Step Forwards in Female Culture."

"The moral and intellectual education of woman is indisputably one of the most deeply felt and universally acknowledged wants of our age. Logical minds perceive that this is one of the most important corollaries of that equality which philosophy teaches, and a necessary consequence of the revolution which civil society has everywhere accepted, and which has impressed upon all social, political, and religious institutions a rapid transformation."

Upon these principles our distinguished authoress erects the whole structure of her educational system. Nor does she confine that system to the women of Italy, but applies it to the female sex in all nations which have attained a certain point in civilization. She justly observes that in all countries the condition of woman is substantially the same, or at least analogous. Everywhere woman is humiliated by legal institutions, hampered by custom and public opinion. Social statistics are largely made up of the detail of the much that is denied her, the little she has to lose. If she enjoys a condition of well-being, she owes her happiness to the individual; while the evil she suffers is due both to the individual and to the institutions. It has, therefore, seemed to her absurd to propose a system of improvement in the intellectual condition of her sex which should be limited to the special case of the women of Italy. The base upon which her thesis is constructed being the democratic idea, which cannot logically exclude a single human creature from its share of rights and duties, she could not confine to a single nationality, a single country, the beneficent effects of progress without greatly diminishing the value of the scheme and falling into inconsistencies.

We applaud the plan of an international institution in which young women should be educated according to the principles of that universal morality whose precepts command the suffrages of all nations, "it being the supreme end and aim of this plan to redeem woman from the capricious dominion of individuals, by raising her reason and her conscience to the knowledge of her duties, of her rights, and of the mission imposed upon her towards herself as an intelligent and progressive being, as an associate in civil society, as a citizen in the commonwealth, as a co-worker in the social laboratory; towards her family as a wife and as a mother, in which last point alone her situation is distinguished from that of her companion."

In approving this noble scheme we may express the hope that, as Switzerland has at Geneva her international institute for male youths, Italy may soon possess an international institute for females on her favored soil, where the human heart is still the same which beat in the bosom of the sons of Latin mothers, and which now pulsates with the fresh life inspired by the hope of the regeneration of the Italian people.

To the above remarks, which have been prepared for The Nation by

* "Un Passo avanti nella Cultura Femminile, Tesi e Progetto di Anna Maria Mozzoni. Milano. 1866." [A step forwards in female culture.]

"Woman as Considered in the Project for a new Italian Civil Code. Milan. 1865."
"The Rights of Woman, a Lecture before the Pietrasanti Institute. Milan. 1865."

the Chevalier Vincenzo de Castro, of the Italian Ministry of Public Instruction, I beg leave to add some further observations on Miss Mozzoni's first-mentioned essay, "A Step Forwards in Female Culture," and on the important subject it discusses. This is an argument for an improvement in the systems of female education, based partly on historical facts, and partly on the obvious necessity of elevating the social and moral condition of woman in accordance with the democratic principles which constitute the true motive power of modern progress. Political reformers have too generally overlooked the solidarity which the laws of nature have established between the sexes. Their plans for the extension of political franchises, of civil rights, of public instruction, and of material prosperity have almost uniformly been framed as if the world was made for *man*, and that woman had no rights which the legislator or the freeman is bound to respect. The relations of master and servant, of government and people, not being founded on natural law, are not determinable by reference to ascertained or ascertainable principles, and may, therefore, to a certain extent, be arbitrarily controlled by circumstances, or by the express or implied consent of the parties. But the relative, or rather the joint, rights, duties, and interests of the sexes are fixed by laws as universal and as unalterable as the moral and intellectual constitution of man. The popular mythology of Persia fables a bird which has but a single wing, with a hook or an eye on the opposite side, and so can fly only when linked together in a pair. Man and woman are indissolubly united as such a couple, as the social complements of each other, and the highest interests of neither can be effectually promoted by any system of government, legislation, or education which does not regard with equal favor the mental and moral culture, the independent sense of right and responsibility, the material advantage and the general happiness of both. Man has, no doubt, attained to a certain greatness in some countries by whose institutions woman is debased; but, at the same time, the *progress* of man in those very countries has been marked by an improvement in the condition of woman, and his fall has always been accompanied, and too often occasioned, by the ignorance and depravity to which his institutions have reduced her.

In all existing general systems of education, the mental and moral inferiority of woman is assumed as an axiom. Man is a creature of reason, woman a creature of instinct. Hence he must have a rational, she a sensational education. Upon such a sandy ground as this all our fabric of scholastic teaching, all our domestic culture, has been founded. The iron logic of fact has proved the falsehood of the fundamental assumption, and the overthrow of this error must involve a revolution in our methods of training for both sexes. We say for *both*, because when we are able to see clearly the defects of our course of female education, we shall begin to perceive that our scheme of instruction for male youth is almost equally imperfect. The curriculum of our preparatory schools and our colleges contains absolutely no provision for social, next to none for moral, culture. Youths, while passing through them, are deprived of the humanizing influences of domestic life, and the young man comes out of the hands of his professors a coarser, a more unsocial, too often a more vicious, being than the mother's boy he has grown out of.

Coleridge, who had no liberal estimate of the intellect of woman, has nevertheless remarked that at least the physiognomy of men of the highest genius is always characterized by feminine traits of expression. We admire the womanly generosity of great conquerors more even than their powers in battle, and we worship the heroism so often displayed by women more devoutly than the most attractive exhibition of sensibility or even affection. There is no emptier, no more poor-spirited commonplace than that which describes woman as emotional and impulsive, man as rational and reflective, and hence deduces the conclusion that in woman the affections, in man the intellect, should be especially cultivated. Were the fact as assumed, the contrary course of training would be that which ought to be followed in order to foster in each sex the qualities in which it is naturally deficient. That a sickly sensibility has been often developed in women, blanched as they are by exclusion from the light and air of God's atmosphere, is, unhappily, too true, and it is not less so that the heart of men becomes hardened and their sensibilities deadened by an unsocial education, and by the habit of devolving exclusively upon women the burden of domestic duties, parental responsibilities, and personal charities.

Without insisting that the normal education of women should be in all respects identical with that of man—for that is a question which experience alone can determine—it is not extravagant to say that such facilities of instruction as they have the will and the power to turn to profitable account should be placed as freely at their command as they now are at the command of men, and that, if it be found expedient to make some distinction in special branches of their respective courses of study, the methods should be substantially the same, and the education of the sexes should be so far assimilated as to effect in each the development of the moral and intellectual traits which command our highest reverence and admiration in either.

Besides this, provision ought to be made for exceptional cases in either sex. If a man happens to be so constituted that he can labor to greatest advantage in departments usually occupied by women; if, on the contrary, a woman is so organized that she can, most profitably to herself and to the commonwealth, perform such work as men habitually perform, there is no good reason why the exceptional individual should not be trained to labor in the exceptional field. The truth is, we know next to nothing at all about the relative powers and capacities of the two sexes. We have remained in blank but wilful ignorance of the whole matter. Obscurantists, civil and religious, prate about the lessons of experience. We have nothing that is fit to be called experience on the subject. Commonplace saws and shallow generalizations, indeed, we have in abundance; but of philosophical *experience*, which consists in well-devised *experiment*, nothing.

Mr. De Castro has well expressed the fundamental wrong in the position of women. If they enjoy a condition of well-being, they owe their happiness to the individual, to the exceptional virtue or indulgence of those upon whom brute force, organized into unjust law, has made them dependent, while the humiliation and misery of what has been regarded as their normal status is due in the greatest measure to the brazen network of arbitrary institutions which has everywhere enchained them. When a woman is set free from this miserable state of dependence by the death of those whom in bitter, but unconscious irony, society calls her "natural protectors," she is found, in the great majority of cases, quite as well able to provide for herself and to live respectably as her *unprotected* brothers. For one female mendicant, except in priest-ridden countries, ten sturdy male beggars will ask your charity, and in all lands the male idlers are greatly more numerous than the female.

The first duty of society to woman is to emancipate her from artificial restraints, to pass a "Civil Rights Bill" for her benefit, and to leave her to obey the impulses of her organization, mental and physical, as freely as man. Make her an independent *being* (or rather equalize the natural interdependence of the two sexes), compel her no longer to remain the *soulless thing* into which your institutions are constantly striving to transform her. But you say the powers of women are limited, and her position fixed by natural law. Very well, then, if nature has made such laws as you suppose, why not leave it to nature to enforce them? All violations of natural law inevitably and inexorably involve their own punishment, and nature does not require the help of any self-appointed interpreter to define and apply the penalties for offences against her. Make woman legally and socially the peer of man, afford her equal if not identical means of education, give free scope to the natural laws which determine the relations, powers, and positions of *both* sexes, and all the points, the bare suggestion of which so shocks the wiggeries, owleries, and cowleries of social and religious old-fogyism, will settle themselves far better than man's wisdom can regulate them.

In Italy, the country with whose social condition Miss Mozzoni is naturally most familiar, women are under substantially the same disabilities as elsewhere in Christendom, and they have for many centuries suffered under still more cruel oppressions—the despotism of the priesthood, embracing, of course, the confessional, and the deleterious influence of a conventual education, two of the most powerful instruments of moral degradation and intellectual debasement which have ever existed in any form of human society.

If we take the history of the Italians for the six last centuries, as a whole, we must allow them to be, if not in every respect the first, yet at least the most variously gifted, people of modern times, and their women, whenever temporarily or accidentally released from the restraints of what Miss Mozzoni justly calls "Catholic misogynism," have always maintained the same relative superiority as the men. In the second section of her essay Miss Mozzoni enumerates very many distinguished Italian women, and she might have added many highly illustrious names to her list of those who have shed honor on Italy; for, not to speak of minor celebrities, she does not mention among her learned countrywomen Olympia Morata, perhaps the greatest of them all, nor among Italian female artists the admirable Elisabetta Sirani, of Bologna, who, like her celebrated townswoman, Properzia dei Rossi, is said to have fallen a victim to the professional jealousy of a male rival.

In the early part of the sixteenth century, during the brief period when even the Church itself, the very sanctuary of darkness, was threatened with a profane irruption of light, the number of learned, genial, and liberal Italian women was so large that it is very doubtful whether all the rest of Europe together contained so many as the Italian peninsula alone, and they have always taken a conspicuous part in every movement for the enlightenment and redemption of their country. But the priesthood still retains the hold upon the great majority of them, and Garibaldi never uttered a more preg-

nant truth than when he said that the instruction, elevation, and emancipation of woman was among the most powerful means and most indispensable conditions of the regeneration of Italy.

Not above one-fifth part of the total Italian population is able to read and write, and as girls are generally excluded from schools taught or controlled by priests, it is very questionable whether one Italian woman in ten, upon the average, knows her alphabet. The moral and intellectual degradation of the people and the influence of the priests—which, in social arithmetic, are generally convertible terms—are in all parts of Italy measured by the ignorance of the women. In large Italian towns, former capitals of the old duchies, I have known women who, in purchasing an article costing twelve sous, could not tell how many coppers they were to receive out of the *lira* they had given the shopman, and who, in fact, could not even count ten. And yet these women, though regular church-goers, have been persons of quick native intelligence, and capable of performing extremely well the mechanical duties of the routine in which they had been trained. Since the organization of the kingdom of Italy the army has been, as a seminary of popular instruction, a school worth all the rest, and it has thus abundantly compensated the pecuniary sacrifices it has cost the nation. Illiterate recruits are taught to read, write, and compute, by the officers. They learn, many of them for the first time in their lives, that they have a country, a government, between which and themselves exist reciprocal rights and duties. "Every discharged soldier from the southern provinces," said a distinguished Italian to me, "is a missionary of kno wledge and civilization;" and I have scarcely ever witnessed a greater transformation of the individual than that from the raw, half-human, priest-fearing, and God-denying Calabrian conscript to the trained Italian soldier of three years' standing. From the advantages of the military establishment women, of course, are excluded, and the enlightening and liberalizing influences of the new institutions have not yet shown themselves effectual in raising the sex from the ancient condition of ignorance, servility, and debasement.

To dispel the blackness of darkness which broods over her sisters is the vast and noble scope of Miss Mozzoni's ambition. Beginning, as of course in such a state of society she must, with those who are in a condition of comparative *material* superiority, she proposes the establishment of schools in which the period of instruction should be six years, the course of study being fixed for the first three, optional during the last half of the term. The entire range for which she designs that instruction shall be provided would be as comprehensive, at least, as that in most American colleges, and her plan embraces also arrangements for physical and social training, as well as for what are called "accomplishments" in our educational nomenclature. I see nothing objectionable in the details of her scheme except that she seems to me to have fallen into the common error of attaching too much importance to the study of living foreign literatures and giving too little prominence to that of classical language, the Latin especially, which, as a mental discipline, is worth all the rest. The most common defect in female education is the want of *exactness* of knowledge, and they are not habitually trained to scrupulous precision in the forms and logical relations of words or of philosophical conceptions. In regard to a large class of the objects of thought, mathematical studies enforce the habit of exact appreciation and distinction; but for a still larger, a thorough acquaintance with the admirable mechanism of the Latin language is the best of all educational disciplines. It must be admitted, however, that the requirements of education in Italy are, in this respect, quite different from what they are in the United States. The Italian language itself, to those to whom it is native and acquired without effort in the nursery, supplies, though imperfectly, the place which Latin demands in an American education, and French has, unhappily, obtained so universal a currency in Italy as to have very seriously interfered with the rights of the vernacular, and become an absolutely indispensable social accomplishment. Every Italian must know his provincial dialect, French, and the *lingua commune*, or book-language, of Italy. This to the Tuscan is a mother-tongue, to his fellow-citizens of other provinces a foreign speech, which he too often knows least perfectly of the three he is obliged to acquire. An American ought to know but one form of English, and if to that he adds a familiar acquaintance with *written* French and German, he has all the attainment in *modern* philology which, to persons not specially addicted to linguistic pursuits and not contemplating residence or travel abroad, is worth the labor of acquisition.

Miss Mozzoni's project has been received with much favor in high quarters, and, unless the war which is now threatening Italy shall delay the realization of her hopes, it is highly probable that a liberally organized and endowed female high school will soon be put in operation under her direction. Persons engaged in instruction in Italy complain of the want of good manuals in all the branches of education, theoretical treatises on the subject, reports of the organization and management of such public and private schools as have proved successful, scholastic apparatus of all sorts, information of all kinds, in short, except mere catalogues of pupils. Persons who are disposed to aid the cause of female education and progress in Italy may render important assistance by contributing such publications; and any books, maps, educational apparatus, or the like, which may be left with Scribner, Welford & Co., publishers, New York, for that purpose, will be duly forwarded to Miss Mozzoni.

VIATOR.

ROME, June 10, 1866.

MARCY'S ARMY LIFE ON THE BORDER.*

A BOOK of adventure is generally as interesting to read as it is easy to write. Traversing, as it does, the debatable ground between fact and fiction, the author can give free play to his fancy without incurring the reader's suspicion that he is trespassing beyond the limits of truth. And, indeed, most books of this character, if they deal only with realities, are as full of thrilling incident as it is possible for any story of fiction to be. That they are easy to write may be inferred from the manner in which they are usually written.

We may say, then, that Colonel Marcy has made a very readable and entertaining book, though it be without any pretensions to literary merit even of the average sort, for he has written a book of his adventures on the Western border as an army officer, extending over a period of nearly twenty years, and embracing an experience more varied than could have fallen to the lot of any ordinary explorer. The book may possess additional interest from the reason which the author gives in his preface, that it treats of subjects which are fast becoming matters of history, as soon they will be no longer matters of observation. We quite agree with him, and suspect that whatever little value his rambling sketches have arises from the fact that they do so largely treat of the habits and characteristics of a race of men that soon will cease to exist except in fable. And yet we must find some fault with Colonel Marcy even here, for all that he says about the Indians conveys but little knowledge of their actual condition, never gives a hint as to how their condition can be improved, or how the ruthless process of extermination practised upon them by the civilized whites can be arrested. Colonel Marcy tells of hair-breadth escapes of hunters from the savages, and how the warriors hunt and fight and the squaws steal, and of their remarkable instinct to follow a trail, etc., but this is about all. Anything like a profound discussion of the real wants of the Indians, any suggestions of wisdom or humanity in respect of the course to be pursued toward them, Colonel Marcy does not give. Something of this sort we might have expected in the published work of a man who has spent twenty years of his life in fighting or making treaties with them, and who, more than any one else, has had opportunity to make himself acquainted with their character and their necessities. For one thing, writing in the interest of humanity, we have to thank Colonel Marcy—he does not follow the lead of almost every other soldier who has had dealings with the tribes in advocating the cold-blooded policy of extermination. He is not unable to see in every instance of border outrage that as much blame attaches to the white as to the savage. Perhaps, then, it is to his praise that the Indian and the buffalo are alike objects of interest to him, and that he equally regrets the probable fate of both.

Of Colonel Marcy himself, as portrayed in his book, or rather as suggested, for he does not spend many words upon himself, something may very well be said. In the din and bustle which the great reputations of the hour are making we are apt to forget many who have some claim upon our gratitude and respect, if there is no trumpet to proclaim their merits. Not many officers in the service have, we dare say, rendered more substantial benefits to the country than has Col. Marcy. We do not refer to anything he has done in the late war—as he does not allude to that, neither shall we—we refer to the laborious expeditions of which he had command that, from the years '48 to '60, at different periods contributed such signal advantages, by their persevering zeal, to the early and comparatively peaceful settlement of our Western possessions. The difficulties which he had to contend against can hardly be over-estimated. The perils of Indian warfare formed but a small part of these difficulties; the explorer had to contend against Nature herself. In this volume is given a graphic account of the passage over the Rocky Mountains from Utah into New Mexico, in order to obtain supplies for General Johnston's invading army. This was accomplished by Colonel Marcy with one hundred men in the dead of winter, and is, we believe, without parallel among all the adventures of our Western explorers.

* "Army Life on the Border. By Col. R. B. Marcy, U. S. A." Harper & Brothers, New York.

Fifty-one days were spent amongst the snows of the desolate mountains before the expedition reached Fort Massachusetts. Though the hardships encountered were incredible, so that almost every beast of burden succumbed to them and died in the passes, yet such was the tact and discretion with which the enterprise was conducted that not a single human life was sacrificed. Colonel Marcy received many testimonials of consideration from the commanding general, as well as from the public, but not more than he deserved. We think this march of Marcy and his company over the mountains should be esteemed as one of the most notable achievements on all our military records.

Colonel Marcy also had command of the expedition which, by order of the War Department, explored, in 1852, the north branch of the Red River to its sources. He was accompanied on this expedition by George B. McClellan, then a brevet-captain in the corps of engineers. This expedition, if less arduous, was more important in its results than the one we have previously mentioned. The couple of chapters devoted to it are the most interesting in the volume. The topography of the country is minutely described, and its geological resources copiously illustrated. Colonel Marcy was the first, we believe, to explore and call attention to the most wonderful geological phenomena on our continent, the cañons of the Red River. A description of these in the shape of a lecture, now embodied in these chapters, drew the attention of Professor Hitchcock, who was materially aided by it in his own scientific researches.

In 1854, Government employed Colonel Marcy to locate the reserved lands in Texas for the Southern tribes of Comanche Indians. This he attempted, and, so far as was possible, accomplished. He made as good locations as circumstances would permit, and by his personal influence induced a large number of the Comanches, under one of the most powerful chiefs, to begin settlements upon them. As the mission was a failure in the end, it may be well to give Colonel Marcy's reasons for its barren results:

"After the Indians had made considerable improvements upon their lands, their value was so much enhanced that they became an object worthy the attention of those lawless border robbers that inhabit Western Texas, and, as I was informed, they organized a large force, went to the reservations, and, without the slightest provocation from the Indians, attacked and indiscriminately murdered many of the men, women, and children. Those that escaped the foul massacre made their way into the plains, and this pretty much broke up the settlement."

Colonel Marcy is, if not a humorist, quite a lover of the humorous, and many of his pages sparkle with illustrations of backwoods life. Some of the stories are quite old, and we doubt if the author was the first who heard them; but then they are so good it will do to repeat them. Others, again, are pretty broad; but their relation may be excused when we reflect that border wit is never of the chastest description. That peculiar race of beings, half savage, half civilized, the pioneer hunters of the West, is admirably set off.

Our limits will not permit us to give quotations from the most readable portions of the volume, which we should be glad to do, or indeed to spend more time upon the work itself. We again commend it, as we began, by calling it a pleasant and readable book. An idle hour can be spent very profitably in glancing through its genial pages.

Influence of Climate in a Commercial, Social, Sanitary, and Humanizing Point of View. By J. Disturnell. Also a paper on the Influence of Climate in the Equatorial Regions. With a map. (D. Van Nostrand, New York. 1866.)—This memoir contains an abstract of some of the chief subjects in the science of physical geography. It points out the isothermal lines, and shows the extent of the zones over which animal and vegetable life is spread, whether dependent on latitude or elevation above the surface of the earth. If one goes northward *from* the equator and ascends the mountains *on* the equator, he will find in either case a series of plants, and in some measure of animals, ranging from the tropical to the arctic kinds. Between the two extremes in latitude comes the "favored zone," where man and the most useful animals and valuable plants flourish to the greatest advantage, and where civilization is the most progressive. This zone has an average temperature of about 50° F., and is mostly comprised between 40° and 60° N. latitude. It is one of the chief objects of the memoir to show the relation of climate to the health and progress of the human race; this relationship is not elaborated, but only indicated. A good map on which the isotherms and zones are plainly indicated by a series of tables showing the distribution of heat and moisture, and the height of towns and mountains above the level of the sea, all compiled from various published works, make the memoir a source of interesting information to those who have never given their attention to physical geography.

Crumbs from the Round Table. A Feast for Epicures. By J. B. (New York: Leypoldt & Holt.)—To the true epicure "the ating and the drinking," as an Irish philosopher called the main business of his life, is a serious subject of discourse. In these essays "J. B." only plays at being a luxurious feeder. It is not to pamper his stomach or to teach others to do so that he is an epicure, but to make our mouths water if he can by titillating our imaginations. He tries to write the poetry of that science of which the cook-books give us the prose. Most men, therefore, eating to live will overlook the affected enthusiasm of the author and think that if any one chooses to condemn himself to trifling of that sort—smacking his lips over salacious dabs of oysters, and groaning over American gravies for pages together—he has leave to be as trifling as he chooses. But the book pretends to be nothing more than it is, and probably no one will undertake its perusal expecting to find more in it than the means of getting rid of a lazy hour.

The Angels' Song. Thomas Guthrie, D.D. (New York: Alexander Strahan & Co.)—"Where death, with grim and grisly aspect, stood by the mouth of an open grave, shaking his fatal dart, we see an angel form opening with one hand the gate of heaven, and holding in the other a shining crown," etc., etc. This is not very forcible thinking nor very forcible writing; indeed, it is flat and worthless as anything needs to be, but, such as it is, it is Dr. Guthrie's. It is a specimen of the substitute for writing and thinking with which he has flooded the religious world of England, and which he is now, by the help of his publisher in New York, to pour out over the religious world of America. He is one of the not small class of writers who suggest to us John Foster's question: "It was necessary for them to be Christians, but what made it necessary for them to be authors?"

PARIS GOSSIP.

PARIS, June 15, 1866.

THE proverb, "It is an ill wind that blows nobody any good," is just now receiving an illustration that demonstrates the truth of that other proverb, "Extremes meet;" the "rumors of war" now filling Europe in general, and Germany in particular, exercising a deterrent influence on the migrations of the gay world, and retaining in this city, to the great satisfaction of its various corporations of luxury-mongers, the birds of passage on whose absence the hotel-keepers of the fashionable German watering-places are now so mournfully meditating.

Under these exceptional circumstances, the purveyors of amusement are hastening to show themselves "on a level with the situation." The elegant and spacious theatre of the Châtelet, one of the great white piles of free-stone recently erected under the shadow of the beautiful old tower of St. Jacques de la Boucherie—now cleared of its former ignoble surroundings, and finding itself in the centre of a charming public garden—is bringing out as the heroine of a fairy-opera that old friend of the Anglo-Saxon childhood, "Cinderella." The new piece, which is expected to throw into the shade even the stupendous fairy piece of the "Woodland Doe," that has had a run of nearly four hundred nights, is the joint production of MM. Clairville, Albert Monnier, and Ernest Blum, boasts five kilometres of magnificent scenery, and an assortment of splendid costumes that has cleared the Lyons warehouses of their most splendid tissues. A certain scene, in which figure a legion of turnspits all dressed in white satin and silver, may suffice to give an idea of the sumptuosities of costume lavished on the more important personages through a series of twenty grand *tableaux*. The Gymnase Theatre is drawing immense crowds to its new piece, "The Whirlwind," which had the honor of being repeatedly applauded a night or two ago by their Majesties and the little Prince. "Le Chevalier Lubin," by Boieldieu, is in great vogue at the Fantaisies Parisiennes, its charming melodies appearing as fresh as ever; and the famous open-air concerts of the Champs Elysées, under the consummate management of M. Becdelièvre, are, next to the Bois de Boulogne, the most fashionable rendezvous of the "high-flyers" of the capital. The choiceness of the music, the admirable execution, and the excellent tone of these charming concerts, held in one of the prettiest gardens of this city of pretty gardens, all concur to make them something very near perfection in their line. So extensively are they patronized by the best society, that they may be said to offer a sort of bird's-eye view of the wealth and distinction of the capital.

The daily drive in the Bois, which has become an essential element of the fashionable existence of Paris, now takes place in the evening, the favorite time for this promenade being from seven to ten, or even later. Nothing can be prettier, in its way, than the sight of that charming park lit up with innumerable lights, the pretty gondolas shooting over the lake with their gay Chinese lanterns, and the lamps of the dense stream of carriages showing through the trees like clouds of fire-flies. So marked is the tendency of the fashionable world to

prolong its nocturnal inhalation of the cool and perfumed air of the Bois, that it is gravely proposed to obtain the requisite authorization of the prefect for the erection, on the favorite points, of tents that might serve as sleeping-places for their respective owners. These structures are to be of striped silk, fitted up with curtains, hammocks, sofas, and a few chairs. The owners of each tent would bring one or two servants, a hamper of *friandises;* and, after indulging in the usual slow drive through the favorite alleys and round the lakes, would retire to their improvised shelter, and there receive the visits of their acquaintances, to whom the iced coffee, sherbets, and cream, the *pâtés* and *galantine*, redolent of truffles, and the tiny glasses of delicate *liqueurs*, would be hospitably offered. Conversation would be kept up, under the canopy of the elegant little tent, and to the softened light of well-screened lamps, on cool nights—under the canopy of heaven, and to the light of moon or stars, on sultry ones; the aristocratic colony thus making and receiving visits until sunrise, when all would retire to their respective hammocks and sleep in the quiet and freshness of their sylvan *faubourg*, returning to Paris in time to dress for the "second dêjeûner," which forms so important a feature in the commissariat department of "the metropolis of Europe." What the municipality of the Seine will say to this Arcadian project remains to be seen. Meantime it is warmly advocated by many leaders of the *ton*, who would fain provide themselves with a substitute for the usual summer dissipations of which M. von Bismark has so effectually "done his little possible" to deprive them.

The importation of racing has been so successful here that the sporting world is now doing its best to import that other English passion which manifests itself under the forms of boating and yachting. The French have no natural liking either for horses or for water, but their vanity has been so agreeably tickled by the brilliant successes of *Gladiateur* that they have jumped to the conclusion that, although they have been slow in recognizing their vocation, they are really born for the turf, and, should the recently-started regatta clubs succeed in winning a laurel or two upon fresh water, it is just possible that a few of the more adventurous spirits may essay their skill on the broader field of salt water. The accidental injury which has lamed *Gladiateur*, and compelled his premature retirement from the scene of his well-earned triumphs, may possibly exercise a sedative influence on the novel enthusiasm of the Parisians for the race-course; as any beatings which the new boating-clubs may receive at the hands of English crews would probably suffice to calm down the desire now felt to humble the pride of the "Insulars" on what they have so long had the audacity to regard as their native element.

One of the historic shows which French towns are so fond of geting up, and which, in their way, are well worth seeing, is about to take place at Valenciennes, which ancient town, from its earliest days, has always been remarkable among its Flemish sisters for its passion for this sort of pageant, and which, among other reminiscences of a similar character, still boasts of the representation given by it, in 1547, of "the life, death, and passion of Jesus Christ," a grand and magnificent spectacle which occupied the streets of that old Flemish town during twenty-one consecutive days. The grand show now being organized on so magnificent a scale by the Valenciennes of to-day is to represent "humanity marching in the path of civilization and of progress," and is to consist of thirty distinct groups, forming so many tableaux, and in which will figure a couple of thousand people, all "made up" with the utmost splendor. The tableaux will represent Egypt, Judea, Chaldea, Assyria, Phœnicia, Persia, Greece, Rome under Augustus, the Arabs under the caliphs, the Crusaders, the establishment of franchises, Paganism, Judaism, Christianity, the discovery of the Indies, of America, of Australia, of printing, of steam, of electricity, the Revolution of '93, the Consulate, Empire, and first half of the nineteenth century, the whole with the accompaniments of flags, banners, music, costumes, triumphal chariots, etc., etc.!—a programme which will enlist all the grandees in the neighborhood and draw its hundreds of thousands of spectators from every corner of France, to the jubilation of the innkeepers and shopkeepers of the old centre of the lace-making art.

Paris has had but a single *fête* during the past week, the dinner and *soirée* given by their Majesties, at the Palace of the Elysée, to the Grand Duchess Helen, of Russia, and her daughter. After the dinner, to which only thirty guests were invited, the "august" people, reinforced by the five hundred favored mortals honored with invitations for the *soirée*, adjourned to the beautiful garden of the palace, so exquisitely laid out and kept, and shaded with some of the largest and finest trees to be found in all France, when, at a signal given by the Empress, the entire garden, with all its contents, to the tops of the trees, was instantaneously illuminated by the aid of electrical suns, magnesium and Bengal fires, presenting a scene of the most striking character, and not to be surpassed in its own way. Every corner of the grounds was as light as day; the smallest print might have been read, or a pin picked up, in any part of the garden, with the utmost ease. The band of the Guard and choruses from the opera played and sang at intervals through the evening. An immense crowd had gathered outside (the hirers of chairs making a handsome thing of the event) and remained there through the evening, admiring the illumination and enjoying the music. The Emperor and Empress, who show to particular advantage when doing the honors of their hospitality in the informal style adopted on these occasions, mingled with their guests throughout the evening, and seemed to enjoy the affair as heartily as anybody present. Queen Emma, of the Sandwich Islands, who has been wintering in Hyères, has also been received by their Majesties, and was present at the fairy-like scene got up in honor of the Russian Highnesses.

What may have been the *menu* of the banquet on the occasion in question has not transpired; but M. de Girardin's new paper, *La Liberté*, which is endeavoring to captivate the good graces of the public by publishing every day the skeleton of a dinner, for the edification and convenience of its lady-readers, has just published the list of the dishes served a few days ago, at lunch and dinner, at the Imperial table, which is as follows:

DÉJEUNER OF THEIR MAJESTIES.

Roast fowl; fried calves' brains; veal-cutlets à la hollandaise; stewed beef, à la paysanne, with jelly; omelette with minced herbs; potatoes à la Maître d'Hôtel; Dampfdonilles à l'allemande.

DINNER OF THEIR MAJESTIES.

Spring soup with queuelles of fowl; meat soup with Italian paste; rissolés à la russe; turbot with Dutch sauce; ham stewed with vegetables; lamb-cutlets, spigram of chiccory; fat fowls à la Périgueux; crépinettes of game à la Montaigrence; darne of salmon, rémolade sauce; little galantines à la parisienne; ducklings from Rouen; young chickens; asparagus; green peas à la française; Plombières biscuits; lightnings of coffee; orange jelly; strawberry profiteroles.

All Paris is busy studying these two lists, but no one seems to know anything about "Dampfdonilles," "crépinettes," and "profiteroles," which are considered to be either old friends with new names, or new inventions of the culinary genius of the Imperial kitchen.

While Paris is thus studying the delicacies of the Imperial table, Marseilles is preparing for the approaching gathering of *savans*. M. Leverrier is gone thither to look after the interests of the stars; M. de Lesseps is expected to report on the progress of the canal; and the opponents of the theory of "spontaneous generation" are amusing themselves with declaring that the learned "preparator" at the Museum of the Garden of Plants (son of the inventor of that famous theory) is going off to "the Phœnician City" to favor the assembled *savans* with an account of his efforts, hitherto unsuccessful, to hatch three crocodile-eggs (two of them white and one red), presented to him last winter by a traveller returned from the East, with a view to "dotating" France with a new article of food—stewed crocodile being declared by the said traveller to be both palatable and nutritious in a high degree. The failure of the learned young doctor to hatch these eggs, which he is said to have carried constantly in his bosom for the last seven months, wrapped in a flannel waistcoat especially donned for that purpose, is attributed to the fact of their not being crocodile-eggs at all, but three billiard balls, abstracted from a "hell" at Cairo, by the perfidious "friend," a Pasteur-ite in disguise, who has taken this unhandsome method of having a side-fling at the obnoxious theory, by perpetrating an unjustifiable hoax on the learned son of its learned inventor.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE WAY THE TARIFF IS SETTLED.

THE incompetency of Congress for the task of dealing with great questions of finance and taxation was clearly demonstrated during the war, notably by the almost pitiable imbecility with which in these matters it followed the lead of anybody who pretended, with a bold front, to be better informed than the mass, as in the case of Mr. Thaddeus Stevens and his gold bill. A commission composed of men who had made these subjects their study was accordingly very properly appointed to investigate and report upon our whole system of taxation, and suggest such changes in it as they should deem proper. They made their report. It was universally admitted to be able and well considered, and, on the whole, the most valuable contribution to the literature of political economy to be found amongst our state papers. It met with the warm approbation of the Secretary of the Treasury, was heartily welcomed by the public, and it was generally believed that when it was laid before Congress that body would have the modesty and good sense to be guided by it. When the tariff and internal revenue came up once more for discussion, most of us expected to see the report adopted as the basis of all modifications to be made in the actual system.

It is, however, only with regard to the internal revenue that the slightest attention seems to have been paid to it. The commission not only recommended a vast reduction of the excise duties on most branches of native industry, their total abolition in the case of a large number, but spoke strongly against an attempt to increase the customs duties, believing that they were already sufficiently high to satisfy even strong protectionists, while not too high to excite a very active opposition, under all the circumstances, from free-traders, while any increase in them would be pretty sure to rouse popular discontent, to say nothing of the effect it would be likely to produce on the revenue returns. What we all wanted to see, and what we had a right to see, was a full and fair discussion of this report by Congress, before the country. We had a right to know, from members themselves, in open debate, what they had to say against its conclusions. But we have not been favored with any such information. The tariff has, like most other questions of importance nowadays, been discussed secretly in committee; and a new bill reported to Congress, at the tag-end of the session, when the hot weather has set in, members begun to be anxious to get home, and when the chances of rushing it through under the hour rule and the previous question are more than usually good. What influences have operated to reduce it to its present shape, what share the members of the committee have had in its creation, we shall never know. Its submission to the two Houses is a mere matter of form. Mr. Morrill's speech in elucidation of it was a mere matter of form. Nobody supposes that it is the arguments which he puts forward that have had most to do with bringing it to its present shape. The real work of drawing it up was done in the lobby, and consisted not in legislating on certain great principles, with the convenience of the whole country kept steadily in view, but in an elaborate effort to appease the various "interests" whose agents and deputies besieged the committee-room, and cajoled or threatened or seduced the members. And so little shame is there felt over the haste and the secrecy by which the whole process has been marked, that the New York *Tribune* gloats over the speed with which the bill is being "put through," or, in other words, the increasing contempt for discussion and publicity which Congress is every year displaying.

Now, what the country wants of Congress is a financial policy, and not a succession of makeshifts. Our financial system must be based on some rule or other, whether it be the protectionist rule or the free-trade rule, to make it possible for merchants and manufacturers to carry on their business without needless loss and vexation. Has the country decided upon adopting a policy of protection, and making the revenue subservient to the exclusion of such foreign products as compete with native ones? If so, protection, like every other piece of legislation, must be steady and consistent; must, in short, be based on a rule which everybody understands, and on the existence and enforcement of which traders and manufacturers can count one, two, or three years ahead. At present nothing is fixed. Nobody knows what the duty on any article will be three months hence any more than if he lived in Turkey or Persia. This year one "interest" will tell Congress that fifty per cent. duty will satisfy it, and fifty per cent. is accordingly clapped on. Next year the same interest will besiege the Committee of Ways and Means for an increase of twenty-five per cent., and will get it, though the whole industry of the country be thrown into confusion by the change. To make the matter worse, too, no enquiry is ever made into the reasons which prevent an "interest" from being able to compete with foreigners. It may be bad management, incompetency, careless workmanship, want of energy—defects which additional protection will only increase, for which the public will have to suffer, but the story of the lobby is always taken as a complete explanation of the matter, and on goes the duty.

To deal with applications of this nature arbitrarily, as Congress does, and secretly as Congress does, is probably one of the most fertile sources of corruption ever opened in any age or country. If protection of native industry be resolved upon as a means of qualifying the home producer to compete with the foreigner at some future period, either the period at which protection shall cease should be carefully fixed, or else the amount of protection should not be so great as to be absolutely prohibitory. Even American human nature, energetic as it is, cannot bear a complete release from the ordinary stimuli to exertion. There ought to be some point at which the indolence, or wastefulness, or recklessness, or negligence of the home producer would release the public from their dependence on him. But, as long as he has only to go to Congress to ask for an increase of duty, without other explanation of his difficulties than he chooses to give, there is practically no limit whatever to the extent to which he may impose on his countrymen, except that created by the competition of his neighbors. In many branches of business, however, this amounts to nothing. In a country in which capital is so scarce as this, combinations are not difficult, and monopolies will abound. In short, under any system of protection which can lay the slightest claim to statesmanship in conception or execution, the amount of duty required for the support of each branch of industry should be the subject of public investigation by a competent commission, and the evidence and arguments by which its application for an increase are supported should be in everybody's hands, not just as the bill is being hurried through, but time enough for the public to think about them and talk over them. The plan at present followed not only inflicts great loss and inconvenience on traders, but is sure to cause before very long a violent reaction against the whole protective system. Its advocates at present owe much of their success to the absorption of the public mind in the reconstruction problem and the association of high duties with the maintenance of the public credit. If they are wise, they will content themselves with moderate triumphs. The good they promise is distant, and the inconvenience by which they propose to purchase it is immediate and pressing; and they have to deal with a public which will not consent, except temporarily and under strong pressure, to postpone its enjoyment of any of the good things of the world. The high prices of everything are already pressing on all but the rich with great severity Scarce as labor is, wages are, estimated as they should always be esti mated, not in money, but in the necessaries of life, exceedingly low and yet, in the teeth of this, an enormous increase of taxation is pro posed on iron and steel—the articles on the cheapness and abundance of which every branch of the national industry, from the hoeing of a potato to the transportation of the national products, depends for success. Surely an attempt, at such a juncture, to lay a heavier burden on an article of this sort is a signal illustration of the madness as well as of "the falsehood of extremes."

POLITICAL VALUE OF THE SOUTHERN UNIONISTS.

A LETTER from the New York *Times's* correspondent in Richmond, which appeared in that journal on Monday last, contains a somewhat dismal but instructive account of the state of mind of the Virginia

Unionists. The picture may be somewhat overdrawn, but that it is in its main features accurate, everything we have heard or know of these gentlemen justifies us in believing. He describes them as utterly cowed and disheartened, and as disposed, in all political matters, to sit down and fold their hands and wait for the intervention of Providence or of the North to give them the ascendency, and as fully prepared to accept whatever dispensation their secessionist neighbors may see fit to prepare for them. In fact, it is probably entirely due to the presence of our troops in Virginia, as in nearly every other State in the South, that there is even the shadow of a Unionist or a trace of Union feeling to be detected within her borders. Whenever the President comes to the conclusion that the *habeas corpus* has been restored and recalls the Union garrisons, we may feel pretty sure that people who disapprove of secession will have to hold their tongues as diligently now as during the war. We shall probably never see in Congress more than half a dozen representatives from Southern States who will venture to profess adhesion to this Government on principle and not through necessity, or who will avow their faith in Northern ideas and Northern theories of society. There have, in fact, been few greater disappointments in history than that which the "Union men" of the South have inflicted on the North. We witnessed the commencement of secession in the full belief that the Union men would arrest its progress before it culminated in an armed collision, and when the war was actually raging a great many people expected every morning to hear of a grand outburst of Union feeling before which the Confederacy would succumb, and its armies dissolve like the mists before the sun. But the painful truth is, that we never got any help from that quarter worth speaking of. We raised a considerable force amongst the Unionists of Kentucky and Tennessee, but it was a force whose existence exercised no appreciable influence on the fortunes of the war. In all other States the loyalists furnished a handful of victims, whose sufferings and devotion were touching enough, but they furnished very few soldiers, or statesmen, or even witnesses to the goodness of their cause. In most cases the strongest evidence of devotion to the Government which Unionists afforded was lukewarmness towards the Confederacy, and a person who did not hurrah over Federal defeats, or assist in hunting down Federal fugitives, came at last to regard himself as a sort of martyr, and in truth, in a vast number of cases, a martyr he became, and was shot, hanged, or robbed.

It is not, however, this kind of Unionist that is ever going to regenerate the South, or to exercise any influence worth considering on its politics or society. Many amongst us are disposed to believe that the Southern Unionists might have had more energy and activity infused into their composition by a more liberal distribution amongst them of post-offices and assistant-assessorships and collectorships.

Patronage is, no doubt, an excellent means of rewarding patriotism, but it cannot stimulate it, and we doubt, for our own part, whether, if every Unionist in the South were receiving fifteen hundred dollars a year, two suits of clothes, and fuel from the United States Government, we should be one whit nearer seeing a large and powerful party rising up amongst native Southerners, loyal to our flag, and permeated by our ideas, than we are now. We shall not have any considerable number of such men in Congress, no matter what tests or restrictions we impose, and the whole plan of reconstruction adopted by Congress must, in fact, be regarded as rather a means of preventing mischief than securing devotion. So it is confessed to be by everybody.

Mr. Johnson's "policy" is based on the theory that, slavery being abolished, all real difference of sentiment or opinion between the two sections will at once disappear. At the close of the war he held that the rooting out of all rich landowners owning over twenty thousand dollars was also necessary to bring about this result; but, on seeing some of these gentlemen, he changed his mind, and held that the only indispensable conditions of unity of feeling, as well as of public unity, were the extinction of slavery and the repudiation of the rebel debt. But it was not the mere fact of slavery that kept the North and South apart; it was the theory of society and government on which slavery was based. It was the opinion held by all Southerners that the laboring class must be a subject class, whether slaves or serfs, or only villains or hinds, and that opinion ninety-nine out of every hundred Southern men still hold. They would hold it if their laboring class were white instead of black; but they hold it with ten-fold greater tenacity because it is black. It is this, and not either the war or the State-rights doctrine, or Calhoun's teaching, or the raving of the Pollards or the Wises, that divides us, and it will continue to divide us as long as it lasts. When our senators and representatives meet Southern men in Congress next winter, if they do meet them, they will meet men as widely separated from them on all the great questions which lie at the base of political society as the Earl of Derby or the Duke of Buccleuch, and yet neither of these noblemen owns or has ever owned a slave; but what influence could we bring to bear on him that would make him a devoted admirer of equality and universal suffrage?

The change in Southern feeling will come not from the Unionists nor from anything we are likely to say or do here, but from the material and social progress of the country, and until that progress has done its work, our business is to see that the authority of the Government and of the laws is upheld, that disaffected persons are not armed with powers or privileges which may be used to work mischief, and that the equality of man is recognized in legislation, until such time as it is recognized in Southern manners, and literature, and political economy. Perhaps nothing would do more to promote freedom of speech at the South than the growth of commerce and manufactures. Large, busy communities, with varied and complicated interests, get often indifferent to their neighbors' opinions, or tolerant of the expression of them, and at all events cannot for their own sake permit anything which interferes with the general comfort or safety. Vigilance committees, committees of citizens, and all the rest of the machinery by which the South enforced uniformity of sentiment on social questions, are not possible in any but a thinly settled and semi-barbarous country. As long as the Southern cities are antiquated villages, or rude hamlets, and the country is a wilderness dotted here and there with plantations, it will be difficult for the world outside to exercise any strong moral influence on the people, and difficult for "Union men" either to hold their own or make themselves felt in politics. If Charleston or Norfolk, or both, can be converted into great commercial entrepots, they will be veritable centres of light and freedom. But great commercial entrepots they can never become until the laboring class enjoys complete protection. Commercial prosperity has in every country which enjoyed it been preceded by the triumph of law.

"THE DETESTED ARRANGEMENTS OF 1815."

It is nothing strange that Bonaparte should detest the arrangements of the treaties of Vienna in 1814, and of Paris in 1815, nor that France should sympathize in the feeling. For those treaties were made expressly to humble France and to crush the Bonaparte family, so that neither should have any power of mischief again. And it hardly needed the announcement of the speech at Auxerre to make known these facts, inhering, as they do, in the very nature of things and of man. But one would think that both the Emperor and France might derive some little consolation from the consideration of how very little of those arrangements has survived to the present time. The first and main object of those arrangements was to bury Bonapartism deeper than ever plummet sounded, so that it could never come to the surface again to plague the world. The Congress of Vienna, in the panic-terror with which they were stricken by the news of the return from Elba, put Napoleon, to whom they had all, with the exception of England, crooked the pregnant hinges of the knee as the lord of France and the arbiter of Europe, under the ban of the assembled empires and kingdoms, and, virtually, if there be force in words, made his assassination a virtue. Well, they seemed to have effected thus much. He was safely caged in St. Helena, and finally put to rest under the willows of Longwood, and Europe breathed freer at the news. For about thirty years after the battle of Waterloo the soil of France was pressed by the foot of no Bonaparte, excepting by the present Emperor, in the ridiculous attempts of Strasburg and Boulogne. But how does it stand now? For nearly twenty years the present Bonaparte has been the chief magistrate of France, and for fourteen its absolute sovereign. He has succeeded the elder and younger Bourbons in the Tuileries, and his cousin the Prince Napoleon

in the Palais Royal. He is the arbiter of Europe more undeniably than the founder of the family. Every power in Europe, every signatary of the treaties of Vienna and of Paris, has recognized him as the lawful Emperor of the French. Even England, who never acknowledged the imperial title of the first Napoleon during his lifetime, has long since recognized it, and that of the King of Rome, by saluting the present monarch as Napoleon III. And the granddaughter of George III. has buckled the garter below the knee of the nephew of the Corsican usurper, and imprinted the kiss of royal sisterhood on his cheek. It would seem as if this part of the detested treaties had been pretty effectually torn out and trampled under foot.

The next purpose of these arrangements was to chastise France for the mischief she had done and the terror she had excited for the last twenty years—to disgrace as well as to cripple her. So she had to pass under the Caudine Forks of the treaty of Paris, a treaty to which even Louis XVIII. consented with bitter tears of mortification. She was stripped of all the spoils and the trophies of her twenty years of victory; every shred of territory which she had added to her domains by conquest was wrested from her. She was mulcted in the sum of 1,500,000,000 francs, or about $300,000,000, to pay her conquerors for beating her; and, in addition, to maintain 150,000 foreign soldiers, under the command of the Duke of Wellington, for three years, to make her keep the peace. She was not only on her knees, but, as Lord Chatham said he meant to bring her fifty years before, upon her face, and it seemed as if she had fallen never to rise again. But there is great vitality in nations, and especially in those that have been through such a process of renovation as the Revolution of 1789. She revived rapidly even under the repressive policy of Villèle and the party of the priests. And in a dozen years from the withdrawal of the army of occupation, she had sent the elder branch of the Bourbons packing, and set up "the best of republics," the Duke of Orleans, in its stead. All the signataries of the treaties of 1814–15 were aghast at this high-handed violation of the principles of those instruments, but they could do and attempted nothing to vindicate them. They saw that the French were a people like the Romans, "gens quæ victa quiescere nesciat," and they recognized the Citizen King in the very teeth of the arrangements of 1815—with an ill grace, indeed, but they did it. Another of these arrangements was the creation of the kingdom of the Netherlands to absorb Belgium, the first point of the revolutionary conquests, and Holland, which had been long an appanage of the brother of Napoleon and the putative father of the present Emperor. As a corollary of the revolution of July, 1830, this arrangement was broken up, Belgium erected into a separate kingdom, and the daughter of Louis Philippe seated on its throne as the consort of Leopold I. England consented to this disarrangement of the treaties and permitted her son-in-law to accept the crown of Belgium. And the other signataries had nothing for it but to fume inwardly, snub outwardly, and submit to what they could not help.

The general object of the arrangements of 1815, of which these of which we have spoken were incidental details, was the rehabilitation of legitimacy on the old footing all over Europe, and the wiping away of every trace of the disturbing hand of France. The English Tories rejoiced over this abundant reward for the long labors of Pitt and Liverpool, and counted the spirit of liberalism as laid for ever. Ferdinand, the beloved, was heartily hated in Spain. The House of Braganza was re-established in its rights to Portugal. The Bourbon and Austrian kinglings and princelets were established in Naples and the Italian duchies, Savoy was restored to Sardinia, and everything seemed fixed on the old foundations. How do they all stand now? The law of legitimate succession has been set at defiance, successfully, after civil war, both in Spain and Portugal, and the crown of the first secured to a supposed daughter of Ferdinand, and that of Portugal derived through a daughter from Pedro IV., and this with legitimate pretenders yet alive. The treaties of 1814–15 never meant that legitimate claims should be treated thus. And what has become of all the final settlements of Italy? Naples, Tuscany, Modena, Parma, and all the rest of them united under the sceptre of the King of Sardinia, with Lombardy thrown in, and Savoy passed over to France and once again a French department, for her part in this re-arrangement of the treaties of 1815, while the Pope has his tiara held on his head by the bayonets of the putative nephew of Napoleon, thus recognized as the Eldest Son of the Church! Surely, there is not much left of the detested treaties in this direction. And now Venetia is threatened by Garibaldi with the virtual consent and assistance of the son of Frederick William III., of Prussia, and Queen Louisa. And this monarch, whose father received a slice of Saxony by those treaties, is now hungering for the whole, and hoping to devour up the whole Germanic Confederation, which was their creature. He already has seized Holstein, one of its states, and declared that its exercise of the unquestionably constitutional right of putting its troops on a war footing shall be regarded as an act of hostility. As far as the treaties of 1814–15 are concerned, it would seem as if Bonaparte had nothing to do but to stand still and see them crumble to pieces before his eyes. If Prussia can have her way, and is successful in the war now impending, she will dispose of what is left of them in a brief time. And she could well afford to let him help himself to Sardinia as the price of letting Italy take possession of Venetia.

THE WAR AND THE IMPERIAL MANIFESTO.

The war is begun. Yesterday the Prussians entered Hanover and Saxony. The Bund has voted the mobilization of the Federal armies, and Prussia has openly seceded from the Confederation. A few days before, the French Emperor made a manifesto which makes his intentions known to the world. To Austria he says: "You must give up Venetia;" to the German secondary states, "The organization of your Confederation is bad and ought to be remodelled;" to Europe, "If in any way the equilibrium of Europe is altered, France will seize neighboring France and take her part of the spoils."

At the same time he declares for neutrality. But nobody in Europe will give the name of neutrality to a policy which has prepared all the elements of the present conflict, which has written the articles of the treaty between Bismark and Prussia, and which draws beforehand all the articles of the treaties which ought to put an end to the war.

If France had taken no part in the present complications; if she found herself placed in face of a great war in Germany, and of the dissolution of the German Confederation, she would certainly have every right to warn the combatants that she would not see the whole of Germany conquered by one great military power without taking precautions against such an aggrandizement. If Prussia even now, with her ill-defined geographical frontiers and her scattered provinces, is strong enough to bully all Germany, to crush all liberal aspirations, to defy the Bund; if she can successfully enter on her career of military propagandism, ought not France to be even more suspicious of her after she has annexed new provinces and consolidated her empire? On this question there will be found no difference of opinion in France. We may be Republicans, Orleanists, or Bonapartists; we are all French. We have seen France invaded twice, in 1814 and 1815; Prussia in 1815 was placed on our frontier as a perpetual menace. We would have much preferred to see in the Rhenish provinces a small kingdom—a sort of German Belgium. As things are now, there is not a power in Europe whose aggrandizement is more dangerous to us than that of Prussia. It is quite natural that the Emperor should say to Europe that he cannot see with indifference great changes in the constitution of Germany. What is extraordinary and, in my opinion, wrong, is that he should favor such changes and play into the hands of Bismark.

The manifesto of the Emperor justifies the powers who have not been anxious to go to the conference, for it is an implicit avowal. It is evident that the "arbiter of Europe," as Mr. Kinglake's great diplomatic hero, Lord Stratford of Redcliffe, called, a few days ago, the Emperor of France, is the principal actor in the great drama which is beginning. Between two maps of Gaul for his great "History of Julius Cæsar," he has found time for a map of Europe in 1867.

To those who reproach Italy with rushing wildly into war and compromising her late conquests, Italy can answer, "I do not drag France into war, and it is France which obliges me to attack Austria; I am a satellite, not a planet." To those who reproach Bismark for having suppressed all liberties in Prussia, for having dragooned his parliament and levied taxes without its consent, Bismark can answer, "I have been

obliged to do all this to get ready for the war, and to show myself worthy of the confidence of Napoleon III."

Never has it been more manfest that the destinies of Europe hang now on one single, solitary will, which can be no longer controlled either by kings or by nations. This will has now been made manifest to the French Parliament by the organ of M. Rouher, the Government's mouth-piece. As we are to pay for the war, to give our blood and treasure, we have been put in its confidence; but how was this favor conferred on us? Simply by reading in the Parliament a letter addressed by the Emperor to *his* minister of foreign affairs. No discussion was allowed. Jules Favre, who wished to offer a few remarks, was not permitted to utter a single sentence.

And while the Parliament, which we all know to be favorable to peace, trembles at the mere expression of the Imperial will, what shall we Liberals do and say? We feel indeed that we are the innocent cause of the war, as the negro was in the American war. The attention of France must be thrown across the frontier; we shall be forgotten and left to our painful pre-occupations. Painful as our feelings may be, we shall never allow partisanship to destroy in us patriotism. We shall give all our sympathies to Italy, though she may be the ally of Bismark; we cannot find fault with her if she does not respect the treaty of Zürich any more than Austria respected last year in Denmark the treaty of London. We believe that Italy has a natural right to Venetia. Our sympathies will follow her arms; in Germany our sympathies will be left neutral. We do not see clearly on which side the interests of liberty will be found. We see two tyrannical and military despotisms face to face, and between the two a number of princes whose only pre-occupation is to preserve their small domains. We should prefer to see in Germany a confederation of states after the model of the United States rather than one great centralized, bureaucratic, and military kingdom; and if Germany is Prussianized from end to end, we anticipate a great war between her and France. It is doubtful for us if any advantage which we may gain in the end could be placed in balance with the terrible misfortunes which the war will bring on Europe and on our country, and with the injuries which liberty will receive.

We are neither Jeremiahs nor Cassandras; we belong to our time and to our country; but we place our time and our country above any man, and we feel the most painful anxiety in feeling ourselves thrown like dust in the adventurous orbit of a proud ambition which is ready to destroy everything in order to save itself.

A Frenchman.

June 16, 1866.

OBITUARY ABSURDITIES.

The doggerel of the tomb-stones has always afforded a curious food for laughter. The droll speeches of the dying, the last words of the ruling passion, have always been a feature of the jest-books. A pretty compilation might be made of funny funeral anecdotes. Likeness in things dissimilar and an audacious mixture of incongruous affairs make the salt of wit compound for blasphemy even with the pious, extenuate impropriety with the decent, give a savor to coarseness, relieve us from the tension of a wearisome earnestness, and force a fleeting smile upon the saddest of faces. Horace, if he had thought of it, might have affirmed the pleasure of laughing *ex loco* as well as *in loco*. We like to be agreeably irritated and find a fillip in the stroke of an untimely jest. To the least touch of nature our hearts respond. The polite father who apologized at the funeral of his child for bringing so small a body before a company so unexpectedly large, as if he would have provided a coffin six feet long, and not such a sesquipedalian one, had he foreseen the fulness of the house, was a true gentleman in his grief, and only morbidly nervous lest he should fail in some pious point of sepulture. The comic epitaphs, we may be sure, were soberly written, and an honest grief prompted the rudest inscription. When a babe only a span long is dead, the most prosaic are tempted into sending a versified advertisement of the death to the newspapers; and the first mother who placed flowers upon the tomb of her child was an unconscious poet, although these floral offerings have now become hackneyed and cheap. It is the sorrow of a great sorrow that it is so inarticulate and helpless and speechless, and often tearless; in our bereavement we strive, even in some pitiful way, to give words to our agony.

But it is not of these genuine and domestic demonstrations of regret that we propose particularly to speak. We have no jibes for real mourners; but those who are strictly professional and formal in their lugubrious calling, and manage the ceremonies as volunteers or for hire, should either feel assured of their competency for the service, or should keep a prudent silence. It was only the other day, in Boston, that a venerable gentleman, well known in the medical world, was buried, as full of honors as of years. The clergyman who officiated upon the occasion drew a lively picture of the doctor's public and private life; he portrayed his friend's strong religious nature, and went on to say: "With him it was Christ and his kingdom first. He believed in vegetable diet, and lived thirty years without tasting meat. *He believed in calomel and used it through life.* And now he has gone to be at rest in the Lord." Is not this an extraordinary admixture? When a man has ceased to eat altogether of earthly food, one does not readily see why his hostility to beef and his partiality for potatoes should be proclaimed over his coffin; nor is there any occult connection, that we are aware of, between salvation and salivation. In a church at least, and in a church this funeral oration was pronounced, the controversies of the bolus and the pellet, of heroic dosers and infinitesimal practitioners, of vegetarians and of sarcophagicians, might be permitted to subside. To have told the weeping assemblage that the deceased was five feet high, weighed one hundred and fifty pounds, and

> "Wore not rights and lefts for shoes,
> But changed his every day,"

would hardly have been more untimely than this recital of his dietetic and medical faith.

We have ceased to look for any great oratorical displays in the House of Representatives, nor do we, indeed, think it a proper arena for frequent exhibitions of that character. Speech-making for the sake of making a speech should be intolerable in a body devoted to the business of legislation; because it is well enough known that speeches change no votes and neither affect nor expedite results. Ambitious attempts in that direction are usually either for the purpose of personal display in Washington or of personal aggrandizement at home. The death of a member is one of the few occasions upon which a somewhat elevated style of address may be allowed, because it is natural as the expression of personal friendship and regret, and the utterance of sentiment, however respectable, is not to be restricted by the technical formalities of practical discussion. But, if this license is to be permitted, the credit of the country and common sense require that it should be kept within the strictest limits of good taste. Death is a stern monitor, and the death of a public man is especially suggestive of the emptiness of all which we call honor, and the frivolity of mere display. We think that the late Mr. James Humphrey deserved to have something better said of him than this: "Shortly after midnight he raised himself upon his pillow, repeating the words, 'I faint! I faint!' and, without a struggle or a groan, *the gentlemanly spirit of James Humphrey was wafted into the presence of his Maker.*" Without any coarseness of language to offend us, there is to our minds something painfully coarse in speaking of a departed spirit as "gentlemanly." We need hardly point out to the careful reader that "gentlemanly spirit" is an etymological solecism. A "man" is not a "spirit," and a "spirit" cannot be a "man," in the sense in which the word is here used. But this is a trifle. It is the moral solecism which particularly shocks and offends us. While the title of "gentleman" is certainly expressive of the most noble and praiseworthy qualities of character, it is reasonably to be hoped that all who are entitled to enter upon the eternal joys of paradise are also entitled to the appellation. No "spirit," we believe, is more "gentlemanly" than another. How shocking it would be to our ears to hear the assemblage of the saints spoken of, even by the vulgarest of Hard-shell Baptist preachers, as a company of "ladies and gentlemen!" These are words which have a conventional meaning, and we habitually use them to express something very different from the perfect purification and the complete glorification of the saints. The phrase "gentlemanly angel" would be not merely a contradiction in terms, but it would imply an extension to the next world of the frivolous distinctions of this, and an eternal materiality like that which disgusts us in the revelations of "seers" and of "mediums."

We offer these strictures chiefly in behalf of the violated laws of good taste. The subject, we know, is capable of a higher treatment; but this, perhaps, would not be strictly within our province. Death is certainly not to be regarded with a hopeless and cowardly dread, but still less is that tremendous change to be classed with the common and familiar incidents of our life; and he who cannot attain some degree of extraordinary solemnity in its contemplation, and a reasonable propriety of speech in commemorating the departed, for a thousand reasons had better remain silent.

CAPRI AND CAPRIOTES.

I.

I HAVE no doubt

"Calm Capri waits,"

where we left it in the Gulf of Salerno, for any traveller who may choose to pay it a visit; but at the time we were there, we felt that it was on exhibition for that day only, and would, when we departed, disappear in its sapphire sea, and be no more; just as Niagara ceases to play as soon as your back is turned, and Venice goes out like a pyrotechnic display, and all marvellously grand and lovely things make haste to prove their impermanence.

We delayed some days in Naples in hopes of fine weather, and at last chose a morning that was warm and cloudy at nine o'clock, and burst into frequent passions of rain before we reached Sorrento at noon. The first half of the journey was made by rail, and brought us to Castellamare, whence we took carriage for Sorrento, and oranges, and rapture—winding along the steep shore of the sea, and under the brows of wooded hills that rose high above us into the misty weather, and caught here and there the sunshine on their tops. In that heavenly climate no day can long be out of humor, and at Sorrento we found ours very pleasant, and rode delightedly through the devious streets, looking up to the terraced orange-groves on one hand and down to the terraced orange-groves on the other, until at a certain turning of the way we encountered Antonino Occhio d'Argento, whom fate had appointed to be our boatman to Capri. We had never heard of Antonino before, and indeed had intended to take a boat from one of the hotels; but when this corsair offered us his services, there was that guile in his handsome face, that cunning in his dark eyes, that heart could not resist, and we halted our carriage and took him at once. He kept his boat in one of those caverns which honeycomb the cliff under Sorrento, and afford a natural and admirable shelter for such small craft as may be dragged up out of reach of the waves, and here I bargained with him before finally agreeing to go with him to Capri. In Italy it is customary for a public carrier when engaged to give his employer as a pledge the sum agreed upon for the service, which is returned, with the amount due him, at the end, if the service has been satisfactory; and I demanded of Antonino this *caparra*, as it is called. "What *caparra?*" said he, lifting the lid of his wicked eye with his forefinger; "this is the best *caparra*," meaning a face as honest and trustworthy as the devil's. The stroke confirmed my subjection to Antonino, and I took his boat without further parley, declining even to feel the muscle of his boatmen's arms, which he kindly exposed to my touch in evidence that they were strong enough to row us swiftly to Capri. The men were but two in number, but they tossed the boat lightly into the surf, and then lifted me aboard, and rowed to the little pier from which the ladies and T. got in.

The sun shone, the water danced and sparkled, and presently we raised our sail, and took the gale that blew for Capri—an oblong height rising ten miles beyond out of the heart of the azure gulf. On the way thither there was little interest but that of natural beauty in the bold, picturesque coast we skirted for some distance; though on one mighty rock there were the ruins of a seaward looking Temple of Hercules, with arches of the unmistakable Roman masonry, below which the receding waves rushed and poured over a jetting ledge in a thunderous cataract.

Antonino did his best to entertain us, and lectured us unceasingly upon his virtue and his wisdom, dwelling greatly on the propriety and good policy of always speaking the truth. This spectacle of veracity became intolerable after awhile, and I was goaded to say: "Oh then, if you never tell lies, you expect to go to Paradise." "Not at all," answered Antonino compassionately, "for I have sinned much. But the lie does n't go ahead (*non va avanti*)," added this Machiavelli of boatmen; but I think he was mistaken, for he deceived us with perfect ease and admirable success. All along, he had pretended that we could see Capri, visit the Blue Grotto, and return that day; but as we drew near the island, painful doubts began to trouble him, and he feared the sea would be too rough for the Grotto part of the affair. "But there will be an old man," he said, with a subtle air of prophecy, "waiting for us on the beach. This old man is one of the Government guides to the Grotto, and he will say whether it is to be seen to-day." And certainly there was the old man on the beach—a short patriarch, with his baldness covered by a kind of bloated woollen sack, a blear-eyed sage, and bare-legged. He waded through the surf toward the boat, and (at a secret signal from Antonino, as I shall always believe) when we asked him whether the Grotto was to be seen, he paused knee-deep in the water, put on a face of tender solemnity, threw back his head a little, brought his hand to his cheek, expanded it, and said, "No; to-day, no! To-morrow, yes!" Antonino leaped joyously ashore, and delivered us over to the old man, to be guided to the Hotel di Londra, while he drew his boat upon the land. He had reason to be contented, for this artifice of the patriarch of Capri relieved him from the necessity of verifying to me the existence of an officer of extraordinary powers in the nature of a consul, who, he said, would not permit boats to leave Capri for the mainland after five o'clock in the evening.

When it was decided that we should remain on the island till the morrow, we found so much time on our hands, after bargaining for our lodging at the Hotel di Londra, that we resolved to ascend the mountain to the ruins of the palaces of Tiberius, and to this end we contracted for the services of certain of the muletresses that had gathered about the iron gate, clamorously offering their beasts. The muletresses chosen were a matron of mature years, and of a portly habit of body; her daughter, a mere child, and her niece, a very pretty girl of eighteen, with a voice soft and sweet as a bird's. They placed the ladies, one on each mule, and then, the mother and daughter devoting themselves to the hind-quarters of the foremost animal, the lovely niece brought up the rear of the second beast, while the patriarch went before, and T. and I trudged behind. So the cavalcade ascended; first, from the terrace of the hotel overlooking the bit of shipping village on the beach, and next from the town of Capri, clinging to the hillsides, midway between sea and sky, until at last it reached the heights on which the ruins stood. Our way was through narrow lanes, bordered by garden walls; then through narrow streets bordered by dirty houses; and then again by gardens, but now of a better sort than the first, and belonging to handsome villas.

On the road our pretty muletress gossiped cheerfully, and our patriarch gloomily, and between the two we accumulated a store of information concerning the present inhabitants of Capri, which, I am sorry to say, has now for the most part failed me. I remember that they said most of the land-owners at Capri were Neapolitans, and that these villas were their country-houses; but they pointed out one of the stateliest of the edifices as belonging to a certain English physician who had come to visit Capri for a few days, and had now been living on the island twenty years, having married (said the muletress) the prettiest and poorest girl in the town. From this romance—something like which the muletress seemed to think might well happen concerning herself—we passed lightly to speak of kindred things, the muletress responding gayly between the blows she bestowed upon her beast. The accent of these Capriotes has something of German harshness and heaviness: they say *non bosso* instead of *non posso*, and *monto* instead of *mondo*, and interchange the *t* and *d* a good deal; and they use for father the Latin *pater*, instead of *padre*. But this girl's voice, as I said, was very musical, and the island's accent was sweet upon her tongue.

I.—What is your name?

She.—Caterina, little sir (*signorin*).

I.—And how old are you, Caterina?

She.—Eighteen, little sir.

I.—Have you a lover?

She feigns not to understand; but the patriarch, who has dropped behind to listen to our discourse, explains: "He asks if you are in love."

She.—Ah, no! little sir, not yet.

I.—No? A little late, it seems to me. I guess there must be some handsome youngster who pleases you—no?

She.—Ah, no! one must work, one cannot think of marrying. We are four sisters, and we have only the *buonamano* from hiring these mules, and we must spin and cook.

The Patriarch.—Don't believe her; she has two lovers.

She.—Ah, no! It is n't true. He tells a fib, ha!

But, nevertheless, she seemed to love to be accused of lovers—such is the guile of the female heart in Capri—and laughed over the patriarch's wickedness. She confided that she ate maccaroni once a day, and she talked constantly of eating it, just as the Northern Italians always talk of *polenta*. She was a true daughter of the isle, and had never left it but once in her life, when she went to Naples. "Naples was beautiful, yes; but one always loves one's own country the best." She was very attentive and good, but at the end was rapacious of more and more *buonamano*. "Have patience with her, sir," said the blameless Antonino, who witnessed her greediness; "they do not understand certain matters here, poor little things!"

As for the patriarch, he was full of learning relative to himself and to Capri; and told me with much elaboration that the islanders lived chiefly by fishing, and gained something also by their vineyards. But they were greatly oppressed by taxes, and the strict enforcement of the conscriptions, and they had little love for the Italian Government, and wished the Bourbons back again. The Piedmontese, indeed, misgoverned them horribly. There was the Blue Grotto, for example: formerly travellers paid the guides five, six, ten francs for viewing it; but now the Piedmontese had made a

tariff, and the poor guides could only exact a franc from each person. Things were in a ruinous condition.

By this we had arrived at a little inn on the top of the mountain, very near the ruins of the palaces. "Here," said the patriarch "it is customary for strangers to drink a bottle of the wine of Tiberius." We obediently entered the hostelry, and the landlord—a white-toothed, brown-faced, good-humored peasant—gallantly ran forward and presented the ladies with bouquets of roses. We thought it a pretty and graceful act, but found later that it was to be paid for, like all pretty and graceful things in Italy; for when we came to settle for the wine, and the landlord wanted more than justice, he urged that he had presented the ladies with flowers, yet he equally gave me his benediction when I refused to pay his politeness.

"Now here," again said the patriarch in a solemn whisper, "you can see the Tarantella danced for two francs; whereas down at your inn, if you hire the dancers through your landlord, it will cost you five or six francs." The difference was tempting, and decided us in favor of an immediate Tarantella. The muletresses left their beasts to browse about the door of the inn and came into the little public room, where were already the wife and sister of the landlord, and took their places *vis-à-vis*, while the landlord seized his tambourine and beat from it a wild and lively measure. The women were barefooted and hoopless, and they gave us the Tarantella with all the beauty of natural movement and free floating drapery, and with all that splendid grace of pose which animates the antique statues and pictures of dancers. They swayed themselves in time with the music; then, filled with its passionate impulse, advanced and retreated and whirled away; snapping their fingers above their heads and looking over their shoulders with a gay and laughing challenge to each other, they drifted through the ever-repeated figures of flight and wooing, and wove for us pictures of delight that remained upon the brain like the effect of long-pondered vivid colors, and still return to illumine and complete any representation of that indescribable dance. Heaven knows what peril there might have been in the beauty and grace of the pretty muletress but for the spectacle of her fat aunt, who, I must confess, could only burlesque some of her niece's airiest movements, and whose hard-bought buoyancy was at once pathetic and laughable. She earned her share of the spoils certainly, and she seemed glad when the dance was over, and went contentedly back to her mule. The patriarch had early retired from the scene as from a vanity with which he was too familiar for enjoyment, and I found him, when the Tarantella was done, leaning on the curb of the precipitous rock immediately behind the inn, over which the Capriotes say Tiberius used to cast the victims of his pleasures after he was sated with them. These have taken their place in the insular imagination as Christian martyrs, though it is probable that the poor souls were anything else but Nazarenes. It took a stone thrown from the brink of the rock twenty seconds to send back a response from the water below, and the depth was too dizzying to look into. So we looked instead toward Amalfi, across the Gulf of Salerno, and toward Naples, across her bay. On every hand the sea was flushed with sunset, and an unspeakable calm dwelt upon it, while the heights rising from it softened and softened in the distance, and withdrew themselves into dreams of ghastly solitude and phantom city. His late majesty the Emperor Tiberius is well known to have been a man of sentiment, and he may often have sought this spot to enjoy the evening hour. It was convenient to his palace, and he could here give a fillip to his jaded sensibilities by popping a boon companion over the cliff, and thus enjoy the fine poetic contrast which his perturbed and horrible spirit afforded to that scene of innocence and peace. Later he may have come hither also, when lust failed; when all the lewd plays and devices of his fancy palled upon his senses; when sin had grown insipid and even murder ceased to amuse, and his majesty uttered his despair to the Senate in that terrible letter: "What to write to you, or how to write, I know not; and what not to write at this time, may all the gods and goddesses torment me more than I daily feel that I suffer if I do know."

The poor patriarch was also a rascal in his small way, and he presently turned to me with a countenance full of cowardly trouble and of base remorse. "I pray you, little sir, not to tell the landlord below there that you you have seen the Tarantella danced here; for he has daughters and friends to dance it for strangers, and gets a deal of money by it. So, if he asks you to see it, do me the pleasure to say, lest he should take on (*pigliarsi*) with me about it: 'Thanks, but we saw the Tarantella at Pompeii!'" It was the last place in Italy where we were likely to have seen the Tarantella; but these simple people are improvident in lying, as in everything else. The patriarch had a curious spice of malice in him, which prompted him to speak evil of all, and to as many as he dared. After we had inspected the ruins of the emperor's villa, a clownish imbecile of a woman, professing to be the wife of the peasant who had made the excavations, came forth out of a cleft in the rock and received tribute of us—why, I do not know. The patriarch abetted the extortion, but Parthianly remarked, as we turned away, "Her husband ought to be here; but this is a *festa*, and he is drinking and gaming in the village," while the woman protested that he was sick at home. There was also a hermit living in great publicity among the ruins, and the patriarch did not spare him a sneering comment. He had even a bad word for Tiberius, and reproached the emperor for throwing people over the cliff, though I think it a sport in which he would himself have liked to join. The only human creatures with whom he seemed to be in sympathy were the brigands of the mainland, of whom he spoke poetically as exiles and fugitives.

As for the palace of Tiberius, which we had come so far and so toilsomely to see, it must be confessed there was very little left of it. When that well-meaning but mistaken prince died, a popular tumult demolished his pleasure-houses at Capri, and left only those fragments of the beautiful brick masonry which yet remain, clinging indestructible to the rocks, and strewed the ground with rubbish. The recent excavations have discovered nothing beside the uninteresting foundations of the building, except a subterranean avenue leading from one part of the palace to another; this is walled with delicate brickwork, and exquisitely paved with white marble mosaic; and this was all that was left of the splendor of the wicked emperor. Nature, the all-forgetting, all-forgiving, that takes the red battle-field into her arms and hides it with blossom and harvest, could not remember his iniquity, greater than the multitudinous murder of war. The sea which the despot's lust and fear had made so lonely slept with the white sails of boats secure upon its breast; the little bays and inlets, the rocky clefts and woody dells, had forgotten their desecration; and the gathering twilight, the sweetness of the garden-bordered pathway, and the serenity of the lonely landscape, helped us to doubt history. We slowly returned to the inn by the road we had ascended, noting again the mansion of the surprising Englishman who had come to Capri for three months and had remained thirty years; passed through the darkness of the village, dropped here and there with the vivid red of a lamp; and so reached the inn at last, where we found the landlord ready to have the Tarantella danced for us. We framed a discreeter fiction than that prepared for us by the patriarch, and went in to dinner, where there were two Danish gentlemen in dispute with as many rogues of boatmen who, having contracted to take them back that night to Naples, were now trying to fly their bargain, and remain at Capri till the morrow. The Danes beat them, however, and then sat down to dinner, and to long stories of the imposture and villany of the Italians. One of them chiefly bewailed himself that the day before, having unwisely eaten a dozen oysters without agreeing first with the oysterman upon the price, he had been obliged to pay this scamp's extortionate demand to the full, since he was unable to restore him his property. We thought that something like this might have happened to an imprudent man in any country, but we did not the less join him in abusing the Italians—the purpose for which foreigners chiefly visit Italy.

FAMILY DISCIPLINE.

THE horrible case of child-whipping in the western part of this State, to which we referred on a previous occasion, is to be lamented not merely on account of the unhappy little victim, but also for its inevitable tendency to loosen the bonds of parental discipline, by associating the idea of child-punishment with the recollection of this clerical wretch, who seems to combine the language of a Pecksniff with the relentlessness of a Legree. This act is thrice-accurst, in respect to his baby, to himself, and to society. We cannot doubt that he will receive so much of the punishment which he deserves as it is possible for the law to inflict. Whether it is possible under legal forms to render him full justice may be doubted.

But we cannot afford to let this solitary instance of parental cruelty blind us to the fact that, as a people, we err mainly in the opposite direction. American parents, as a rule, have very little inclination to tyrannize over their children, and are very strongly disposed to loosen the reins of family government. Looking around among our own acquaintance, we do not call to mind a single parent who is a terror to his children; and we rejoice that it is so. But we do know multitudes of parents who never had their children under their control; and this we cannot rejoice over. The days when children were tied to bed-posts and flogged for slight transgressions are, thank Heaven, substantially past; but the extreme to which our grandfathers carried their notions of discipline is no justification for the other extreme into which we are now disposed to run. If there is really no middle path, doubtless the license which is now allowed to children is better than the excessive severity of old times; but no such excuse for laxity can be truly made. There *is* a middle path; but it requires more patience,

perseverance, and enlightened parental love than either of the rival systems of wholesale flogging or *laissez faire*.

A certain distinguished clergyman once told in our hearing an incident which illustrates our meaning. His little girl, then a little over three years old, was playing in his room, when he called upon her to fetch his shoe. She had often done it before, and been proud to do it; but this time she looked at her father with a smiling face, and did not stir. "I repeated my command," said the father, "but with no better result. 'Now,' said I to myself, 'comes the crisis, and we must see who is to gain the day.' I called her to me, and she came quite cheerfully. I pointed to the shoe, but she would not look at it; she threw her arms round my neck, and would kiss me just as long as I would let her; she brought me an apron, a book, anything but the shoe; that she would not touch. And nothing but the shoe would satisfy me. 'Fetch me that shoe,' said I; but no. For more than two hours the conflict lasted, and then she suddenly grasped the shoe in her little hand, and, rushing up to me, threw herself into my arms in a violent fit of weeping, her little frame perfectly convulsed with sobs; but she was conquered." Such struggles as these occur at least once in the life of every high-spirited child. A Lindsley gratifies his brutal love of domination by the use of a shingle upon his child; the majority of American parents find it easier to abandon the contest, and let their children enjoy a demoralizing triumph, than to persist with mingled firmness, tact, and patience until obedience is secured.

Divine wisdom has made obedience necessary to the true happiness of every child. A spoiled child is the emblem of misery to itself and discomfort to all around. And American children are universally presumed to be spoiled, not merely by the judgment of foreigners, but by the tacit evidence of our own people. Why is it that landlords are so unanimous in preferring tenants without children? Why is it that children, in all other countries esteemed the object of marriage, are here so commonly thought of as its drawback? There can be no doubt that it is because they are expected, as a matter of course, to be a source of irritation and anxiety, undisciplined little nuisances, worrying their parents' lives and driving off their parents' friends. We go further, and assert that the enormous prevalency of abortion among married women is largely owing to this universal expectation that children will be a source of far more annoyance than comfort; an expectation which no experience of well-trained children would ever justify. Unquestionably the most judicious training fails in many instances; but as a rule it develops a condition of moral health which makes children the joy of the household and the special attraction of visitors. And it is from the rule, and not from the exceptions, that the common judgments of men are formed. We conclude, therefore, from the general anticipation that children, at any rate *other people's* children, will be disagreeable and mischievous, that there is a general belief that children are badly trained.

We have already been led incidentally to remark how much discomfort, and even crime, is indirectly caused by the general lack of proper family discipline. These are, however, only part of the evils to which it gives rise. "Young America" is proverbially pert, obtrusive, and irreverent; unaccustomed to obey at home, our young men are apt to lack respect for lawful authority everywhere; untrained at home, they rush into life with shallow thoughts and little training of any kind. Probably half the cost of our late civil war may be fairly charged to the lack of *habits* of discipline, obedience, and self-command on both sides.

It is even more melancholy to witness the causes which most frequently excite parents to the exercise of their authority, and the manner in which that authority is spasmodically exercised, than it is to observe the general absence of parental control. A falsehood, a petty theft, an act of meanness or cruelty which ought to excite the parent at once to grief and indignation, is usually passed over with slight reproof or total indifference. Charley may torture the cat, or destroy his baby sister's doll, or steal her apple, or show a meanly selfish spirit toward his playfellows with comparative impunity, though he is thus giving way to the basest tendencies of his nature; but woe be to Charley if he breaks his mother's china, or stains her silk dress, even though it should be done by pure accident and in the excess of affectionate zeal. Is not this, in its measure, almost as ghastly a spectacle as that of the Rev. Mr. Lindsley "correcting" his baby with a shingle for refusing to say its prayers? On the one hand the child displays a temper which, if entirely unchecked through life, would make it a fiend. For this it receives no punishment. On the other hand, through mere natural thoughtlessness, it injures a few dollars' worth of goods, which must in any case soon perish. This brings upon it bitter words, perhaps bodily chastisement. Every one knows that this is a contrast daily witnessed in thousands of families. For urselves, we see it often, and with ever-growing abhorrenc

THE SACRED CHARACTER OF THE BRITISH INCH.

THE connection between a metre and a gramme is obvious to any one who has mastered the French system of weights and measures; but the connection between the British inch and Christianity may appear somewhat recondite to the general public. Proposed as a conundrum, most people would probably "give it up" in despair. The number of inches to a foot is, indeed, the same as the number of tribes in Israel or the number of the disciples; but then, again, the labors of Hercules were twelve, and we are landed at once in paganism; or the Cæsars were twelve, and we flounder in imperialism, which is worse. A man's thumb—that is, the last joint of it—answers well enough to the inch in not particular measurements; but we never heard of thumbs being a test of orthodoxy, except in the time of the Inquisition, and we should fear, if the test prevailed, lest M. du Chaillu, for instance, should find some day that he had shot a better Christian than himself. Perhaps, if the suggestion be not an old one, the divine right of African slavery may rest (for a divine right cannot be extinguished), at least in part, on the negro's thumb-joint, which is either too long or too short for the Christian inch, just as his heels were too long and his facial angle too obtuse for Christian liberty.

But we perceive that, having been allowed an inch, our imagination has taken an ell of departure from the original question—a question which a religious newspaper of this city has kindly undertaken both to state and to settle. The inch being, as we learn, a part of sound doctrine, it is not so surprising that Congress as that the British Parliament should have legalized the metric system of the French. For, in the first place, the metre does not rest upon absolute truth, although it purports to be an integral part of the earth's circumference; and, secondly, if it were ever so accurate, the French people had no right to reject the British inch or their own *pouce* (or thumb, if you please), and to seek for a natural instead of a divinely transmitted standard of length; and, thirdly, it was all a part of their revolutionary plan "to overthrow the whole order of society, and root out even Christianity itself," and "to abolish the Lord's day and establish in its stead the *decades*;" and, fourthly, the late Mr. Taylor spent a lifetime in ascertaining, by the severest calculations, that the British inch is the one-five-hundred-millionth part of the earth's axis of rotation (which, being a straight line accessible at both ends and in the middle, can be measured with the greatest accuracy); and, finally, Prof. Piazzi Smith has triumphantly proved that the Great Pyramid was built expressly to surround, hold for ever, and keep from wear and tear the British inch. We have also the most satisfactory testimony that the builders of the Pyramid "possessed a degree of mathematical and astronomical knowledge" which it is far from improbable was given by divine inspiration. And if any link in this reasoning were still wanting, it is to be found in the fact that the Queen's chamber is seven-sided, with one of the sides "pushed outwards about twenty-five inches [*twenty-four* were perhaps to have been expected], as if to indicate that while six were ordinary days [it being understood that they represented days], the seventh [the Hebrew Sabbath] was more noble and glorious." The Bible, furthermore informs us that a false balance is an abomination in the eyes of the Lord while a just weight is his delight.

We do not see how this argument can be avoided. But we should like to have been assured that the British penny came direct from the treasury of Heaven, and that we count twelve of them to the shilling, as we do twelve British inches to the foot, by the grace of God. We have read somewhere that we are indebted for our yard to the fore-arm of his Most Christian Majesty, King Henry VII., which, since the yard is a multiple of the inch, is another proof of divine care in preserving for us an infallible standard. And we recommend these considerations to the people before they adopt the infidel system which Congress has offered them. Especially would we warn shop-keepers to be on their guard, lest at the next session a law be passed enforcing the system, whereas it is now merely tolerated, and lest by some "eight-hour movement" a clause be inserted requiring a metre of cloth or of carpeting to be sold at the rates formerly asked for a yard—which would be, as any one may compute, a dead loss of three and thirty-seven one-hundredths (3.37) inches on every metre thus sold. The dismay that this would occasion in every Christian household, at the present prices of goods, may well be imagined, and we leave it to the intelligent heads thereof to decide how they shall put the metre in as bad odor, say, as the meters of the gas companies, or the contract of the city scavengers.

The article in question appears in the *Episcopalian* of June 20, and we commend it to the attention of anybody who wants to see the mischief that may be done by allowing silly people to ventilate their silly opinions in journals formally devoted to the defence and exposition of religious truth.

Correspondence.

"DOES ANY ONE TELL THE TRUTH?"

To the Editor of The Nation:

If your contributor, "L.," in the number for June 22d, had confined himself to answering *this* question in the negative, I should have no controversy with him. For an absolutely truthful person, in word and deed, is so very rare that one may be excused for doubting whether there is any such character extant. But when "L." undertakes to prove that it is neither possible nor desirable to get rid of all deception, in the present state of society, he promulgates a doctrine of the most dangerous character, and all the more because it so readily falls in with the prevailing habits of the world. His thesis is: Society cannot get along without lies. And the reasons are, that much of the truth we should be compelled to hear would be of a disagreeable nature; that true courtesy obliges one often to give a false impression of one's real feelings; that we need the protection of a lie, too, to guard ourselves against impertinent and malicious people, etc. Now, to my mind, these arguments amount to nothing more than an admission that it is often extremely difficult to speak the truth. Let us look at the question of courtesy, as presenting a very common difficulty, and one which has disturbed many conscientious persons. A man comes to my house whom I do not particularly respect, nay, whom, perhaps, I have had cause to despise. Courtesy, nevertheless, requires that I should treat him civilly. I ask him to come in and to take a seat while transacting with me the business he has in hand. Is there any deception here, wilful or otherwise? I do, indeed, suppress and keep back part of the truth; but "L." admits that this is not inconsistent with veracity. I do not tell him how contemptible he is in my eyes. Why should I? But I show him the attention of common civility—nothing more. If he shall proceed to infer from this that I do not disapprove his behavior in the past he alone is responsible for the inference, not I. It is plainly no fault of mine if he shall pervert an instance of the merest civility into an expression of approval. How many thousands of persons are the objects of Christian charity every day who know at the same time that they have no title to the respect of those who thus befriend them! I am aware that many persons deem it necessary to politeness to go much further than in the case supposed. They do not scruple to assure every casual acquaintance, or even some notoriously disagreeable person, how very glad they are to meet him. They make it a point always to give the expected response to any demand for admiration and the like, whether true or not. This is, indeed, a courtesy which cannot be reconciled with veracity; but I deny that it is either necessary or desirable to the maintenance of true social feeling and kindly relations. It is simply a shield for the moral cowardice which *never* dares utter a disagreeable truth.

The one great point which "L." seems to me to have left out of sight in his argument is, that there is such a thing as speaking the truth *in love*. Would he regard those as "brutal" who should thus speak? Has it never been his good fortune to see one of those loving natures who "can say anything they please," even the most unpalatable truths, and yet never give offence, except, perhaps, to those churlish dispositions whom nothing can tame? We hear of some persons who are "privileged" to speak the truth. Where such a privilege is freely granted them, is it not because they never abuse it to purposes of malice or contempt, but always use the truth in the interests of charity.

It seems to me, also, that your contributor mistakes by not discriminating between deception and *leaving one in ignorance*. Many things in social life which look at first like an intention to deceive are simply the result of a purpose to leave another in ignorance of our real feelings. This purpose may be quite consistent with strict sincerity. Thus, if a friend calls upon me when I am distracted with business or overwhelmed with grief, a true politeness admonishes me to throw off this burden for a time, if possible, that I may enter into my friend's affairs with proper sympathy. I strive to forget my own troubles for his sake; and if I cannot quite do that, I resolve that I will let no clouds *appear* in my words or demeanor. This is not, or at least need not be, insincere. But, "L." would ask, Does not your friend go away *deceived* as to the real state of your feelings? And do you not know that he will be thus deceived? I answer, no. Ignorant he may be, but not deceived, for I have not intended to falsify anything to him. My sole effort has been to hide from him the trouble which was making me an unfit companion. Such concealment may have the effect, sometimes, of wilful deception; but that circumstance alone does not stamp it with the *guilt* of falsehood. Guilt lies in intention. I am not chargeable with intention to deceive merely because I have reason to think that one may go away from my presence with a wrong impression of my real state of mind. It would be putting a tremendous responsibility upon us to say that we are accountable for every wrong impression which one may receive from our words or conduct. The question to be first asked is: Did he necessarily receive that impression? Was no other interpretation possible? And did we designedly mislead?

Let me say a word about the supposed right of "protection" from impertinent questioners. To assert this right to the extent that your contributor does, seems to imply that right may sometimes be enforced by wrong. I may like to protect myself from many annoyances, but both human and divine law prescribes a limit to my means of doing this. I should be glad to save my fruit garden from midnight thieves, but I may not shoot them down for this purpose. Is it not simply one of the sacrifices we make for the privilege of human society that we accept that society as it is—its evil as well as its good? As to the authorship of anonymous pamphlets, the simplest course seems to me best. I would simply reply to such a questioner: I do not choose to answer. But he would say: Then I know you wrote it. To which I should rejoin: You may make what inference you please. He could not really know, thought he might have strong reason to suspect; for it is certainly conceivable that I might refuse to answer for the sake of shielding a friend, and not myself.

But it is to me strangest of all, how your contributor seems to have overlooked the fact that truth is an essential bond of society. Not falsehood, but truthfulness, binds men together. I must confide in my neighbor's honesty if he is to be my neighbor indeed; and just so far as that confidence is weakened by an insincere word or deed on his part, so far is the whole social fabric endangered. Love based upon truth, truth spoken in love—who can deny that these are the primal and essential conditions of human fellowship? Apply these conditions to all the minutiæ of daily intercourse, and I am sure the "oil" would not be wanting to the social machinery. The necessity even for *concealment* would become less every day. Men and women would rejoice in the privilege of being frank without suspicion of rudeness, and "plain-spoken" without any lack of tenderness and true courtesy.

NEW CHURCH MUSIC.

THE OFFERING. A Collection of New Church Music, consisting of METRICAL TUNES, CHANTS, SENTENCES, QUARTETS, MOTETS, AND ANTHEMS. By L. H. SOUTHARD.

This is a collection of New Music and not merely a New Collection of Old Music. The established reputation of Mr. Southard will attract to this volume the attention of those with whom really good music is a desirable acquisition. Sent by mail, post-paid. Price $1 50 a copy, $13 50 per doz. OLIVER DITSON & CO., Publishers, Boston.

FINANCIAL REVIEW.

NATION OFFICE, Thursday, July 2, 1866.

THE actual declaration of war in Europe has produced no further effect upon our securities. Five-twenties are still quoted at 64½ to 64⅝, and Erie 40½ to 41. The latter has been maintained by an enquiry for export to this country. Cotton is quoted weaker; but this is ascribed as much to the defeat of the British Ministry on the reform bill as to the news from the Continent. Unless gold should advance materially on this side, we have probably seen the lowest European quotations for 5-20s.

Approximative estimates of the foreign commerce of the United States for the fiscal year 1865-6, which ended on Saturday evening last, are being published in some of the journals. From these it would appear that we imported $401,865,000 of foreign goods (gold valuation), and exported $487,445,000 of produce and merchandise (currency valuation). Reducing the latter to the standard of gold the figures would stand thus:

Imports for 1865-6,		$401,865,000
Exports of produce (gold),	$348,175,000	
Do. of specie,	78,400,000	
		426,575,000
Excess of exports,		$24,710,000

This is exclusive of the movement of securities, of which many millions worth went to Europe during the year. The customs revenue for the year is estimated at $175,878,000, the largest revenue on record; the average duty paid on imports is 47½ per cent., a heavier tax than is paid by any other people in the world.

Government begins to-day to pay the interest on the third series of the 7.30 notes, and on a large proportion of the funded debt; altogether $10,000,000 of gold and $8,500,000 in currency will be disbursed. The gold payments will relieve the gold market very sensibly. On Saturday gold was worth ¼ per cent. for immediate delivery. The price has fluctuated since we last wrote between 151⅞ and 155. To-day, at 3 P.M., it stands at 154. Bankers' bills can still be bought at 108¼, at which rate there can be no shipments of coin to any extent.

Money continues very easy indeed. Call loans are 4 to 5 per cent., and good mercantile paper at short dates 5 to 6. The banks are greatly distressed to know what to do with their funds.

Stocks, with the exception of Governments and Erie, are very inactive but steady. Governments are in active demand at full prices. It is confidently expected that they will, in the course of ninety days, take back all the bonds they have sent us during the past month. Erie is higher on a clique movement, which is supposed to be intended to corner Mr. Drew. It has sold as high as 63¼. Nothing further has transpired with regard to the dividend on the preferred stock. The owners of the Harlem Railroad have declared a dividend of 4 per cent. on both common and preferred stock, so this long neglected fancy may again become active. Reading is selling dividend off, and is steady. The other cliqued stocks are inactive; nobody seems to want either to buy or to sell them.

The following table will show the course of the stock, gold, exchange, and money markets since our last issue:

	June 25.	June 28.	July 2.	Adv.	Dec.
U. S. Sixes of 1881	106	106⅜	106⅜	⅛	....
5-20 Bonds, old	103⅛	103⅛	104⅛	1	....
5-20 Bonds of 1865	102¾	103	103⅛	⅛	....
10-40 Bonds	96⅛	96⅞	97⅛	⅛	....
7.30 Notes, second series	102⅝	103⅜	103⅛	⅛	....
New York Central	98⅝	98¼	98⅛	⅛	....
Erie Railway	58⅜	60⅞	63	2⅛	....
Hudson River	111	112	112	....	....
Reading Railroad	108⅛	109⅜	104⅛*	⅛	....
Michigan Southern	78¾	78⅛	78⅛	....	....
Cleveland and Pittsburgh	82⅛	83⅛	83⅛	⅛	....
Chicago and North-west	29⅞	30⅛	30	....	⅛
Chicago and N.-W., Pref	58⅜	59⅛	59⅛	....	....
Chicago and Rock Island	93	94⅛	94	....	⅛
P., Ft. Wayne, and Chicago	98	98⅛	95⅛*	....	1⅛
Canton	55	53⅞	54⅛	....	⅞
Cumberland	44¾	45	45	....	....
Mariposa	11¼	11	10⅛	....	⅛
American Gold	153⅛	151⅞	154	3⅛	....
Bankers' Bills on London	108¼	108⅛	108⅛	....	....
Call Loans	5	5	5	....	....

*Ex. dividend.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

The tariff bill has passed the House, but it has elicited sufficient opposition, to judge from the tone of the Western journals, to make its defeat in the Senate very probable. Perhaps the very best thing its friends could do would be to get the *Tribune* to cease defending protection, as its peculiar style of argument is daily making converts to free trade. In an article on Saturday it laid it down that if a "chain of mountains" were to rise up on Monday night out of the earth, "compass the United States round about, and cut off communication with the rest of the world," we should, "with the ideas now rife in the Union," have a "more free, full, robust, independent, integral, national life than under an unrestricted intercourse with foreign nations can ever be brought about." If there should be a sudden and violent reaction in the direction of free trade it will be in a great measure due to the preaching of this sort of nonsense by the champions of protection. What makes it all the greater nonsense is, that this grand plan "for creating a full, robust, and independent national life" was tried by the Chinese during some thousands of years and failed pretty miserably. In fact, what renders modern civilization progressive, and, therefore, superior to ancient civilization, is the unrestricted intercourse between different nations by which it is marked. It is this which saves it from stagnation or decline. It was to put an end to the surrounding of nations with "chains of mountains," either moral or physical, that Christ came and that modern science works. The building up of certain branches of national industry in a new country by protective duties is a rational scheme, and capable of defence by many strong arguments, but we would warn all sensible protectionists of the danger of having their cause advocated, as the *Tribune* advocates it, by men whose political philosophy seems to be that of His Majesty Che-hwang-te, of the Tsin dynasty, with a slight dash in it of the Christianity of the Merovingian era.

There was less speaking than usual on the Fourth of July. The Tammany Society of this city did its best to celebrate the occasion, and drew a characteristic letter from Mr. Seward. There was a child-like simplicity about it which reminded one of the famous telegram of the 22d of February. From General Grant, we are glad to say, came simply a quiet and formal expression of inability to attend. The general has already proved himself the greatest orator in America, and we think his letter on this occasion may be referred to as a "model of epistolary correspondence." Mr. O'Gorman, the orator of the day, spoke, as he always speaks, well, and supplied the Society with about the usual number of sophisms and truisms in better English than the Society is used to. He was followed by Mr. S. S. Cox, who contented himself with "expanding a sentiment" of "his eloquent friend," Mr. O'Gorman, but by the time he got it expanded it was an exceedingly light and mysterious article. The sentiment was that the Declaration of Independence was a "revolutionary document." From this Mr. Cox deduced the proposition that the origin of our liberties was to be found "far back of the Magna Charta," and "reposing in eternal might." What or where this is, we must leave the reader to find out for himself. Much of the political oratory of the day is becoming a great deal too abstruse for us.

New York enjoyed the spectacle last week of hearing the decisions of one of its courts reviewed and morally overruled by a lawyer whose proper place is on the bench, but who was turned off it a year or two ago to make way for a man who was expelled from the army for drunkenness, and for whom nobody claims even one of the qualifications which a judge ought to possess. Judge Cardozo's decision, that a license to sell liquor is property, and, as such, protected from revocation by the constitution, was severely criticised and refuted by Judge Bosworth, at a meeting of the Board of Health, in a speech which removed what little doubt there was in the public mind as to the value of the Cardozo judgment. Judge Cardozo's ruling was thoroughly revolutionary, and set at naught some of the most firmly established principles of our jurisprudence, such, for instance, as that most familiar one, that every contract must be supported by a consideration.

The Common Council has perpetrated another monstrous swindle by giving, over the Mayor's veto, a contract to the Gas Company for twenty years, at present rates, for lighting the city with coal gas. There is no question about the character of the transaction, and the *Tribune* gives notice that an "earnest effort" will be made next winter to abolish the Common Council. We hope this may prove true. The pecuniary loss to the tax-payers caused by this band of swindlers is, after all, the smallest part of the evil they work. The very existence of such a body as the Common Council in a city like this is injurious to public morals, as it is a constant corrupter of the poor. The rise, through city politics, of the worst blackguards of the worst wards to wealth and influence, is a spectacle whose evil influence on the ignorant and the young neither school nor church can counteract. There is little use in preaching virtue within a stone's throw of the hall in which a conclave of knaves, raised from the very dregs of society, are dividing the public funds amongst them, selling the public offices and contracts, levying blackmail on the men of property, spending their gains in fast horses and champagne, and laughing at their victims. No theories about "municipal independence" ought to stand in the way of the speedy abatement of the nuisance.

Senator Trumbull's bill to regulate removals from office is a well-considered effort to redeem the public service, as far as may be, from the corruption of political subserviency to the Executive. It is grounded upon the principle that the constitutional power to appoint implies the power to remove, and that the President, who is obliged to obtain the consent of the Senate in the first instance, must also respect its will in the second. There is great virtue in the provision that when, the

Senate not being in session, the President shall have removed an officer for disability or misconduct—a privilege clearly required by the public interest to be vested in him—he shall, within a month after that body has assembled, give the reasons for his action. Men are never so ready to confess their motives as they are to incur by their deeds the suspicion of unworthy motives; and though it may be utopian to assume that a President of the United States would not dare to announce that a difference of political opinions was the sole cause of any given dismissal, or that it ought properly to determine continuance in office, still, such an announcement would undoubtedly give rise to a healthy public sentiment before which this indecency would perish. It might have sufficed, perhaps, to have provided that no office-holder should be removed without being previously notified; in which case, if he demanded a hearing before the Senate, the President might then have been called upon to produce his charges. But we have reached that point where it is safest not to presume infallible rectitude in any official. We should hope that even Mr. Trumbull would not object to removals on account of a neglect of business in the pursuit of politics. This would be a reform second only to the one he proposes.

Mr. Seward has the most illimitable faith in the virtue, he says, and in the good sense, he says, of the American people. About his confidence in their illimitable gullibility he says nothing, in public, but every now and then he gives a striking proof of it. It is a month or so, more or less, since he was at Auburn talking about the Democracy in a way that may have served Governor Morton as a model for his recent indictment of that party. On the Fourth of July we actually find him in Tammany among sachems and braves with all their war paint on. A Blackfoot medicine-man in a Sioux war council would have as good a right to expect a cordial reception. But no reflections of that sort trouble Mr. Seward. Memory may be his enemy; it is hope he relies on always. Tammany, which during the war kept Mr. Chanler and Mr. Benjamin Wood in Congress, Mr. Seward praises sweetly for its unfaltering devotion to the Union, and he calls it a true Union League. For proofs of this character he wisely goes to the pictures on the society's letter of invitation. He was highly pleased, he said, with the vignette and with the associated hues with which it was colored—namely, the red, white, and blue. He liked the temple of liberty, he liked the eagle of the American continent which protected it, he liked the ships and railroads indicative of progress and prosperity. Also, with that facility of being pleased which is peculiarly his own, he delights in the "significant conjunction of dates," 1866 and 1776; unabashed he goes on to subtract one from the other and the difference he finds to be ninety—ninety years, however. The criticisms on the Tammany letter-paper are new, the other half of the letter is old. The South, ever since '61, has had a continuing right to send loyal representatives to Congress, and Congress is bound to admit them —that is Mr. Seward's belief, and it was well known to be his belief before he thought it necessary to go into Tammany Hall. It is kind in Mr. Seward, and right, to wish to get the Southerners into the Union as soon as possible; but he might better have left it to Tammany alone to have a political party all ready for them as soon as they get back. Though he join in that labor, it will not be for him to reap the reward; neither the South nor Tammany has his convenient memory.

Senator Lane, of Kansas, shot himself a few days ago, while suffering from incipient disease of the brain—a calamity which may any day overtake any man in the community, and which is in its nature so awful that one would suppose that even Democratic editors were civilized enough to treat its victims with decency. The Albany *Argus*, however, maundered over the death of poor Preston King as a judgment of Providence brought down by political misconduct, and now the New York *Express*, after publishing a long account of Lane's last wrestlings with his malady, assumes them to have been indications of a fear of death inspired by an ill-spent life. It is said that no man, however honest, can have much to do with horses without becoming more or less of a knave; and it would seem that editing party newspapers has a similarly prejudicial effect on a man's taste and humanity and sense of social obligation, and often converts him into a sort of moral ruffian, who gloats over the last agonies of his enemies, and jumps in triumph on their dead bodies. Horse-jockeys have long been a subject of much solicitude to moral philosophers and home missionaries. We commend the fraternity of Copperhead editors to their attention. If they can even make them decent, we shall excuse their failure to make them virtuous.

The Jamaica Commission has brought in its report. They conclude that there was ground for fearing a general insurrection of the blacks, had the rioters been successful; commend the energy displayed by Governor Eyre in the earlier steps taken for the restoration of order; condemn him for the discretion accorded to military officers after the disturbances had ceased; pronounce the hanging, whipping, and destruction of property to which these gentlemen resorted unnecessary, wanton, and cruel; and declare the trial and execution of Gordon illegal. The report is on the whole judicial in its tone, though displaying everywhere a strong desire not to bear too hard on Eyre in its inferences. But the mere facts which the commission rehearse, as proved, are in themselves a worse condemnation than any opinion the report could pronounce. The reluctance of the commissioners to speak out their full mind has excited a good deal of severe comment in England. But had the victims of Eyre's negligence or cruelty been white, we are satisfied that no man in the country would have dared to put one line on paper which would even look like extenuation of the governor's conduct. The tenderness shown him, even by such a body as the commissioners, proves how deep-seated the feeling is down in the breasts of the best members of the Anglo-Saxon race, that crimes committed against an "inferior race" are somehow less heinous than crimes committed against white men, and that even the "British Constitution" loses some of its virtue when its protection is thrown over a negro. Mr. Eyre has been removed, but it is to be hoped that the matter will not rest here. Gordon's trial was illegal, and his execution was murder. If its perpetrators are allowed to go unwhipped of justice, no man's life in a colony would be safe. Any disturbance that a crack-brained governor happened to think serious would place all his enemies or critics at his mercy.

The telegraphic news from Germany is a farrago of contradictions and improbabilities, of little use, except to furnish headings for "extras." A "desperate battle between the Prussians and Austrians," near Skalitz, seems to have been a cavalry skirmish, and the announcement that "the Prussians retreated leaving their dead and wounded on the field," has little value till we know how many dead and wounded there were. If there were only a dozen the affair will hardly exercise much influence on the fortunes of the war. Another Berlin telegraph tells of another "spirited engagement," "lasting till midnight" (this has an awful sound), in which a Prussian division and brigade were engaged, but whether the brigade was not included in the division does not appear, though it is most likely it was. Of the magnitude of this conflict we may form an idea from the fact that the telegraphic chronicler mentions as a prominent fact that the Prussians lost a colonel, lieutenant, and captain. He omits to state, which we think he might have done with safety, that they also lost a lieutenant, a sergeant, and a corporal. The only thing which seems certain is that the Prussians have entered Bohemia, and the advanced parties of the two armies are coming in collision. Hence small affairs, which the French call "combats," which commanders are apt to encourage at the opening of a campaign as a means of improving the morale of the troops, but which, by the time the news of them gets to the telegraphic operators at Brussels and elsewhere, grow into "desperate battles." The King of Hanover is trying to make terms before he surrenders his army, which is caught in the Prussian rear, and is having an unhappy time. A question of some interest now, but on which we have seen no light thrown, is, who is the directing military man of Prussia? Her operations so far have been marked by extraordinary vigor, concentration, rapidity, and secrecy; but who presides over them? We hear of no Prussian Benedek, or La Marmora, or Victor Emanuel.

THE campaign in Italy has opened with a disaster to the Italians. The King, with about half the army and the reserve, seems to have marched full tilt into the Quadrilateral, apparently with the view of making a diversion in favor of Cialdini, who was operating on the Po with about 70,000 men, and is said to have crossed it at Polesella. The Austrians, however, did not trouble themselves about Cialdini. They marched out of Verona on the 24th of June, at daybreak, attacked the King early in the morning at Custozza, and drove him from all his positions with heavy loss, after a sanguinary and protracted engagement. The fact seems to be that the Austrians need not have fought at all, except for the moral effect, as, had they chosen to stay behind their fortified lines, they might have bid him defiance. The Imperial despatches show that the Italians fought obstinately, and inflicted severe loss on the enemy, and left the field in good order. Probably, under all the circumstances, no troops in the world could have done more, though we perceive the French have already begun to sneer, as if Solferino and Magenta had not been dearly bought victories. The next best thing to winning is to deserve to win. An accident may give a bad army and a bad general a great triumph; but to be defeated after fighting bravely, and yet not to abate either heart or hope, is something of which only a great people is capable; and we shall probably be better able to conjecture what the future of Italy is to be, from seeing the manner in which the Italian troops and the nation will bear this reverse, than from seeing them victorious in Mantua and Verona. The soil of Italy has in every age borne men fitted to satisfy her aspirations; and now that she is in a heroic mood, and yearns, of all things, for freedom and independence, we may be sure she will not prove barren of soldiers who know both how to conquer and how to die.

THE Spanish Minister of State, M. Bermudez de Castro, has made a statement in the Cortes in defence of the bombardment of Valparaiso, in which he maintains that the bombardment was not "barbarous," because it was permitted by the laws of war; so, however, is the sack of a stormed town, and the massacre of the garrison and inhabitants. The treatment of Magdeburg was legal; but what does the world think of Tilly? He adds, moreover, that besides being legal, it was provoked by the Chilians using torpedoes for the annoyance of the blockading squadron; but torpedoes are used for the annoyance and destruction of fighting men, of men "whose business," as the old song says, "'t is to die," and to retaliate by pitching shot and shell into private houses amongst women and children, as an end, not as a means, and without any expectation of taking the place, *is* "barbarous." Firing grape and canister into close columns is awful work, but it is one of the risks for which soldiers bargain; to revenge it, by blazing away at the enemy's women and children, would be plainly brutal. The remainder of M. de Castro's address is frivolous. The whole defence is that of a man speaking for a fallen state, to whom the pettiest triumphs are grateful, and in which decrepitude has crushed out all nobleness and all pride.

ON the 26th ult. Earl Russell, in the House of Lords, and Mr. Gladstone in the Commons, announced that the Queen, after a personal interview that afternoon, had accepted the resignations they had tendered after their defeat on the reform bill. The new cabinet to be constructed by Earl Derby is as yet a matter of speculation; the office of Foreign Secretary being, however, generally assigned to the earl's son, Lord Stanley. Mr. Disraeli is named to succeed Mr. Gladstone as Chancellor of the Exchequer.

COURTESY goes a great way. One of the Prussian legation in Italy is charged with the protection of Austrian subjects and interests, and with the keeping of the archives of the Austrian legations suppressed along with the former states of the Peninsula. An Austrian subject, employed by the same legation, found himself the other day alone in the bureau when a crowd came to salute it with cries of "Death to Austria! Hurrah for Bismark!" The unfortunate official was constrained to appear at the window and bow his acknowledgments.

CONGRESS.

Monday, July 2.—In the Senate, the committee of conference on the Paris Exposition bill reported an amendment, which was agreed to and the bill passed. That on the Freedmen's Bureau bill also reported, sustaining the Senate's proposition in regard to the lands held under Gen. Sherman's order, by which the former owners may recover of the present possessors having a valid title, in exchange for a six years' lease of twenty acres, under a warrant from the direct tax commissioners; the said twenty acres being purchasable at the end of the six years for not more than $1 50 per acre. The report was agreed to, and the bill went up to the President.

In the House, Mr. Clark's resolution concerning the rights of the Fenians as belligerents (offered June 4) was rejected without a division. The tariff bill was debated in Committee of the Whole. The special committee on the Rousseau-Grinnell imbroglio reported by the majority in favor of expelling the former for his assault, and of censuring the latter for the personal reflections which provoked it; also of bringing to trial, for contempt of the privileges of the House, Mr. Rousseau's abettors. The minority simply advised a reprimand of Mr. Rousseau. Laid on the table and ordered to be printed.

July 5.—The Senate agreed to the conference report on the army appropriation bill, which remains substantially the Senate's.

The House agreed to the conference report on the army appropriation bill. Three pages of the tariff bill were disposed of during the day, and the discussion was continued in the first of the evening sessions, concluding with section 10.

July 6.—The Senate was chiefly occupied with the tariff bill, which Mr. Wilson, of Massachusetts, pronounced a Western measure distasteful to the manufacturers of the East, who had protection enough.

The House refused (84 to 46) to lay on the table the bill granting pensions to the officers and soldiers of the war of 1812, but recommitted it by 74 yeas to 46 nays. The tariff bill was debated. The conference report on the internal revenue bill was adopted—yeas, 71; nays, 57.

July 7.—In the Senate, a remonstrance was presented from the New York Chamber of Commerce against the tariff bill. A bill was reported from the Judiciary Committee to regulate removals from office conformably to the present method of appointment.

The House passed a bill to quiet land titles in California, and then resumed consideration of the tariff bill, reaching section 17.

July 9.—The Senate passed the House bill relating to pilots and pilot regulations. Also the army bill, which was amended so as to provide for three colored cavalry regiments and to dispense with three regiments of the Veteran Reserve Corps.

The House adhered to its own army bill—yeas, 93; nays, 30. Sections 17 to 23 of the tariff bill were disposed of.

FREEDMEN.

IN a circular (No. 7, July 2) Gen. Howard calls the attention of his assistant commissioners to the homestead act approved by the President June 21, which enables freedmen (as well as whites) who have not borne arms against the United States to enter upon public lands in Mississippi, Louisiana, Arkansas, and Florida at any time during the current year. Each applicant must file an affidavit that he is head of a family, or twenty-one years of age, or has served in the army or navy, and applies for himself only; and on paying $5 can enter at once on not more than eighty acres of land. At the end of five years, the land having been held and cultivated, a full title can be secured by further payment of $5.

Circular 8 (July 5) exhorts the agents of the Bureau to increased vigilance, in view of the fresh outrages upon freedmen and officers in Texas, Mississippi, and Arkansas. Whenever the freedmen come before the courts, the agents must be their protection against injustice.

Gen. Gill, on duty in South Carolina, says: "There is a growing disposition on the part of the whites to have the freedmen educated; and with the better class of citizens, who really have an interest in the planting of this section of the State, the Bureau is popular, as it is distasteful to the enemies of liberty and justice."

—North Carolina has 133 schools, 155 teachers, and 10,806 scholars.

—Two pictures from Georgia: On the 30th of June there is a meeting of the Superior Court at Augusta, to consider the subject of establishing schools for the freedmen. The mayor promises his aid, and the colored people gladly respond to his request that they shall co-operate. On the 4th they celebrate the day in a quiet and orderly manner, cheering the mayor, who has again patronized them, and General Tillson, who has lent them flags and sabres. Speeches are made by both parties, and the mayor says he would not for a thousand dollars have forfeited the compliment paid him. The other picture is of an alleged negro murderer, whose victim was a white woman, arrested at Macon and hurried back to Wilkinson County, where he is horribly mutilated and then burned alive.

Notes.

LITERARY.

THE question of international copyright seems to have fallen to the ground in Congress, and instead of providing for the rights of foreign authors, measures are being taken to deprive them of the little revenue they now enjoy, arising from the sale of imported books, by increasing the duties on books to a useless and absurd figure. Twenty-five per cent. *ad valorem* in addition to twenty cents per pound by weight is a duty which will effectually destroy the book trade. It plays into the hands of a few publishers whose chief business is pirating English books, and is especially severe on students and literary men, who are thus deprived of books which are necessary to them and cannot be reprinted here. American authors also feel its weight, because publishers, finding a ready market for their reprints of foreign books, which cost them nothing more than the paper and printing, are unwilling to make uncertain ventures on native works, where a part of the profit goes to the author. There is no excuse for the increase of duty except the rapacity of certain publishers and the ignorance of certain so-called statesmen. The revenue derived from importations of books has never been so great as when the duties were fixed at the moderate scale of eight and ten per cent. The addition of twenty cents per pound weight is intended to put a stop to the importation of books in sheets, and of the printing in England of American books. It is especially foolish to desire to stop this, because there is not the plausible excuse that it is necessary for the interests of the country that the books consumed here should be manufactured here; and as the book manufacture does not require the expensive apparatus and machinery that cotton-spinning does, books will be printed here as they were before, as soon as they can be done here as cheaply as abroad. In a country the basis of which is universal suffrage it is of great importance that knowledge should be universally diffused. One way to attain this end is by making it cheap; and the best way of making it cheap is by lowering the duties and allowing the best literature a free circulation.

—The question of the rights of authors is one of considerable difficulty. Should a song be allowed a copyright, like a dramatic piece, so that it could not be sung without benefit to the author? At present, both in England and the United States, a popular song is sung at all the concerts, and brings in much to the manager and nothing to the author except its consequent sale. The rights of dramatic authors are sufficiently protected, but there is as yet in England no protection to the authors of books against dramatists who take their plots and even their language and use them on the stage. A bill which was lately introduced into Parliament on this subject by Lord Lyttleton has failed. The bill in question was introduced at the request of Mrs. Henry Wood, who had suffered from the production on the stage of "East Lynne" in an offensively vulgar manner, the lessee of the theatre where it was brought out at the same time refusing her any share in its profits.

—The dramatic authors of Paris have lately founded a publishing agency of their own. No class of literature brings such great profits for so small an outlay, and no authors are treated worse by their publishers than dramatic authors. It is only when the dramatist's reputation is a fortune in itself that the publishers are willing to pay a reasonable price to the author for his work. Messrs. Levy Frères are especially noted for their sharp bargains with dramatic authors. They gave to M. Bouchardy, for instance, one hundred dollars for the copyright of "Lazare le Patre," and the sale ran up to 120,000 copies. M. Louis Lacour is the general agent of the concern, and an office has been opened on the Boulevard.

—Méry, the prolific French novelist, who was able to write on every subject, and equally at home in all, is dead. A graceful and *spirituel* writer, his books too often illustrated subjects which would be unendurable in English. His death makes a void in contemporary French literature, though he really belonged to the epoch of Louis Philippe, which he had outlived.

—"The name of Catherine Fanshawe," says Miss Mitford, in her "Recollections of a Literary Life," "is connected with the whole of that glorious society which formed the pride and ornament of London during the early part of the present century—the society which, after a short interregnum, succeeded the illustrious circle that had formed the great literary club in the days of Johnson, Burke, Goldsmith, and Reynolds. And amongst this society, at once so dazzling and so charming, there was no name more distinguished for brilliant and various talent, or for every attractive quality, than that of Catherine Fanshawe." One of the survivors of that society, Mr. Harness, has at last presented to the wide circle of Miss Fanshawe's admirers a privately printed volume containing some of her drawings and etchings and many of her poems and letters. Her powers as an artist were quite remarkable in every kind, but she chiefly excelled in the humorous. Many of her groups recall the best manner of Sir Thomas Lawrence, who himself acknowledged his indebtedness to her. In poetry her taste was chiefly for parody. She could have written any number of "Rejected Addresses." The following ballad, for instance, a friend and admirer of Wordsworth wondered had never been shown him by the poet himself:

"The trees that grow upon the shore
Have grown a hundred years or more;
So long there is no knowing.
Old Daniel Dobson does not know
When first those trees began to grow;
But still they grew, and grew, and grew,
As if they 'd nothing else to do,
But ever to be growing.

. . . . . .

"Fix'd are their feet in solid earth,
Where winds can never blow,
But visitings of deeper birth
Have reached their roots below.
For they have gained the river's brink,
And of the living waters drink.

. . . . . .

"And I have said, my little Will,
Why should not he continue still
A thing of nature's rearing?
A thing beyond the world's control,
A living vegetable soul,
No human sorrow fearing."

Miss Fanshawe was an intimate acquaintance of the Misses Berry, whose "Recollections" was the great literary book of last fall. She was a very clever letter-writer, and one of her letters gives an admirable sketch of a dinner party at Sir Humphry Davy's, where Byron and Madame de Staël met each other. The account is worthy of being set by the side of Lewes's sketch of the meeting between Goethe and Madame de Staël. Miss Fanshawe was one of those "two or three young women of rank who, at different times," according to Moore, "formed the subject of Byron's matrimonial dreams." Though he could not make up his mind to give his name to the lady, he allowed her well-known charade on "The Letter H" to pass as his.

—A very useful guide to the study of the causes of the German war, and of the relative political situations and exigencies of the great powers of Europe, is a collection of essays just published by Mountstuart E. Grant Duff, M.P., entitled "Studies in European Politics." The essays, seven in number, are all very carefully written, and have appeared before in various reviews. The subjects treated of are Spain, Russia, Austria, Prussia, Holland, Belgium, and that almost incomprehensible body, the Germanic Diet. The history of this body, and of the various efforts at German unity, Mr. Duff makes quite clear to the reader. Sketches of all the principal European statesmen are given and the key-notes to their characters sounded. Of Count Bismark Mr. Duff says: "The ground tone of his character, it has been truly said, is ὕβρις, but that ὕβρις which takes in public life so offensive a form does not seem incompatible in his case with much geniality in private life, and it would not be difficult to cite instances of the ease with which he obtained influence over persons who are brought across him. Many stories are current which show that his conservatism does not go really so deep as that of many men who make less parade of their anti-liberal views; . . . for the present we have before us a composite being—half French Imperialist, half disciple of M. Gerlach—'making,' to use his own expression, 'Junker-Politik' in the face of an angry but powerless nation."

—The English and Continental publishers are already issuing large numbers of maps of the countries which are to be the scenes of battle. Messrs. Blackwood & Sons are issuing, in sheets, the maps of Keith

Johnston's Royal Atlas. Stanford has published a very good map of Germany. Brockhaus, of Leipzig, advertises a variety of maps by Lange, and Perthes, of Gotha, many more, of which two of the best are "Das Festungsviereck—Verona, Peschiera, Mantua, Legnago, in Maasstabe 1:150000, von Dr. A. Petermann;" and "Schlesien, Sachsen, und nordliche Böhmen, Maasstab 1:740000, von A. Stieler." If some American publisher would issue a selection of these maps, with an historical introduction, he would confer a great service on general readers, and make a very good thing for himself.

—The first number of a new anthropological journal, in quarto, edited by A. Ecker and L. Lindenschmidt, has just made its appearance at Brunswick, under the title of "Archiv für Anthropologie: Zeitschrift für Naturgeschichte und Urgeschichte der Menschen." The subscription is three thalers per year.

—Mme. Bachelin-Deflorenne has just issued "Catalogue de Livres et Manuscrits, rares et précieux, relatifs à la Noblesse, en vente aux prix marqués, plus de 1,000 numéros." Of her reprint of the "Armorial Général de la France" Parts I. to VIII. have appeared, and she has recently published a volume of seven hundred pages, in two columns, under the title of "Etat Présent de la Noblesse Française," containing, among other matters, "Le Dictionnaire de la Noblesse contemporaine avec les noms de plus de vingt mille nobles, et Notices Généalogiques avec Blasons; la Liste Générale des Personnes qui, depuis 1803, ont fait changer ou modifier leurs Noms," etc.

SCIENTIFIC.

Deterioration of Bituminous Coal by Keeping.—Observations made recently in Europe, by several independent observers, have shown that an appreciable part of the value of bituminous coals, considered as sources either of light or heat, may readily be lost if the coals are left exposed to the air for any great length of time after they have been raised from the mine. These observations are of such importance to all who deal with large masses of soft coal, for gas-making or in metallurgical processes, as to justify a somewhat detailed exposition of them. It would appear that all kinds of bituminous coal are liable to deteriorate on being kept in contact with the air, though some kinds suffer much more than others. The fact that coal thus depreciates on keeping is no novelty. It has frequently been remarked by the large consumers of coal that the value of this mineral for making gas or coke, or even as fuel, is very much lessened by long continued exposure to air and moisture. The custom of declaring, with every shipment of coal from Newcastle, that the article then shipped is "fresh wrought" from the mine is evidence of the prevalence at headquarters of a belief that coal will, in some way or other, deteriorate by keeping. Few persons were prepared, however, to credit either the degree to which this deterioration may extend, in case a heap of coal becomes slightly heated, or the rapidity with which, under favorable circumstances, the wasting process may go on.

It appears that coal may suffer from several causes. When simply exposed to the air, but especially if the air be moist, it is liable to undergo oxidation; some kinds of coal, on the other hand, give off gas by simple disintegration, without manifest cause; and finally, when large heaps or masses of coal are moistened, a sort of fermentation sets in, the coal becomes warm, gives off much gas, and at the same time suffers greatly from oxidation. With some varieties of coal these changes are extremely slow, while with others they take place with great rapidity.

From experiments upon Newcastle coals, Lewis Thompson has found that, generally speaking, the heating power of dry coal is diminished in the ratio of 13 to 12 by six months' exposure to the air and the ordinary action of daylight; but when the coal is moistened the loss becomes much greater, especially if the bulk of the material is very large, in which event the coal may gradually lose almost one-half of its calorific power.

Operating with the coal of Upper Silesia, Grundmann found that, while the specific gravity of the coal remained unaltered, and while the proportion of hygroscopic moisture in the coal had actually increased to a slight extent, there was a very great loss of weight in coal which had been left in heaps in the open air during a period of nine months. With small coal this loss of weight amounted at the maximum to even 58 per cent. of the original weight of the mineral. The proportion of ashes in the coal was found to be very much larger after the exposure than before. It was observed, also, that gaseous compounds were evolved during the weathering process, and that the proportion of carbon and oxygen in the coal decreased more rapidly than that of the hydrogen. As the large heaps of coal became heated by the chemical action going on within them, this action was itself accelerated. The process was likewise more rapid when the heaps were wet by rain. Taking no account of the ashes contained in the coal in either case, it was found that the percentage composition of the coal was very nearly the same at the end of the nine months as at the beginning, so that the diminished value of the weathered coal as fuel must be mainly attributed to the large proportion of ashes which it contains. Grundmann concludes his essay by recommending attention to the protection of coal from the weather by placing it beneath dry and well-ventilated sheds.

The experiments of Marsilly, in France, were upon coals from the north of France, from Belgium, and from Newcastle. They relate more particularly to the evolution of gas from the coal itself, less attention having here been paid to the results of the chemical action of air upon it. This observer finds that when bituminous coal, which has been recently mined, is exposed to temperatures superior to 120° Fah., it undergoes a veritable decomposition, attended by the disengagement of aqueous vapor, gases, and hydro-carbon oils. The evolution of gas increases as the temperature is elevated; it is not abundant at temperatures lower than 212°; but at temperatures between that and 600° as much as one or two per cent. of the weight of the coal may be given off as gas. The exhalation of gas noticed by Marsilly is evidetnly similar to that which, in the mine itself, gives rise to the accumulations of "fire-damp" which occasion the frightful explosions so common in the English mines. He has observed that the gas disengaged by coals taken from mines subject to fire-damp, consists principally of carburetted hydrogen; while the gas evolved from the coal of mines in which no fire-damp occurs, is chiefly nitrogen, and is uninflammable. According to Marsilly, it is easy to obtain ocular evidence of this evolution of carburetted hydrogen, by the following experiment. Tolerably large and compact fragments of recently mined coal are rapidly pulverized, and the powder is placed in a large vessel, which is then covered with a conical bell glass. If the whole is now left to itself for twelve hours a quantity of gas will collect in the upper part of the bell, so that on applying a lighted match and, at the same moment, inverting the bell-glass, the gas will take fire and burn for an instant with a long, luminous flame. This experiment will not succeed with coal which has been exposed to the air for a number of days; and after the exposure has lasted during several months the coal will no longer disengage any inflammable gas, even when heated to nearly 600°.

MERIVALE'S CONVERSION OF THE NORTHERN NATIONS.*

The present volume is a sequel to the "Conversion of the Roman Empire," published last year. In it Mr. Merivale sketches first of all the condition in which the invasion of the barbarians found the Christianity of the Roman world; next, the religious and moral condition in which Christianity found the barbarians when they overthrew the empire, and the extent to which they had been prepared for the reception of the Gospel, either by their own progress or their contact with the Roman civilization. When we say that the volume is made up of the "Boyle Lectures," a series of sermons delivered "to order," if we may use the expression, before a popular audience, and paid for by a legacy, the reader will readily understand that the work has not the historical, or philosophical, or literary value which Mr. Merivale might under other circumstances have given it. The eight lectures of which it is composed might readily have been compressed into one without the slightest damage to the arguments and with a great saving of time and labor to the printer and reader. Two-thirds at least of the text consists of that sort of filling up which in periodical literature has received the appropriate name of "padding," and the object of which is to persuade the reader that he is getting a great deal of very fine writing for very little money. How ill at ease Mr. Merivale feels himself in the position of a Boyle lecturer, and how awkwardly he fills the place of a professional "apologist," is easily seen by any one who compares the style and method of the "History of the Romans under the Empire" with those of the two volumes which he has, as we think unfortunately, offered to the public as a continuation of his great work.

As we have said, one admirable and interesting lecture might have been made of the eight before us. There are, perhaps, few men living who are as well versed in the literature, both secular and ecclesiastical, of the declining empire as Mr. Merivale, and better fitted, in spite of the baldness of his style, to call up before our mind's eye a vivid picture of the process by which the Church conquered the world,

* "The Conversion of the Northern Nations: The Boyle Lectures for the year 1865, delivered at the Chapel Royal, Whitehall. By Charles Merivale, D.D." New York: D. Appleton & Co. 1866.

and of the sacrifices of truth, and piety, and simplicity by which the victory was bought. He sketches ably and ingeniously the tendency of some of the earlier fathers, such as Justin, to look upon Christianity as but the natural development of the heathen philosophy in which they had been bred, and which, even after their conversion, they had not ceased to love and to cultivate; that of others, such as Clement of Alexandria, to treat it as something which humanity had reached in its ordinary progress—the goal of much human striving and aspiration, begun in the earliest ages and continued through countless generations of prophets, poets, and artists; the vigorous efforts of Tertullian and Origen to make head against this tendency, by claiming for the Gospel an origin and existence of its own, the power of proving its own truth, and the glory not simply of having furnished an additional agency for the moral amelioration of the race, but of having established a new relation between God and man, opened a new and narrow way through which alone salvation was to be sought. The rise of dogmatic theology in the fourth century, owing to the Arian and Pelagian controversies, and the part played by Athanasius and Augustine in framing and handing down to us the body of doctrine to which the severer of the Christian sects have since adhered, and which, in the shape of Calvinism, has since in England, America, Switzerland, and France exercised so marked and important an influence on the world's history, are ably set forth in the third lecture. The discussion of the influence upon the morals of the Church of the general adhesion to it of the wealthy, official, and educated classes in the third and fourth centuries, is, perhaps, the best portion of the volume, but its value lies mainly in its suggestiveness. As a historical study, it is spoiled by being a sermon. The same judgment may be passed on the concluding lectures, in which the moral and religious condition of the barbarians who overthrew the empire is examined. This portion of the work has, of course, to be done with very scanty materials, and when we say that Mr. Merivale avows that he did it with the view of making evidence in support of a preconceived theory, the reader will understand that it cannot be considered severely critical. In fact, nobody can read these Boyle lectures without feeling, as we have long felt, that whatever value this mode of enforcing the truth of Christianity may have for believers, it is not likely to exercise upon the sceptical or doubting the influence which its originators intended and looked for.

MISS CARY'S COUNTRY LIFE.*

This little collection of tales is well named, for the most of it, and all the best of it, is made up of pretty, flattering pictures of the country and of life there. What country? the reader once in a while asks himself, being not quite sure always whether the spinning-wheel he listens to and the loves of the spinster are to be found in some New England farmstead, or in one of our small Western towns, or in Miss Mitford's village. This is an uncertainty that could not exist if the pictures were photographic. They are not offered as such, we take it, but rather as sketches which fancy in part composed, and which were less intended to be faithful to local nature than to produce the impression which the artist has certainly been successful in producing—the pleasing, if somewhat vague, impression of hay-fields and orchards and farm-houses, of mowing in the high grass, of quiet roads, dusty or filled up with snow, with pastures on each side and cattle panting in the brook or steaming at the frozen watering-place, the impression of showers and verdure, of November rain, and the falling leaf, of the beneficent violence or the peace and amenity of rural scenes. It is this, at any rate, which we find in the book, and this in general is what makes it charming.

There are things in it to be severally praised—the graceful sweetness of the author's style, the perfect purity of sentiment, the gentleness and kind-heartedness which prefer to dwell on what is good and happy, and conceal or soften the harshness and sordidness of many phases of country life, the delightful, unsophisticated innocence which depicts so much exalted affection in the farm hireling, and finds for him a lady of high degree, and pairs so many young lovers—but these, if they all are there, are still parts of a whole: if they do not belong to any farming district known to the Corn and Produce Exchange, do belong to the idea which we like to entertain of the country and the *pagani* and *villani*, its inhabitants.

Even a Yankee landscape might be mistaken for many another if the Yankees were left out; and the occasional, only occasional, uncertainty of which we have spoken is apparently due to the fact that in figure-painting our artist's pencil fails to give so correct or decided a touch as in working on the background. The delineation of character, though often well done so far as descriptive power alone can carry the author, is not one of her strong points. The personages are frequently of that kind which exist to point a moral, or adorn a magazine tale, or both, and their behavior is quite different from that of any flesh-and-blood people who ever lived. Nor is there much to commend in the matter of plot, if we may call plots these threads so free from tangles, or in the invention of the incidents, which are never new and not seldom ill-managed; the humor is apt to degenerate into caricature, or to be dull for other reasons, and the thought is usually rather feeble and trite. To illustrate by one example more than one of these blemishes, we should cite the following passage, which is taken, it is only fair to say, from the poorest story in the book, the one with the ambiguous title, "Making the Children Something." A woman about forty years of age is sitting at dinner with her husband and their two children, of whom one is a marriageable daughter and one a boy of fourteen. The parents stand in the story as representatives of the vulgar rich. Miss Annie, it seems, has been down in the kitchen all morning learning how to make a pudding. Pudding-making, we know, like sauce-making, is a branch of the culinary art which is most shamefully neglected by American womankind, so it does not perfectly surprise us to learn that Miss Annie's instructor in cooking is an elderly farmer, a Mr. Wentworth, who for some reason best known to himself has been spending his day in the basement of Mr. Hartly's elegant mansion. Who is Mr. Wentworth? the father severely enquires. Annie is abashed; but her mother, who was the daughter of "a retired horse-jockey"—an American horse-jockey, we presume, and not a jockey of the English sort—who was born and reared in a country village, who is a woman said to be naturally sensible and shrewd,—Mrs. Hartly, we are asked to believe, makes answer in this fashion:

"'One of those men, you know,' said Mrs. Hartly, in an explanatory way, 'who make pumpkins and milk, and cultivate butter and manufacture corn and cattle, and such things—a man that lives in an open place, you know, where there are trees, and where there are no streets, you know; no houses, only wigwams, or bamboo huts, or something; you know, William, it 's the old person that brings us our butter and apples.' Mrs. Hartly said person to indicate that she did not know exactly whether he were black or white, man or monkey. It was a sheer affectation on her part" (p. 191).

The kind of affectation undoubtedly exists, but this degree of it, we may safely say, considering the given circumstances, never existed. This sort of writing is not delineating character, nor inventing probable or possible incident, nor showing any humorous power, nor doing anything but making a lay figure, and then making it ridiculous. Here is another touch of nature:

"They had taught themselves divers little forms and ceremonies, in the use of which they were most punctilious, and a dozen times a day Mrs. Hartly sent her compliments to Mr. Hartly, with some sweet and lady-like enquiry as to his health, or wishes with reference to what dress she should appear in at dinner, and as often Mr. Hartly sent back his compliments, from the garret where he was putting in a pane of glass, or the cellar where he was sawing wood, as the case might be, begging that Mrs. Hartly would oblige him by wearing the blue dress or the green one, and he often topped these princely messages by a request that Mrs. Hartly, if she could make it consistent with her previous engagements, would do him the favor to accompany him on a visit to the house of General or Governor So-and-so" (p. 194).

If we could only feel sure that any natural laws governed the propagation of such beings, that it was not mere chance which determined what manner of chimera they should produce as offspring, it would be a cause of real rejoicing to know that in the second generation of Hartlys we get boys whose manners and conversation are comparatively so sensible as appears by this example. His father invites Albert to take a glass of wine with him:

"'I see you,' answers the hopeful; 'and when I finish this pooden I 'll drink a bottle or two; haint got my appetite squinched yet, and come to my drinkotite. I was at confession, you know.' For a while Mr. Hartly's head falls, as if a hammer struck him" (p. 197).

He sends the boy to Florence to be made an artist. Annie Hartly, by way of punishment for pudding-making, is exiled to the country, to the house of Mr. Wentworth, who very willingly takes her along with him. She is under orders to keep a diary. She does so, and very absurd it is—even among diaries. It comes to an end, however, on the eighth day, when the wealthy and affectionate young lady writes that she has made a match with the second son of Mr. Wentworth, that aged swain having evidently been a good deal sharper throughout the whole transaction than Miss Cary imagines.

These extracts are all from one story, and they might be multiplied. But we have done with fault-finding. It would not be easy anywhere throughout the book to turn over half a dozen pages without coming on something to make one forget the blemishes—some exhibition of kindliness to be pleased with, some touch of pathos to soften the heart, some token that the author can feel keenly the cares and sorrows and joys of "the huts

* "Pictures of Country Life. By Alice Cary." New York: Hurd & Houghton. 1866. Pp. 359.

where poor men lie," some one of the constantly recurring instances of that excellent descriptive power which is Miss Cary's highest gift. We quote two or three passages, almost at random:

"It was about the middle of February, and along the northern slopes of the hills, at the roots of big trees, and close in the shadows of the fences, lay the skeleton of the great winter snow. For all their searching, the sheep had not found a single patch of green grass as yet, and the mother-cow had brought home to the stable her young calf without waiting to be invited, so sharply went the winds along woods and meadows.

"The smoke issued briskly from the chimney tops, and the heaps of dry wood near the doors, and the lights shining pleasantly out along the frozen ground, told of quiet and comfort within. Here and there an axe was busy at the wood-pile or a lantern shone over the dry sun-flower stalks by the garden fence, as some less orderly farmer than the rest went from house to barn to attend some little chore forgotten or neglected.

"Mostly, however, it was quiet and cold and dark, except at one or two windows of each house, and the snow and frozen earth, ground together, powdered the lonesome road before the late travellers" (p. 56).

Here is a picture from another season of the year. Like the previous one it happens to be not very cheerful, but in neither case is the gloom suffered to remain long. It is the unkempt garden of a tight-fisted farmer:

"'Dear me!' says Mrs. Walden as the wheel stops again; 'well, I must work all the harder for the idleness of the rest, I suppose;' and with a shining tin pan in her hand she makes her way to the garden. She don't know what she will find, she don't suppose she will find anything, and sure enough she does not; the cucumber vines are yellow and seem to be dying; there is not a cucumber to be found larger than her little finger, and as for the tomatoes, they might just as well never have been planted; there are a few onions run up to seed among the weeds; the cabbages are not heading at all, and she can't tell where the beet bed was made. So, through nettles and burs she makes her way out again, stopping for a moment at the currant bushes as a forlorn hope; she finds a few poor little berries, but if she picks them now there won't be any left, so she leaves them for a greater emergency, and with an empty basin returns to the house. The flies are buzzing thick along the ceiling, and one or two old hens are picking the crumbs from off the floor; they ought to have plenty, but they have not—there are not more than half a dozen chickens in all about the farm; the hens don't do well—she don't know why; possibly there is some fruit in the orchard large enough to cook, but she don't know as she will traipse there after it if there is," etc.

And thus the poor, discouraged, hard-worked woman, with no enjoyments, her heart full of bitterness and all her bones tired, spends the hot Fourth of July in her cheerless house, to which no holiday ever comes—or hitherto has ever come, for it is not like Miss Cary to bestow an unhappy past without a compensating happy future. She does it, however, in one of the tales—in the very best of them all—the domestic tragedy of "Eliza Anderson," which seems to us quite worthy of a place beside the best of Miss Mitford's stories, as indeed Miss Cary's whole book is a not unfit companion for the record of "Our Village." It is healthful, entertaining reading, and the pleasure it is able to give is as pure and honest as it is great.

UNHAPPY FRANCE.*

THE quality of Rogeard's prose was made suddenly famous when Paris held its breath on reading his "Discourse of Labienus," and the author of the "Life of Cæsar" compelled the audacious pamphleteer to flee into Belgium. In the clandestine publication whose title is here annexed, and which brought upon Rogeard a second expulsion, we have a taste of the quality of his verse. The preface, however, occupies a fifth of the book, and, quite as much, probably, as the poems which follow, was the reason of Belgium's refusal (whether spontaneous from timidity or ordered by the implacable Emperor) to shelter him. Here the writer no longer lashes Napoleon III. over the shoulders of Augustus, but subjects him directly to a remorseless chastisement. His instrument of torture—the French language—is exercised to its utmost capacity, but it would be difficult to convict him of wanton or excessive abuse. It is not only easy to believe that he is sincerely in earnest, but it is also necessary to admit the justice of his accusations.

He begins by assuring his readers of his perfect frankness and good faith. He anticipates attack from every quarter. "The substance, the form, the title, the dedication even will be condemned. Attack the Empire, the devil! attack it in verse, *peste!* dare to commiserate France, just look at the fellow! invoke the shade of a guillotined man, horror!" Yet everybody knows what the Empire of the Second of December is. "Everybody knows it in free countries, and even at Paris; it is known in the town and in the country—it is even known at court; it would be necessary to go some distance and descend pretty low to find anybody who does not know it." Eugénie, Ollivier, Persigny, Bonaparte himself, the Prince Imperial, each and all understand the symptoms of the Empire, and that the physicians have given it over. France is not guilty of accepting the Empire: she never could digest it; she is about to spew it out to escape being poisoned. She is blameworthy for letting it die of itself, when she ought in honor to kill it. It is a hopeful sign that they are beginning to laugh in France. French laughter is a great and powerful thing; it tumbles down walls like Joshua's horns. Revolutions come of it—Rabelais, Voltaire, Beaumarchais, Courier. Even the defenders of the Empire are of two sorts—the ferocious and the grotesque; and the latter again are divisible into two—the malicious and the simple. The malicious is Marquis de Boissy, when he declares that "he prays for the Emperor's health all the day, and all night—except when asleep!" The innocent is M. Duruy, when he says, "The Emperor is the most liberal man in the Empire."

The Empire is doomed to fall—no question about that. Heir and all, the bandit and his gang. But the Empire must not only fall, but fall promptly. "Time must not be allowed it to demoralize the country enough to enable any sort of monarchy to establish itself again, nor to corrupt the nation enough to render it capable of accepting a king. Of all the agents of social decomposition, of all the solvents, of all the putrefiers, military despotism is the most powerful, the most energetic, the most violent. Of all monarchies it is the richest in toxical qualities; its effects are rapid, terrible, crushing. Peoples as good as ourselves have died of it: Athens died of it, and so did Rome, and so would Paris if she went to sleep with this poison in her stomach. Alexander, Cæsar, Napoleon—poisoners of peoples!"

Do you suppose, continues the writer, that I detest the Empire simply because of the evil it does the present time, and the sufferings that the present generation endures? because there is now in France neither press nor tribune, neither right of assembly nor of petition, nor any guaranty of property, liberty, or life?—simply because of massacres and transportations, of perpetual wars and forced loans? because this Empire, reposing on a single head which is constantly menaced, is like a pyramid balanced on its apex, and maintains its equilibrium only by a miracle, and causes, every instant, mortal trances to the exchange and panics to commerce, and offers no stability to the government and no security to the governed?—simply because it inspires contempt of all authority, and "reposes, like all monarchies, and more than any, on the seven institutions (the seven scourges of modern society) which make kings thrive and peoples perish, the seven cursed pillars of the accursed edifice, to wit: The standing army, the salaried clergy, the unremovable magistracy, the centralized administration, the police, prostitution, and organized pauperism? Do you suppose I detest it, finally, because of the luxury of some and the ruin of others, and because I myself have been a little despoiled, a little imprisoned, a little exiled, and because I shall, perhaps, one day be guillotined a little?"

He answers that, on the contrary, he detests the Empire for the evil that it may do more than for what it does—for the future more than for the present; because the demolition of minds goes on more rapidly than that of houses; because the Empire is a disease of which men die; and because after it anything appears good, even another evil—a Bourbon, an Orleans, a constitutional daub.

This book, he avers, is a work of combat more than a work of art—a siege work, a machine of war. If you ask how he came to write in verse, he asks in return how he ever came to write in prose. Because, since he first seized the pen in 1852 to assail the Empire, he was constrained to write in some form or other. "I do not know," he says, "whether I am a writer; I am absolutely ignorant of the merit of my verses; and what odds is it? As if, forsooth, it were a question of literary renown! The stake is the deliverance of France." This series of satirical pictures is a review of the evils of the present régime:

"France now finds herself invaded by a horde of savages that history will call *the Bonaparte gang*—a race without faith or law, here to-day and to-morrow having neither house nor home; with no notion of right, no moral sense, no respect for justice, no conscience for political duties; night rovers, jayhawkers, dukes of Bohemia, swindlers, adventurers, making rack of others' goods and litter of the public interests. And this tribe of Mohicans holds France by military occupation, and these red-skins would tattoo the nation in their image! That is the invasion, that is the barbarism, these are the vandals in epaulettes and black clothes against whom French society must be defended, and the sacred depository of the newest science and the liberties of the world." . . . "And now, dear reader," concludes the preface, "greeting and fraternity! and may you live in the hatred of despotism, religious, civil, or military, and in the resolution to destroy it. For if tyranny may be the crime of an individual, tyranny which lasts becomes the crime of all, and voluntary servitude is nothing else than public dishonesty."

The poems—for to these we must next turn—are sixteen in number. They are accurately enough described in the preface, and, while not desti-

* "Pauvre France! Par A. Rogeard, Auteur des *Propos de Labienus*. Quatrième édition." Bruxelles: chez tous les libraires. Pp. xxvii., 104.

tute of imagination and of true poetic feeling, betray in too many prosaic passages the motive which inspired them. Meant to be bombs as effective in their way as Orsini's, they are charged with every sort of missile —now with arguments, and now with a catalogue of facts—until they are little better than so much solid shot. This is especially evident in "Bonaparte's Crime" and "Liberty Exported into Italy by the French Empire." All, moreover, save one, have the same form—the iambic hexameter, and otherwise attest the classical training of the author of "Labienus." The invocation may be roughly rendered as follows:

"Let the fountain sing, and let its wave not cease to pour;
The brook that murmurs now, a torrent grown, will roar
Against the massive rock across its pathway flung;
The flood mounts, and the mass of rock is swept along.
Flow, brooklets, flow! and roar, ye torrents of our ire!
Mount, hate! in thunder swell, O people's vengeance, higher
This Roman empire nods and almost falls to-day;
At dawn a flood of truths shall carry it away!"

"Imperial France" recounts the decay of the nation from the time of the First Republic. Over all hovers like a vulture the spirit of the Second of December. Europe is hell—Dante's funnel—with France at the bottom. Once the vestal virgin, and thought worthy to hold up the torch which she had kindled before the human race, she had allowed the sacred flame to expire, and her doom was to be buried alive. Paris, from being the capital, has become the necropolis of democracy.

"The Comet" was suggested by Donati's comet in 1857. It contains many humorous and sarcastic enquiries as to the mission of this prodigy, and surmises that God had despatched it to recover his heaven from the apotheosized Roman emperors, who had each appropriated a star to himself. But ours is not that impious age:

"The times are mild, and we sit happy at our boards!
This age, of glory full, with virtue is oppressed;
We are happy, times are mild, what hither is thy quest?
If thou avengest crimes, seek elsewhere their abode;
Our charming species is angelically good;
Spare us, O comet, spare! this world is innocent;
It does not even know what is by bloodshed meant.
Remote from us the times when men their souls have sold;
No longer do we cowards, no longer knaves behold;
None gathers on his knees the great man's crumbs to-day;
This world is innocent, I tell thee; spare us, pray!
But if, O voyager, in thy sublime career,
Thou seest ever (of course, in quite another sphere)
Upon a dunghill huge, all moist with blood and slime,
Spread like a cedar-top, an overpowering crime,
Root up the cedar, and leave in peace the shrubbery;
Search well, look well, and strike, comet, impartially!"

WELLS'S PHYSIOGNOMY.*

MANKIND will have to change essentially before men and women will dislike to talk about themselves and to hear themselves talked about. Whatever may be the foundation of phrenology and physiognomy as sciences, it is upon this not very lofty trait of human nature that the art and craft of the phrenological "professor" is founded—whether he is a stroller who feels heads for half a dollar a time, and no two times alike, or the rent-paying professor, who charges five dollars for a chart of character, selects your profession for you, and tells you how to choose what he likes to call a "matrimonial partner." Vanity is one name for that weakness of their fellow-creatures on which these gentlemen live, though it is possible to find a more flattering title, for the feeling is not an unmixed one. Usually, however, the phrenologer's dignified invitation to his customer, Come, know thyself! really means a sort of knowledge which, if it had not succeeded in getting itself called scientific, most men would be a little ashamed of seeking. It corresponds to an excuse for studying a looking-glass.

The fat, catchpenny duodecimo of seven or eight hundred pages, just issued by Fowler & Wells, ought then to be quite a popular book, and, doubtless, it will sell by the thousand copies. It is a perfect farrago—a jumble of sense and nonsense, facts of observation, ridiculous assumptions, bad guesses at truth, old things and new, religion, palmistry, over a thousand wood engravings, phrenology, moral philosophy, advice as to the use of cosmetics, anatomy, physiology, graphomancy, climatology, the passions, the temperaments, the races, physiognomy, the systems of Lavater, Redfield, and Alexander Walker, quotations from the poets and prose writers, the physiognomical observations of Aristotle, remarks by Mr. Wells himself of all degrees of silliness and of various degrees of sense—in short, an immense and ill-digested mass of incongruous materials of which, while some of the parts are good, the compilation is very nearly worthless. But, as we have said, it will not want readers. Many a person who has languished all his life behind a nose ungracefully wide through the nostrils, will buy the book and take comfort in learning that such a nose has valuable uses—"it disposes one to seek concealment, to hide things, to lie low and keep dark." It is remarkably fitting that this nose which lies low and keeps dark should be the African nose. It is a fact too plain for the author to miss, and he remarks almost immediately that no man is more subtle and secret than the negro; usually, when he is asked a question, he "don' know nuff'n 'bout it." With the secretive nose there goes a tendency, which we must say we have never observed in colored people of our acquaintance, to wear the coat buttoned close across the chest, or, if the secretive nose belongs to a woman, to cut the gown high in the neck.

So, too, if one have a nose of which the partition between the nostrils extends downward more than is common, it will interest and please him to learn that in virtue of that slight blemish he possesses "the power of discovering, analyzing, and combining—a threefold mental process, by means of which truths are established and systems formed." It would be a curious subject of investigation to enquire—body and soul are so inextricably tied together and so interdependent—whether the custom of wearing nose-rings might not be expected—after several generations we mean, of course—to increase the number of Spencers and Frothinghams.

And again, if a man, as many men have been, is a clergyman, looking back penitently on reams of flowery sermons, or a Moncure D. Conway, half ashamed of much very high-flying, ornamented eloquence, or an Alexander Smith, with a pack of poetical similitudes, some stolen, some home-made, he will be glad and thankful to learn that after all he has but followed his nose: "the faculty of metaphor" accompanies a thickness of the middle part of the septum above mentioned, and the man so marked "abounds in figures of speech and imagery of all kinds." The spirit was willing because the flesh was weak.

And who would not like to know what his chin means? and who, if he is silly enough, would not like to let Mr. Wells tell him what he thinks it means? What a satisfaction it will be to the lady who has remained unwedded for years after she thinks she should have become a matron, to find that she can get consolation from her despised pointed chin: her celibacy is due to the sharpness of that feature. It has caused her to be hard to satisfy, to love an ideal; her high requirements have made her cold to ordinary love. She may find in the indented chin, not in any superior gifts and graces, of her married cousin, the reason of the good fortune on which that lady plumes herself. Indeed, she is almost justified in shaking her head when that lady's name is mentioned: ladies with pointed chins not unfrequently, their affections are so ardent, instead of waiting for gentlemen to ask, themselves propose!

That there is nothing in physiognomy is something that we are as far as possible from saying. Every man's experience of every day would contradict us. But to say that there is a science of physiognomy is an assertion too ridiculous for even Mr. Wells to make. And such a performance as this of his only tends to bring the art and the professors of it into contempt.

* "New Physiognomy; or, Signs of Character. S. R. Wells," New York: Fowler & Wells. 1866. Pp. 768.

PARIS GOSSIP.

PARIS, June 22, 1866.

THE commencement of hostilities in this hemisphere is, of course, the main topic of conversation here. All private interests must be more or less affected by the perturbations of war; but to the kinglets and dukelets of Germany the struggle now begun is a question of life and death. It is fully understood that Prussia intends to keep whatever she gets possession of; and more than one of the internal divisions of the "Vaterland" may now be regarded as things of the past. Queen Victoria, who has exerted all her personal influence to moderate the internecine animosities of the day, but without success, remarked, a day or two ago, "Alice is ruined; for Hesse has ceased to exist. I have written to her to come over here; unless she do so there is nothing left for her to do but to go to some cheap place in Switzerland and live as economically as she can." The Crown Prince and Princess of Prussia are, like the Queen, strongly opposed to the absorption of the duchies, the war, and the entire Bismarkian programme. The Queen of Prussia is so indignant at her husband's course that she lives almost entirely away from him. But the weak, narrow-minded, obstinate, yet vacillating old man is so much under the control of his minister that he fancies it to be his "duty" to persevere in the path on which he has entered. He regards himself as the victim of a hard necessity, and as being "menaced" by the opposition of Austria to his absorption of the duchies. He fancies himself as being desirous of peace with all the world, and as being forced into war by the machinations of his enemies. "What a hard case is

mine!" exclaims the old King, weeping the while half a dozen times a day; "I desire to be on friendly terms with all my neighbors, and especially with Germany, and yet the hostility of the Germans compels me to fight for the honor and safety of the Prussian crown."

The Emperor Napoleon, still busy with attempts at negotiation, has given up his usual visit to Vichy, from whose waters, as from those of Plombières, he has derived so much benefit in regard to the enemies of indigestion and rheumatism, against which not even the power of Cæsar is of any avail. It is said that the Prince Imperial, kept in Paris against his wishes, has begged of his august papa to be permitted to amuse himself with learning to print; and that a beautiful little printing press has accordingly been set up for him at the Tuileries, and a skilful young printer engaged to teach his active little highness how to use it. If the story be true, we shall doubtless be favored, before long, with samples of the proficiency of the "Hope of France" in his new capacity.

Another clever child, attracting just now the attention of the artist world of Paris, is Mademoiselle Thérésa Carreno, aged twelve, daughter of the ex-Minister of Finance of Venezuela, who has come hither to prosecute her musical studies, and is meantime turning the heads of all who hear her, Rossini and the other "great guns" of the musical art included. The little lady's execution is wonderful, and her genius for composition more wonderful still. She seems destined, indeed, to take her place in the very front rank of the musical phalanx, equalling if not surpassing its two great leaders, Liszt and Thalberg, of whom the former is cultivating the applause of the gay world as assiduously in priestly garb and with the aid of sacred music as he formerly did in dress-suit and white choker and with the profane productions of the secular muse, while the latter, who has been planting vines with the utmost energy and perseverance for five years past, on the gentle slopes of his magnificent estate at Posilippo, is promising to become as famous in the capacity of a wine-grower as he is in that of pianist, the products of his vineyard being pronounced by connoisseurs to be superior to anything grown in the most renowned wine-districts of France or Spain; an identification of Bacchus and Euterpe more fortunate than the gradual descent which has brought the name of Madame de Genlis, the favorite of courts and kings, and whose writings are still familiar to the infant mind of France, into the proceedings of a police court in the investigation of a quarrel in a wine-shop: one of the principals in the affair, the mistress of the wine-shop in question, being sworn, was "Athénaïs de Brulart de Genlis, wife of Jacques Durand."

It appears that the ingenious *gourmet* to whom the M. de Girardin newspaper, *La Liberté*, is indebted for the sketch of a dinner, published daily in that paper, is the Baron de Brisse, well known here as "a fork valiant" of the most artistic and erudite type. His skeleton dinners are devoured by all Paris: literally, by those who can afford to have them executed by their cooks; in imagination, by those who are restricted to a more moderate rate of prandial outlay. The *Liberté*, which began its career a few weeks since with 250 subscribers, owes a goodly proportion of the 25,000 now upon its list to the success of its "daily dinners." The idea, however, is not due solely to the fertile brain of M. Emile de Girardin, the *Grand Journal* having formerly inaugurated its entrance into the world of publicity by publishing a series of "culinary conferences" by that most accomplished of cooks, the elder Dumas. The popular author had promised, after the immense success of his receipts for the production of his famous salad and "cabbage soup," to impart to the listening universe the secret of another of his most renowned dishes, viz., "rabbit à la musketeer."

The author of "Monte Cristo" having gone to Italy to act as secretary to Garibaldi, and to pick up materials for a fresh batch of novels, Paris ran the risk of remaining ignorant of this important secret. Happily for the lovers of rabbit and of Dumas, the receipt in question had been written down by one of their number, who, since the sudden departure of "the great Alexander" for the scene of war, has generously given it to the public. According to this authority, the dish in question, which Dumas declares to be "meat for the gods," is prepared as follows: Get a rabbit, knock it on the head, open the body, draw away from it as much blood as possible, and take out the liver. To the blood and liver thus obtained, add the wing of a fowl, two wings of partridge, one truffle, a small handful of sausage-meat, one onion, parsley, garlic, and spice. Chop up the whole very fine, with a bit of salt butter and a sprinkling of pepper, and put it into the body of the rabbit, which is then to be hung up by its hind legs in a dry larder, and left for forty-eight hours. At the expiration of that period, take down the rabbit and *tie it to the spit*, in its skin, which you will have carefully sewed up at the opening through which you have introduced the stuffing. Let the rabbit turn constantly until it begins to let off little jets of steam, which will show that it is cooked *à point*. When this occurs, take the rabbit from the spit, seize its hind legs with your left hand, and, with your right, you give a sharp pull at the tail, when, lo! the entire skin will come off with a sudden crack, and the odoriferous "roast" will be revealed in all its succulent glory to your enchanted senses. "You will then," said Dumas, in winding up his description, "have only to place the rabbit on a layer of fresh butter, mixed with herbs chopped fine, and absorb it with a becoming sentiment of respectful sensuality."

The quarrel between M. Victorien Sardou and M. Paul Féval has been, happily, terminated without the duel which at one time seemed imminent; and the latter may repose in peace on the abundant laurels he has already gathered, one of the glossiest as well as most profitable of his laurel-leaves being his last creation, "The Benoiton Family," which, after a short pause, has resumed the course of its successes as brilliantly as ever. The wonderful costumes of the actresses in this popular piece have done far more to stimulate the existing passion for costly dress than the moral of the play will ever do to restrain it; and ever since this tirade against extravagant dressing has been upon the boards of the Vaudeville, all the womankind of the capital has been assiduously imitating the "ravishing toilettes" of the Benoiton ladies. We have had the Benoiton chain, and bonnets, head-dresses, jet, gold, silver, straw, and glass, and on foulards, muslins, silks, and ribbons. We have crinolines, skirts, paletots, boots, bracelets, parasols, and horse-whips *à la Benoiton*, and now we have pastilles, bonbons, and, lastly, sticks of apple-sugar rejoicing in the same magic appellation.

It appears that Petersburg and Moscow, since the life of the Czar was saved by the intervention of the journeyman hatter, Kommissaroff, have endured a similar infliction of the not very euphonious name of the Emperor's deliverer. In all the principal streets of the capitals of Old and New Russia abound photographs of Ivan Kommissaroff, the journeyman hatter, and the Prince de Kommissaroff-Kostromskoï, the newly-created Russian grandee, for the edification of whose fortune on a scale corresponding with his newly-bestowed dignity subscriptions are being organized all over Russia. Meantime, all the principal streets of the old and new capitals of Russia abound in *bonbons à la Kommissaroff*, pies *à la Kommissaroff*, with a portrait of the fortunate hatter in sugar-candy; cigars, cigarettes, purses, cloaks, hats, clasps, and walking-sticks, all *à la Kommissaroff*.

The famous grotto being built in the cellars of the Hotel Frascati, on the Boulevard Montmartre, promises to be as successful as the other culinary speculations of the wealthy syndic of the whilome corporation of Paris butchers. This curious enterprise has already been pushed downwards to a considerable depth, and the walls, ceiling, and ground are said to present a faithful imitation of the scenery of a submarine cave. The place is to be a vast aquarium, where a numerous collection of finny celebrities will swim about in real sea water, brought fresh, daily, from the sea by railway. We are promised seals, porpoises, a siren, Chinese gold-fish, and various other interesting strangers, including a pretty little whale, twelve feet long, just brought from Baffin's Bay, viâ Boston, in the *Mormon*, on board which vessel it was lodged in an iron tank, in and out of which the sea swept freely, no doubt to the great satisfaction of its interesting tenant. The whale is now at Brest awaiting the completion of its Parisian domicile, and will be conveyed to this city in its tank by railway. The "Marine Grotto," when complete, will combine the instruction and amusement of a peripatetic exposition of piscine curiosities with the substantial attractions of a restaurant; and if M. Duval restricts his list of prices to the very moderate tariff of the twenty popular restaurants he has established at other points of the capital, he will doubtless add a good many millions to the many he has already realized by his spirited undertakings as butcher and purveyor.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

THE NEW PARTY.

It seems at last to be settled that a new party is to be organized for the support of Mr. Johnson, and that the Democratic party will co-operate with, if not entirely merge its existence in, the new organization. The President may therefore congratulate himself upon having already secured a measure of success in politics far exceeding that of his prototype, John Tyler, who attempted exactly the same thing, but ignominiously failed. Mr. Tyler was compelled finally to follow in the wake of the Democratic party, which pursued its own course with total indifference to his wishes. Mr. Johnson has not been able to dictate to the party which elected him, but he has compelled the Democratic party to follow in his wake. He has not only shaped its platform, but has reduced it to the position of a mere Johnson party, obsequiously accepting all his policy, endorsing all his acts, recanting all its recent emphatic declarations, and humbly waiting for his further pleasure.

This is no common triumph; for deserters, however welcome they may be made, are not usually put at the head of the army to which they go. No doubt Mr. Johnson is persuaded that he owes this achievement to his own superiority of wisdom over those who have been his predecessors in treachery. Yet it is obvious that such is not the fact. It is owing solely to the peculiarity of his position; and not the least remarkable feature of the case is that the very weakness of his following in the party to which he nominally belongs, but which he has resolved to betray, is the source of his chief power over the party which is now allying itself to him. So few of the Union party agree with him, that he individually is the only obstacle which prevents the views of that party from being carried out. If the South or the Southern party at the North should offend him, they would be absolutely at his mercy, since there would be no one in power who would have the slightest disposition to moderate his terms. If one-third of the party which elected him were conscientiously on his side, he could not carry them over to radicalism at his own whim; but having no support except that which springs from servility or timidity, he can carry his supporters where he pleases and do what he likes. Should the South irritate him, he could instantly establish equality of political rights from Virginia to Texas, in spite of all that the Democratic party might say or do; because he would be sustained in this by two-thirds of both houses of Congress. If he had more sincere followers among the Unionists, he would not be able to make any material change in his policy. Thus it is that his very weakness enables him to dictate terms to the South, since it lies at the mercy of his caprice.

It is too early to pronounce upon the chances which the new Johnson party will have for success. Something will depend upon the plan of organization; and we do not sympathize with it enough to give it any advice as to that. Much will depend upon the management of the Union party. If a liberal spirit prevails in its councils, and room is allowed for honest differences of opinion upon subordinate questions, such as modes of taxation, foreign policy, etc., the party will continue united and formidable; but unity without uniformity must be accepted as sufficient. If Mr. Stevens insists upon driving out all free traders, he will find his party more select than he will relish. We do not, however, apprehend much danger on this side, though a warning is needed.

It is useless to enlarge again upon the dangers to which the Union party has exposed itself by adopting a policy of mere exclusion, since we fully set forth our views upon that subject before a final policy had been adopted, and the course of the party has now been settled. The policy determined on is, by far, easier to carry out and to sustain before the people during the present year than a broader and bolder plan would have been; but it is one to the success of which unbroken victory is essential. The constitutional amendment proposed by Congress is in every respect unexceptionable, so far as it goes. It is worthy of the united support of all men who have been truly loyal to their country during the war, and we believe that it will command very nearly that measure of support.

The attempt which is made to persuade the public that the Philadelphia convention will be one of the Union party is a highly dishonorable one. Such devices have no effect upon readers fully posted in political affairs, but many who do not have time to keep themselves informed may be deceived. The most remarkable circumstance in this connection is that the newspaper which most strenuously asserts this to be a Union party convention is nominally edited by the chairman of the Union National Committee, through which alone a national convention of the party could be called; and that neither he nor any other member of that committee has signed the call for the Philadelphia assemblage. He has not even called the committee together to consider whether it would ratify the action of Mr. Randall and his associates. Such an instance of self-abnegation is not often known in politics.

The multiplied treachery to obligations of honor and good faith which is involved in the organization of the new party must not pass without notice. If the leaders of the movement had any idea that they could induce the Union party to accept their views, they would have worded their call differently, or would have requested the chairman of the National Union Committee to convene that body to consider the proposition for a convention. Instead of this, the existing party organization is ignored, and two or three office-holders, in the present or in prospective, issue a call, addressed only to those who entirely agree with their views, excluding, and *intended* to exclude, nine-tenths of the members of Congress elected by the Union party, and a proportion of the party itself, estimated by no one at less than one-half, and by no experienced politician at less than three-fourths. Special pains are taken to secure the co-operation of the adverse party, and the call itself is not issued until it is countersigned by one or two leading Democratic Congressmen, and the sanction of all the others made ready for publication. All this is done to please a President elected by the Union party, by office-holders appointed by the Union party, and with the encouragement of some of the men to whom the central machinery of the party has been entrusted.

It is entirely immaterial, in considering the question of honor, whether the party thus betrayed is right or wrong in the policy which it has adopted. If the cause of the Southern Confederacy had been the purest and noblest in the history of the world, the act of Twiggs in turning over his forces and supplies to the rebels would have been scarcely one shade less infamous than it was. Dugald Dalgetty considered himself at liberty to fight on every side in turn, but he conscientiously waited until his term of enlistment had expired, and never dreamed of carrying over with him anything which had been committed to his charge. But Mr. Doolittle tenaciously holds on to his senatorship, Mr. Randall to his position in the post-office, and Mr. Johnson to the White House, while intently engaged in slaughtering the party to which they owe all their honors.

We are familiar with the arguments by which it is sought to avert from such proceedings the contempt of mankind, and by which the participants are able to silence their own consciences; but we cannot believe in the sincerity of the men who use them. It sounds very fine to talk of the superior obligations of the country over those of a party; of independence, refusal to submit to dictation, and what not; but all the world knows that such high-sounding phrases generally cover something of which the speaker is at heart ashamed, and which he cannot defend in any other language than rhodomontade. When used, as they are in the present case, to justify the sacrifice of party faith and public confidence to mere man-worship and office-seeking, they become doubly contemptible. That such is the fact in this instance is too notorious to be soberly questioned. Mr. Guthrie and Mr. Hendricks honestly oppose impartial suffrage, as they lately opposed emancipation; but Mr. Doolittle and Mr. Norton would make the heavens ring with their enthusiasm for universal suffrage, constitutional amendments, and who knows what beside, if Andrew Johnson only favored them. The less we hear from such politicians concerning their independence, the less we shall despise them.

THE RELIGIOUS CONDITION OF THE SOUTH.

The Board of Domestic Missions of the Old School Presbyterian Church declare in their last report that the religious condition of the South has not improved during the past year, the Southern leaders being determined to "make the religious division permanent," "although slavery no longer furnishes a pretext for separation," and it gives hints of the existence of internal troubles in the body arising out of the care taken by the board to appoint none but loyal men as missionaries. We cannot help wishing that less pains were taken by the various religious bodies at the North to bring about ecclesiastical reunion with the South. Not that the matter is not important, but that all efforts made by the North just now to heal the breach are only likely to make it wider than ever. Religious unity will come after the establishment of political and moral unity, but not sooner, and political and moral unity will, in our opinion, only come as the result of increased civilization. There is nothing which irritates the Southern people so outrageously as the assumption, on which nearly all our offers of reconciliation are based, that they have not only sinned, but sinned with the full knowledge that they were sinning—that they went into the war well knowing that they were about to commit a great crime. We accordingly not only look on their defeat as a piece of retribution, but we expect them to see it in the same light, and to meet us as penitents in sackcloth and ashes, and take our advances to them as proofs of our magnanimity and forgivingness. They, on the contrary, look on themselves as martyrs, on us somewhat as the Jews looked on Nebuchadnezzar or Titus, and treat our propositions to pray with them and fast with them as ingenious modes of lacerating their feelings and aggravating their humiliation. When a "loyal" missionary appears amongst them, so far from being a minister of peace, they look on him as a political emissary whose very presence amongst them —inasmuch as they would if they could drive him over the border—is a constant reminder of their overthrow in a contest in which they staked everything. His teachings, therefore, except amongst the freedmen and the very ignorant whites, are likely to irritate rather than soothe or edify. No doubt a good many men at the South, perhaps all of those whom we call "leaders," went into the rebellion regardless of everything but the gratification of an ambition for which there was no opening left in the Union, and well knowing that they were about to commit a crime—the greatest of all crimes—that of kindling a civil war without the pressure of absolute necessity. But assuredly the great mass of the Southern people did not take the field with any such burden on their souls. Whole communities, comprising millions of men and women, have never, in any age or country, banded themselves together for the commission of acts which their consciences pronounced immoral. Providence, which inscrutably permits so much that is evil, has never suffered anything so monstrous as this. Deep as are the depths of degradation which it sometimes allows human nature to reach, it has never suffered whole nations to turn robbers and murderers, well knowing that they were robbing and murdering, and carrying with them in their operations by land and sea the consciousness of their blood-guiltiness. Even the Red Indian on the war path, the Mahratta and Highlander on his foray, and the Thug when lying in wait for his victims, found in their code of morals something which justified their exploits or made them glorious; something which made it possible for them to lift cattle, burn houses, or throttle travellers without the loss of self-respect. And the supposition that the Southern people went into the war for the mere purpose of doing mischief, and fought through it without the support of motives which, though we have no difficulty in pronouncing them low, were far from being criminal in the ordinary sense of the word, would, if true, warrant the world in asserting that the United States had furnished a blotch on civilization and a scandal on religion and humanity, for a parallel to which the annals of even Oriental vice and wickedness might be searched in vain. Mr. Stevens's grand plan of confiscation, and a good part of his fiercer disquisitions on "the guilt of the rebellion," are nevertheless based on this theory; but his conclusions have found little favor with the public. There is no doubt the rebellion was a crime in one sense of the word. There is no doubt that it is something, too, which society, in self-defence, is called on to punish to whatever extent may be necessary to prevent its repetition; but it was not a crime which proves the perpetrators utterly base, and which entitles us to despise them, or look down on them, or offer them forgiveness, as we offer it to a thief or defaulter.

What the rebellion really was, was the effort of a lower civilization, or, if you will, of a barbarous society, to preserve itself and retain its peculiarities against the pressure of a more advanced and more civilized society, and it was the heads of the people rather than their hearts which were at fault in carrying it on. The success of Prince Charles's Highlanders or of the Vendeans might have given a new turn to English and French history, and postponed indefinitely the triumph of liberal principles in Europe. It was a duty to defeat them, to kill as many of them as might be necessary to put them down, and to execute as many of their leaders and confiscate as much property as might be necessary to prevent their rising again; but it was not necessary to insist on their confessing that they were thieves and murderers, and that hanging was too good for them.

We are opposed *in toto* to all movements for forcing the South either into confessing its sins or seeking spiritual communion with us. Some of the means which are proposed for this purpose are about as sensible as the plan of making children pray or love their parents by whipping them. Loyal men do not at present possess the necessary qualifications for evangelizing the South or softening its heart, and are sure not to succeed in doing so. The very best way to win over the rebels into loving us is to let them alone. It was not, as we have often said in these columns, the fact of slavery which made the breach between North and South; it was the feelings and opinions which slavery bred. We do not extirpate these feelings and opinions, nor effect any change whatever in the character of the whites, by liberating the blacks. We simply prepare the way for a change. This change will come in time, by the spread of education, the growth of commerce, the infusion of Northern and foreign elements into the population, and the softening of manners which is sure to take place when that greatest of all promoters of ferocity, the presence of a class with no legal rights, has disappeared. Whenever people at the North, and, above all, Northern conservatives, can be got to believe thoroughly in their own principles of government, we shall have made an immense step towards that union of hearts which we all seek and desire, and without which no political union can be perfect. But this will not be brought about by following Southerners about, telling them we will forgive them if they will confess that they are criminals, offering to pray with them, preach with them, and labor with them over their own hideous sins. Nations have never yet been bound together or homogeneous societies built up by homilies from the conquerors to the conquered. What soonest wipes out all traces of discord is simple justice, the equality of all men before the law, and the absence of all distinctions. Having somebody always at hand to kick and cuff, and "paddle" and rob, made the Southerner the turbulent, intractable visionary, pistol in one hand, Aristotle in the other, which we have for fifty years, to our sorrow, had to deal with. Let us now leave no human being within his reach whom he dares to trouble, either in mind, body, or estate. Let us make him respect his neighbor's rights, make him respect every man because he is a man, and for no other reason; and if, in a very few years, we do not witness at the South the disappearance of all the peculiarities of Southern society, of everything which now renders union between Northern and Southern churches impossible, Southerners must differ in essence from the rest of mankind. Of course there is always room, and even need, for the largest practical charity. We can never give too much for the relief of Southern needs. No false construction can be put on the unostentatious, silent clothing of the naked, and feeding of the hungry, and housing of the widow and the orphan. But pray let these charitable deeds be accompanied with as little preaching and moral philosophy as possible.

THE DESTRUCTION OF PORTLAND.

Again one of the most beautiful of our cities has been subjected to a frightful calamity. For several years past the citizens of Portland have been justly proud of its rapid advance in material prosperity, and of the new and costly structures which have arisen upon either side of

its crowded thoroughfares, and of its increasing beauty and increasing wealth. By the accident of an accident, upon a day dedicated to national festivities, the finest portions of this flourishing metropolis have been reduced to ashes, its industry and enterprise have been suddenly arrested, and rich and poor find themselves alike destitute of shelter, and almost of the common necessaries of life. It is creditable to the American people that such misfortunes invariably and instantly arouse a spirit of public philanthropy, and Portland, in the substantial sympathy of her sister cities, may find a mitigation of the adverse fate which has overtaken her. But her loss still remains a terrible one. Whatever heart and hope she may exhibit in struggling to retrieve it, many years must elapse before its effects will cease to be painfully felt. The waste of such a catastrophe is positive, final, and enduring.

Great fires are like pestilence, pauperism, railway and steamboat accidents, and mobs—the opprobrium of our civilization; it being well enough known, through mournful experience, that the burning of one house may involve the conflagration of half a town; that wealth, comfort, food, raiment, and shelter may all be cut off in an hour by what the reporters call "the devouring element." We never remember, until it is too late, that the "element" cannot possibly devour bricks, stone, and mortar. A fire-proof building being possible, it is hard to see why we do not make all our buildings fire-proof, especially as wood, the inflammable material which we mostly use, is daily growing dearer and dearer. Of course no building, of whatever construction, is fire-proof if filled with combustible merchandise and surrounded by light and unsubstantial fabrics. Under such circumstances the fire-proof building becomes an oven, in which the consuming contents calcine the walls which surround them. The reform in building, to be effective, must be general and thorough. We do not want one or two fire-proof buildings, but a system of such. Cities like Portland are usually built after a most miscellaneous fashion, with a proportion of cheap frame erections too large for the public safety. By the side of these may arise edifices of a more durable material, alternating with other wooden structures, so that when a fire breaks out it leaps from one point to another, and finally reduces to ruin the buildings which would have resisted any ordinary danger. The fire in Portland is a case in point. It began in a boat-builder's shop, and was caused by the explosion of crackers among shavings on the outside. It soon communicated with the costly sugar-house of the Portland Company, and our readers know the rest. It is not agreeable to find fault with those who have so dearly paid the penalty of carelessness; but it is pertinent to ask why a boat-shop was allowed to stand in such a locality, and its tenant to heap his refuse shavings outside, of all days in the year, upon the Fourth of July? If the municipal authorities are not competent to guard a city against such plain and simple nuisances, it seems to us that they are ordained to very little purpose. But the melancholy truth is, that fire is one of those calamities against which we always take a strangely inefficient precaution. When it actually breaks out, we are extremely active in its extinguishment, risking life and limb almost with nonchalance in our contention with it; but to prevent the emergency from arising at all, we trust principally to good fortune. While a street in Constantinople is in process of combustion, all the cross-legged Turks sit calmly about, smoking their pipes, and waiting for Allah to stay the progress of the flames. We indulge in the same philosophy, but it is before the event. We constitute Divine Providence our special watchman. Because we were not burned out on Tuesday, we take it for granted that we shall not be burned out on Friday. Because we have been burned out once, we conclude that we shall not be so unfortunate again. When the second calamity comes, we lift our hands piously and call it a dispensation or a judgment.

There may be human misfortunes, properly so named, which it is impossible to trace to human negligence or error, but they are much fewer in number than mankind is supposed to think them. There are times, for instance, when Mephistopheles seems especially busy upon the railways. Up and down all the lines he would appear to be at his frightful work of murder and mayhem. Alas! it is a veritable human being, and not the devil at all, who leaves open the yawning drawbridge, who fatally misplaces the switch, who runs the train out of time, or who leaves obstructions upon the track. Why should civilization and mechanical perfection make us so improvident? Why should a clearer knowledge of our danger render us so reckless in meeting it? Is it familiarity with these mighty forces which engenders in us a contempt for their terrible power? The savage, who has only common and natural dangers to encounter, is more prudent than we are; and the brute, who is guided only by his instincts, shows a finer genius than man for self-preservation. If fire were a danger to which birds and beasts were naturally exposed, we should find them taking the most efficient precautions against it, and snugly lodging in incombustible nests and fire-proof dens. No elephant can be forced to cross an untrustworthy bridge. It is man alone, the lord of all, who submits himself to a daily and nightly risk of roasting, and runs a race with death, as he hurries over oscillating and insufficient piles.

But as fires must come in spite of the utmost prudence, their speedy and efficient extinguishment is the next point to be considered. It requires about as much skill and judgment to subdue a great fire like that in Portland as to fight a battle. Usually, so far as our observation has extended, there is, in most of the smaller cities and villages, a prodigious bawling, a great running to and fro, and a lamentable waste of energy and good intentions. There is not too much method even in the labors of such highly-trained fire departments as those of New York and Boston; almost always in the minor cities there is nothing but panic, confusion, and ill-directed toil. The remedy is self-evident. A cool-headed engineer, who knows his business thoroughly, and who can take in, as the phrase is, the situation at a glance, is indispensably necessary. There must be a sufficiency of steam fire-engines, with dexterous engineers and horsemen, and there must be a plentiful provision of water.

When all these precautions of building and of discipline, with suitable police regulations, have been taken and adopted, it will be time enough to trust in Providence, like the amiable but somewhat muddled disciples of the Koran. In whatever town such matters are left to chance or, at best, are but inefficiently cared for, with distress, bankruptcy, and all manner of suffering in its train, sooner or later a great fire will sweep through the streets, and work its woful will with but small let or hinderance. We will not believe that such catastrophes are necessary. On the other hand, we firmly believe that human ingenuity is equal to their prevention, and very much we should like to see it generally exerted in such behalf.

THE POETRY OF TAXES.

Once upon a time the Sibylline leaves of the press bore upon their wings to the remotest corners of the land the tidings that a man had just died, in whose obituary it was written that "he loved to pay his taxes!" Nothing but the infallible authenticity of the newspaper press and the impeccable exactitude of obituary notices, which, like epitaphs, notoriously never overstep the strictest limits of fact, could have saved this statement from being reduced to the category of myths, or relegated to the limbo of the unveracities. One would like to know from which of the multitudinous nationalities which contribute to swell our *colluvies gentium* he could have derived his descent. English he could hardly have been; for John Bull, though he pays his taxes, we believe has never professed to love the process, even in the divinest days of the heaven-born Pitt. It is true that Lord Byron says, or sings, in speaking of the affection he bore to his native land, "I love the taxes!"—but it is with a difference, and by no means an immaterial one, "when they 're not too *many!*" And his lineage could scarcely have been from the original Yankee stock, inasmuch as they went to war for seven years merely because they did *not* love to pay their taxes. But it is vain to speculate on a point where certainty is impossible, for the name of this financial phenomenon is lost for ever. Like the heroes who lived before Agamemnon, his name has perished from off the earth, "*caret quia sacro vate.*" We think that he must have died in youth. He was too good to live long.

The wisest financial philosophers have not aimed at bringing the dull mass of tax-payers to the sublimated perfection of this golden example. What they have attempted has been to extract the root of all evil from the pockets of the lieges without their knowing anything about it. Such a benefactor was the man who first invented indirect taxation, and so mixed up our taxes with our daily bread and daily

wear that we have to go through a process of ratiocination to ascertain that we are taxed at all. Now this is certainly a much more agreeable method than the old plan of the tax-gatherer taking us by the throat and bidding us "stand and deliver!"—an old plan which, alas! we have lived to see furbished up and made as good as new. If one must be relieved of his filthy lucre, it is less annoying to have it silently spirited away by the prestidigitory spell of the pickpocket than by the more candid aggression of the garroter or the highwayman. So he was a clever man who first thought of substituting the manipulations of the grocer and the tailor for the grim visitations of the tax-collector *in propriâ personâ*. It was like gilding the pill, or mixing it with the viscous sweetness of the roasted apple, or the gelatinous emulsion of the currant, with which it was thought that the wholesome bitter might be disguised to our childish palates. But we may all of us remember how at last we detected the pious fraud, and refused to be longer deceived for our own good. So it is that the march of mind has made the man as knowing as his father the child—according to the genesis of Wordsworth—and he has found out that it is only a substitution of the line of beauty for the line of directness, by which the grocer and the dry-goods dealer are put in the stead of the old tax-gatherer.

Now, it is not to be supposed that the ingenuity of man in the direction of making taxation easier to the patient than it now is has been exhausted. Why, it is not yet twenty years since Dr. Charles T. Jackson bestowed on mankind his illustrious gift of ether, by which we can have all our teeth drawn, or be divested of our arms and legs, in a sleep of sweet unconsciousness or in a blissful dream of delight; so it is not too much to hope that some other benefactor of the race may be raised up to make the excision of so vital a part of ourselves as our money a painless if not a pleasurable operation. Perhaps, when the world is somewhat older and a good deal wiser, it will adopt the plan urged a few years ago by Emile de Girardin, before he had been reformed out of *La Presse*. We are not sure that the original idea was not Fourier's, but M. de Girardin did not propose reconstructing the whole of society from the foundations before giving it the benefit of his new invention. His scheme was to transform governments into great mutual insurance companies, and taxes into premiums against all insurable losses. In consideration of his taxes every tax-payer would be entitled to be made good for all losses from which government ought to have saved him. It is the business of government to protect the lieges against fire, against violence, against theft and robbery. If it fail in the ounce of prevention, it is but fair that it should provide the pound of cure, and make good the losses and compensate the sufferings it should have hindered, so far as money can do it.

Governments are founded for the protection of those forming or permitting them, and they attempt doing it in a clumsy and ineffectual sort of way. Government professes to defend us against all assaults of our enemies, but its defense is but too often *ex post facto*. For example, a ruffian attacks me, garrotes me, robs me, and leaves me half dead by the way-side. If I can tell government who the villain is, government will arrest him and lock him up for trial, and, what is more, will lock me up into the bargain, in case I cannot find bail for my appearance against him at his trial. Having deprived me of my liberty in this last case, and necessarily damaged my affairs, at last, if not rescued by a Tombs lawyer, my man is sent to Sing Sing and set to work. But he is not set to work for my benefit. By no means. Whatever he earns goes into the pocket of government, and no part of it is diverted to repay my losses or make amends for my hurts. This may be satisfactory to justice, but it is not satisfactory to me. Now, M. de Girardin's philosophy would teach that if government takes a man's money, engaging to protect him in person and property, and if it fail, from negligence or incompetency, to do the work it undertook, it should at least make good the losses and compensate for the sufferings he has endured through its default or incapacity. This principle of compensation is already adopted in almost all civilized communities in case of losses by mobs, that being a gross form of violence which it is taken for granted government might have prevented if it had been prompt in doing its duty. Perhaps there is no reason in the nature of things why other losses from violence and fraud, which governments were instituted to protect their citizens against, should not come under the same rule. As the whole history of the race is but a record of the efforts of mankind groping in the dark or the twilight after a better state of things, if haply they might find it, no one can affirm that some such plan as this of M. de Girardin, for spreading all social losses over the whole community, and thus making the share of each member almost infinitesimally small, may not be reduced to actual practice. It were no more strange than many changes in municipal and social customs which have come to pass within the last half century, and which would have seemed absurdly impossible to one who died without the sight, had they been prophesied unto him.

Supposing this to have come to pass, it is evident how much it would lighten the moral burden of taxation. In fact, it would transform what is now a burden, like that which Christian bore on his shoulders when escaping from the City of Destruction, into the staff which sustained his steps after leaving the Interpreter's house. There would be no more perjured returns of incomes, no more fraudulent transfers of stocks, no more lying conveyances of lands. Every one would be more than ready to make returns of his whole estate, inasmuch as the amount of his assurance would be notably proportioned to his premium. The danger might be that dishonest people would return more than they were worth, for the sake of the benefits of over-insurance. But this risk might be safely incurred in view of the compensating advantages of the scheme. Nobody grudges the payment of his premiums to a fire or life insurance company, because he has his return in the feeling of security, even if he should not have the good luck to die or be burned out, so as to perceive the full benefits of the operation. Then again, M. de Girardin, if he be permitted to become the Lycurgus of the modern world, would guarantee nations from political revolutions—at least from all such as are provoked by the pressure of taxation. For the members of a mutual insurance company would be slow to pull down the office and lynch the directors of the institution where their funds were invested. Should this golden age really dawn upon us, there would be no need of treatises like t at of Dr. Johnson to prove that "Taxation is no Tyranny," for it would be a self-evident fact, level to the meanest capacities. We are aware that such a financial revolution might be injurious to the vested interests of our city fathers in the taxation which they may love to receive, but which few of us have the grace to love to pay. But no public benefits can come about without some private inconveniences. And as governments, even after such a radical change, would still be human institutions, they may comfort themselves with the thought that there will always be pickings and stealings, more or less, to reward the intelligent activity of the assiduous official.

"FOUND FROZEN."

SHE died, as many travellers have died,
O'ertaken on an Alpine road, by night;
Numbed and bewildered by the falling snow,
Striving, in spite of failing pulse, and limbs
Which faltered and grew feebler at each step,
To toil up the icy steep, and bear,
Patient and faithful to the last, the load
Which in the sunny morn seemed light!
And yet,
'T was in the place she called her home she died;
And they who loved her with the all of love
Their wintry natures had to give, stood by
And wept some tears, and wrote above her grave
Some common record which they thought was true;
But I, who loved her first, and last, and best, *I* knew!

H. H.

CAPRI AND CAPRIOTES.

II.

STANDING on the height among the ruins of Tiberius's palace, the patriarch had looked out over the waters, and predicted for the morrow the finest weather that had ever been known in that region; but in spite of this prophecy the day dawned stormily, and at breakfast time we looked out doubtfully on waves lashed by driving rain. The entrance to the Blue Grotto, to visit which we had come to Capri, is by a semi-circular opening,

some three feet in width and two feet in height, and just large enough to admit a small boat. One lies flat in the bottom of this, waits for the impulse of a beneficent wave, and is carried through the mouth of the cavern, and rescued from it in like manner by some receding billow. When the wind is in the wrong quarter, it is impossible to enter the grot at all; and we waited till nine o'clock for the storm to abate before we ventured forth. In the meantime, one of the Danish who, after assisting his companion to compel the boatmen to justice the night before, had stayed at Capri, and had risen early to see the grotto, returned from it, and we besieged him with a hundred questions concerning it. But he preserved the wise silence of the boy who goes in to see the six-legged calf, and comes out impervious to the curiosity of all the boys who are doubtful whether the monster is worth their money. Our Dane would merely say that it was now possible to visit the Blue Grotto; that he had seen it; that he was glad he *had* seen it. As to its blueness, messieurs—yes, it is blue. *C'est à dire.* . . .

The ladies had been amusing themselves with a perusal of the hotel register, and the notes of admiration or disgust with which the different sojourners at the inn had filled it. As a rule, the English people found fault with the poor little hostelry and the French people praised it. Commander Joshing and Lieutenant Prattent, R.N., of the former nation, "were cheated by the donkey women, and thought themselves extremely fortunate to have escaped with their lives from the effects of Capri vintage. The landlord was an old Cossack." On the other hand, we read, "J. Cruttard, homme de lettres, a passé quinze jours ici, et n'a eu que des félicités du patron de cet hôtel et de sa famille." Cheerful man of letters! His good-natured record will keep green a name little known to literature. Who are G. Bradshaw, Duke of New York, and Signori Jones and Andrews, hereditary princes of the United States? Their patrician names followed the titles of several English nobles in the register. But that which most interested the ladies in this record was the warning of a terrified British matron against any visit to the Blue Grotto except in the very calmest weather. The British matron penned her caution after an all but fatal experience. The ladies read it aloud to us, and announced that for themselves they would be contented with pictures of the Blue Grotto and our account of its marvels.

On the beach below the hotel lay the small boats of the guides to the Blue Grotto, and we descended to take one of them. The fixed rate is a franc for each person. The boatmen wanted five francs for each of us. We explained that although not indigenous to Capri, or even Italy, we were not of the succulent growth of travellers, and would not be eaten. We retired to our vantage ground on the heights. The guides called us to the beach again. They would take us for three francs apiece, or say six francs for both of us. We withdrew furious to the heights again, where we found honest Antonino, who did us the pleasure to yell to his fellow-scoundrels on the beach, "You had better take these signori for a just price. They are going to the syndic to complain of you." At which there arose a lamentable outcry among the boatmen, and they called with one voice for us to come down and go for a franc apiece. This fable teaches that common carriers are rogues in Naples as well as in New York; but that whereas you are helpless in their hands at home, you may bully them into rectitude in Italy, where they are afraid of the law.

We had scarcely left the landing of the hotel in the boat of the patriarch—for I need hardly say he was first and most rapacious of the plundering crew—when we found ourselves in very turbulent waters, in the face of mighty bluffs, rising inaccessible from the sea. Here and there, where their swarthy fronts were softened with a little verdure, goat-paths wound up and down among the rocks, and midway between the hotel and the grotto, in a sort of sheltered rock, we saw the Roman masonry of certain antique baths—baths of Augustus, says Valery; baths of Tiberius, say the Capriotes, zealous for the honor of their infamous hero. Howbeit, this was all we saw on the way to the Blue Grotto. Every moment the waves rose higher, emulous of the bluffs, which would not have afforded a foothold or a crag to cling to had we been upset and washed against them—and we began to talk of the immortality of the soul. As we neared the grotto, the patriarch entertained us with stories of the perilous adventures of people who insisted upon entering it in stormy weather—especially of a French painter who had been imprisoned in it four days, and kept alive only on rum, which the patriarch supplied him, swimming into the grotto with a bottle-full at a time. "And behold us arrived, gentlemen!" said he, as he brought the boat skilfully around in front of the small semi-circular opening in the front of the lofty bluff. We lie flat on the bottom of the boat and complete the immersion of that part of our clothing which the driving torrents of rain had spared. The wave of destiny rises with us upon its breast—sinks, and we are inside of the Blue Grotto. Not so much blue as grey, however, and the water about the mouth of it green rather than azure. They say that on a sunny day both the water and the roof of the cavern are of the vividest cerulean tint—and I saw the grotto so represented in the windows of the paint-shops at Naples. But to my own experience it did not differ from other caves in color or form; there was the customary clamminess in the air; the sound of dropping water; the sense of dull and stupid solitude—a little relieved in this case by the mighty music of the waves breaking against the rocks outside. The grot is not great in extent, and the roof in the rear shelves gradually down to the water. Valery says that some remains of a gallery have caused the supposition that the grotto was once the scene of Tiberius's pleasures; and the Prussian painter who discovered the cave was led to seek it from something he had read of a staircase by which Barbarossa used to descend into a subterranean retreat from the town of Anacapri on the mountain-top. The slight fragment of ruin which we saw in one corner of the cave might be taken in confirmation of both theories; but the patriarch attributed the work to Barbarossa—being probably tired at last of hearing Tiberius so much talked about.

We returned, soaked and disappointed, to the hotel, where we found Antonino very doubtful about the possibility of getting back that day to Sorrento, and disposed, when pooh-poohed out of the notion of bad weather, to revive the fiction of a prohibitory consul. He was staying in Capri at our expense, and the honest fellow would willingly have spent a fortnight there.

We summoned the landlord to settlement, who restrained all his household, assembled to present the account, from asking *buonamano* by a strong sense of previous contract. It was a deadly struggle with them, but they conquered themselves, and blessed us as we departed. The pretty muletress took leave of us on the beach, and we set sail for Sorrento, the ladies crouching in the bottom of the boat, taking their sea-sickness in silence. As we drew near the beautiful town, we saw how it lay on a plateau, at the foot of the mountains, but high above the sea. Antonino pointed out to us the house of Tasso, in which the novelist Cooper also had resided when in Sorrento—a white house not handsomer nor uglier than the rest, with a terrace looking out over the water. The bluffs are pierced by numerous arched caverns, as I said, giving shelter to the fishermen's boats, and here and there a devious stairway mounts to their crests. Up one of these we walked, noting how in the house above us the people, with that puerility usually mixed with the Italian love of beauty, had placed painted busts of terra-cotta in the windows to simulate persons looking out. There was nothing to blame in the breakfast we found ready at the Hotel Rispoli, and as for the grove of slender, graceful orange-trees in the midst of which it stood, and which had lavished the fruit in every direction on the ground, why I would willingly give for it all the currant bushes, with their promises of jelly and jam, on which I gaze at this moment.

Antonino attended us to our carriage when we went away. He had kept us all night at Capri, it is true, and he had brought us in at the end for a prodigious *buonamano;* yet I cannot escape the conviction that he parted from us with an unfulfilled purpose of greater plunder, and I have a compassion, which I here declare, for the strangers who fell next into his hands. He was good enough at the last moment to say that his name, Silver-Eye, was a nickname given him according to a custom of the Sorrentinos; and he made us a farewell bow that could not be bought in America for money.

At the station of Castellamare sat a curious cripple on the stones—a man with little, short, withered legs, and a pleasant face. He showed us the ticket-office, and wanted nothing for the politeness. After we had been in the waiting-room a brief time, he came swinging himself in upon his hands, followed by another person, who, when the cripple planted himself finally and squarely on the ground, whipped out a tape from his pocket and took his measure for a suit of clothes, the cripple twirling and twisting himself about in every way for the tailor's convenience. Nobody was surprised or amused at the sight, and when his measure was thus publicly taken, the cripple gravely swung himself out as he had swung himself in.

A LIFE FOR A LIFE.

THAT was a nefarious sentiment which Mr. Bergh uttered the other day. It mattered little, he said in effect, now that summer has leaped on us like a tiger, as Alexander Smith puts it, if the alliance of policemen and dog-hunters did slaughter dogs by the wholesale. They were sure, he thought, of being done to death, anyhow; to leave the warm precincts of the dreadful heated term by a speedy method was a happy release. That he should say so, considering his public character, must have been a great encouragement to that baser sort of people who are the natural enemies of all dependent animals and of the society for preventing cruelty to them. No doubt he meant it as a small witticism—he was speaking as a man and not as an

honorable secretary; but how pathetically and how cogently, if the age of fable, like the age of chivalry, were not all over, should we hear the wretched race of dogs reproachfully quoting in reply the remark of the frogs to the youngsters about the diverse aspects of an ancient bit of pleasantry not much dissimilar.

For him to make such a jest was a sad coming down from the high humanitarian pedestal he had ascended. It was another discouraging example of the vicissitudes incident to the state of man, to see a gentleman one day recognized as a public teacher, the next even as one of the dangerous classes which drive calf-carts through crowded thoroughfares; to-day the active, aggressive leaven in a vast lump of cruelty and cold-blooded indifference, a conscious light throwing his beams far into a black and naughty world, and then to-morrow quenched, snuffed out with a joke, abdicating his lofty moral position—in one word, descending from the level of a secretary to the Society for the Prevention of Cruelty to Animals to that of the bad boys in "Æsop's Fables."

With what face, but a sheepish one, can he now proceed against that woman who lives—we presume she still lives, for public virtue is decayed—somewhere in the eastern part of New York city, and who has just disgraced her city, her sex, and the universal race of man? A few days since the infant offspring of this creature fell headlong into the river from a pier. She could not, and the bystanders, if there were any, would not or could not, do anything to rescue the child, which struggled pitifully, and sank. Just then, a Newfoundland dog, which happened to be near at hand, plunged in and, after the little creature had disappeared beneath the surface, caught it by the hair, and then by the clothing, and at last succeeded in bringing it safe to its mother. That female discovered on the head of the infant two or three slight scratches. She at once set off to the nearest police station, and begged for an order authorizing her to have her benefactor killed. The policeman, or sergeant, or captain, or whoever was in authority, after some demurring, acceded to her request, and the dog was put to death that same day.

Mr. Bergh will probably reply that let him do his best he can do nothing; that the murder was not committed within the jurisdiction of Judge Richard Busteed; that however it may be in Mobile or in the county of Buncombe, in New York ingratitude is not a crime known to the common or statute law, and that to prosecute the monster would therefore be impossible, even if he had never uttered a jest in all his life. To this we answer, that had all Mr. Bergh's prosecutions been as unsuccessful in the courts as that well-known turtle case, he could still have performed the chief work of the society; he could still have been an irritant of the public conscience, *ex officio* an incarnate protest against human inhumanity. But now he has bound his sweet influences. He made that sinister, or that unfortunate speech, and henceforth he himself is not much better than one of the ungodly. And on his personal as well as his official character the effect of this first slip may be lamentable. *Nemo repentè turpissimus*, and of course we know he is not yet a swill-milk-cow herd, nor a Broadway omnibus driver. But it is a dangerous path on which he has entered. This particular side of the case, however, is no concern of ours, and of the whole matter we have spoken more in sorrow than in anger. We leave Mr. Bergh to that repentance which, we trust, has already come upon him; which at any rate is sure to come upon him as soon as the mercury falls to a reasonable height in the thermometer and heat no longer seems all of life.

Certain other considerations are suggested by this monstrous act of ingratitude. Ingratitude, we have called it; but was it that? Rousseau has a theory that a person obliged is not bound to remember any benefits except such as the person conferring them forgets. Let benevolence be honored, he would say, but mere beneficence one is free to use and despise. If one's benefactor remembers his favors, it is almost a proof that he has bestowed them not from any impulse of pure good-will, benevolence, but from a prompting of some form of self-interest. The man who feeds the fish, the fish may properly love; nobody but a fool would expect them to love the angler who, when he offers them food, offers them also a hook by which he intends to draw them to himself for his own purposes. On this theory the dog, who can hardly be called a creature capable of pure benevolence, whose best impulses, if analyzed, would probably be reducible to interested motives or dictates of blind, irresponsible instinct, could hardly be a fit object of gratitude. On the other hand, Rousseau would have admitted enthusiastically that gratitude is one of the very rarest of human qualities, that it is one of the most delightful and most honorable, that therefore it ought to be encouraged, and if he had thought of it he would doubtless have advised moralists to abate something of the severity of this test and allow us to cultivate gratitude to our benefactors by instinct. That would shut out from our admiration the self-interest which the impassioned philosopher of Geneva was so desirous of seeing excluded, and it is possible that to-day, on this side of the ocean, we might have been spared a deed which in one view of it only killed a dog to be sure, but in another certainly did something to demoralize the community.

The woman may have been only a fool. It is probable that she held that absurd belief in reference to the hydrophobic poison, according to which, if a dog in perfect health bites a child to-day, and the wound heals, and the child grows up to manhood, never experiencing any inconvenience from it after it has first healed, and then, twenty years afterwards, the dog for any reason becomes rabid, at once, by some occult sympathy, the man also goes mad and dies. Women are non-voting; but what right has a police captain to be so perfectly stupid as this? He should have taken the woman to the next physician, and if in half an hour her fears were not laughed out of her, she might well enough have been sent home still retaining them. Cases like this prove a truth which before stood out in only too harsh prominence, that man's dominion over his fellow-denizens of earth is too certain to make an absolute monarchy, whose tyranny is limited by self-interest, but seldom by mercy or justice. That an animal can have rights, that man has duties towards animals, he habitually forgets, or rather it has hardly ever entered into his heart to conceive. So extreme a case as this is, in which so great and hard-hearted injustice was inflicted, might almost make one wish that the gift of immortality had been bestowed on the inoffensive sufferer, and to hope that the untutored Indian is not so altogether untutored, who

> "—thinks, admitted to that equal sky,
> His faithful dog shall bear him company."

Correspondence.

THE MAINE CONVENTION.

To the Editor of the Nation:

Sir: It was with painful regret that many Republicans in Maine read last Saturday The Nation's *ex parte* review of the recent canvass, which terminated in the selection of General J. L. Chamberlain as our candidate for governor. The nomination is equivalent to an election. Public opinion throughout the State was so evenly divided on the merits of the two candidates whose names came before the convention at Bangor, that until the vote was actually declared the result was uncertain. The canvass was inevitably warm, and towards the close a little embittered, chiefly, as I believe, by such intolerance on the part of some of General Chamberlain's friends as appears in the article which you have admitted to your columns. The friends of the defeated candidate have frankly accepted the results. They have forborne to press upon the public attention, at this time, complaints which might justly have been made. The galleries of the hall in which the convention assembled were crowded, not to say packed, with sympathizing friends of the Chamberlain delegates. In every *vivâ voce* vote the voice of the galleries was heard. We felt that we were overborne by irresponsible numbers; and by one of these *vivâ voce* votes a rule was adopted disfranchising a considerable number of our authorized delegates. The convention and the galleries voted that no delegate should be recognized unless a resident of the county from which his credentials came—this, when half-a-dozen Massachusetts towns offered Charles Sumner a seat in a recent State convention, and Horace Greeley appeared in the last national convention as a delegate from Oregon! Such a rule, adopted in defiance of precedent by such means, and at the last moment, we might well have complained of. We were willing, for the sake of harmony, to let it pass for the present. We are not willing, however, to submit to the intolerance which persists in stigmatizing the 438 delegates who, after all, voted for Mr. Spring as "politicians," and glorifying the 599 who voted for General Chamberlain as "the people."

The statement of your contributor, that General Chamberlain was popularly designated as "the soldiers' choice," and his competitor as "the politicians' candidate," may be true, within the limits of his observation; so far as mine extends, it is not true. His further statement, that it was "well understood" that, should he not be nominated by the convention, General Chamberlain's name "would in all probability be submitted to the people by the executive committee of the 'Soldiers' and Sailors' Union,'" is entirely erroneous. That committee was in session on the day of the convention. After the session, General J. P. Cilley was called upon to address the convention. I stood within ten feet of him while he was speaking, and could not have misunderstood him. "Give us a soldier, if you can," he said, at the close of his speech; "but remember—and I speak as the president of the Soldiers' and Sailors' Union—whoever you select as the standard-bearer of

the great Union party, will be fully and heartily supported by the men whom I represent." That was the honorable position of the soldiers of Maine, not "understood" but authentically expressed. There were many soldiers who supported General Chamberlain; there were others among the most active friends of Mr. Spring; there were few, if any, who went into the convention with the dishonorable purpose of abiding by its decision if suited to their wishes, but not otherwise. Secession was not in their thoughts.

The truth, which your contributor nowhere admits, I must insist upon: there were substantial grounds for the difference of opinion which existed. There were undoubtedly "politicians" on both sides, who acted after their kind. But there was also a great body of honest men on each side, or the conflict could not have hung so long in even scale. Singular as it may seem, it was not generally known, up to the very day of the convention, that General Chamberlain had ever voted with the party which was urged to raise him to the highest station in the State. His letter to General Smith (a part of which you have published) was accepted as evidence of his present agreement to the general policy, if not to the particular measures, of the Republican party. His military services had endeared him to the people of the State. His personal integrity was above suspicion. But when men looked to his political career for some assurance for the future they found a blank. The personal integrity of President Lord, of Dartmouth College, the military reputation of General (now Governor) Cox, of Ohio, the temporary agreement of Andrew Johnson to the Republican policy, were so many warnings. The advocacy of the only newspapers in Maine which had defended President Johnson's usurpations did not strengthen General Chamberlain's case. His friends have nobody but themselves to blame that his political record was left in utter obscurity until the very day when the convention assembled. On the other hand, a candidate was presented who had been long and conspicuously associated with the party, who was practically conversant with the affairs of the State, whose integrity was as unquestioned as General Chamberlain's. Mr. Spring had been named, both publicly and privately, before General Chamberlain. Was it so wonderful that his friends throughout the State should hesitate to adopt the new suggestion, coming in such questionable shape, and from such questionable sources? Is it seemly, is it right, to libel one half the Republican party of Maine, as your contributor has done, because their judgment differed from his?

The obliquity of vision which appears elsewhere in his article is not least noticeable in his comments upon the course of the Portland *Press*. The *Press*, as he says, had been strenuous and unremitting in its advocacy of the claims of Mr. Spring. He neglects to say that, when Gen. Chamberlain's *present* sympathy with the Republican party was called in question, the *Press* denounced the slander as promptly as it denounced the petty falsehoods circulated by "politicians" working in their own way against Mr. Spring. On the day before the convention the *Press* urged upon the delegates already assembled in Bangor the considerations which have been presented in this letter. The *Press* did not "sneer at General Chamberlain's achievements in the field:" the article is on record, and will answer that aspersion for itself. It did insist, as was its right and its duty, upon the conspicuous political career of Mr. Spring, and upon the obscurity which then shrouded the political history of his competitor. "We do not say," this was its language, "that General Chamberlain, if nominated by the Republican party, would disappoint the expectations of his friends and place our State in any doubtful position upon the great questions of the day. But we do say, we have no assurance from his political antecedents that he would not." This your contributor calls "cruelly unjust and untrue." More than half the Republicans of Maine then believed the statement to be both just and true and timely. It was only on the appearance of this article that General Chamberlain's friends realized the extremely doubtful position in which they had allowed their candidate to stand. His townsmen of Brunswick immediately issued a circular, affirming that for ten years General Chamberlain had invariably acted and voted with the Republican party. That circular secured his nomination. That circular alone reconciled the friends of the defeated candidate to the decision of the convention. We accepted the result frankly and honestly. "The representative man of the Union party of Maine," said the Portland *Press*, "can only be a Radical. Such a representative we believe the Union delegates have given us in General Chamberlain, and so believing we waive our prior choice and heartily accept the Bangor nomination."

I regret—and I believe the regret will be very general on both sides—that a controversy which had reached its natural limit and was fast smouldering into mere dead ashes, should have been rekindled by the publication of such an article as that to which I have felt compelled to reply. It has been necessary to show that we had some grievances of our own. If we could afford to overlook them for the sake of harmony, we had a right to expect at least as much consideration from the victorious section of the party.

"Flagrantior æquo
Non debet dolor esse viri."

The stoicism which would have enabled the friends of the winning candidate to bear the misconstruction to which their own neglect exposed him would not have been very great. If they will now cease their clamors and allow us to turn to more practical discussions, it will be better for them, and —what is of far more consequence—better for the great party which now represents American progress.

H. W. Richardson.

Portland, Me., July 2, 1866.

FLOWERS AT FUNERALS.

To the Editor of The Nation:

Bishop Fitzpatrick, recently deceased at Boston, on his death-bed directed that no flowers should be displayed at his funeral, as he considered them appropriate to the sanctuary, to festive occasions, and out of place when associated with corruption. I am very glad that so high an authority as the bishop should thus publicly protest against a custom that always seemed to me singularly offensive to propriety and good taste. The custom has been growing in fashion for some time, until, at present, flowers are considered as indispensable at a funeral as at a wedding, and are ordered of the undertaker at the same time with the coffin and other arrangements. Even when bestowed by sympathizing friends, who wish thus to express their interest in, or affection for, the departed, they are ill-timed and out of place; but when ordered from a coffin warehouse, all their significance and beauty are changed to something repulsive.

Many years ago I attended the funeral of a friend who died of apoplexy, in midsummer. Decomposition had commenced early, and the lower part of the face of the corpse was disfigured. To conceal this corruption, a quantity of flowers was stuffed into the coffin, the glazed lid of which, as it was shut down, pressed them against the face and only partially concealed the repulsive sight. Such a desecration of flowers made a lasting impression on us, and we were led to consider this matter of flowers at funerals from an æsthetic point of view, and every year since has confirmed our abhorrence of this custom. That powerful law of association which operates almost instinctively, and by which we link together *things* and *thoughts*, should caution us against perverting these rich sources of delight. Flowers are for festive and joyous occasions, for the bridal wreath, for the christening font, for the young, the innocent, the beautiful; for the living, and not for the dead. Above all, they are welcome in the sick chamber, to the weary invalid debarred from the sweet influences of green fields and woods and the manifold beauties of nature.

To every sufferer confined to the room by illness, the gift of flowers is an inexpressible delight. The heart is made thankful for the kind sympathy that offered them, and the senses refreshed by their colors and perfume.

It is important, then, that this pure source of comfort and delight to the invalid should be entirely free from any unpleasant associations with funeral ceremonies or death. The utmost that a strict sense of fitness would allow on such occasions is a wreath or cross of evergreen—the form as well as the material being symbolical and appropriate, and not interfering with our associations of cheerfulness and life; but the present rage is for an extravagant quantity of costly and fragrant flowers, as if to smother the idea of corruption by our lavish display of beauty and perfume. But the majesty of Death will not be thus appeased. In his solemn march he disregards our floral offerings equally with our tears, entreaties, and most passionate implorations. He will suffer no blandishments to impede him, though they come in the guise of purity and innocence. The custom of preserving and framing funeral flowers, to be hung up as pictures, is another perversion of good taste too much indulged in at present.

Mrs. Browning's "Dead Rose" may lie "seven years in a drawer," and retain its significance, embalmed in her wondrous verse; but these pressed and gummed effigies, associated with the shroud and coffin, are at best a ghastly sight.

The beauty of flowers is the beauty of delicacy, of fragility, of transitoriness. It is because "a breath doth mar them" that they become precious to our imagination. Let not their beautiful service be desecrated by associating it with corruption, and when they have subserved our purpose let them live only in our memory.

K.

[Bishop Fitzpatrick was doubtless a high authority on many questions, but his dictum on flowers at funerals we hold not to be binding.

His desire to have his funeral seem a dismal affair was doubtless a whim of his own. His ecclesiastical superior, Archbishop Hughes, on the other hand, directed himself "to be buried in sunshine." This, however, far from indicating a desire to "associate sunshine with corruption," as "K." would probably consider it, simply indicated a desire to have death seem a joyous and not a joyless event. People who put flowers on coffins and corpses do not do so, as "K." asserts, in order to hide corruption, but to show that they "sorrow not as those who are without hope." All that the case of the person who died of apoplexy proves is, that his friends did not know how to use flowers. There was no good reason for squeezing them under the glass of the coffin. "The powerful love of association," of which "K." speaks, so far from cautioning us against using flowers at funerals, seems to us to prescribe it. Its object is not to "associate flowers with corruption," but to associate death with tranquillity, and hope, and even rejoicing, to remind the survivors that death is not simply corruption, but change; not night only, but morning. That there are and always will be people, with a good deal of money and no taste, to make funerals an occasion of vulgar display, there can be no doubt; vulgarity can be shown in hot-house flowers as well as in other things; but this is no reason why people who have taste and sentiment should discard a mode of expression which in all ages, and we believe in all climes, has been considered simple, natural, and affecting.—ED. NATION.]

277 Washington St., Boston.

THE NATION.

For the guidance of those who may feel disposed to assist us with their contributions, we may mention that the contents of THE NATION will fall nearly under four divisions—or that, at all events, these divisions would have to be kept in mind by anybody writing for it as a volunteer.

1. References to, and concise comments on, the news of the day, with the view of fixing the degree of its importance, and suggesting its bearings upon and relation to the main current of contemporary history.

2. Reviews or comments, whether in the shape of letters or articles upon important events, and upon the utterances of those who are, or are trying to be, leaders of public opinion.

3. Accounts more or less detailed, or discussions of such occurrences in the social, literary, artistic, or scientific world as are likely to interest men or women of education and intelligence. Under this head we do not include mere gossip about nobodies, or advertising chronicles of the sayings and doings of quacks, daubs, penny-a-liners, dilettanti.

4. Critiques of publications or works of art of sufficient merit to make it desirable that the public should ever hear anything about them.

TERMS—$5 per annum; 6 months, $3.

When delivered by Carriers in New York or Brooklyn, $1 additional.

JOSEPH H. RICHARDS, Publisher,
130 Nassau St., N. Y.

The Best and Most Popular Books Recently Published.

HARPER & BROTHERS

will send any of the following Works by mail, postage paid, to any part of the United States, on receipt of the price:

I.

NAPOLEON'S CÆSAR. The History of Julius Cæsar. By His Imperial Majesty NAPOLEON III. Vol. II. Superfine edition, cloth, bevelled edges, $3 50.

II.

HARPER'S PICTORIAL HISTORY OF THE GREAT REBELLION. By ALFRED H. GUERNSEY and HENRY M. ALDEN. Vol. I. From the Beginning of the Conspiracy to the Close of the Peninsular Campaign of 1862. With more than Five Hundred Illustrations.

*** This volume consists of nearly 400 pp. in large folio, each equivalent to six octavo pages. The volume thus contains as much matter as five ordinary octavo volumes. Price $6 in cloth, gilt, with bevelled edges.

III.

ANDERSONVILLE PRISON. A Narrative of Andersonville, drawn from the Evidence elicited on the Trial of Henry Wirz, the Jailer. With the Argument of Col. N. P. Chipman, Judge-Advocate. By AMBROSE SPENCER, of Georgia. 12mo, cloth, bevelled edges, $1 75.

IV.

COL. HARRY GILMOR'S FOUR YEARS IN THE SADDLE. 12mo, cloth, bevelled edges, $2.

V.

PHEMIE KELLER. A Novel. By F. G. TRAFFORD, author of "Maxwell Drewitt," "The Race for Wealth," etc. 8vo, paper, 50 cents.

VI.

THIRTY YEARS OF ARMY LIFE ON THE BORDER. Comprising Descriptions of the Indian Nomads on the Plains; Explorations of New Territory; A Trip across the Rocky Mountains in the Winter; Descriptions of the Habits of Different Animals found in the West, and the Methods of Hunting them; with Incidents in the Life of Different Frontier Men, etc. By Colonel R. B. MARCY, U.S.A., author of "The Prairie Traveller." With numerous Illustrations. 8vo, cloth, bevelled edges, $3.

VII.

GOLDWIN SMITH'S LECTURES. Lectures on the Study of History, delivered in Oxford, 1859-61. By GOLDWIN SMITH, M.A., Regius Professor of Modern History in the University of Oxford. To which is added a Lecture delivered before the New York Historical Society in December, 1864, on "The University of Oxford." 12mo, cloth, $1 75.

VIII.

ARMADALE. A Novel. By WILKIE COLLINS, author of "No Name," "The Woman in White," "The Queen of Hearts," "Antonina," etc. Numerous illustrations. 8vo, paper, $1 60; cloth, $2.

IX.

BULWER'S LOST TALES OF MILETUS. The Lost Tales of Miletus. By Right Hon. Sir EDWARD BULWER LYTTON, Bart, M.P. 12mo, cloth, $1.

X.

SANS MERCI; OR, KESTRELS AND FALCONS. A Novel. By the Author of "Guy Livingstone," "Sword and Gown," "Maurice Deering," etc. 8vo, paper, 50 cents.

XI.

THE TOILERS OF THE SEA. A Novel. By VICTOR HUGO, author of "Les Misérables." 8vo, paper, 75 cents.

XII.

CARLYLE'S FREDERICK THE GREAT. History of Freidrich II., called Frederick the Great. By THOMAS CARLYLE, author of a "History of the French Revolution," "Oliver Cromwell," etc. With portraits and maps. Complete in six volumes. 12mo, cloth, $2 per volume.

Published by HARPER & BROTHERS, New York.

FINANCIAL REVIEW.

NATION OFFICE, Tuesday, July 10, 1866.

THE news from Europe is less favorable for our securities, but better for cotton and breadstuffs. Five-twenties are down to 64, and Erie to 38; cotton is up ½d. per lb. Failures continue to occur among the new banks in London.

Foreign trade continues quiet; last week the imports were $3,202,000, making $162,942,000 for the calendar year to date—say double the import of the corresponding period of 1865; the exports, including specie, about $3,380,000, making $154,430,000 for the calendar year to date, say $64,000,000 in excess of the export of the corresponding period of last year. General dullness prevails in mercantile circles, and will last until the tariff question is settled. The crop prospects are good: from the West we learn that the corn and wheat crops will be a full average if no accident occurs; at the South the estimates are that the cotton crop will not be less than 2,500,000 bales.

Gold has been active, though until to-day the fluctuations have not been as large as during the month of June. To-day it sold down to 148¼. The short interest is much reduced, and gold has been lent "flat" for several days in succession. There is reason to believe that the bull party which undertook to lock up all the floating gold has lost money by the operation. Above 150, with exchange at 108 to 108¼ for bankers' sterling, it is a dangerous enterprise to undertake to corner the market. Last week we received as much gold from California as we shipped to Europe, and the Sub-Treasury disbursed for interest a million more than it received for duties.

Money is easy at 6 per cent. for call loans. An effort was made in the latter part of last week to create the impression that money was more active, but it did not succeed. The banks hold over $80,000,000 of legal tenders, nearly twice as much as used to be considered a safe reserve. Under these circumstances, the financial community are anxiously looking out for the expected funding scheme, which is to deplete the banks of their surplus of greenbacks and consolidate the debt of the Government.

The feature of the stock market last week was an advance, with a large business, in all classes of Government securities. The old five-twenties sold up to 106, the ten-forties to 98, the seven-thirties to 103¾. The rise will greatly facilitate the funding scheme which the Secretary was a few weeks ago so anxious to inaugurate. Railroad stocks are generally higher but quite inactive, the exception being Erie, which has advanced fifteen per cent. in a fortnight, with a large business. No better reason can be given for the advance than a clique movement. It would seem, in effect, that a party of wealthy operators, calculating on the large short interest, and presuming on the supposed position of Mr. Drew, have undertaken to corner the stock, and have succeeded in putting it up at a very rapid rate. The directors will meet next week to determine the dividend question, and will probably pass the dividend on both the common and preferred shares.

The following table will show the course of the stock, gold, exchange, and money markets since our last issue:

	June 28.	July 2.	July 10.	Adv.	Dec.
U. S. Sixes of 1881	106¾	106⅜	109	2⅝	....
5-20 Bonds, old	103⅜	104⅛	106⅜	3⅜	....
5-20 Bonds of 1865	103	103⅛	105	1⅞	....
10-40 Bonds	96⅞	97⅛	98⅜	1	....
7.30 Notes, second series	103¾	103¾	103¾	⅜	....

Bankers' Bills on London	108¼	108¼	108¼	....	....
Call Loans	5	5	6	1	....

* Ex. dividend.

The passage of the new tariff bill through the House of Representatives is viewed with concern by all classes, and with unmingled alarm by honest adherents to the Republican party. As it stands, the tariff is needlessly oppressive; the revenue commission recommended a reduction in the duties, and other economists, looking at the question from a revenue stand-point, have endorsed the recommendation. Instead of heeding these counsels, the Committee of Ways and Means made no reduction worth mentioning in the schedule of duties, but increased the duty on nearly all articles of foreign manufacture which come into competition with native manufactures; and the House of Representatives not only adopts this view, but actually goes so much further on the protectionist side that Mr. Morrill, the author of the new bill, has protested against any further increase of taxes for fear it should render the whole measure odious.

Mr. Morrill's fears are well grounded, but they come too late. The outrageous attempts of the manufacturers to levy toll upon the industry and agriculture of the country for their own private benefit have already aroused a spirit that will not be laid until the commercial legislation of the United States be radically reformed. It matters little now whether at this session of Congress the manufacturers rob us of $1 or $1 50. Perhaps it would be better for the country in the end that the protectionists should have their way throughout, or, to use a familiar phrase, that they should have all the rope required to hang themselves. Nothing but severe suffering will rouse the people to the necessity of modernizing our tariff system; the more exorbitant the present exactions of the manufacturing interest, the surer the reaction against all protective duties.

It is needless to enumerate in this place the new duties which it is proposed to levy on foreign goods. Some of them, indeed, are so complicated and elaborate that no one but an old revenue officer or a manufacturer can estimate the exact amount of tax which they levy. Woollen cloths, for instance, pay a duty *ad valorem*, a duty per yard, and a duty by weight. It is calculated that these various duties will amount to 70 per cent. on some descriptions and 150 per cent. on others. The duty on iron will amount to $22 50 per ton in gold, very little less than Scotch railroad iron used to command, duty paid, before the war. Foreign coal is carefully excluded by a prohibitory tax. Many small articles, such as copper wire, spikes and nails, hoops for crinoline, common drugs, etc., etc., are taxed exorbitantly under the new bill, the additional duty being in many of these cases the work of W. E. Dodge, a member from New York city. The Congressional report of the de-

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

The Cabinet is undergoing a thorough modification. Mr. Dennison has resigned the Postmaster-Generalship and Mr. Speed the Attorney-Generalship, and other changes are expected. Mr. Stanberry takes Mr. Speed's place, Governor Randall Mr. Dennison's, and Governor Sharkey, of Mississippi, is marked out for Mr. Harlan's place. Things will then be snug for the Philadelphia Convention, and Mr. Johnson will have broken the ties which bind him to the party which elected him, and can once more submit his "policy" to Cabinet meetings.

The political crisis at Washington is productive of much epistolary correspondence. Mr. Doolittle writes to the Secretary of State, begging to know if he favors the call of a "Union National" Convention at Philadelphia. Why, most certainly he favors it, Mr. Seward replies; he does not see why Mr. Doolittle should ask such a question. It is barely possible, we would suggest, that Mr. Doolittle may have secretly had it in mind to print the Secretary's answer in the newspapers. Designing men have been known to exercise finesse and do such things. That his friend Doolittle may know just where he stands, Mr. Seward proceeds to give him the Auburn speech in little—which serves Mr. Doolittle right. He must have known of old the unutterable tediousness of these compositions. The letter goes on to say that as Congress has the power of restoring the Union, and as it has done not a single thing and will not do a single thing to that end, there can surely be no harm done if good men from all parts of the country meet together and beg Congress to take action of some sort. This then, we suppose, is to be the work of the convention—a political platform in the form of a petition. It will surprise Mr. Seward and the convention beyond measure to be referred as an answer to a proposed constitutional amendment, which, apparently, has wholly slipped the memory of the Secretary of State. At the end the writer gives us a little amusement by the characteristic close of his remarks: "To admit that the convention will fail would be to admit that the people of the United States are deficient either in wisdom or in virtue, etc., etc." It might prove something too, perhaps, about deficiencies on the part of the convention.

Mr. Doolittle gets another letter from Attorney-General Speed, who had been requested, if he approved of the Philadelphia call, to write and say so. He does not approve of the call, he replies, but he intends to write, notwithstanding. Silence would be interpreted to mean that he disapproved of all the principles set forth in the new platform, as well as the call which pretends to summon a new party into being. But it is the call that chiefly he disapproves. What need of a new party when the great Union party, which carried the country through the war, which is the same in principle and object to-day that it was then, is still intact? The party which, a few months since, elected Mr. Lincoln and Governor Johnson, and a great majority of the present Congress, is still good enough for him, and he has no intention of leaving it for a party which represents but one department of the Government. Without commenting at length upon the unobjectionable and objectionable principles enunciated in the call, Mr. Speed points out that its fatal defect is that it fails to take any notice whatever of an all-important issue now before the American people—namely, Shall or shall not the amendment to the Constitution last proposed by Congress be adopted? To this question he himself, with all his heart, would say, Yes. The call also quite ignores the unjust advantage in the matter of the basis of representation which would accrue to the South if she were at once admitted. The letter, leaving these practical considerations, then goes off into a dissertation upon the primordial theory of the American political system, whither it is unnecessary to follow it. Yet Mr. Speed knows the Western people. He knows their fondness for general ideas and broad views, and his letter will probably be none the less available as a campaign document because it takes politics out of practice into the region of the moral sentiments.

The September convention of Southern loyalists it is possible to make a meeting of some consequence. It can do much towards putting the Southern people in communication with the great Union party North; and the strength of Union men South, thus for the first time gathered together and compacted into a political organization, may be of some immediate value in political struggles in the North. At any rate, it will be less likely to be frittered away in individual efforts that must long be fruitless. But the convention will be of little avail for any one of these purposes if its members consist in any large part of Northerners who may happen to be now doing business in Southern States. Such persons can hardly express any but their own personal opinions. They cannot speak for the loyal communities, or parts of communities, in which they are new comers. Their presence in the convention will give it no strength in popular estimation, South or North, but rather be an element of weakness. The whole matter should be left, as far as possible, in the hands of native Southerners, and Northerners at the South will best serve the party by keeping, for the present, in the ranks.

The "veil of secrecy," as the reporters call it, has been removed from the deliberations of the Republican caucus, and we now know that there was a good deal of very alarming talk at it, and a good deal, also, which was simply violent. Several members, such as Mr. Boutwell, of Massachusetts, who generally weigh their words, expressed in strong terms their fear that the President will resort to a *coup d'état* in order to secure the admission of the Southern representatives without other conditions than he has himself imposed, and, of course, indicated their own readiness to meet force by force. The passage of a resolution last week directing the distribution of Government arms amongst the loyal States may be taken as another proof of the depth of the apprehension prevailing at Washington. General Sherman has aggravated it by a declaration that the young men of the rising generation will witness worse fighting than he had ever

seen, though what it is to be about he has not thought fit to reveal. On the other hand, Mr. Raymond, of the *Times*, repudiates on behalf of the President all intention of resorting to violence, even for the carrying out of so precious a thing as "his policy." Mr. Johnson himself acknowledged in his last veto the validity of the civil rights bill, and thus by implication the validity of all other acts of the present Congress. He probably does not mean mischief, as he hopes by the use of the ordinary machinery to attain his ends; but what we fear is that his head will not be strong enough to resist the appeal for recognition of a new pseudo-Congress, composed of Democrats and Southerners, meeting in Washington next spring. He might then do something frightfully revolutionary under color of law. The exact nature of the danger we have discussed elsewhere. The *Times* laughs at the notion that there is any such danger. It has brobably forgotten that Mr. Seward predicted, through his Auburn oracle, last April, the very danger over which the Radicals are now sounding the alarm, but fixed its occurrence for 1868 instead of 1867.

The veto of the Freedmen's Bureau bill contains the arguments with which we are now so familiar, and does not need any recapitulation from us. The following is the strongest one:

"The ordinary course of judicial proceedings is no longer interrupted. The courts, both State and Federal, are in full, complete, and successful operation, and through them every person, regardless of race and color, is entitled to and can be heard. The protection granted to the white citizen is already conferred by laws upon the freedman. Strong and stringent guards by way of penalties and punishments are thrown around his person and property, and it is believed that ample protection will be afforded him by due process of law without resort to the dangerous expedient of 'military tribunals.' Now that the war has been brought to a close, the necessity no longer existing for such tribunals, which had their origin in the war, grave objections to their continuance must present themselves to the minds of all reflecting and dispassionate persons."

Gen. Grant is, we believe, "a reflecting and dispassionate person," and yet he has reached conclusions differing so widely from those of the President regarding the state of things at the South that he has thought it necessary to issue the following order, which we print entire as the best possible comment on the veto message:

"General Order No. 44.—Department, district, and post commanders in States lately in rebellion are hereby directed to arrest all persons who have been or may hereafter be charged with commission of crimes and offences against officers, agents, citizens, and inhabitants of the United States, irrespective of color, in cases where the civil authorities have failed, neglected, or are unable to arrest and bring such parties to trial, and to detain them in military confinement until such time as a proper judicial tribunal may be ready and willing to try them. A strict and prompt enforcement of this order is required.

Our reports from the South contain plenty of justification for Gen. Grant's precaution. A negro accused of murder was lately taken from the hands of the sheriff in Wilkinson Co., Georgia, and his death by burning *voted* by a mob of three or four hundred of the "citizens." The sentence was carried out after his ears had been cut off. Gen. Woods has accordingly ordered that his accomplice, if arrested, should not be delivered over to the civil authorities. Of course, civil justice administered by a community of this sort is simply a disgusting farce, and we owe it to civilization to see that no human being, of whatever hue or race, is left to their tender mercies. The commanding officer of two districts in South Carolina has also been compelled to petition for a reinforcement of cavalry, to enable him to protect freedmen from torture. Mr. Johnson, however, says the courts are open, and so they are, but he would be a bold negro who would show his nose in a court in Wilkinson Co., Ga., for instance. The negro lately burned there has his remedy under the civil rights bill, and may either prosecute criminally or sue in damages for assault, battery, and combustion.

The weather is terrifically hot, and, probably, has much to do with the prevailing political acrimony. Even Thurlow Weed no doubt loses much of his self-control and shrewdness when the thermometer is at 99°, and a speech from Mr. Johnson on Sumner and Stevens, delivered any day last week, would probably have been the finest outburst in the annals of vituperation. The high temperature affords the newspapers an opportunity too of describing the sensations attendant on great heat in articles of greater or less length, which have the air of being the result of extensive observation, but are, probably, in most cases, that of personal experience. It is always safe, when the mercury rises above 90°, to speak disparagingly of "Old Sol," which has been from time immemorial the reporter's name for the sun, and describe the consumption of iced drinks as numerous without taking the trouble to watch the bar-rooms or walk the streets.

It appears that the instances cited by us in our late criticism of obituary absurdities were due to the brevity of a reporter and the carelessness of a printer, and are not chargeable to the clergyman and Congressman respectively. The former, in setting forth the character of the deceased, probably dwelt, as he ought, on his obedience to conviction; "and the 'calomel' and 'vegetable diet,'" says our informant, "illustrated this point, and well too; for how few doctors live themselves as they tell others to live!" Mr. Darling, of New York, spoke of "the *gentle, manly* spirit" of his colleague, which is quite another thing from "gentlemanly."

The old, familiar type of the excusable thief, the poor man who has not tasted bread for three days, and who, dashing his fist through a bakeshop window, makes off with a loaf, must give place to a better than he. He breaks the eighth commandment in order that he may satisfy a physical craving, or may selfishly feed his own peculiar children. But, in a certain Massachusetts town, they have produced a thief who first became so from willingness to abate a nuisance to the whole body of society, and discourage most rascally swindling—a paradoxical thief who was an enemy of Wood and Morrissey. This initiatory step on the downward road was about as pardonable as any ever heard of. He has been a post-office clerk, it seems, for something like two years, and the other day was arrested on a charge of robbing the mails. He confessed what must be called his guilt; for mail robbery, in general, is doubtless a crime and a sin. But he began with what seemingly almost amounts to at least a doubtful virtue, if even it be not a certainly meritorious act. He began by breaking open the letters addressed to the managers of various lotteries, gift enterprises, and other such Peter Funk schemes, of which the name is legion. The rascals contrive to keep, just by a bare hair's-breadth, beyond the reach of law, so that they are able to laugh at the police and fleece the foolish with impunity. Setting aside the question of his service to society—both that which he owed and that which he volunteered to render—most people will agree with the post-office clerk in thinking that "he had as good a right to the money as the New York sharper." There is not much to choose between two thieves. But the descent was easy, and unfortunately he did not know when to stop.

That they live in a great country most Americans have always known from the time when first they heard discourse of reason or orations. It was a surprise, though, when for a moment we thought that Utopia must be within our confines. There is at any rate a portion of our country where the elsewhere all-powerful greenback is held in contempt. The very horse-car conductors there, when they are offered a greenback in payment for a ride, decline to be so rewarded One conductor we read about who on the fourteenth of June went further than a simple refusal. The passenger who tendered him the money he pronounced "a dirty puppy," and afterwards he stopped the car in order that both might alight and he might get "satisfaction." Indeed, this new Timon was not even then content. He followed after the gentleman who had affronted him, "making use of language still more insulting, and threatening to break his head and jaw." One begins to suspect that after all it was not Utopia in which these things occurred, though the next sentence may confirm the original supposition: "Mr. McGlynn, superintendent of the railroad, testified that he had instructed all the conductors to refuse greenbacks for tickets, but let the party tendering them pass free." "The accursed lust of gold," however, is strong enough, it would seem, in San Francisco. It is only paper money that is hated. How fondly the Californians cling to hard money may be gathered from the fact that the judges on the bench rather sympathize with such defendants as the car conductor. In this case a light fine was imposed.

The Prussian invasion of Bohemia consisted of a simultaneous movement of two armies—the one under Prince Frederick Charles setting out from Görlitz, on the Neisse, in Prussia, and marching straight upon Reichenberg; the other (an eastern division), leaving Glatz, in Prussia Silesia, having the fortress of Josephstadt for its objective point. On the 27th of June the army first named had occupied Turnau, at the junction of the Northern Bohemian railways, in spite of all that 20,000 Saxons and some 50,000 or 60,000 Austrians could do. On the same day General Von Steinmetz had reached Nachod, 25 miles from Glatz, and fought without decisive results or any considerable advance. On the 28th he was reinforced up to 60,000 men, and drove the retreating Austrians beyond Skalitz, which he occupied. In this day's fighting the superiority of the breech-loading needle guns was conspicuous. On the same day the prince had a bloody engagement with the Austrians at Münchengrätz, 50 miles west of Skalitz, and experienced his usual success. The same day, also, the Prussian Guards, 45,000 strong, which had penetrated from the north by the Landshut Pass, met Von Gablenz, the evacuator of Holstein, at Trautenau, ten miles north of Nachod, and had a stubborn conflict with him, but compelled him to retire. On the 29th Gitschin was taken by storm, and communication between the several wings of the Prussian army was at once effected. The Austrians retreated to a line between Horzitz and Königgrätz, and there, on the 3d of July (the anniversary of Gettysburg), at a little place called Sadowa, was fought the tremendous battle which compelled Austria to tender Venetia to Napoleon and to call for an armistice, which Prussia and Italy have refused to grant her.

Garibaldi is reported to have suffered a repulse at the hands of the Austrians, and to have been wounded in the thigh. The Italians have crossed the Po.

The Earl of Derby has succeeded in forming a ministry. It is mainly composed of the material of that of 1858, and has in it no elements of great strength. But some of the changes in the list of 1858 are great improvements—such as the substitution of Lord Stanley in the foreign office for Lord Malmesbury. Stanley will throw the weight of English influence in Continental affairs, if he leans to either side, on the side of Austria and conservatism. The only other office of importance is that of the Chancellor of the Exchequer, and what Disraeli will do in it it is scarcely worth while to speculate. The new ministry has no programme and, we believe, no principles. It is avowedly a kind of stop-gap, which is put up when the liberal machinery gets out of order, and will probably only last while the House of Commons is recovering from the effects of Gladstone's imperious manners. The Tory language is, however, highly reactionary, and has, during the late debates, been so insulting to the working classes as to rouse in the latter some traces of the bitterness of 1846–8. Even Gladstone is being abused as "a plebeian."

M. Michel Chevalier, the distinguished French economist, has written an article in the *Revue des Deux Mondes* warning the European people against war, partly because war does not pay, and partly because nothing is worth fighting for. He advises the formation of a kind of loose confederation of European states, in order, amongst other things, to be ready for a combined resistance to the armed interference in European affairs of which the United States will probably be guilty as soon as they can boast 100,000,000 of inhabitants. The whole article is a striking illustration of the visionariness into which "practical men" are apt to fall when they attempt political theorizing. The Chevalier and Cobden school persistently refuse to recognize ideas or aspirations as political forces, and as soon as they have shown that a certain course will produce a certain amount of material comfort, or avoid a certain amount of material loss, sit down triumphant. There is, for instance, nothing easier than to show an Italian that the addition of Venice to the Italian kingdom would make no man in it a whit better off; but what hope could we have for Italy if this argument had the least force for any considerable number of the population, if it sheathed a single sword or silenced a single gun?

CONGRESS.

Tuesday, July 10.—The Senate passed the House bill fixing the number of judges of the Supreme Court, and altering certain judicial districts, so amended as to prohibit the filling of any vacancies till the number of associate judges is reduced to six.

The House passed the tariff bill—yeas, 94; nays, 53. All the New England members voted for it, though they disclaimed being responsible for it, and vindicated New England against the odium that might attach to the measure.

July 11.—The Senate passed Mr. Clark's bill to regulate the time and manner of electing U. S. Senators—yeas, 25; nays, 11. It directs that each House of a State Legislature shall vote *viva voce*, a majority electing; and that, whether there be any choice or not, the two Houses shall, on the following day, compare their journals, and, if they shall not have chosen the same person, the balloting afterwards shall be in joint session, still *viva voce*, and the majority electing. The bankruptcy bill was called up and ordered to be printed. The bill to re-annex the city and county of Alexandria to Virginia was defeated—yeas, 13; nays, 17.

The House passed without amendment the anti-monopoly telegraph bill of the Senate—yeas, 74; nays, 61.

July 12.—On motion of Mr. Grimes, of Iowa, the Senate, after a spirited debate, voted to recommit the tariff bill to the Finance Committee, with instructions to report on the second Monday in December next—yeas, 23; nays, 17; absent, 7. A bill was passed authorizing the President to place at the disposal of the Portland sufferers the surplus and condemned clothing, equipage, etc., of the army.

The House passed the Senate bill to relieve the Portland sufferers.

July 13.—The Senate, after debate, postponed the Niagara Ship Canal bill till December—yeas, 24; nays, 13; absent or not voting, 14.

The House passed the bill reconstructing the civil appropriation bill.

July 14.—The Senate debated without result the bill to aid in the construction of the Northern Pacific Railroad.

The House passed the bill authorizing the construction of bridges over the Mississippi, and making certain of them post roads. The reports on the Rousseau-Grinnell case were debated without a conclusion. The special committee on the Fry-Conkling controversy reported, exonerating the latter.

July 16.—The Senate passed the Freedmen's Bureau bill over the President's veto—yeas, 33; nays, 12.

In the House, a message from the President was read, in which he refused his signature to the Freedmen's Bureau bill on substantially the same grounds as before, but with the added reason that the Civil Rights act had rendered it unnecessary to protect the rights of the blacks. The House then passed the bill without debate—yeas, 104; nays, 33. The Rousseau-Grinnell discussion was resumed but not terminated.

FREEDMEN.

Gen. Scott, assistant commissioner for South Carolina, recently prepared careful estimates of the rations needed to sustain the destitute of that State, and forwarded them to the proper authorities. Gen. Sickles, however, his military superior, disapproved of them on the ground that Gov. Orr discredited the reports on which they were based, and the rations were accordingly withheld. A correspondence upon the subject between Gen. Howard and Gov. Orr revealed a misapprehension on the part of Gen. Sickles, the governor being solicitous that the rations should be furnished as proposed. Gen. Scott having had occasion a lsoto appeal from a decision of Gen. Sickles, that district commandants must report to him as well on freedmen as on military affairs, Gen. Grant has overruled this decision.

—Gen. Gregory reports from Texas continued industry and steadiness on the part of the freedmen. The corn crop is large and beyond danger, the wheat crop abundant, of the best quality, and already harvested. There has been no corresponding growth of loyalty, but since March, with the withdrawal of the troops and the crippling of the Bureau, the outrages on the freedmen have constantly increased, murders have been numerous, and the courts have afforded no redress to the victims.

—The June reports from Georgia enumerate 79 schools, 113 teachers, 7,792 pupils, being a net increase of 14, 13, and 997 respectively. All schools taught by Northern teachers are now having a recess till October, and their closing was attended almost uniformly with the most satisfactory exhibitions.

—A colored pastor in Nashville, on the 28th ult., was fined $500 for marrying a white man to a colored woman, the pair being also fined $50 each and in default thereof sent to jail.

—There are growing complaints of violence against freedmen in North and South Carolina, and in Arkansas and in Mississippi.

—The Freedmen's Saving and Trust Company has declared a dividend of five per cent. on its deposits, which in fifteen months have amounted to upwards of $370,000.

Notes.

LITERARY.

A striking coincidence of poetic conception and expression occurs in the July number of the "Atlantic Monthly." Two poems could not well be less alike than Longfellow's "On Translating the Divina Commedia" and Bryant's "The Death of Slavery." But they each use the same image, and embody it in similar language—the wide dissimilarity of theme and reference, together with the fact that they appear at the same date in the same periodical, adding interest to the parallel. Longfellow addresses the shade of the "poet saturnine:"

> "I enter, and see thee *in the gloom*
> Of the long aisles,
> The congregation of the dead *make room*
> *For thee to pass.*"

Bryant addresses the shade of the "Great Wrong," which he sends, "accursed of God," to take its place "with baleful memories of the elder time:"

> "Lo, the foul phantoms, silent *in the gloom*
> Of the flown ages, *part to yield thee room.*"

—We find in a recent publication of the statistical office of the Kingdom of Italy some interesting notices on the Italian dialects. The Italian dialects, not alone from the historical but principally from a philological point of view, may be classed into six families, in which classification, however, the sub-dialects of foreign origin are omitted; the dialects spoken in Venetia, Friuli, and Corsica are likewise omitted, although of Italian origin, being under a foreign government. Firstly, the family of the Italo-Celtic dialects, which are spoken in the province of Turin (with the exception of the district of Aosta and some valleys of the Graian Alps) and in the provinces of Cuneo, Alessandria (excepting the district of Novi), Novara, Milan, Pavia, Bergamo, Brescia, Cremona, Piacenza, Parma, Modena, Reggio, Bologna, Ferrara, Ravenna, Forlì, as far as the Foglia and towards Pesaro—to which may be still added the canton of Tesino, where a Milanese sub-dialect is spoken; the eastern valleys of the Tridentino, where a Brescian sub-dialect is spoken, and the province of Mantova; on the whole, a territory with more than 8,000,000 of inhabitants. Secondly, the family of the Ligurian dialects, which are spoken, with numerous varieties in the pronunciation, all along the coast of Genoa, from Menton to Sarzana; that is, in the provinces of Genoa and Porto Maurizio, and besides in the district of Novi; on the whole, by 800,000 inhabitants. Thirdly, the family of the Tusco-Roman dialects, which are divided into the three types of the Tuscan, the Umbrian, and the Marchipisanian; they are spoken in the provinces of Florence, Pisa, Arezzo, Siena, Grosseto, Umbria, and in the greater part of the former Marches of Ancona; this territory, inclusive of that under Papal government, contains about 4,000,000 inhabitants. Fourthly, the family of the Neapolitan dialects, among which is prominent the dialect of the Abruzzi, that of Pula, and the Neapolitan, or Campagnard proper. These dialects are spoken in the three Abruzzi, the Terra di Lavoro, the two Principali, the provinces of Naples, Benevento, Molise, Capitanata, Terra di Basi, Terra d'Otranto, and the Basilicata, together having 6,000,000 of inhabitants. Fifthly, the family of the Sicilian dialects, rich in varieties but with two principal types, the Calabrian and the Sicilian, spoken by more than 3,000,000 of inhabitants; and sixthly, the family of the Sardinian dialects, which fall in the two branches of the Campidanese and the Lugudenese, and which are spoken by more than half a million of inhabitants. Considering the number of the speakers, the Celtic dialect, of foreign origin or relationship, would have to be placed in the first rank. But the groups of the Tusco-Roman dialects maintain their superiority, since the life of the nation has its root in them and draws its nourishment from them, and also because the other Italian dialects, as the Venetian, which has not been considered, the Neapolitan and the Sicilian, are much nearer related to the Tusco-Roman than to the Celtic type.

—The report of M. E. G. Rey, to the Minister of Public Instruction, of his scientific mission in the north of Syria, has just been published in Paris. M. Rey was sent in 1864 to Syria to study the military movements of the Crusaders, and the geography and archæology of the mountains of the Ausariés, and of the regions lying in the pachalic of Aleppo, on the right bank of the Orontes, and between that river and the Euphrates. This region, of great importance, had been but little visited, and the few travellers who had been there had not observed the country with great care. The American missionaries, Eli Smith and Thompson, traversed the region between 1848 and 1852, and Dr. Smith collected geographical notes of great interest, which he forwarded to Karl Ritter; but since his death they seem lost to science. Arriving in Syria in August, 1864, M. Rey met Lieut. Vignes, the companion of the Duc de Luynes, and immediately set about his explorations. His first discovery was of the ruins of the temples of Jupiter, which had been merely mentioned by Lieut. Walpole, and which were situated in the midst of the Ausariés mountains, the ancient Bargylus, at a place called Hosn Souleiman, on the site of the ancient Bactocete. The enclosure of the temple is 144 metres long by 90 metres wide, and in shape approaches the trapezium. It is the best preserved specimen of sacred enclosures. It is built of gigantic blocks. There are four entrances to the enclosure. On one of the piers of that which faces the north-east are two inscriptions: the first, in Greek, recounts the donations made to the temples by a king of Seleucis; the second, in Latin, the restoration of its revenues during the Roman period. In the middle of the enclosure rises a temple of the Ionic order, which seems never to have been completely finished; and in front of the peristyle is an altar, which probably was covered with bronze. From this place M. Rey went to Hamath, visiting several ruined temples on his way. At Selmich, on the right bank of the Orontes, he found several Coptic inscriptions, full of interest, dating from the early years of the Hegira. Selmich appears to have been built by Mussulmans on the site of a Byzantine city, probably Irenopolis. Among other places, M. Rey visited Membidj, the ancient Hierapolis, situated in a rocky plain about six miles from the Euphrates. Here stood the temple in which, according to Lucian, the rites mentioned in his treatise "De Deâ Syriâ" were solemnized. On reaching the centre of these ruins, he was struck at once with the topography of the sanctuaries as described by the Greek author. To the west of the city may still be seen, half dried up, the lake in which the sacred fish were kept. It was on its banks that took place the ceremony of the descent into the lake, of which Lucian gives such a curious account. A little further on is the hill on which stood the temple, of which nothing remains except a few shapeless fragments. Several Arab inscriptions were found; and in the midst of the ruins of the temple a stela, in lava, representing the Goddess of Syria, seated on a throne, supported by two lions, and conforming, in all respects, to the description of Lucian. Fever compelled M. Rey to return, leaving incomplete the map of the northern part of the mountains of the Ausariés. He was, however, enabled to complete his studies of the epoch of the Crusades, and to elucidate many points in the territorial and military organization of the Christian principalities of Syria during the Middle Ages.

—Mr. George Lillie Craik, professor of history and English literature in Queen's College, Belfast, died on the 25th of June. He was born in Fife in 1799, and was the son of a schoolmaster. In 1824 he came to London and got employment under Mr. Charles Knight and the Society for the Diffusion of Useful Knowledge. At the suggestion of Lord Brougham he wrote the "Pursuit of Knowledge under Difficulties" for the Library of Entertaining Knowledge. Under Mr. Knight's direction he wrote the "Pictorial History of England." He was appointed professor at Belfast in 1849, and has since been more generally known by his "History of the English Language and Literature," which was republished in this country. He was also the author of "The English of Shakespeare," "The Romance of the Peerage," and several minor works.

—The Geographical Society of Paris have just awarded their gold medal for 1863 to Mr. Gifford Palgrave for his great Arabian journey. The medal for each year is given for the journey performed in the course of that year, and is determined by a special sub-committee, who make a report which is printed among the proceedings of the society. In this case the report was drawn up by four geographers of the highest distinction, who speak in very strong terms of the great achievement of Mr. Palgrave. Praise from such a source will more than counterbalance the anonymous detractions and malevolent criticism of two of the English reviews.

—Dr. Mitterrutzner, a dignitary of the Roman Catholic Church in the Tyrol, has published recently at Brixen, in German, a grammar of the language of the Dinka negroes in Central Africa, inhabiting the upper course of the White Nile. This is the first grammar of the Dinka language ever attempted. It is accompanied with texts and a Dinka-German-Italian dictionary. The Imperial Academy of Sciences at Vienna bore a portion of the cost of publication. We owe to German scholarship another contribution to African philology—a grammar of the Kafir language, by J. A. Bonatz. The author studied the language at Caffraria, and had prepared a grammar in manuscript before the appearance of those by Messrs. Boyce and Appleyard. In the elaboration of his work he has made copious use of the books of those gentlemen. Mr. E. J. Brill, the celebrated publisher and bookseller of Leyden, in Holland, has lately added another important work to his remarkable collection of "Arabic Historians and Philosophers." It is an edition of Edrisi's "Description of Africa and Spain," the Arabic text published for the first time from the manuscripts of Paris and Oxford, with a translation in French, notes and glossary, by R. Dozy and M. J. de Goejè.

SCIENTIFIC.

Deterioration of Bituminous Coal by Keeping.—The experiments of the well-known chemist Varrentrap on this subject are more recent than those described in the last number of The Nation. They were undertaken for the purpose of testing Grundmann's results and of clearing up some points which had not been completely elucidated by his researches. Varrentrap operated first upon lignite from the Duchy of Brunswick, and subsequently upon different samples of gas-coal from Westphalia. The details of these experiments are interesting not only because of the very remarkable character of some of the results obtained, but also on account of their unquestionable truthfulness and thorough trustworthiness. The experiments, whether upon lignite or upon the gas coals, agree closely among themselves. It will, therefore, be unnecessary to relate all of them. Those upon lignite are, upon the whole, rather more instructive than the others, and are, therefore, here copied.

A pound of lignite, fresh from the mine, was first broken into fragments as large as peas, and these fragments were placed in a flask. Moist air, free from carbonic acid, was then caused to flow through the flask over the coal, and then to bubble through baryta water before it passed off into the atmosphere. The flask was, meanwhile, exposed to various carefully-regulated temperatures. It appeared that, even at the ordinary temperature of the air, a very small quantity of carbonic acid was immediately formed by the action of the air upon the coal. The moist air was now made to flow over the sample of coal at the rate of about two cubic feet per day during 670 consecutive hours, the coal being all the while maintained at a temperature of from 95° to 104° Fah. As the result of this experiment there were obtained six grammes, or about ninety-three grains, of carbonate of baryta. The experiment was then continued, under precisely similar conditions, with the same sample of coal, and at the expiration of forty-four days six more grammes of carbonate of baryta had been formed. The temperature of the coal in the flask was next reduced to 60°, and maintained at that temperature, or thereabouts, during forty-two days. Under these conditions only one and a half grammes of carbonate of baryta were formed. During the next nine days the temperature of the lignite was maintained at 175°–185°, about one cubic foot and a half of air being passed through the flask every day. In a short time nearly eight grammes of carbonate of baryta were formed. The flask and its contents were then placed in an oil-bath and heated to 230° during six hours, and then to 250° during six hours. At these temperatures nearly all the moisture distilled over, and the coal was left almost completely dry; but, in spite of this, the amount of carbonic acid formed during these twelve hours was manifestly more considerable than that obtained during the six weeks when the temperature of the coal was kept at 95°–104°. The coal was now moistened with water, which had just been thoroughly boiled in order to expel oxygen and carbonic acid, and left to stand over night. It was then heated, during eight hours upon the following day, to 260°, and in like manner to 275° during eight hours of the day next succeeding. In the course of this comparatively short interval of twenty-eight hours there were formed twenty-one and a third grammes of carbonate of baryta. After this the coal was heated during four hours to 285°, and there were formed nearly four and a half grammes of carbonate of baryta. The coal was, in the next place, completely covered with boiled, distilled water, and left to itself during a couple of days. The water was then poured away, and the oil-bath heated. In the course of two hours the temperature of the coal had risen to 285°, and at that point it was kept during four hours. About one cubic foot of air passed over the coal in the course of this experiment, and there were formed four and a half grammes of carbonate of baryta. During each of the three following days the temperature was raised to 285°, and maintained at that point for eight hours upon each occasion. There were formed, all told, twenty-four grammes of carbonate of baryta. The coal was now once more covered with water, and subsequently again heated, the temperature being maintained at 300° during eight hours for three consecutive days. The air in this case flowed over the coal at the rate of about one-sixth of a cubic foot per hour, and there were formed, in all, twenty-nine and a quarter grammes of carbonate of baryta. After this the temperature was maintained at 300° during 14–16 hours per day each for six days. About three cubic feet of air passed through the flask, and there were formed one hundred and three grammes of carbonate of baryta.

The assertion of Grundmann that in the course of nine months coal may lose more than half of its carbon by simple waste and oxidation, without inflammation, if only it be improperly stored, is thus more than justified. Estimating that the dry lignite contains 64 per cent. of carbon, it appears from these results of Varrentrap that if his experiment should be continued during three months at the temperature of 300°, every particle of carbon in the coal would be converted into carbonic acid gas.

As has already been said, these experiments clearly show that, under certain conditions as regards temperature and moisture, the oxidation of the carburetted ingredients of the coal can be both rapid and thorough. This waste will occur when large heaps of coal become heated, even if only to a temperature very far below that at which the coal would take fire.

As was remarked above, Marsilly looked less to the oxidation of the coal than to simple waste by emission or exhalation of gas. His experiments are, therefore, to be regarded as being in one sense complementary to those of Varrentrap, and upon that account they are the more worthy of careful consideration. Two of the capital points made by this observer are to the effect, 1st, that coal will still continue to lose gas, even when it is exposed to a very considerable degree of atmospheric pressure; and 2d, that one of the ingredients which is given off is the substance, or at least a constituent part of the substance, which binds together the coke which is left as a residuum when coal is distilled. By repeated trials it was found that carburetted hydrogen gas will still be spontaneously disengaged from coal, even when the air about it is subjected to a pressure five times greater than that of the atmosphere. It was established with equal certainty, by careful experiments, that the coals of mines liable to fire-damp, upon being exposed to the air, lose a part, if not the whole, of the fatty principle which occasions the formation of coke. This agglutinative matter may also be completely removed from the coal by maintaining it for some time at a temperature of 400°–480°. Coal which has been heated to this temperature for some time is afterwards unfit for making coke. These observations are in accord with the assertions of the manufacturers of coke, that old coal will not cake together on being heated. They illustrate the wisdom of the old custom of cokemakers, always to employ freshly mined coals.

RENAN'S "APOSTLES"—CARLETON'S TRANSLATION.*

The critical principles which lie at the bottom of M. Renan's treatment of the early Christian history were so frankly stated in his "Life of Jesus," and have become so familiar by the help of reviewers, that it is not necessary to enlarge on them now. In this volume he applies those principles to the history of the first apostles, who were the personal companions of Jesus

* "The Apostles. Renan." New York: Carleton. 1866.

and the immediate continuers of his work. The volume has all the peculiar merits and defects of his former volume; the grace of style, the honeyed smoothness of diction, the facility of narrative, the easy mastery of material, the delicate tracery of thought and allusion, the enchanting naturalness of movement, and, with all this, the appearance of conscious design and the actual inconsistency which gave a meretricious air to his famous biography. For a man who professes but little sympathy with the people, whose interests are with the literary class, and who does not acknowledge the popular dissemination of truth to be a part of the scholar's duty, M. Renan takes singular pains to write in a style that commends itself to the lovers of light reading rather than to students of his own grade. Some have suspected a slight disingenuousness in the writer who upholds the established religion and claims from Government the protection of the philosopher's liberty, while at the same time he charms away the speculative opinions on which the established religion and the Government rest. But M. Renan is sincere after his manner. He is at the same time a deep scholar and a brilliant man of letters. His genius compels him to write as he does; he would not write differently for a chamber of savans. A "naturalist," he uses natural attractions, and addresses the natural taste for mental excitement. The interest of the second volume on the origin of Christianity centres in two points—the belief in the resurrection of Jesus, which gave to the disciples their impulse, and the condition of the Roman empire, which gave them their field of work; and these points M. Renan especially elaborates—the first in the three opening chapters of the volume, the second in chapters xvii. and xviii. The intervening chapters are interesting as giving a fresh description of the feelings and beliefs of the primitive apostles, their enthusiasms and fanaticisms, their rules and modes of living, their ecstasies and visions, their institutions, their bigotries, their zeal, their labors, persecutions, missions, the gradual expansion of their ideas, and the slow maturing of their method—all pleasant reading, but all more or less familiar. A gorgeous picture of Antioch lights up the level monotony of the middle portion of the book. A highly-wrought but feeble description of the conversion of Paul, done after the most extravagant manner of his school, with full apparatus of thunder and lightning, evening shadows, oppressive atmospheres, nervous agitations and ophthalmic diseases, terrific convulsions of matter and mind, is thrown in out of place, as if to give an air of intensity to the otherwise tame narrative of ordinary events.

M Renan's principle is pure naturalism and naturalism on the ordinary historic plane. He not only discards the miraculous, he discards also the marvellous and the wonderful; for explanations of events however stupendous in the record, he goes to the phenomena of common life. Christianity having its place in the world's history, both as to its origin and its continuance, the history must be interpreted, as all history is, by *averages* of experience. So he, somewhat rashly, we think, concludes. The belief that Jesus rose from the dead was the corner-stone of the primitive apostolic faith. The Church says he did rise from the dead in palpable form. The believers of the Swedenborgian school say he rose and was seen in the spiritual body. The mythical interpreters will have it that the accounts of the resurrection are not to be taken literally but figuratively, as poetical descriptions of a speculative idea or an inward experience. M. Renan puts all these aside, and attempts to account for the belief on simple psychological principles. The chapters in which this powerful persuasion is accounted for are among the most remarkable specimens of subtle constructive criticism we have ever known. We can recall nothing equal to it for delicacy of feeling and handling. The steps from the instantaneous but profound impression made on Mary's heart as she stood in the early morning before the empty tomb, and felt in her bosom that Jesus was still alive, to the general admission of the fact as a thing his friends would not doubt, and scorned even to ask evidence for, holding it a kind of reproach to believe *because they had seen*, deeming theirs the greatest faith who would not have been if they could, are traced with a skill nothing short of amazing.

Personal love of Jesus was the animating soul of the earliest church. The apostles "were small, narrow, ignorant, inexperienced as it is possible for men to be. They were simple to an extreme; there were no limits to their credulity. But they had one characteristic: they loved their Master to fondness. The remembrance of Jesus was a constant motive-power within them; it possessed them continually; it is clear that they could not have lived but for him who, in the space of two or three years, had so fascinated and bound them." This love for Jesus made them believers in his resurrection, friends in his sympathy, ministers of his compassion, servants of his spirit. It explains their folly and their wisdom, their childishness and their manliness, their exclusiveness and their expansion, their timidity and their courage, their attachment to their peculiar usages in which he had participated, and their desire to extend the knowledge of his person to people of other customs, their allegiance to the old church and their willingness to establish new churches on a broader base of feeling.

It is not possible to believe that a religion consisting as this is supposed to do of personal affections, and sentiments flowing therefrom, could have "converted the world." Causes and effects must correspond. If Christianity was a superhuman force let into the world from the upper spheres, it required a terribly depraved condition of the world to justify its coming. If history proved the condition of the world to be one of terrible depravity, a presumption arises that Christianity must have been a superhuman power. On M. Renan's hypothesis, no such helpless depravity could have existed. We have from him, therefore, a description of the state of the world towards the middle of the first century, differing in every particular from that which has long been current in Christendom. We do not mean to insinuate that he has yielded to the temptation to make history square with hypothesis, and has drawn on his imagination for his facts. Far from it; we are sure that such a suspicion would be unjust. The description is wrought in good faith. The authorities have been consulted faithfully and quoted fairly; the statements are balanced, calm, and candid; the shadows seem to be honestly put in. Nevertheless it is quite possible, nay, it is altogether probable, that the writer was insensibly inclined by his theory to look on the brightest side of history at that particular point. We think his picture on the whole more cheerful than Merivale's, with whom, it should be added, he accords on most of the essential and decisive points, as, for instance, the condition of the Roman people as distinguished from that of the court; the softening of manners under foreign influence, the indifference to the ancient religion, and the readiness to accept a simple earnest faith; the numerical and social prominence of the Jews; the extent of their influence, through their religious ideas; their charitable institutions, and the sentiment of human fellowship which pervaded their secular as well as their spiritual existence. A single perusal, even though careful, will not enable one to do justice to the body of learning and reflection that is packed away in the compass of these sixty-two fascinating pages. The discriminations are too nice to be appreciated at a glance. The result of so much study demands study in the reader, who, on candid reflection, may satisfy himself as Mr. Renan has satisfied himself that, on his theory of Christianity, too, causes and effects balance each other. We are not disposed to accept M. Renan's book as the best thing that rationalism can do on its principles; for it might be glad to avail itself of certain intellectual and moral qualifications of which he seems to be destitute. Rationalism is not necessarily sentimental, nor does it as matter of course rule out the mysterious, the extraordinary, or even the marvellous from the treatment of history. It has imagination as well as fancy, and is opposed to the supremacy of ingenuity over reason. Still, with all its defects, the work of M. Renan is by far the best specimen of historical reconstruction that has come from his school.

We cannot congratulate those who must make acquaintance with M. Renan's book through the channel of the Carleton version. We have not critically examined it from beginning to end; that would be too much for one who had enjoyed the luxury of the author's French; but we have examined several chapters critically, and feel bound in truth to say that it does no credit either to translator or to publisher. It is slovenly, inaccurate, and spiritless. We might prove this without going further than the introduction. For instance, p. 39, the original says: "The miraculous is a formal departure from common laws, on the plea of a special will." The translation reads: "The miraculous is a formal derogation from recognized laws, *in the name of a particular desire.*" In the next sentence the English has it, "What we deny to the miracle is the exceptional state, or the results of particular intervention;" the corresponding French whereof is: "Ce que nous nions, c'est le miracle à l'état d'exception, ce sont des interventions particulières," which conveys quite another sense. On p. 45 we are told that "the first principle of the critical school is the allowance, in matters of faith, of all that is needed." We should read: "The first principle of the critical school is to make all necessary admissions in regard to faith." On the same page it is declared that "philosophy differs from faith in this, that faith is believed to operate by itself, independently of the intelligence acquired from dogmas;" which is nonsense. Renan says "philosophy differs from faith in this, that faith is presumed to operate through its own virtue independently of any *understanding of the dogma.*" On p. 60, where Renan writes: "Her woman's heart rested wholly in the desire to clasp once more in her arms the dead body of her beloved," the ingenious translator indites: "Her woman's heart went *no further from her desire* to clasp again in her arms the beloved corpse." On p. 72 the author's words are: "With a feeling of melancholy they dreamed of the lake and the lovely mountains;" for

which we have: "They fancied that they were actuated by a melancholy affection for the lake," etc. On p. 74, the original: "On those waters where they had touched God, how could the disciples have failed to see their divine friend again?" is translated, "How was it that the disciples had not again beheld their divine friend?"—a very different idea. On p. 94, "Aberrations sans portée et sans avenir," is rendered "aberrations *without capacity* or future results." "Gerbes de flamme" are "garbes of flame," instead of "sheafs." "Vagissement" is "squalling." "Rôles brilliants de la prédication" are "brilliant *feats* of preaching." "Conscience," consciousness, or mental state, is invariably rendered "conscience," without the smallest regard to the sense.

But these are trifling blunders. We come to graver inaccuracies. There are two on p. 12. For "The physiognomy of that period is, upon the whole, not known with certainty," we should read: "The characteristics of that period are, on the whole, not known with any *more* certainty," namely, than those of the other. For "We have *features* wanting too often in that work," we should read: "We have a critical mark, or a fixed point of judgment, which we had not in reading the other work." On p. 17 Renan asks: "Must we come to a pause before these objections?" The translator asks: "Is it necessary to pause here to *discuss* these objections?" There is no question of discussion. On p. 26 the language runs: "The control which we can demand of the synoptical texts we can demand also of St. Paul." Renan says, "The exactness which we *cannot* demand of the synoptical texts we can demand of St. Paul." There is something worse yet: "The effort to soften the asperities of the severe apostle hence seems *without evidence*." The original states precisely the opposite, namely this: "The effort to soften the asperities of the stern apostle is here most *palpably seen*." Three pages further on the translator intimates that the more prominent men learn nothing new from Paul. The difficulty was not on that side; it was *he* that was taught nothing new by *them*. Page 78 gives us three blunders, all bad, but one atrocious. As thus; here is Renan's text: "A peine avons-nous songé jusqu' ici à poser une question oiseuse et insoluble." Now mark this: "With difficulty have we thus far dreamed in order to propose a trifling question, but one which admits not of easy solution!" "This detail will be always steadily ignored" means, "this point will always be hid in ignorance." Two pages further along appear two more mistakes: "La nuance particulière de leur sincérité" means, we presume, not "the particularly slight knowledge of their sincerity." "La conviction exaltée" certainly does not mean "the conviction of being exalted."

And what are we to think of this: "The history of the church will henceforth be oftener the history of treacheries than subservient to the idea of Jesus?" We assure our readers that the following is a correct copy of Renan's text: "L'histoire de l'Eglise sera le plus souvent désormais l'histoire des trahisons que subira l'idée de Jésus;"—the history of the betrayals which the idea of Jesus is to undergo. We will give but one more instance, for the business is tiresome: Speaking of the "gift of tongues," Renan writes: "As no language expressed the new sensations they experienced, they had recourse to an indistinct stammering, at once sublime and puerile, in which what we may call 'the Christian tongue' floated in germ." This sentence being transmogrified, appears thus: "Any language which did not afford the new sensations which were being produced they suffered to become an indistinct stammering, at once sublime and puerile; or that which they could denominate 'the Christian language' was wafted about in an embryo state!!"

This is about as bad as bad can be. But what right have we to expect better? The work was done, according to the custom, as job-work, by several different men, who were neither good French scholars nor good English scholars, and who did not understand the book they were translating. The task was distributed among them; their time was limited, and their pay. Their business was to turn off so many pages in order that their version might get the start of all others. Against this method of publishing translations of important works we earnestly protest. It insults the author, it does disrespect to the volume, and it is an imposition on the public, which not only is put off with something that is not what it pretends to be, but is prevented from ever getting what it ought to have. Such books as the "Vie de Jésus" and "Les Apôtres" should be translated at leisure, from advanced sheets, by a scholar who is accomplished in that department of literature. The interests of thought, as well as the dictates of honor, demand as much. The public sentiment should not be satisfied with less For our own part, we are not sorry that this translation is as bad as it is, for it may awaken disgust at the unprincipled manner in which such work is done. This volume does not reproduce M. Renan's, and must not be received as its equivalent.

MISS ROSSETTI'S POEMS.*

ANY American reader who for the last two or three years has occasionally seen and admired the stray poems attributed to Miss Rossetti, being asked to describe them by one word, would have pronounced them Pre-Raphaelite. They were certainly most picturesque poetry; it was her practice to dwell elaborately upon details; oftenest her theme was nature; when they were devotional, her pieces were full of that phase of religious feeling which contemplates, not without sentimentality, God made man, which, we may almost say, agonizes at the feet of a Saviour who suffers and yearns, who is bleeding and aching with fleshly wounds. To have attributed to Pre-Raphaelitism such qualities as these would, perhaps, have been to give it a definition rude or incorrect. But whether right or wrong as regards the sister art, it was not a mistake to fix upon these as the distinguishing features of Miss Rossetti's poetry, and if with these we name a pervading sensuousness, we have the list of its essential characteristics complete.

Poetry more picturesque it would be hard to find in English literature. It is not only that, after it is expressed, she can set off and illustrate her thought or feeling by pictures, but that picture is her customary and natural means of expression. The abstract she has nothing to do with; in her mind, as her mind is here revealed, every idea puts on shape and color. Incident to this power of hers is that characteristic of her writing which, on a first perusal, is the most striking and which has been so attractive to the wearied reader of ninety-nine in a hundred of recent poets—namely, the simplicity, frequently homely or quaint, the pictorial vividness, the life of her language. For it being natural to her to give form and color to her idea, to give it a body, to be dissatisfied if it is not made definite and perfectly clear, it is natural for her as an artist, in order that the reader may see and feel as she sees and feels, to draw in very sharp outline and to color with all the vividness possible. To illustrate by example this preference of the specific over the general, of the concrete over the abstract, and the accompanying force and freshness of her language and imagery, almost any poem in the volume might be safely cited. If, for instance, she would say to us *Carpe diem*, we need have no fear of the old properties, of the stock garlands of rosebuds, of the wine-beakers to be crowned and wreathed, of the maids to be kissed while yet we are young.

"If I might see another spring
I'd not plant summer flowers and wait:
I'd have my crocuses at once,
My leafless pink mezereons,
My chill-veined snow-drops, choicer yet
My white or azure violet,
Leaf-nested primrose; anything
To blow at once not late.

"If I might see another spring
I'd listen to the daylight birds
That build their nests and pair and sing,
Nor wait for mateless nightingale;
I'd listen to the lusty herds,
The ewes with lambs as white as snow,
I'd find out music in the hail
And all the winds that blow.

"If I might see another spring—
O stinging comment on my past
That all my past results in 'if'—
If I might see another spring
I'd laugh to-day, to-day is brief;
I would not wait for anything:
I'd use to-day that cannot last.
Be glad to-day and sing."

And in this little song, which embodies the same sentiment, the traits that we have spoken of are almost equally observable:

"Two doves upon the self-same branch,
Two lilies on a single stem,
Two butterflies upon one flower—
O happy they who look on them.

"Who look upon them hand in hand,
Flushed in the rosy summer light;
Who look upon them hand in hand
And never give a thought to night."

Neither of these pieces contains overmuch thought. But it is not for thought or passion that one goes to the minor poets; and Miss Rossetti's merit, though unique, will never be of the supreme order.

Again, what in the common way of presenting it is more conventional, and for that and other reasons more unimpressive, than the coming back to earth of spirits departed? Gliding ghosts, misty and vague, they shun the day and the haunts of man, and flit in the chill and damps of midnight. They do sometimes return seeking revenge, as to claim a false lover's pledge, to bring terror and punishment on the murderer; but poetic ghosts are, for the most part, shadowy simulacra, whose existence is in men's fears, while

* "Goblin Market, and other Poems. By Christina Rossetti." Boston: Roberts Brothers. 1866.

out of themselves all life of human affection is vanished—gone with the life of the blood. And if any poet, not distinctively a religious poet, conceives more loftily of the existence of dead men, he still keeps them at a vast remove from human interests and interest.

"How pure in heart and sound in head,
With what divine affections bold,
Should be the man whose thoughts would hold
An hour's communion with the dead."

But look at this ghost which Miss Rossetti sees. He is still a human being; it is a warmer, kindlier life than "the life of winds and tides" which he partakes. Clinging to sense, he still hungers and thirsts for human companionship; he grieves that he cannot sit at meat with his friends, drinking and talking; he shivers forlorn in a pleasant world from which he will not tear himself away.

"When I was dead, my spirit turned
To seek the much-frequented house:
I passed the door, and saw my friends
Feasting beneath green orange-boughs;
From hand to hand they pushed the wine,
They sucked the pulp of plum and peach;
They sang, they jested, and they laughed,
For each was loved of each.

"'To-morrow,' said they, strong with hope,
And dwelt upon the pleasant way:
'To-morrow,' cried they, one and all,
While no one spoke of yesterday.
Their life stood full at blessed noon;
I, only I, had passed away:
'To-morrow and to-day,' they cried;
I was of yesterday.

"I shivered comfortless, but cast
No chill across the table-cloth;
I, all forgotten, shivered, sad
To stay, and yet to part how loth:
I passed from the familiar room,
I who from love had passed away,
Like the remembrance of a guest
That tarrieth but a day.

"I listened to their honest chat:
Said one: 'To-morrow we shall be
Plod plod along the featureless sands,
And coasting miles and miles of sea.'
Said one: 'Before the turn of tide
We will achieve the eyrie-seat.'
Said one: 'To-morrow shall be like
To-day, but much more sweet.'"

As specimens showing her purely descriptive power, her sense of the life of nature, take these three pictures, which yet, like all the rest, are not pictures merely but veil a thought. They are from "A Year's Windfalls." The first is of the thaw month, "February fill-dyke," as ancient almanacs used to say:

"On the wind in February
Snow-flakes float still,
Half inclined to turn to rain,
Nipping, dripping, chill.
Then the thaws swell the streams,
And swollen rivers swell the sea.
If the winter ever ends,
How pleasant it will be."

Here is October, so far as October is windy:

"In strong blast of October
At the equinox,
Stirred up in his hollow bed
Broad ocean rocks;
Plunge the ships on his bosom,
Leaps and plunges the foam,—
It 's oh for mothers' sons at sea,
That they were safe at home!"

And last is November in its melancholy death-in-life, when its dreariness is listless:

"In slack wind of November
The fog forms and shifts;
All the world comes out again
When the fog lifts.
Loosened from their sapless twigs
Leaves drop with every gust;
Drifting, rustling, out of sight
In the damp or dust."

The poet's sensuousness, giving that word a more restricted meaning than the one which would apply to the poems already quoted, may be felt in the following sonnet, which will show, too, how far she carries force and intensity of expression and feeling:

"Three sang of love together: one with lips
Crimson, with cheeks and bosom in a glow,
Flushed to the yellow hair and finger tips;
And one there sang who, soft and smooth as snow,
Bloomed like a tinted hyacinth at a show;
And one was blue with famine after love,
Who, like a harp-string snapped, rang harsh and low
The burden of what those were singing of.

One shamed herself in love; one temperately
Grew gross in soulless love, a sluggish wife;
One famished, died for love. Thus two of three
Took death for love and won him after strife;
One droned in sweetness like a fattened bee,
All on the threshold, yet all short of life."

That aspect of love in which the passion is little more than the instinctive attraction between the sexes is the one of which Miss Rossetti preferably treats. Strong and sweet, therefore, as many of her love poems are—one especially, we remember, "The Blessed Damosel," which is left out of this volume—they will please less and not please so long as the poems which contain so many touches descriptive, interpretative sometimes, of external nature. It is true, though, that the sensuousness we speak of is often of so refined a sort that the songs containing it, like the "Maiden Song," for instance, seem so filled with the freshest melody and the purest, gayest innocence that the happy lays of Blake's singer,

"Piping down the valleys wild,
Piping songs of pleasant glee,"

were hardly happier or purer.

Our poet could not be a Pre-Raphaelite, we suppose, we speak under correction, if her good qualities were not sometimes pushed to a ridiculous excess. Here, for instance, is Eve weeping for her sin and loss, and all nature grieves in sympathy with our first mother's tears. The great thought so well presented by more than one great poet Miss Rossetti fritters away in this fashion, crowding details upon each other, losing the whole in the parts, giving us grotesqueness for sublimity:

"Greatest and least,
Each piteous beast
To hear her voice,
Forgot his joys
And set aside his feast.

"The mouse paused in his walk
And dropped his wheaten stalk;
Grave cattle wagged their heads
In rumination;
The eagle gave a cry
From his cloud station;
Larks on thyme beds
Forbore to mount or sing;
Bees drooped upon the wing;
The raven perched on high
Forgot his ration;
The conies in their rock,
A feeble nation,
Quaked sympathetical;
The mocking-bird left off to mock;
Huge camels knelt as if
In deprecation;
The kind hart's tears were falling;
Chattered the wistful stork;
Dove-voices with a dying fall
Cooed desolation,
Answering grief by grief.
Only the serpent in the dust,
Wriggling and crawling,
Grinned an awful grin and thrust
His tongue out with its fork."

And there is an over-intenseness and strenuousness in this way of saying that love is found better than knowledge, though it be a spirit of more might than angels and archangels which loves and knows. It is from the most impassioned piece in the book, to be sure, "The Convent Threshold," and it is written of a dream, in which a lady dreams of her lover, but the last half of the passage deserves to be called spasmodical:

"I tell you what I dreamed last night:
A spirit with transfigured face
Fire-footed clomb an infinite space.
I heard his hundred pinions clang,
Heaven-bells rejoicing rang and rang,
Heaven-air was thrilled with subtle scents,
Worlds spun upon their rushing cars:
He mounted shrieking: 'Give me light.'
Still light was poured on him, more light;
Angels, Archangels he outstripped,
Exultant in exceeding might,
And trod the skirts of Cherubim.
Still 'Give me light,' he shrieked; and dipped
His thirsty face, and drank a sea,
Athirst with thirst it could not slake.
I saw him, drunk with knowledge, take
From aching brows the aureole crown,—
His locks writhed like a cloven snake,—
He left his throne to grovel down
And lick the dust of Seraphs' feet:
For what is knowledge duly weighed?
Knowledge is strong, but love is sweet;
Yea, all the progress he had made
Was but to learn that all is small
Save love, for love is all in all."

We have left ourselves no space to speak of Miss Rossetti's devotional pieces. In them she seems to us more imitative, less to be writing from the fulness of her own mind and heart than in the other poems. Many of them would have been worthy of Herbert if Herbert had done them.

PETO'S PROSPECTS AND RESOURCES OF AMERICA.*

THE persistent attempts to depreciate the credit and resources of the United States made during the war by the financial editor of the *Times*, an authority which, worthless as it has been proved on many important occasions to be, has probably still more weight even with shrewd and well-informed Englishmen than any other, made Sir Morton Peto's visit to this country at the close of the war peculiarly fortunate. His standing in England as a business man was sure to secure for whatever he might say touching the condition and prospects of this country an amount of attention and consideration which hardly any writer, certainly no literary man or politician, could look for. Happily, too, he seems to have come in a candid frame of mind, suitable to a real business investigation, and without any preconceived theories as to the effect of democracy on morals, manners, or trade; at least if he had any he seems to have kept them in thorough subjection.

The little volume before us may be considered a report to English capitalists upon the productions, producing power, and resources of this country. The allusions in it to politics are rare; in fact, the United States are treated throughout simply as a field for investment. Manners, religion, or government are rarely touched upon, and only in so far as they affect, or may be supposed to affect, the money-making power of the people. Sir Morton's conclusions, gratifying as they must be to us, are all the more valuable and all the more likely to draw capital to our shores from the fact that they are thoroughly dispassionate in tone, and have been formed by a foreigner. Nearly everything that has been written for circulation in Europe by our own statisticians, however correct as far as the figures and the reasoning went, has been so strongly colored by patriotic feeling as to excite the distrust of those who do not share and cannot understand the hope and enthusiasm with which every American regards the future of his country.

There is not much in Sir Morton's book possessing novelty for us. Wonderful as our national growth is, most of us are too familiar with it to be astonished even by the clear, careful, and able presentation of the details made by our author. There are, however, a few statements made which will take a good many readers by surprise. One is, that immigrants from Europe have brought into this country $400,000,000 in cash, to say nothing of the enormous addition made to the national resources by their labor. But this is a still more striking fact—if fact it be—and we commend it to the attention of Dr. Palfrey, who has asserted, in the preface to his history, that one-third of the population of the United States are of New England origin:

"It has been mathematically demonstrated that if the United States, in the year 1800, had been in the same circumstances as Great Britain—that is, if there had been no immigration, and the increase of their population had arisen from natural causes only, the free white and colored people of the United States would, at the present time, have only numbered 10,463,000, or one-third of the present population. In fact, it is estimated that, of the whole population in 1863, the immigrants of the present century and their descendants number more than 21,000,000, or two-thirds of the whole."

The population of the rebellious States at the outbreak of the war would, on this calculation, have been little over 6,000,000, or about that of Ireland at the present day, and their resources, of course, proportionately small. If, however, two-thirds of the population are the descendants of foreigners, settling in the country since 1800, and one-third are of New England origin, as Dr. Palfrey asserts, what becomes of the increase of the Southern and Middle States? We do not know where "the mathematical demonstration" Sir Morton Peto speaks of is to be found, and regret that he has not thought it necessary to cite his authority. Sir Morton has throughout made the census reports the basis of his remarks, and occasionally takes strong ground against the conclusions reached by the commissioners. For instance, the preliminary report declares 1,385,000 persons to be personally engaged in manufactures; supposes each of them to support 2½ other persons, making in all 4,874,500, or nearly one-sixth of the entire population, to be supported by manufactures. Sir Morton, on the other hand, pronounces this an exaggerated view. He says, and in this he is unquestionably right, that it is grossly incorrect to set down the persons engaged in manufacturing industry as supporting 2½ other persons. This they would not do unless they were heads of families; while there can be little question that a large majority of them are single persons, supporting only themselves. Next he takes exception to the census definition of manufactures. It is made to include almost every process by which the form or use of a thing is changed, such as the trades of fishermen, blacksmiths, carpenters, tailors, varnishers, mariners, millers, and lumbermen. Sir Morton says:

"If we take the census tables, and regard the numbers stated to be engaged in what may be properly regarded as manufacturing industry, we shall find that they fall very far short of any such calculation. The following are the principal figures, as far as I can gather them:

Miners,	147,750
Factory hands,	87,289
Machinists,	43,824
Weavers,	36,178
Moulders,	17,077
Manufacturers,	11,283
Jewellers,	10,175

". . . We find that the total population engaged in manufactures (including mining), instead of being 1,385,000, as stated in the preliminary report, is in reality less than 354,000."

Sir Morton Peto displays throughout the volume, wherever he reveals his own feelings at all, the strongest admiration for our institutions and progress, and evidently looks forward to our future with hardly less hope and confidence than we cherish ourselves.

Manual of Blowpipe Analysis and Determinative Mineralogy. By William Elderhorst, M.D. Third edition. (Philadelphia: T. Ellwood Zell. 1866.)—This reprint of the second edition of Dr. Elderhorst's excellent little compilation is most welcome. The reprint is so exact that we were alarmed by the phrase on the title-page, "revised and greatly enlarged," which was true of the second edition, as compared with the first, but which we were relieved to find not true of the third compared with the second. An enlargement of the second edition would not have been desirable, for a manual on this subject must not be too large for the pocket. The first sixty pages of the book treat of the blowpipe tools and of the reaction and tests by which all the common ingredients of minerals are recognized. Dr. Elderhorst was here very successful in selecting the best tests and condensing the extraordinarily diffuse descriptions given by Plattner, from whose work this first portion of the manual and the tables at the end of the book are taken. The succeeding chapter, on the characteristics of the most important ores, is a useful one, particularly to those students who are interested in minerals mainly, because and only in so far, as they constitute the raw materials of metallurgy. The next chapter, the fifth, contains a "systematic method for the discrimination of inorganic compounds," but we have never been able to find the least use for this method, either with beginners or with advanced students. It is only a translation of a section from Laurent's "Analyze au Chalumeau," and has always seemed to us a superfluity, to say the least, in this manual; fortunately, the chapter is only eleven pages long, so that the useless weight of paper is not considerable. The sixth and last chapter consists of Von Kobell's admirable "Tables for the Determination of Minerals," which are, beyond all doubt, the best in use.

Blowpipe analysis is the only sort of chemical analysis which is available in the field, away from the appliances of a laboratory; the tools are small and light, and the methods are both quick and sure; some even of its quantitative determinations, as that of silver, for example, are rapidly made and are entirely trustworthy.

There are but two drawbacks—it requires an accurate appreciation of color and a very delicate manipulation; many persons cannot perfectly attain to the first, and the second is inconsistent with that too common American haste which is not speed. That the third edition of this excellent manual should have so soon followed the second, shows that the subject is attracting a large part, at least, of the attention it deserves.

Brave Old Salt; or, Life on the Quarter Deck. A Story of the Great Rebellion. By Oliver Optic. (Lee & Shepard, Boston.)—Mr. Adams has aimed, in the series to which this story belongs, to hold up to youth the career of a true, noble, and Christian young man, and he has very courageously placed this character in straits which make it very difficult for him to preserve his identity. It was little short of temerity, indeed, to invite the generation which has been taught to believe that George Washington never told a lie, to admire a hero who both speaks and acts deceptively on the largest possible scale, and wins promotion by it. Nor will the infant understanding easily distinguish between the turpitude of taking an oath to support the Confederacy and the innocence of an agreement to serve it by violating one's oath to his country. Mr. Adams, perhaps, has not erred in this matter more than other writers for boys and girls who have drawn their material from the late war; he only still further illustrates the want of tact in all of them in selecting that material, if any regard was to be had to the moral perceptions of their readers. War, as well as peace, has its victories which belong to Christianity, and are both a sign of and a contribution to its progress. Truth and nobility have shone on many a battle-field "in the sudden making of splendid names." And while this is the case, it cannot be necessary or wholesome to dwell on those features of war which are abhorrent to conscience and humanity, and which men only endure as a choice of evils from which there is, or they think there is, no escape. It would not be difficult to quote passages in which the author betrays his sense of the incongruity between the military and the Christian codes, though the whole teaching of his book is that no such incongruity exists. A proper comprehension of his responsibility as an instructor of the young would have led him to avoid so perplexing a contradiction.

The Works of Edmund Burke. Revised edition. Vol. VII. (Little, Brown & Co., Boston.)—The greater part of the present volume is occupied by an essay towards an abridgment of English history, in three books, beginning with the state of Britain at the time of its invasion by Cæsar, and ending with the reign of King John. The last chapter of Book III. is apparently out of place. It is a fragmentary essay towards a history of the laws of England. An essay on the drama is another interesting feature, which makes the volume quite desirable, apart from the series to which it belongs.

STEERING FOR THE ROCKS.

THERE is a strong impression afloat in political circles that there is trouble of some sort ahead during the coming year—trouble more serious than any which the country has yet had to encounter, and it is but right that the public should know exactly the nature of the danger into which, in the opinion of a great many men who are neither hasty nor simple, it is rapidly drifting.

There is now very little question that the President has fully resolved to commit himself to the cause of the South, and turn the Government over, so far as it is in his power to do so. He will make a vigorous effort to do this by the forms of law, and by a liberal use of corrupting official influences; but he will not stop with these. He has entered upon a path which may and, unless there be more moderation in him than has yet been revealed, probably will lead him to an attempt to carry out his theories by force of arms, unless so thoroughly defeated in the elections this fall as to destroy all his hopes of dividing the North.

All our readers are familiar with the threats which have been made by the President's new allies, of his recognizing the Southern members, and those who might join them, as the genuine Congress. This is not likely to be done at present, simply because a quorum could not be got together in that way. When the Southern seats are filled there will be 72 senators and 242 representatives. But there are not more than 31 persons now claiming to be senators, nor more than 93 claiming to be representatives, who could possibly be induced to take part in any such disorganizing and revolutionary proceedings. The scheme, therefore, cannot at present be carried out with the slightest pretence of legality.

But the *next* Congress will present an entirely different question. There is very little doubt that the Republican party will lose one representative in Connecticut, three in New York, one in Pennsylvania, three in Ohio, three in Indiana, two in Illinois, one in Michigan, one in Wisconsin, two in Missouri, and one in Kentucky; while the four Johnson-Union members from Maryland, Kentucky, and Missouri will be succeeded by other Johnson men, if not re-elected. Four of the members elect from Tennessee to the present Congress are too loyal to support Mr. Johnson. Not more than two of these will be re-elected. No members have been yet elected in Texas. Four Secessionists will appear from that reconstructed State next winter. Thus, at the opening of the Fortieth Congress, 117 persons claiming seats in the House will *certainly* be prepared to support Mr. Johnson's policy. If he can only carry five more he will have a clear majority of those whom he will consider lawfully elected to the lower branch of Congress. Now it is very probable that, in addition to those losses which we have before mentioned, the Republicans will lose one member in Connecticut (Mr. Hubbard), two in New York (Messrs. Humphrey and Ketcham), two in Pennsylvania (Messrs. Thayer and Miller), two in Ohio (Messrs. Hubbell and Ashley, or Mr. Clark), one in Indiana (Mr. Hill), one in Illinois (Mr. Harding), and one in Wisconsin (Mr. Sawyer), ten in all; while it is not certain but that five or six other seats may be lost. Taking, however, these estimates as the basis of calculation, it will be seen that the probable loss of 28 members, though it would leave a Republican majority of about 40 in the House of Representatives as at present constituted (113 Republicans to 71 Johnsonians), would yet give the Johnson party 127 members out of 242, in case the Southern delegations were admitted.

If the present programme is carried out, the Southern representatives will insist upon their right to vote for Speaker at the commencement of the next Congress. The Clerk will not call their names; and the plan meditated is for the 70 or 75 Johnson members who are clearly entitled to seats to unite with the 58 excluded Southerners, elect a temporary chairman in place of the Clerk, choose a Speaker, and apply to the President for recognition. This recognition is, of course, to be given, and the unrecognized House to be forcibly ejected.

We need not say that such conduct would lead to the instant impeachment of the officials concerned in it, if the majority of the lawful representatives were allowed to meet anywhere, and that the President would as a matter of course refuse to acknowledge the validity of the proceedings. This would equally, as a matter of course, bring about a conflict of authority, the decision of which by the Senate would be unavailing to prevent an appeal to force. If convicted by two-thirds of the court of impeachments, as now constituted, the President would still deny the validity of the sentence, the twenty-two Southern senators being excluded, and thus the issue would be left to the decision of arms.

If the new coalition carries 93 of the 184 undisputed seats in Congress, Mr. Johnson's triumph may be as peaceful as it will be complete; or if it fails to prevent the election of 122 Republicans, he may abandon the hope of success in a struggle wherein he can have no pretence of legality upon his side; but we think the former alternative highly improbable, and the latter almost impossible. The only remaining prospect, unless the courage of one party or the other fails at the last moment, is *civil war*.

The disadvantages of the loyal North in such an event must not be denied or underrated. The South would have, in such a struggle, exactly the position which, if it had taken it in 1860, would have insured its triumph. It would undertake to crush a divided North in the name of the Federal Government. It would fight its battles in the name of the United States, under the command of a nominal President of the United States, and with the sanction of a self-styled Federal Congress. It would have an equal chance for recognition by all foreign powers. It would have powerful aid at the North, especially in the States where the local administration might be in the hands of Johnson men.

On the other hand, it is a favorable circumstance that the governor of every Northern State is now a Republican, and that the only governors who can possibly be displaced by Democrats within the next year (except in case of death) are those of Connecticut, New York, and Pennsylvania. The bulk of the Northern States, therefore, as far as their executive authorities are concerned, will certainly co-operate with Congress. The militia would be placed under its control, and, in the absence of a large standing army, this would be an immense advantage.

What has brought this Government into such a critical position? Why is it that, after such a terrible experience as we have just passed through, we are again driving straight upon the same rocks? For two reasons: the perverseness of the President, and the lack of true statesmanship in Congress. On these points we shall make some brief remarks.

It is now undeniable, as it has long been evident to all sensible politicians, that Mr. Johnson, months ago, resolved upon breaking up the party to which he owed his election. His officious declarations of neutrality in the fall of 1865; his hasty recognition of the Southern States before they had really complied with his own terms; the offensive language of his vetoes, and the bitterness of his speeches, all indicated the desire of his heart to carry out the scheme to which he is now openly committed, of organizing a party on the basis of personal devotion to himself. As soon as he had secured the success of this darling idea of his brain, he did not hesitate to stultify himself by opposing the new constitutional amendment, although it is, in substance, exactly what he had himself recommended a few months previously. All his pretended moderation is simply indispensable prudence in a bad cause. His power of appointment to office is restricted by an adverse Senate; his power over the army by a patriotic Lieutenant-General. The moment he is unfettered he will show his real nature, to the dismay of those simple people who mistake the shrewdness of a politician for the dignity of a statesman.

Mr. Johnson has determined that his will shall be law. He, no doubt, fancies that he is actuated by a regard for State rights and constitutional guarantees; but he has no hesitation in overriding these whenever it better suits his purposes. His regard for the rights of the States is so profound that he cannot tolerate the interference of Congress to save the negro race from extermination; yet it is so shallow that he does not hesitate to promise military intervention on behalf of

rebels at the coming Missouri election. His real object is to force a reconstruction of the Union without any diminution of Southern power; nay, even with an increase of it.

We cannot let Congress pass entirely without censure, although we are aware that its duties have been exceedingly difficult, and its path blocked up with embarrassments. Its main defect has been that those of its members who have any wisdom have lacked courage, and that those members who had courage lacked wisdom, while the majority had neither, but simply good intentions. Mr. Stevens has a boldness and pluck that are invaluable; but, unfortunately, he is full of the most absurd mediæval ideas. Mr. Fessenden has an excellent judgment on most questions, but is over cautious, and allows time to slip by while feeling his ground. We cannot imagine how any one holding the views expressed in the report of the Committee on Reconstruction could doubt the power of Congress to re-organize the Southern States upon any basis which it might deem fit. Had Congress done this, and completed the work of restoration upon its own terms, the power of Mr. Johnson for mischief would have been destroyed, and the defeat of the Union party been made impossible.

It is, however, more important to look to the future than to the past. Imminent as are the dangers before us, we do not think it impossible to avert them; but the effort will require the utmost wisdom and firmness on the part of the Northern people. A timely preparation for the conflict of 1861 might have prevented it altogether, in which case those who foresaw its approach might have been ridiculed as false prophets. So at this crisis, if the President sees that the North is fully prepared to meet him, he will be forced to abandon his schemes, and those who now sound the alarm may then be laughed at; but this is a small risk for us to bear compared with the dangers which might befall the country through the unwise silence of the press. The proceedings of the Union caucus at Washington show that our apprehensions are shared by many of the oldest and coolest politicians there; the language of our leading generals shows that they foresee the same contingencies; and if we are mistaken in our fears we err at least in good company and on the safer side.

THE SITUATION IN BOHEMIA.

Those who were inclined to give Marshal Benedek credit for being a great "genius," and to believe that he "had the Prussians just where he wanted them," and that his inactivity while they were carrying everything before them in Germany was caused by profound strategical combinations, were probably a good deal astonished to find that he allowed, during the last fortnight of June, two Prussian armies to converge on him from points a hundred miles apart, drive in his outlying posts in a series of bloody combats, finally defeat him in a general engagement, on ground of his own choosing, so signally that nothing lies between the victors and Vienna except the remnant of a demoralized and half-disorganized army. In other words, his "strategy" and his "secrecy" and his "genius" have had a good deal to do with bringing the Austrian monarchy in one short month to the verge of ruin.

It would be unfair, however, to impute the whole of the Austrian misfortune to Benedek's incapacity, although he is the first Austrian general for many a day who could boast entire freedom from interference on the part of the court. He has had everything his own way, and has made a sad failure; but he is far from being wholly responsible for the collapse which has just taken place in Bohemia. The Prussian success has been mainly due to the vigor and decision which have characterized Prussian operations from the very outset. Bismark, there can be hardly a question, had his whole programme prepared before he broke with Austria at all. His demands were, from a diplomatic point of view, so outrageously unreasonable, and were made with such insolence, that their rejection was certain, so that he was able certainly two, probably three, months before the outbreak of hostilities to put the whole matter into the hands of the military men. It is safe to say that the great lines of the campaign were traced early in May, and there was the less difficulty in tracing them, as the only uncertain element in the problem was the attitude which the small states would be likely to assume. It was, therefore, determined to overrun them at once, and the orders for the movement of the troops which were to occupy Saxony were probably issued before Austria had refused the conference. From the first day everything in the Prussian army has gone with the precision of clock-work. Corps after corps has gone straight to its mark without one hour of wavering or hesitation. Dresden was seized before Benedek had got well settled in his seat, and while he was supposed to be preparing terrible blows behind his "mountain screen" the first and second Prussian armies were going straight at him through the screen—the one under Prince Charles entering Bohemia from Görlitz, and the second under the Crown Prince by the Glatz district, eighty miles away. Had Benedek flung his whole force on either of them it was reasonable to expect that he would have crushed it, but he sat and waited. He was driven by Prince Charles in succession from Reichenberg, from Turnau, and from Münchengrätz—all this on the 24th, 25th, and 26th of June. On the 27th he was attacked on the other side by the Crown Prince, at Nachod, with a similar result. On the 29th Gitschin was stormed, and a junction effected between the two armies. On the 3d they attacked Benedek in concert at or near Sadowa, and inflicted on him a bloody defeat, which may be said practically to terminate the war. The only question still undecided is the extent of Prussian forbearance. There are but one hundred and fifty miles of open country between them and Vienna.

It is difficult to over-estimate the importance of all this to Europe and to the world. Technically, nothing can be more illegal than the course pursued toward Austria by both Prussia and Italy. In the forum of international law there is not a word to be said for them. Bismark, too, is a man with whom no lover of liberal principles can have much sympathy. He has done his best to turn parliamentary government in Prussia into a mockery and a snare, and has lent whatever influence he possesses abroad to the support of genuine absolutism. He has never made any secret of his contempt for all those principles which the friends of progress hold most sacred. But then Bismark is but a man, and a man whose range of vision is too narrow and who is too much out of harmony either with the age he lives in or with his own countrymen, to make him, in so far as he is an evil, anything but a temporary evil.

The same thing may be said of the King. Behind them both there lies a nation which has got fast hold of all the essential ideas of modern progress, in which education, comfort, self-respect, and respect for law are perhaps more widely diffused than in any other in the world except our own, and which may be fairly said to contain all that is best in German character and thought. Anybody who extends the sphere of Prussian influence, of Prussian law, and Prussian rule, who brings more of Germany into the stream of Prussian progress, no matter who he may be or what his aims are, renders, we believe, a great service to freedom and civilization. Prussia is essentially a modern state, and its triumphs, no matter under whose auspices they may be won, are, in our eyes, genuine gains for the whole human race.

Behind Benedek there is, on the other hand, nothing but an army and a court. Austria is a conventional not a real state. There is no Austrian people. What is called Austria is a certain extent of recruiting ground on which armies are raised. She represents a totally different order of ideas from Prussia, and notably the feudal idea of territorial sovereignty, of which she may be said to be now the last embodiment. She is the result of the doctrine on which all political arrangements have been based in Europe for a thousand years—that the land belongs to the princes and not the people, and that any divisions of it, however arbitrary, on which sovereigns may decide, may be made for the benefit of particular families. With the disappearance of the Austrian empire the last trace of this doctrine would have disappeared, and we should have entered on a new era, in which governments would rest on nations, and in which the monstrosity of armies like Benedek's, without a country, and compelled to fight for the mere purpose of keeping one man and his near kindred in the enjoyment of a certain amount of luxury and power, would no more be seen.

We, therefore, honestly confess that we hope that the Prussians will make a clean sweep now that they are about it, and we think it very unlikely that Bismark, after ten days of victory, will quietly accept, through French mediation, what he might have had a month ago

without fighting at all. Austria has not a single claim on the sympathy of any human being. The house of Hapsburg has done nothing for literature, nothing for science, little for art, and has probably inflicted more misery on the world than any race with which it has pleased God to curse it. For six hundred years its sword has been a very present help to all forms of bigotry and tyranny, and the tenacity with which it clings to Venice is, perhaps, the strongest evidence we could have of how unnatural to it is the part of the reformer which it has of late been playing in Austria and Hungary.

Since writing the above, Prussia and Italy have, as we expected, refused the armistice; and it may, therefore, be safely said that Austria is in worse straits than she has ever yet found herself, extraordinary as some of her escapes have been.

THE NATIONAL CAPITAL.

THE decision to which Congress has at last come to provide for the erection of a new "executive mansion" affords an opportunity for taking another step hardly less needed, and making a general revision of the whole of Washington, doing something to remove the reproach which its present condition and appearance bring upon the nation. The spectacle of great promise and lame performance is always a painful one, and Washington has now for half a century furnished one of the finest specimens of it on the globe. The laying out of the city displayed great breadth of conception and very lofty hopes, but the manner in which the plan has been carried out has furnished three generations with abundant cause of mortification. It was fair enough, no doubt, to suppose that the capital of the United States would very rapidly grow into a wealthy, populous, and important city, and it was, therefore, probably proper to make preparations on a great scale. That it has remained—or, rather, become—what it is, a straggling, dusty village, with large and pretentious buildings scattered few and far between over an immense area, and strung together by unpaved roads, bordered here and there by shabby houses, the most of them little above the shanty either in appearance or accommodation, is not the fault of the founders. They did their duty. If something had not gone wrong, Washington would be now what people fifty years ago supposed it was going to be—a real city, with "magnificent distances," with long, wide avenues running between rows of mansions of various degrees of splendor, with vistas of imperial grandeur, and with a large, wealthy, and refined population of the *élite* of the nation. It would be the resort at all seasons of the celebrated, the rich, the idle, the learned, the fashionable, and the gay—in other words, the real metropolis of the Union, growing as it grew, being beautified as the national resources increased, and forming the pride and joy of the people.

That it is what it is, while cities have in other parts of the country risen from nothing into magnificence within half the period during which Washington has been in existence, and that, while there has been in nearly every part of the Union prodigious material progress, the capital of the nation shows hardly a trace of it, and looks rather like the seat of government of a small, semi-barbarous, and declining power than that of one of the greatest, strongest, and most thriving in the world, must doubtless be ascribed in great part to the unfortunate fact that it was founded on slave soil, and that it remained until the outbreak of the present war under the influences of slave society. There has been no part of the Union in which so little capital has been sunk in permanent improvements as in the slave States. Enormous masses of it found their way South, no doubt, but it was nearly all invested in slaves and plantations. There was probably no people in the world, who could boast so much wealth, who were able to make so little display of works either of domestic or public architecture as the Southerners. The unnatural structure of society seemed to cause a general shrinking from anything that was to last beyond the owner's lifetime. There were a few good old dwelling-houses in the older States, and a few tolerable State-houses, but the general aspect of Southern towns and Southern plantations was, architecturally considered, dismal and decayed.

At Washington the depressing influence of slavery on the work of permanent improvement was aggravated by the unsettled state of the relations between North and South. There has been for years a secret feeling that the slavery controversy would end as it did end, and whenever it came Washington was, of course, sure to be one of the principal bones of contention. The city stood on the border, and nobody knew who would have it, supposing there was a split or convulsion. Then the state of feeling in the political world for many years before the war gave life in it a troubled and insecure air, and converted the members of Congress into two bands whom a word or look might at any moment bring into armed collision. Society, such as it was, was so completely under Southern control as to be intolerable for anybody who was not afflicted with Southern ideas, and plantation beaux and belles gave it a wild and somewhat barbarous freedom. Nobody wanted to live in Washington; few could live there. The foreign ministers hated it and hate it still. Its population during the sessions of Congress, besides persons brought there by their official duties, consisted mainly of office-seekers, lobby agents, persons burdened with theories of legislation or "views" on finance, and young women and their mammas anxious to dance with "Southern gentlemen."

The war has changed all that. The abolition of slavery has opened Washington to Northern capital by introducing free labor, and has placed the city under the control of Northern ideas. There is, therefore, an opportunity now of making it really worthy of its position. But the very first step in its improvement must consist in making it "fit to be seen." This it now literally is not. The general plan might, perhaps, be improved; but it is too late to make any change in that. The first thing to be done is to make the streets look decent. A commencement ought to be made by paving them. Their present condition is a disgrace to our civilization, and the alternations of mud and dust which they supply are one of the strongest objections to Washington as a place of residence. It then remains to exercise some sort of control over the class of buildings to be erected in particular streets. We hold it to have been a fatal error at the outset, when it was determined to found a city for a special object, for the Government to have relinquished all control over it, or never to have acquired any. It ought to have been sold or leased, as the lands of Columbia College are in this city, under certain stipulations as to the class of buildings to be erected in certain streets. Two-thirds of the houses on Pennsylvania Avenue are a disgrace to the country, and their erection ought never to have been permitted. That avenue, at least, ought to have been preserved and made a dignified and proper line of communication between the Capitol and the President's house. If people could not have been found at once to erect the required style of buildings along it, it ought to have been kept in gardens, and well planted, until they were found. Many of those who saw the army defile along it in the summer of 1865—perhaps, all things considered, one of the most magnificent processions ever witnessed—felt mortified enough to think that, for such an occasion, we had nothing better than that dirty track, with its shabby hotels, its lager bier saloons, its tumble-down wooden houses, and second-rate country stores, for our *Via Sacra*.

It will, of course, be much more difficult to make any change now than it would have been forty years ago, but it is not nearly so difficult now as it will be twenty years hence, and change of some kind becomes every day more and more necessary. Land, houses, and all are probably cheaper now than they will ever be again. There is, perhaps, nothing which defaces the city more than the vast number of unoccupied spaces on the various streets which are now used as dumping grounds, or receptacles for rubbish, and are strewed with bones, old shoes, old hats, old pantaloons, and an occasional dead cat, forming dreary wastes, dotted with shabby-genteel brick houses. These ought to be disposed of in some way. If they cannot be decently built upon, or until they are decently built upon, they ought to be either put in order or screened by plantations. Within certain districts no houses below a certain height ought hereafter to be permitted. This may seem a great departure from the ordinary practice of our government; but it must be remembered that Washington is an exceptional city. It has not grown as other American cities grow. The Government undertook to create it, and has only quarter done the work. A committee of Congress is not, however, the proper body to take charge of any such work. It ought to be put into the hands of a commission with instructions to prepare a thorough and well digested plan of improvement, and then

the necessary funds ought to be voted—of course, after listening to the requisite amount of platitudes from Western members on the evils of luxury.

PARIS GOSSIP.

PARIS, June 29, 1866.

THE heat of summer, as summer comports itself in these latitudes, is upon us at last. All who can stay indoors do so during the day, leaving the scorching outdoor air to the occupation of the sparrows, more familiar, impudent, and noisy than anywhere else, and of the swallows circling incessantly above the tops of the houses, and filling the sunny blue above us with their peculiar cry. The Boulevards are half deserted, and the danger of being crushed in crossing them has sensibly diminished. At night the scene changes. The Boulevards, crowded with promenaders, are lined with hatless men, and women with bonnets too small to be felt as incumbrances, enjoying ices or iced lemonade at the doors of the *cafés*, and watching the motley crowds of promenaders and the incessant stream of gay equipages going to the Bois. The fair occupants of these carriages are usually attired in the very lightest of summer silks, in barèges, gauzes, or other transparent material, white book-muslin being among those most in vogue, and forming, with the addition of trimmings of colored ribbons and guipure, the most elegant of summer evening toilettes. As for the bonnets, they are now so microscopic as to be almost invisible, the mass of hair, real and artificial, artistically arranged over the back of the head, constituting the real head-dress, and the minute cheese-plate of tulle or straw, just big enough to serve as the *point d'appui* of flowers, *grelots*, and strings, only covering the centre of the top of the head. Shawls and mantles of black or white lace complete these toilettes, with the frequent addition of a very long sash of very wide ribbon tied behind. Paletots and mantles of silk are reserved for walking-dress, and are made rather fantastically, opening behind or on the side, and are generally of the same material as the dress, sometimes with very long points behind and in front, and with long, straight, open sleeves, copied from old Italian pictures, hanging nearly to the ground. Such a toilette, say of bright sky-blue silk, gown and paletot, with the pendant sleeves lavishly trimmed with a rich white guipure, the head of the wearer surmounted by a few leaves or flowers, and shaded by a parasol of the same silk as the dress, and trimmed with the same guipure, looks very gay and pretty, and is in vogue with ladies who have no objection to be a little conspicuous.

But to return from this digression. Dense as is the stream of carriages every evening along the Champs Elysées and the Avenue de l'Impératrice, to the lakes of the Bois, a good many of the lights of the fashionable world have already taken their departure, and the court will leave, it is now thought, for Fontainebleau in another fortnight. *Savans* are journeying in various directions, attending various kinds of learned gatherings, with pleasant interludes of dinners and *soirées*. M. Leverrier, who adds the dignity and emoluments of a senator to the directorship of the Observatory of Paris, and who has just returned from a learned "pow-wow" in Marseilles, has gone off to Bordeaux to attend another scientific gathering, on which occasion there is to be a grand distribution of the prizes founded by the Empress, the Prince Imperial, and many rich and public-spirited individuals, for services rendered in the teaching of evening classes for adults through the departments of the south-west. Mr. Coste, the zealous apostle of pisciculture, goes with the learned astronomer to the gathering at Bordeaux, after which the latter is to accompany the former to Arcachon (the beautiful pine-fringed bay which the brothers Pereire are transforming into a winter bathing-place), where all the learning and practicality of the country is convened to assist at an exposition of what it is now becoming the fashion to style "aquiculture."

Enormous as are now the rates of house-rent in this delectable city, a piece of favoritism just bestowed on M. Leverrier is exciting no little jealous dissatisfaction among his brethren and the public generally. There is, close under the walls of the Observatory, a pretty old-fashioned house, built of the white freestone so common here, surmounted by the usual low attic story, faced with slate, which brilliant invention has rendered the name of the architect Mansard immortal in this country, with large windows, a winding stone staircase up to the door, standing in a very large garden, and boasting half-a-dozen outhouses, more or less convenient. The garden has gone very much to seed; the house, also, is somewhat dilapidated; but a comparatively small outlay would put the place to rights, and make a very desirable residence. The ground alone, as it stands, would sell for 200,000 francs. M. Leverrier being a friend of our clever Prefect of the Seine, who is lord paramount of the world of building and re-building in which we are living, that functionary took an opportunity of representing to the Emperor that the house and garden in question, which are the property of the city, would be just the thing for M. Leverrier's private residence; and his Majesty having assented, with his usual easiness, to this suggestion, Baron Hausmann immediately put the astronomer in possession of the place, at the nominal rental of 1,200 francs per annum.

The cost of living in this city has become so heavy already that people are looking forward with no little apprehension to the probable scale of prices for next year. Street after street, called into being by the enchanters who work in stone and mortar, are springing up in the neighborhood of the new Industrial Palace, and are being let, as soon as finished, to speculators, who will furnish them with a view to letting them to the visitors who are expected to "flock in shoals" to the wonderful show of 1867, in view of which rents are rising not only in the neighborhood of the Champ de Mars, but generally through all the western and southern portions of the town. Although no one can be in Paris without a full consciousness of the exorbitant prices to which all the elements of material existence have risen, one comes, from time to time, across facts of extortion so amazing as to produce almost the effect of a new revelation. What do your readers think, for instance, of a "flat" in the avenue of the Champs Elysées, pretty and prettily furnished, but very small, and tenanted by a small family, who pay for their narrow quarters the sum of $835 per month? or of another apartment in the Rue St. Honoré, certainly very large and splendid, but still only a flat, unfurnished, which is now rented by an American family at $8,600 a year?

The Turkish ambassador has just given a grand dinner, on which occasion nearly the whole of the embassy garden was converted into an elegant ball-room, where the guests, of both sexes, invited to the ball which followed the dinner, danced a little, and did a good deal of promenading, admiring the beautiful *coup d'œils* presented by the saloons, and the charming view of the Arch of Triumph as seen by moonlight, and of the Place, with its radiating avenues, bordered with double lines of lamps, and the stream of carriages, with their lamps looking like fireflies, coming back from their nocturnal airing in the Bois. It is reported that during the dessert a leading diplomatist declared his belief that Italy would be beaten in the fearful struggle that is but too probably, while I write, deluging the soil of Venetia with blood, and added, "When Austria, victorious, has shown that Italy cannot force her to give up Venetia, she will voluntarily give that province up to Europe, calling a congress to decide on its future. The congress will erect Venetia into a free territory, on condition of its remaining separate from the Italian kingdom. Thus Italy will find that her impatience has caused her to lose the possibility of acquiring that coveted province, of which she will henceforth remain deprived." If such a programme were really sketched out by the eminent statesman to whom it is attributed, it would be difficult to refuse to believe that some such clever project may have been struck out by Austrian brains. But, in the first place, the check received by the Italians in the Quadrilateral, though serious, by no means settles the question of superiority in Austria's favor; and, in the next place, it is by no means certain that Europe, finding itself called upon to settle the future of Venetia, would elect to defeat at once the wishes of that province and of Italy, or that, should the united wisdom of this hemisphere continue to commit so unjustifiable a piece of absurdity, either Venetia or Italy would long abide by such a decision.

The annual Exhibition of Fine Arts is drawing to its close, as is also the far more interesting exhibition of the works of the old masters got up in another part of the same building by some public-spirited individuals, with the aid of pictures lent for the occasion from their galleries by the wealthy amateurs of the capital. Among many ma g

nificent and most beautiful paintings are others which only connoisseurs would regard with pleasure. The other day, when the Emperor visited this exhibition, escorted through the rooms by M. Haro, his Majesty, who makes no pretensions to art knowledge, but likes highly-finished, elaborate paintings, remained for some time before a delicious Wouvermanns, "The Spy," belonging to Baron Nathaniel de Rothschild, and the "Starting for the Hunt," by Carle Vernet, a very clever and charming scene, full of life and gaiety. "Capitally rendered," remarked the Emperor, who is a thorough sportsman and fully appreciated the details of the picture, adding, as he observed the air of enjoyment the painter has thrown into the faces and attitudes of his groups, "The men of those days understood the art of amusing themselves better than we do." Having reached the show of the earlier artists, M. Haro pointed out one of the masterpieces of Hans Memling, "La Vierge et les Donataires," from Count Duchâtel's gallery, expatiating enthusiastically on its beauties. The Emperor listened and looked as he was bidden, and presently turning to the learned cicerone and pointing to a frightful portrait, by some ancient Flemish painter, of a coarse, red face, half buried in dirt and beard, that hangs next to the fine Memling, asked, with the curious smile of quiet humor that sometimes lights up his usually impassive face, "Must I admire this gentleman also?"

MEDICAL ETIQUETTE.

AMERICANS are accustomed to think of the *guilds*, which played such a part in European civilization during several centuries, and still exist in some parts of the continent of Europe, as instruments of oppression, expressly contrived to abridge the liberty of the individual and the freedom of trade for the benefit of the privileged few. A guild was an odious monopoly, which perpetuated itself by establishing heavy conditions of admission into the trade which it controlled, such as assessments of money, technical tests of skill, and a long period of apprenticeship. Its object was ostensibly to secure good work, but really to prevent competition.

Modern society has in the main outlived the need of guilds; open competition has proved to be the most effective promoter of the useful arts. Nevertheless, there may be detected in one of the liberal professions to-day, at our very doors, a narrow spirit of exclusiveness and of interference with individual rights which bears far too near relationship to that of the mediæval guilds. That the medical profession is one of the most useful and most honored of all professions, renders it only the more needful to hold up to plain view the matters in which its creed or its practice is illiberal or viciously conservative.

The attitude which the medical profession has assumed towards "irregular practitioners" of every description is in certain respects illogical and unjust. In so far as this attitude may be a protest against ignorance and knavery it is worthy of respect. There can, indeed, be no question as to the prevalence among educated physicians of a sincere desire to sustain and elevate the character of their profession; or as to the great influence which this laudable sentiment has exerted in shaping those tenets of medical etiquette which look to the putting down of pretentious incompetency and the exposure of fraud.

There is certainly something of wisdom in the published assertion of the faculty that a regular medical education furnishes the only presumptive evidence of professional abilities and acquirements, and ought to be the only acknowledged right of an individual to the exercise and honors of his profession. But, after all, it may be questioned whether a technical opinion of this kind were not better left unexpressed. It is, no doubt, an opinion with the spirit of which most intelligent persons will agree; but the great general truth remains, and it is a verity which has always been held in respect by the masses of mankind, that, in every profession, patience and perseverance, when combined with strength of will and a sound judgment, not infrequently lead to professional attainments of a high order, in spite of irregular and defective education. It is notorious that native ability and special aptitude will assert their just supremacy in spite of any lack of "presumptive evidence" in their favor. Genius, no matter of what grade or order, so only it be genuine, is, in the art of healing as surely as in every other sphere, a power far superior in kind to anything which mere education can furnish. Knowing well that talent is a gift which can never be manufactured to order, the general public has no sympathy with any creed which even so much as hints at the ignoring or undervaluing real, though untrained, natural capacity, in case it really arise. The public is firmly convinced, moreover, that in the art of medicine, as in every other art, empiricism has always played a very important rôle, and the conviction is just. Iodine is to-day highly valued by the medical profession, but has it been already forgotten that before the discovery of this drug a number of empirics "pretended" to cure certain scrofulous diseases by the use of mineral waters, in which, as is now known, this very iodine exists as a really efficient medicament? How many years is it since the use of quinine was confined to the practice of illiterate Indian doctors in the forests of Peru?

The advantages of a regular medical education are, however, so many and weighty that, barring the lack of liberality and breadth of view which their system of exclusion implies, the doctors are not to be blamed if they insist upon the point strenuously. The inherent unreasonableness of their position, as regards consulting with empirics, may be, perhaps, best seen by reference to one of the canonical tests which has been adopted by the united wisdom of the faculty. The very first requisite happens to be the possession of a formal degree from some medical college of acknowledged respectability. There are no doubt some colleges which confer degrees only as the reward of long continued, diligent study, and upon directpro of that the applicant possesses adequate knowledge and ability. But, upon the other hand, just as we see in the daily intercourse between man and man, these honorable and respectable institutions, which would scorn to confer a degree upon an incompetent applicant, do, nevertheless, continue to associate with and acknowledge the respectability of far less scrupulous colleges. It is now notorious that a degree, sufficient to meet every requirement of the case, can readily be bought outright for gold. In some cases, even, there is absolutely no need of either coaching or ponies in order to make the stage; and this is particularly true when the applicant is a stranger, having no intention of settling in the neighborhood of the college selling the degree.

It follows, therefore, that, precisely as in all police experience, the rogue's passport will always be found strictly correct, the cunning quack will not fail to provide himself with a degree or to study the "code of ethics," whenever he may find his advantage in so doing.

Regarded as a means of preventing quackery, the code in question is merely amusing; but beneath its surface lurks a latent injustice, against which we protest. It is the true empiric—using the word in its best sense, the artsman proper—who is unjustly affected by the corporate action of the regular physicians. That there are many persons uneducated in the ordinary sense, but possessing a natural turn or talent for some one particular branch of the healing art, or having acquired by inheritance a stock of traditional knowledge applicable to some special branch, there can be no question; nor can there be any reasonable doubt as to the fact that these persons must be often soured, depressed, and hindered from improving by the high-handed system of exclusion which has been adopted by the "regulars" as regards them. To the discredit of the medical profession be it written, these men are by its action debarred in many ways, both directly and indirectly, from doing their best for humanity.

One need not have travelled widely in order to know the great value, in many cases, of a host of empirical systems—of baths and steamings, of rubbing and shampooing, of water, whey, grape, and movement cures—which are in vogue among both civilized and barbarous nations. Of the use and importance of several of these systems as methods of curing certain forms of diseases, no rational observer, even if he be a physician, can for a moment entertain a doubt. In their proper places, and applied in the light of reason and knowledge, they could manifestly be made safe as well as efficient agencies for bringing about those "changes in mode of life" and "modifications of previous habits," whether of mind or body, which are nowadays so frequently recommended by physicians, and so rarely accomplished, except by quacks.

No man in his senses would deny the real value of several of these systems, or the fact that cures are frequently effected by means of them, yet we may look in vain for any widely extended use of these means by educated physicians, or for any earnest effort to fathom their true scope and the extent of their applicability. Once in a while, an isolated physician may privately recommend a patient to try the water cure; or another may admit that he has seen good effects result from the use of the Turkish bath, or from the persistent rubbing of a sprained limb. Sometimes he may turn over a despondent subject into the hands of a professional trainer of athletes; but the medical profession, as a profession, turn away from these things with holy horror as from devices of the evil one. "No one," says the code of ethics of the American Medical Association, "can be considered as a fit associate in consultation whose practice is based on an exclusive dogma, to the rejection of the accumulated experience of the profession, and of the aids actually furnished by anatomy, physiology, pathology, and organic chemistry." Or, in other words, the skilled maker of pin-heads shall not be em-

ployed to make pin-heads because, forsooth, like most other artificers, he happens to entertain a contempt for all wide scientific knowledge. Surely there is rank injustice done to the community at large when a profession laying claim to the public confidence openly asserts that certain valuable remedies should be discountenanced because, perchance, the application or administration of them has fallen into technically disreputable hands.

It would seem to be an easy matter, if they have really the best interests of the public at heart, for the doctors themselves to provide reputable or "licensed" establishments in which the now obnoxious rites might be performed with due care and proper ceremony. There are, perhaps, few things which have done more to cast discredit upon the medical profession than the unwillingness or inability of its members to give trustworthy answers when their opinion is asked concerning the applicability of an empirical method in a special case. The profession would do well to accept the fact that an irregular practitioner is not necessarily and *ex-officio* a knave; and, further, that, if a knave, he is not thereby and consequently a fool. With the choice of all the remedies in the materia medica, and many more beside at his hand, and subject to no restraint from the trammels of custom or established authority, it would be indeed most strange and most discreditable to the intelligence of humanity, if only worthless and hurtful means and methods should be selected and put in practice by the empiric. The conviction is forced upon us that a wrong is committed wherever and whenever an individual physician allows himself to be influenced or intimidated to such an extent by the spirit or creed of his fellows that he fails to seek out, or is unwilling to recommend and apply, whatever of good there may be in the empirical methods which are in use about him.

THE LIMITS OF CARICATURE.

We are informed by the newspapers that at a "Ladies' Fair" recently held in Honesdale, Pa., for a laudable charitable purpose, caricatures of the principal citizens, exhibited through the medium of a magic lantern, were among the attractions, and created, as a matter of course, a great deal of boisterous merriment. It is not stated that the victims of these pictorial pasquinades relished the jest, the point of which must have been in a coarse exaggeration of personal peculiarities; however, for the sake of appearances, they may have joined in the laughter, as Charles Lamb helped to hiss his own ill-fated farce. It would only have been according to nature if the caricatured were secretly mortified and hurt by the exhibition. We take it for granted that no sensible man is desirous of a ridiculous presentment, although he may have sufficient self-command to conceal his vexation. It is a curious fact that the physically ugly are rarely aware of their homeliness until they are driven almost to conviction of it by persistent ridicule and, even then, they are more likely to attribute malice than truth to the critics of their proportions. In either case, the mortification is much the same, for to be considered ugly is quite as irritating as to be really so. Poor Goldsmith, in his peach-bloom coat, probably believed to the last that his person was a fine one, although his good opinion of his own figure was not seldom rudely disturbed; and we once knew a man who was little better than dog-faced who spent many happy moments before his looking-glass. Such a harmless complacency it is ill-bred and even malicious to disturb. A nose of the big and bottle variety may serve its possessor quite as well as if it were of the finest Roman curve or the daintiest Grecian slope; but the laws of beauty have fixed a standard of taste, and any violent aberration from this is a real misfortune, so far as it tends to notoriety and attracts observation. Moreover, it is the motive of this exposure which opens the eyes and wounds the sensibilities of the caricatured. They no more discover their irregularities in a photograph taken by their own desire than they find them in the mirror in which they voluntarily look; but when their neighbors officiously draw them and put palpable ridicule into every stroke, conceit itself is undeceived, or, if it remain indomitable, it cannot prevent the wounds of pride nor altogether allay a feeling of injury.

The essence of caricature is exaggeration to deformity, and, however it may entertain us, there is always the drawback of its untruthfulness; nor is it paradoxical to say that the closer the likeness, the more cruel is the lie. There is a substantial immorality in commenting, however veraciously, upon the defects and deformities of our fellow-creatures; but to represent them as more hideous than they really are, while affecting to preserve simple resemblance, is an offence akin to slander made portable and piquant by a few grains of undeniable truth. This is specially to call the attention of the world to peculiarities which might otherwise have escaped comment; to limit the efforts of the well-meaning by attaching ludicrous associations to their presence; and, perhaps, to obscure modest merit by depreciating the outward form of its possessor. And it may be noticed that while caricature fastens upon foibles and perpetuates the eccentricities of honest men, it is incapable of rising to the sober earnestness of rebuking positive and acknowledged wickedness. Humor is not usually a quality of virtuous indignation; and great immoralities, public or private, are not to be dealt with in a spirit of levity, because, to subject them to the ordeal of ridicule, would be really to diminish the abhorrence with which they should be regarded.

It is the malicious element in caricature which so often betrays it into mere *caricature*, just as many a newspaper writer cannot vent his spleen without abuse, and fancies that abuse is severity. In both instances recourse is had to distortion, and distortion, unless under the guidance of an uncommonly powerful hand, is sure to result in feebleness. We may put big heads upon little bodies; we may crook the limbs or arch the shoulders; we may draw a forest of beard or a yard of moustache; we may double a squint or magnify splay-feet, but every observer knows at once that this is not the man whose name is underwritten, and the chances are that he gets our sympathy rather than our dislike or contempt. We have seen a portrait of Pope which was hawked about by his enemies, and which made us think the "Dunciad" a mild and well-deserved rebuke; for the etching showed us what beasts the little crooked man had to deal with. The tendency of caricature is to license, and this in turn to vulgarity. This is easily to be observed in literature—the satirist who determines to be cruel usually succeeds so far as to be coarse. It is true that there is a malign power in coarseness which makes it a weapon tempting to the writer who is or who supposes that he is mounted upon his injuries, or who pleases to run a wanton muck against his contemporaries; but he must take heed lest he win admiration for his bad ability at the cost of our contempt for his heart. In literature as in life, a man may do mischief very brilliantly, and win only notoriety instead of fame. Archilochus wrote a lampoon upon the three daughters of Lycambes which drove them all to suicide; and Hipponax, we are told, could boast of similar sorry triumphs. There may be power in the talent so exercised, but it is the same power which resides in the pistol of the house-breaker or the bludgeon of the highwayman. A good man is not likely to possess it, and will certainly be incapable of using it. When it vents itself in pseudo-criticism, it is the bane of letters, and many a man of generous parts and of real promise has been cut off early in a career which might have been honorable to himself and useful to the world by the flippant fault-finding and poisonous personalities of the monthly and quarterly censors.

The point in which caricature, and especially American caricature, almost universally fails, is that of composition. The forlornly absurd pictures in our newspapers misnomered comic, in which public men are represented in impossible situations and doing impossible things, are like the vagaries and antics of postprandial dreams. The situations would be childish enough if they were correctly drawn; but to every impossibility of attitude is added the aggravation of linear distortion. The season of the war produced a plentiful crop of these nondescript abominations, which lined the windows of the print-shops, and, as we are sorry to say, seemed to gratify the crowd. If there was fun in them, it was of so recondite a character that a plain man might be excused for failing to observe it. Nor were they particularly gratifying to our patriotism. The Federal generals and statesmen were, as a rule, rendered quite as ridiculous as the Confederate magnates, and, to crown all, the nonsense which issued from loyal mouths rivalled, in pointless folly, the imputed stupidities of the rebels. Though the artist had matters all his own way, he made but a sorry job of his satire.

Upon the whole, we can hardly esteem caricature as an agreeable or particularly useful art; for fairness and good nature are almost impossible in its practice. Since human infirmities are shared by us with a sad equality; since most of us have a common birthright of error and of failure; since he must be an exception to the rule who has no follies to be ridiculed and no eccentricities to be blazoned, the equity of selecting a few as objects of laughter may well be questioned. The decline of caricature as a means of personal attack, which was so unscrupulously resorted to in the days of Gilray, may be considered as a mark of advancing refinement; for it is safe to say that the productions of that artist would not now be tolerated by good society, and hardly relished by the frequenters of gin-palaces and beer-shops. In its place we have that graphic and kindly humor of which the late Mr. Leech was an acknowledged master. If this can afford us an agreeable entertainment without ill-humor, and a hearty laugh without the least touch of spleen, it is surely more worthy of our encouragement and attention than those satiric strokes of the graver every one of which is meant to reach a human heart.

"GRIFFITH GAUNT."

THE world has long agreed that there is to be no disputing about tastes. We shall, perhaps, be forced by and by to agree that there is to be no disputing about principles. The Washington correspondent of a Boston religious newspaper is so greatly exercised by the immorality of "Griffith Gaunt," now publishing in the "Atlantic Monthly," that he goes out of his political way to denounce it under the heading of "Licentious Literature." His outraged virtue is curious to know if pious families in New England "read this licentious and, in many respects, filthy story without indignant comment." "A more infamous tale," he declares, "was never written by Eugene Sue, and Miss Braddon is purity itself by the side of Reade, who is conceded to write in an exquisite style, and therefore his 'scented filthiness' is inhaled with delight by our 'first families.'" He is "amazed that THE NATION has no fault to find with the story," and praises the *Post* for advising "parents to keep it out of the hands of young people; its effect upon unformed minds would be pernicious." Then, bringing his virtue to bear on "Harper's Monthly," he declares that it has just concluded a serial tale, "Armadale," which is nearly as bad as "Griffith Gaunt."

We must confess that we were at first somewhat abashed by the severity of our censor. We suspected some grave defect in our moral nature, and were just inwardly debating what course to pursue for the purpose of attaining a healthy moral sensibility, when we chanced upon the column of book notices in the same religious paper, and there learned that "Wilkie Collins never writes a poor story, and his last, 'Armadale,' is . . . not, perhaps, quite equal to 'The Woman in White,' but a novel of half the interest and power which belong to that is far better than the average. We detect no pandering to vice or immorality in Collins's books, and his villains —and they are marvels in their sins—are never made attractive, and usually meet with their just deserts." This disagreement of doctors, if it did not quite inspire us with self-confidence, at least restored our peace of mind.

We notice, too, that while the *Post*, on one side, warns "Griffith Gaunt" out of the hands of the young people because of its pernicious effects upon their unformed minds, the *Herald*, on the other, is unwilling that Gail Hamilton's "Summer Rest" "should be read by any very young person, as it might easily unsettle the[ir] religious belief." So that between the purity of the *Post* and the piety of the *Herald* our young people must be somewhat put to it to find reading innocent enough for their unformed minds.

Without presuming to teach our betters, we would yet suggest that the morality of a story does not depend upon the characters introduced in it, but rather upon the manner of their treatment. The Washington correspondent rests his charges upon the fact that the principal personages in "Griffith Gaunt" are—"first, a husband who is guilty of adultery and bigamy; second, a priest who is in love with a married woman; and third, a wife who barely escapes ruin through her interest in the priest." Very bad, certainly. But we are reminded of another story whose principal personages make but a sorry showing—first, a husband who is guilty of adultery, bigamy, and a most treacherous assassination, murdering the husband of his paramour, who is his most loyal servant, and muttering wise general reflections over the dead body of his victim; secondly, a wife who does *not* escape ruin through her interest in her husband's master; and third, an accomplished but unscrupulous general who lends himself a willing tool to his unscrupulous master; yet the most orthodox Washingtonian would scarcely call the story of David immoral. He would, doubtless, say it was recorded for warning. So is "Griffith Gaunt" recorded for warning. But he objects that Griffith's love for Mercy is described as "one of those gentle, clinging attachments that outlast grand passions and survive till death; a tender, pure affection, though built upon a crime." David's love for Bathsheba is not spoken of in so many words, but we have very strong reason for supposing that his guilty passion—more guilty than anything which is attributed to Griffith—softened and clarified itself into a tender, pure affection, though built upon a crime, for he comforted her after the death of her child, and he made her son Solomon his heir in spite of primogeniture.

The question is simply this, Does Mr. Reade present infidelity, adultery, and bigamy in such lights as to make them attractive? Does he diminish the guilt of crime beyond the limits which the truth of life warrants? Some of our contemporaries say yes. We say, unhesitatingly and decidedly, no. To us it seems that he has from the beginning skilfully yet naturally involved the guilty parties in the evil consequences of their crime, and is leading them on to still greater retribution. Their punishment is swift though subtle. It is as yet unfolded directly from the sin, and we do not see how it can be otherwise than lasting. If any one is charmed with Griffith's position and prospects, we can only wonder at his taste. That any man will ever commit his sins and plead in extenuation that Reade has made the way of the transgressor easy, we do not believe. We have no hesitation in saying that we shall never accept such a plea, and shall reckon a hypocrite as well as a knave the man who makes it.

As to whether Mr. Reade has unduly diminished the guilt of crime, we also say no. That his sinners are not monsters we concede. That we are not aroused to unmitigated abhorrence; that we pity the sufferer though he suffer from his own misconduct; that the boundaries between right and wrong are sometimes so shaded off as to be almost imperceptible—all this we admit. What then? If it were otherwise, the story would be useless as well as clumsy. For this is exactly what takes place in life. Men do commit heinous sin with compunction and continue in it with remorse. They sin under stress of temptation so sore that we can but pity while we blame. Right does trench closely upon wrong, and vice does approach wearing the garb of a most graceful virtue. Whoever will walk wisely and judge justly in the world must remember this. If the human race were to be judged by the ready sympathy and help extended to the sufferers by the Portland fire, we should say the human race had never fallen; if by the greed and selfishness prowling for booty among the ruins, we should say it had never risen, and never could rise. The individual, like the race, must be taken good and bad together. And novels, to be worthy, must represent men as they are, good and bad together. If stories are to give us only well defined outlines—distinctions impossible to be mistaken, saints without shadows, and sinners without lights—they might as well not be written at all. They answer to nothing in this world. If they vilify what is good and glorify what is bad, they should be condemned.

The character of crime as an element of the novel depends chiefly upon the ability of the author. In the hands of a master it becomes high art, and is profitable for reproof, for correction, for instruction in righteousness; in the hands of a bungler it is a mere "sensation story," good for nothing but to be cast out and to be trodden under foot of men.

It is rather dangerous to pronounce upon a book before it is finished. We only avow our calmness undisturbed by what has yet appeared. What danger lies in ambush under the manuscript we cannot tell. We promise, however, that if any subsequent development reveal some masked battery fraught with disaster to our unformed minds, no pride of opinion, no regard for past services from author or publishers, shall stay our hand, but we will smite the evil-doers hip and thigh with our "indignant comment."

Correspondence.

SOUTHERN UNIONISM.

TO THE EDITOR OF THE NATION:

Your able article of July 5, "Political Value of the Southern Unionists," does not fully cover the ground. *Audi alteram partem.* It is true that those who, with Mr. Greeley, believed the South to be charged with Unionism somewhat as a Leyden jar with electricity, must be sorely disappointed. No firm stand has been taken by the Union men of the South, generally speaking, in this momentous crisis. No word of cheer from them has found its way into the halls of Congress or into print, much less have they been heard from the stump at home. But could we reasonably expect all this? Have we not, from the outset, utterly misapprehended, if not their number, at least their position, or, if you please, their character, their pluck and influence? Look at the South. There are, besides the freedmen, two classes of white men. The first class (to whom treason has not been made odious, nor even uncomfortable), though small numerically, is in fact *the* South: the rich planter, rolling in affluence, monopolizing all the offices of trust and emolument, with his, perhaps, poorer relatives engaged in the professional pursuits; and the second class, generally and justly termed *poor whites*. The first class is "secesh" to a man; they do not love the Union, they do not profess to. They simply yielded to circumstances over which they had no control, ready at any time with their unsought pardons to lower the Union flag and hoist the beloved snake! The poor whites have mostly no influence whatever, little or no education in the rural districts; all they seem or care to know is that the "nigger" can never be their equal, that the North wants to make him such, and that they must stand by their aristocratic neighbors in order to avert this direful calamity. There are exceptions, however, sprinkled all over the South: sturdy mechanics, thinking farmers, who have profited by the shock of Sherman's march, ready now to act for themselves, full well knowing that the North is their friend, the Union their protection and hope—men who climbed distant mountains to get a glimpse of the stars and stripes. These, no doubt, were the people

Mr. Greeley hoped would rise and assert their independence under the protecting care of the Union troops. But, alas for human hopes! the troops were too hastily withdrawn either to cheer the Union men or to cow the traitors. Left without friends, unorganized, scattered over a broad area of land, watched with Argus eyes by an unscrupulous "chivalry"—what could they do? Look to the Government for protection, aid, and comfort? Well, they did that, and with what result? They asked for bread, and received a stone! A few papers were encouraged amongst them, but by whom? In Wilmington, N. C., a sadly mismanaged Union paper received some $3,000 by or through Mr. Raymond; so did a few others in the South. But for all the Union sentiment to be developed through them they might just as well have received a check from Ben. Wood's banker in Canada. They raised their voice in behalf of "my policy," it is true; but in what does this differ from the principle to destroy which we sacrificed 280,000 precious Union lives?

The fact is, the Union men of the South have not only not been assisted, but their efforts have been thwarted and treated with contempt. Instead of seconding their feeble but well-meant efforts to organize, as one would assist a child in its first attempt to stand alone, they have been kept under. Why have those brave men in West Virginia been left to wage the war for the adoption of the Constitutional Amendment single-handed and alone? Why has the Union Club in Richmond received nothing, after all its applications and suggestions, but franked speeches as answers from the senators and members of Congress?

What these people need is encouragement and information. They must be made to feel that the Union is a staff they can lean upon, a power that will not desert them in their hour of need. Let it once be demonstrated (which has not yet been done) that it is safe for a Union man to live here; that it is safe for him, in travelling through the South, to express freely his sentiments, even if he should think Messrs. Stevens and Sumner pure men and glowing patriots, and the Union sentiment, now only heard in a whisper, will soon be proclaimed from the housetops; new voices will be heard from all over the land, feebly perhaps at first, but louder and louder, even as the mountains and the sky receive a glow of promise ere the sun has risen in the fulness of his glory.

No Northern man who has not lived here can possibly conceive at what peril a man utters a Union sentiment, and this state of things has grown rapidly worse since the raid of Messrs. Steedman and Fullerton. Let me give you a fact which came from a prominent member of the convention lately in session in Raleigh. In the western part of the State a Union man endeavored to raise a company of volunteers during the rebellion. The fact becoming known in Richmond, a troop of cavalry was despatched to arrest this gentleman and his courageous friends. They resisted and drove the detachment sent against them ignominiously away. Last May an indictment was found against them by a jury assembled under the fostering care of Governor Worth and his friends, and this Union man and those of his friends who had not taken to the woods were convicted and publicly whipped for "resisting lawful authority." The writer of this was invited to make a speech on the Fourth of July in the interior of the South, but declined, for prudential reasons, as he knew there were no soldiers there, and his life is but poorly insured—former attacks upon him, too, being yet fresh in his memory.

Mr. Beecher said, in a sermon which appeared but last month in the *Independent*, that he knew he was just now very unpopular with his congregation. I propose a remedy. Let him start South and make there a few of his ringing speeches of bygone days, and if he ever should return he would do so as a new man. Profiting by his experience, his labors would assume a different direction, and be blessed and duly appreciated not only by his people, but also by his disappointed friends throughout the land.

A Unionist at the South.

IMPORTERS OF ENGLISH AND FOREIGN BOOKS,
4 Cortlandt Street, near Broadway.

THE NATION.

For the guidance of those who may feel disposed to assist us with their contributions, we may mention that the contents of The Nation will fall nearly under four divisions—or that, at all events, these divisions would have to be kept in mind by anybody writing for it as a volunteer.

1. References to, and concise comments on, the news of the day, with the view of fixing the degree of its importance, and suggesting its bearings upon and relation to the main current of contemporary history.

2. Reviews or comments, whether in the shape of letters or articles upon important events, and upon the utterances of those who are, or are trying to be, leaders of public opinion.

3. Accounts more or less detailed, or discussions of such occurrences in the social, literary, artistic, or scientific world as are likely to interest men or women of education and intelligence. Under this head we do not include mere gossip about nobodies, or advertising chronicles of the sayings and doings of quacks, daubs, penny-a-liners, dilettanti.

4. Critiques of publications or works of art of sufficient merit to make it desirable that the public should ever hear anything about them.

TERMS—$5 per annum; 6 months, $3.

When delivered by Carriers in New York or Brooklyn, 50c. additional.

JOSEPH H. RICHARDS, Publisher,
130 Nassau St., N. Y.

TWO NEW BOOKS.

I.

A History of Savings-Banks:

With an Account of the Origin and Progress of Mr. Gladstone's Financial Measures for Post-office Banks, Government Annuities, and Government Life Insurance. By William Lewins, author of "Her Majesty's Mails." Dedicated by permission to the Chancellor of the Exchequer. 8vo, cloth, $8.

II.

Illustrated Guide Book to Spain:

TRAVELLING IN SPAIN IN THE PRESENT DAY. By Henry Blackburn. One elegantly printed octavo volume, with colored Route Map; twenty beautiful Embellishments; Illustrations of the Picturesque Architecture, Scenery, Manners, etc, of the country, engraved on wood by the first artists, from drawings by John Phillips, Walter Severn, and the Author; and an Appendix of "Useful Information for Travellers," on Routes, Railways, Hotels, Expenses, etc., "corrected to May, 1866." Cloth antique, beveled edges. Price, $4 50.

"Its artistic appearance is a credit to author and publisher. The pictures are of the best, and so is the text, which gives a very clear and practical account of Spanish travel that is unaffectedly lively, and full of shrewd and accurate notes on Spanish character."—*Examiner.*

The above for sale, with all recent English publications, by

SCRIBNER, WELFORD & CO.,

654 Broadway, New York.

"The grand addition to the Geography of Inner Africa made by Mr. Baker."—*Sir Roderick I. Murchison, Bart.*

JUST PUBLISHED,

THE ALBERT NYANZA,

Great Basin of the Nile, and Explorations of the Nile Sources.

By Samuel White Baker, M.A.F.R.G.S., and Gold Medallist of the Royal Geographical Society. With Maps; numerous Illustrations, engraved on wood, by J. Cooper, from sketches by Mr. Baker; and a Chromo-Lithograph Frontispiece of the Great Lake from which the Nile flows; and Portraits of Mr. and Mrs. Baker, beautifully engraved on Steel, by Jeans, after Photographs. In 1 vol. 8vo, Cloth. Price $6.

"A model of what a book of travels should be."—*London Saturday Review.*

"A book which everybody must read."—*North British Review.*

"As a Macaulay rose among the historians, so a Baker had arisen among explorers."—*London Reader.*

"There is not a page in it that will not repay perusal, and not a chapter that is not in some way or other suggestive."—*London Athenæum.*

"Charmingly written, full, as might be expected, of incident, and free from that wearisome reiteration of useless facts which is the drawback to almost all books of African travel."—*London Spectator.*

"No one who has any feelings to be moved can read Mr Baker's exquisite narrative without extending to him and his noble wife the warmest sympathy."—*London Review.*

The Charming New English Poetess.

Christina Rossetti's Poems.

WITH FOUR DESIGNS BY THE CELEBRATED ARTIST, D. G. ROSSETTI.

"These lays have the charm of a welcome surprise. To read them after the labored and skilful, but not original verse which has been issued of late, is like passing from a picture gallery, with its well-feigned semblance of nature, to real nature out of doors, which greets us with the waving grass and the pleasant shock of the breeze."

"The entire series displays imagination and beauty, which are both undeniable and unborrowed."—*London Athenæum.*

"The first and largest poem ('Goblin Market') is one of very great and fresh beauty, and of a very original kind, and told in so unique a way as to gratify the fancy, and make the mind *smile* throughout, as in one of Hans Andersen's quaint stories, to stimulate intellectual curiosity, and to gratify intellectual taste."—*London Spectator.*

In one volume 16mo. Cloth, gilt top. Price $1 75.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

So far as Congress can restore her, Tennessee is fully restored to her place in the Union. The President takes occasion to reiterate his opinion that Congress has no power to fix terms of restoration, but he does not withhold his signature from the joint resolution. He maintains, however, that Tennessee has not ratified the Constitutional Amendment. The matter stands thus: There are 84 seats in the lower branch of the State Legislature; 56 of these should be full, or the House has not its legal quorum. Every effort had been made to prevent the assembling of the required number. The President is belied, or all his influence was lent to the thick-and-thin opponents of ratification. Only 52 members came together voluntarily, but two more were secured by arrest; and for some days 54 members were present. The Union men knew that though there were 84 seats, there had been deaths and resignations enough to reduce the living members to about 72, and therefore, in caucus, they had determined to declare that 54 members should constitute a quorum. Just then, however, two more Union members arrived, and there were 56 members at the capitol, if all could be induced or forced to be present. For some unexplained reason, neither persuasion nor compulsion was of any avail with two conservatives, whom the House seems to have had under arrest and confined in a committee-room, and the Union majority was driven to the expedient of voting, against the decision of a conservative Speaker, that the two obstinate legislators, while in the committee-room, should be held to be present in their places. This was voted, and then the amendment was immediately ratified. But it is said that the Speaker of the House, who permitted the names of Messrs. Martin and Williams to be recorded as present and not voting, now declares that those gentlemen must be considered to have been absent, and will not sign the certificate of ratification. It is possible, then, that Tennessee may have to go out again for a while.

As Congress has begun, in Mr. Harvey's case, the plan of punishing public servants for improprieties of demeanor, by stopping their salaries, we respectfully suggest that, if the plan be considered a good one, the Clerk of the Senate be brought under its operation. The country was edified not long ago by the publication of an application from this gentleman for an office to President Johnson, which was supported by a strong reminder that he (the applicant) was the proprietor of "two papers, both dailies," a circumstance which must have made "our chief magistrate" more amenable than ever to the voice of the press. Mr. Forney has, within a few days, however, capped the climax by reading in full Senate a telegram from the unfortunate Governor of Tennessee, in which he applied language to the President which would disgrace a Tennessee grog-shop. No formal notice has, so far, been taken of this scandalous occurrence. From Parson Brownlow nobody expects any decency of either language or behaviour. There was, in our mind, no more melancholy incident in the war than the adoption of this personage by the Union party of the North as a prophet and martyr—he who was, as long as slavery lasted, as foul-mouthed and blasphemous an advocate of slavery as he has since been of freedom. To his ribaldry and buffoonery the Senate cannot put a stop, but it can prevent its being insulted by having bits of his billingsgate read aloud by one of its own officers.

THE Tarift Bill having been postponed by the Senate, another attempt has been made by Mr. Spalding to raise the duties heavily, by adding to them the cost of freight, packing, brokerage, and export duty—thus once more adding to taxation and damaging trade at the fag end of the session by a sort of *coup de main*, when it is too late for discussion or consideration. This section has been struck out by the Senate, and will probably furnish matter for a conference. This measure is of a piece with Mr. Sherman's scheme for forcing the Secretary of the Treasury to sell gold whenever he finds himself in possession of any greater sum than fifty millions, and for depriving the holders of seven-thirty notes of four months of the time now given them for electing to convert them into bonds. The prodigious rate at which the country grows rich in spite of the Congressional financiers is a most wonderful proof of the energy of the people and of the fertility of the soil. There is no other nation in the world which could even earn a livelihood under our Committee of Ways and Means. If the Secretary of the Treasury is to be hereafter charged with the duty of keeping down the price of gold, we trust the public will insist on seeing that he keeps down the price of wheat too. The cost of bread at present weighs far more heavily on the national industry than the price of gold has ever done or is ever likely to do.

RESOLUTIONS have been adopted in the House requesting the President both to suspend the prosecutions now pending in this country against the Fenians, and to use his influence to procure the discharge of the Fenians now awaiting their trial in Canada. We sincerely hope the resolutions may have the desired effect in both cases. There is no good purpose to be served by making martyrs of such worthies as Roberts, Sweeney, Stephens & Co., or by punishing any of their ignorant dupes. Everything that helps to spread the impression that they are not silly and insignificant people will encourage the repetition of the attempt. Roberts probably desires nothing better than to be furnished with texts, in shape of "persecution," for balderdash proclamations; and the immuring of a few "victims of British tyranny" in Canadian jails would probably be the means of stripping some thousands of servant girls of the remnants of their savings.

THE course of the Civil Rights Act is not so smooth as if it had not to make itself respected against the opposition of the President. It found a partial friend in Judge Bowie, of the Maryland Court of Appeals, who sustained under it the competency of colored testimony in a suit brought before him. Judge Harbeson, of Kentucky, pronounced the law unconstitutional in this very respect, and asserted that no law

of Congress could annul the laws of Kentucky. Judge Burbank, of Nevada, excluded a colored man from serving on a jury, because, as he said, a law of Congress could not override the constitution of the State. We have spoken of the President's opposition to the act, whereas in his veto message No. — (we forget the number, but we believe it was the last), he declared that he meant to see it executed. If this is the way it gets executed by his favor, how efficacious would it be in case he should turn against it?

PARSON BROWNLOW has always had the reputation, whatever his defects of taste and temper may be, of being at least a brave man. But his recent onslaught on Mr. Johnson, in his telegram, will, we fear, do much to deprive him of this well-won fame. When Mr. Johnson and he met on the stump in Tennessee, of course the Parson was welcome to use whatever oratorical weapons are most in favor in those parts, because Mr. Johnson, being then plain Andrew Johnson, could give as good as he got, and, if report speaks truly, was abundantly able to defend himself against all comers. But being now President of the United States, he is, as regards his ancient adversaries, in the position of a man whose hands are tied, as the Parson well knows. It is, therefore, cowardly in the highest degree to attack him as Governor Brownlow has done. If the latter wants to have a bout of vituperation, he can always find a foeman worthy of his steel in George D. Prentice, of the *Louisville Journal*, who, during the last month or two, has emptied more filth on his head than we supposed it was possible for even an irate South-western editor to compose in a year. But Mr. Johnson probably looks on Brownlow now as Prince Hal, after his father's death, looked on Falstaff.

IT is not a custom of ours to print in THE NATION clippings from our exchanges, but the following extract is so perfect a specimen of what we may call Constitutional Wail now common at the South that we are constrained to break our rule, and copy the following from the *Texan Ranger*:

"Last week a squad of Yankee soldiers were sent here from Millican to arrest a young man named Forest (brother of Gen. Forest), for giving a negro wench a decent and deserved whipping. It appears that she was very insolent to the lady to whom she was hired, and this young man, who was a boarder in the house, properly protected the lady by giving this abusive nigger a merited punishment. She went to her brother Yanks and made her report, and instead of giving her a whipping and sending her back, they gave her every encouragement and protection. *God grant that our poor down-trodden State may soon be freed from the iron heel of military despotism.*"

The sentence which we have italicized is delicious. We would add that there have been some cases, and the *Ranger* will confirm our statement, where not only the nigger has been "encouraged" by the abolition miscreants, but when even fines have been imposed by them upon many a free-born Texan. And Sheridan has just issued an order which looks like anything but a mitigation of the tyranny under which the South is languishing. No monument, he says, intended to commemorate the late rebellion shall be erected within the limits of the Military Division of the Gulf, and all resuscitation, whether done openly or in secret, of the old rebel military organizations, as regiments, batteries, brigades, etc., is strictly prohibited.

Mr. MONTGOMERY BLAIR has been attending the Democratic Convention at Reading, and prophesied civil war very savagely. He says that if the Radicals are victorious at the next election, it will lead to the establishment of two presidents and two congresses, and warns us that we are on the eve of a civil war, in which, we suppose, he himself will play a prominent part. The resolutions adopted afterwards call savagely on the President to make Congress the representative body of the whole people, express sympathy with the Fenians, and oppose negro suffrage. Mr. Vallandigham's "own familiar friend" was one of the speakers, and made mince-meat of the Radicals, and flooded the whole question of reconstruction with lurid light.

THE Charlottesville (Va.) *Chronicle* has been arguing with some local politician whether or not Virginia should seek to be represented in the Philadelphia (Randall) Convention. The editor thinks not. Being reminded that last winter he was in favor of some such convention, he replies that last winter is not this present July. Since last winter he has been made angry; his feelings toward the North were much more kindly then than now. Congress had not then passed a bill guaranteeing the civil rights of all American citizens; the Freedmen's Bureau bill had not then been passed; no bill had then been passed which enables black men to purchase twenty and forty acre lots of the national domain on as easy terms as those granted white men; a new constitutional amendment had not then been submitted to the people—an amendment which makes a Northerner's vote count for exactly as much as a Southerner's. And since last winter it has been shown him that he does well to be angry. It is since then, he reminds his opponent, that the President has made his 22d of February speech and sent in his veto messages. He was willing last winter to eat a great deal of dirt; now he is not. The article is not noticeable above a hundred thousand other Southern editorials that have appeared since the Appomattox surrender, except in being well written; but it is a frank statement of the course of political sentiment in that section since April, 1864, and enables us to lay the praise or blame at the door where it belongs.

IT has recently been proposed that the Indiana Legislature should pass, and be done with it, a general act declaring that all men and women, from any American State or Territory situate to the eastward of the one hundred and seventh degree of longitude west from Greenwich, who may be living together in legal wedlock at the time of the passage of the act, shall, by virtue of travelling across the State of Indiana in any express or accommodation train, be, and be considered, divorced. Such an enactment would save the judges trouble, build up the railroad system of the State, and not be much more sweeping than the usual practice of the Indiana courts. Certainly, there is a lamentable tendency in parts of the West to degrade the holy estate of matrimony, or the very important civil contract of matrimony, into something not much different from the fortuitous concourse of animals. It seems, however, as if the disgraceful reputation acquired by the Western States were to be shared by some of the Eastern. In Connecticut itself, once the Land of Steady Habits, it is officially reported that during the last six years one marriage in every eleven has been broken in the courts!

DESPATCHES published by the Navy Department show that the monitor *Monadnock* has successfully accomplished the voyage from Philadelphia to San Francisco, a distance by the vessel's course of 15,385 knots. Her greatest average speed per hour for twenty-four hours together was 8.15 knots; the least was a little less than .8 of a knot. Engines and hull are said to have performed equally well, and the ship is now all ready for any sort of a voyage. Lieutenant Commander Bunce, in his report to Commodore Rodgers, says that the *Monadnock*, "in her present condition, is as perfectly safe and trustworthy a vessel for cruising to or in any part of the world as any vessel can be relying upon steam alone for its motive power. . . . At sea she has never needed or received assistance of any kind whatever from other vessels, and therefore I regard her, or any vessel of her class, as perfectly competent independent cruisers." The ship's surgeon reports that "in general the state of health of officers and men during the cruise had to be considered a very satisfactory one." These facts, in conjunction with the good behavior of the *Miantonomoh* in the European voyage, are very encouraging and gratifying to the American people in its character of sponsor and guarantor of the monitor system.

A POPULAR new play in Paris is the "Shepherdess of Ivry," the villain of which is an assassin by the name of Ulbach. As this happens, also, to be the name of a very lively writer, M. Louis Ulbach, the official censors had the courtesy to offer, if he desired, to prohibit the retention of the name in question by so disreputable a character. M. Ulbach was so little sensitive, and so very sensible, as to reply that he would not be implicated in any kind of prohibition.

THE colonial wits, though much enraged at Mr. Banks's proposal to swallow the Provinces whole, can compass no severer retort than to repeat Mr. Banks's own little joke. In despair, we suppose, of finding any more exquisite fooling, a New Brunswicker, Skinner by name, has introduced into the Parliament of that Province a "bill to establish conditions for the admission of the States of Massachusetts, New York, Pennsylvania, Maryland, and the District of Columbia, into the British North American Confederation, and for the organization of Territorial governments for the other States of the American Union." Whether Mr. Skinner is as liberal as Mr. Banks in the matter of assuming all the debts of the people whom he invites to come and be eaten, is not stated. Mr. Banks has his usual good luck. Mr. Skinner is the worst he has to fear. Judge Haliburton is dead, and it is out of the clockmaker's power to make a trip to Waltham now, dilating as he returns upon soft sawder, the flaxed-out British lion, and A 1 statesmen.

OUR latest dates from Europe are to the 15th. There had been no further conflict of any magnitude between the chief contending armies. Prussia's conditions were not calculated to make an armistice acceptable to her adversary, and Bismark has not allowed himself to be checked for a moment in the victorious pursuit of his designs. The mediation of France is abandoned; Francis Joseph, in a sorrowful manifesto, summons his peoples to resist to the last the abasement of the empire; and the Prussians all the while advance. Prague is occupied, without resistance, on the 8th. Bohemia being overrun, the three armies enter Moravia *via* Iglau, Zwittau, and Olmütz—three routes converging on Vienna. On the 13th the first had reached Znaim, forty English miles from Vienna, north, as the crow flies. On the 12th the second left Zwittau and occupied Czernahora, scarcely ten miles north of Brünn. Concerning the movement of the third army we have no particulars, except that on its approach the Austrians evacuated Landskron, in Bohemia, some twenty-five miles north-west of Olmütz. In Bavaria the crossing of the Saale, near Kissingen, by the Prussians under Gen. Manteuffel, was hotly contested by the Bavarian forces, who afterwards withdrew to a position on the Main.

In Venetia the Austrians are gradually retiring. Cialdini occupied Rovigo on the 11th, and shortly afterwards Padua. In the Stelvio Pass the National Guard engaged and defeated the Austrians on the 11th. Gen. La Marmora has resigned.

BEYOND the commencement of the laying of the Cable, the news from England is unimportant. Mr. Disraeli has made a speech to his constituents, in which he announces in substance that the new Government has no programme in particular, but will make everything pleasant and everybody prosperous. It will not bring in any Reform Bill, but if it does, it will be a thoroughly English one, without any taint of American or French ideas. British relations with America, he says, were never so cordial; and he lays so much emphasis on this, that we should not be at all surprised at seeing an early attempt to submit the *Alabama* matter to arbitration. Lord Derby's Cabinet can approach it without the embarrassments of a personal nature which would have surrounded the path of his predecessors. Mr. Disraeli says the emigration from Ireland must be stopped, but does not say how. It is pretty certain that the Tories will not attempt any reform in the land laws; and without this there is about as much chance of keeping the Irish peasantry at home as of Sweeney being king of the country.

THE shore-end of the Atlantic Cable was laid successfully at Valentia on the 6th inst. By the *Scotia* we learn that on the 12th the *Great Eastern* had paid out 135 miles, and that communication between the ship and the shore was perfect. Possibly before this paper reaches some of our readers, the arrival of the huge vessel will have been announced from Trinity Bay. This time it will not be Dr. Russell who will furnish the principal account of the voyage, for he is reporting the efforts of Austria to maintain her integrity on the battle-fields of Europe.

CONGRESS.

Tuesday, July 17.—The Senate passed, with amendment, the House bill to revive the grade of General in the U. S. army. The China Mail Steamship Company was relieved from its obligation to stop at the Sandwich Islands. The Northern Pacific Railroad bill was recommitted.

The House settled the Rousseau-Grinnell controversy by voting to censure Mr. Rousseau, and to summon his accomplices to answer for their contempt of its privileges. On the resolution to expel, the vote stood—yeas, 72; nays, 49; less than the requisite majority of two-thirds.

July 18.—The Senate, after amending the Mississippi Bridge bill as it came up from the House, sent it back for concurrence. The usual notice was taken of the death of Senator Lane, of Kansas.

The House agreed to the Senate's amendment of the bill reviving the grade of General. It accepted (yeas, 78; nays, 41) the Senate substitute for the bill fixing the number of judges of the Supreme Court. The Revised Tariff bill was passed—yeas, 88; nays, 34. A resolution was passed fixing Wednesday, the 25th inst., as the day of adjournment—yeas, 76; nays, 57.

July 19.—The Senate passed a bill authorizing the President to tender to the Governor of Maine $50,000 for the relief of Portland. The House amendment to the bill reviving the grade of General was agreed to, and the bill now goes to the President. A bill was passed for the payment of the public debt. Mr. Trumbull offered a joint resolution recognizing the government of Tennessee, by reason of the State having ratified the Constitutional Amendment.

In the House, Mr. Stevens offered and afterwards withdrew for the day a concurrent resolution that when Congress adjourn it be till the 1st December, unless sooner called together on emergency by the presiding officers of both Houses, whose authority should be the resolution. The report exonerating Mr. Conkling from the charges of General Fry was adopted by a nearly unanimous vote. Mr. Bingham moved, successfully, after much opposition, to reconsider the vote by which the resolution concerning Tennessee had been referred (March 5) to the Committee on Reconstruction—yeas, 70; nays, 27. He then offered a substitute declaring the restoration of the State in consequence of her ratifying the Constitutional Amendment, among other evidences of renewed loyalty.

July 20.—The Senate passed the bill relating to the occupation of mineral lands. The report of the conference committee on the consular and diplomatic appropriation bill was adopted.

The House, after a limited debate, in which Mr. Boutwell was the chief speaker in opposition to the measure, passed Mr. Bingham's resolution restoring Tennessee to the Union—yeas, 125; nays, 12. The Democratic members were obliged to choose between excluding Tennessee and swallowing the preamble. The resolution read as follows:

Joint resolution declaring Tennessee again entitled to senators and representatives in Congress:

Whereas, The State of Tennessee has in good faith ratified the article of amendment to the Constitution of the United States, proposed by the Thirty-ninth Congress to the legislatures of the several States, and has also shown, to the satisfaction of Congress, by a proper spirit of obedience in the body of her people, her return to her due allegiance to the government, laws, and authority of the United States; therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the State of Tennessee is hereby restored to her former proper practical relation to the Union, and is again entitled to be represented by senators and representatives in Congress duly elected and qualified upon their taking the oath of office required by existing laws.

Mr. Stevens's reconstruction bill was laid on the table—yeas, 96; nays, 37. His resolution to adjourn to December 1st was rejected—yeas, 75; nays, 48.

July 21.—After a prolonged debate the Senate passed a resolution—yeas, 28; nays, 4—restoring Tennessee to the Union in the following terms:

Whereas, In the year 1861 the government of the State of Tennessee was seized upon and taken possession of by persons in hostility to the United States, and the inhabitants of said State, in pursuance of an act of Congress, were declared to be in a state of insurrection against the United States; and

Whereas, Said State government can only be restored to its former political relations in the Union by the consent of the law-making power of the United States; and

Whereas, The people of the said State did, on the 22d day of February, 1865, by a large popular vote, adopt and ratify a constitution and government whereby slavery was abolished, and the ordinances and laws of secession and debts contracted under the same were declared null and void; and

Whereas, A State government has been organized under said constitution which has ratified the amendment of the Constitution of the United States abolishing slavery, and also the amendment proposed by the Thirty-ninth Congress, and has done other acts proclaiming and denoting loyalty; therefore, be it

Resolved, by the Senate and House of Representatives of the United States, in Congress assembled, That the State of Tennessee is hereby restored to her former proper practical relations to the Union, and is again entitled to be represented by senators and representatives in Congress.

In the House, the Speaker, as ordered, administered a reprimand to Gen. Rousseau, who had previously made remarks in self-exculpation, and had sought to avoid the censure by resigning his seat. A concurrent resolution was passed adjourning Congress to October 20, and on that day, unless otherwise ordered, to December 1st—yeas, 59; nays, 52.

July 23.—The Senate refused to take up the bankrupt bill—yeas, 14; nays, 17; absent, 17. Bills were passed making certain cities ports of entry; defining collection districts in North Carolina; fixing the compensation of collectors of customs; against wearing sheath-knives in the navy; and repealing an act of June 28, 1864, concerning seamen.

The House adopted a resolution—yeas, 102; nays, 2—requesting the President to urge the Canadian authorities to release the Fenian prisoners now in their custody; also one requesting him to cause the prosecutions of Fenians in United States courts to be discontinued, if compatible with the public interest. The Senate amendments to the joint resolution concerning Tennessee were concurred in.

Notes.

LITERARY.

THE annual necrological record of the alumni of Harvard College appeared, as usual, in the Boston *Advertiser* on Commencement Day, Wednesday, the 18th inst. The number ascertained to have died during the past year is thirty-three, of whom all but nine were natives of Massachusetts, and all but four of New England. Classified professionally, thirteen were more or less identified with the law, eight with theology, four with medicine, and the remainder pursued various callings. One, a graduate of 1797, died in an almshouse; one was killed by a railroad accident; and five died of affections of the lungs. The most distinguished name on the list is that of Jared Sparks, the historian (1815). The Rev. Warren Burton (1831) represents a loss sustained both by the clergy and the instructors of Massachusetts. Six deaths are reported as having occurred in former years without being recorded at the time. Four of the deceased were Southerners either by birth or residence, and died in the course of the rebellion; one, William Williams, of Nashville (1798), having written the secession ordinance for the State of Tennessee. The supplement concludes with the name of the late Richard Hildreth, United States consul at Trieste, whose career as essayist, novelist, editor, and historian is familiar to the public.

—Among the numerous deposits of antiquities in Slesvig, two have attracted especial attention—those found in the peat-mosses of Thorsbjerg and Nydam. Mr. Conrad Engelhardt, a well-known Danish antiquary, and late director of the Museum of Northern Antiquities at Flensborg, excavated these mosses at the expense of the Danish Government during the summers of the years 1858 to 1864. He had completed his exploration of Thorsbjerg and was engaged in that of Nydam when the Slesvig-Holstein war put an end to his work. The excavations have since been continued by Germans, but without the proper care and intelligence. Engelhardt first published an account of his researches in Danish, and has lately published an enlarged translation in English, with many valuable plates. These plates represent a great variety of articles. In the moss of Nydam were found the remains of three well made boats, one of which, of oak, was seventy-seven feet long by nearly twelve broad, and had rests for twenty-eight oars; another was of fir; the oak boat had been pierced with holes and evidently sunk purposely. In the moss of Thorsbjerg were found articles of wearing apparel, two cloaks, each made of a square piece of woollen cloth, a kirtle, two pairs of long trousers, a leathern sandal. In both places were found many personal ornaments and toilet articles, such as buttons, fibulæ, glass and porcelain beads, silver clasps, tweezers of bronze and silver, bone combs, amber pendants. Many weapons were found—helmets, shields, fragments of chain armor, bows and arrows, swords, and lances; also trappings, harness, remains of agricultural implements, pottery, and a few Roman coins of the earlier part of the third century. The most plausible explanation of these deposits is that these mosses were formerly sacred lakes, into which these objects were thrown as offerings to the deities who presided over the lakes. It is stated that most of these articles appeared to have been thrown in in bundles which had been wrapped up in skins or pieces of cloth, and that many of them must have been sunk in the boats. It may be supposed that they were part of the plunder of warlike expeditions dedicated to the gods. From the date of the coins found, Mr. Engelhardt ascribes all this class of antiquities to the third century A.D., and makes out of them what he calls the *early iron age*, for the Danish antiquaries have now divided the so-called iron age into three subdivisions—the early iron age, the transition iron age, and the late iron age. The general character of the Slesvig remains is strongly like that of the Anglo-Saxon graves of the pagan period.

—Mr. Alexander Melville Bell's "Visible Speech" is attracting considerable attention from English scholars. By this name the author styles a new alphabet which he considers capable of representing all varieties of human speech with wonderful accuracy. It consists of thirty-four symbols only; but several of these symbols are often combined to represent a single sound. Some of the characters are devoted to the vowel and consonantal sounds, and others to the loudness or softness, the accent and tone. "They *depict*," as Mr. Bell says, "by suggestive analogy of form, the *organic attitudes* which produce or modify the respective sounds, and so inform the reader how to place his organs to pronounce the sounds." Important testimony has been borne to the value of this alphabet by many scholars, and among others by Mr. Alexander J. Ellis, himself the inventor of the most complete universal alphabet that had as yet been proposed, and the author of several works on phonetics. Mr. Ellis gave the system a thorough examination, and was entirely convinced of its great utility. Words and phrases in all languages and dialects were taken down from his mouth by Mr. Bell, and were read with ease by his two young sons, who reproduced accent, tone, drawl, brevity, and indistinctness with surprising accuracy, so that Mr. Ellis seemed to hear the echo of his own voice. Mr. James Spedding devotes an article to the subject in the last number of "Macmillan's Magazine," and a strong effort is being made to induce the Government to appoint a commission to examine the system. Such a mode of recording speech as this would be very useful, even though only auxiliary to an alphabet and as a method of transcribing Eastern languages. It of course would require oral teaching.

—In 1863, Baron Liebig published in one of the English magazines an article entitled "Lord Bacon as a Natural Philosopher," in which he tried to prove that Bacon did nothing to forward the progress of natural philosophy, that his views were less advanced than those of his contemporaries, and "that the result to which his method inevitably leads is naught." The authority of Baron Liebig's name and the plausibility of his statements silenced many who would otherwise have defended the great Englishman, and many, doubtless, thought that Bacon was one of the great humbugs of the past that are being daily exploded, and that his reputation for science rested on as narrow foundation as his reputation for morality. Mr. G. F. Rodwell in two recent numbers of the *Reader* refutes, in a very able essay, the positions that were taken up by the baron. In the review of the "Historia Naturalis" Liebig states "that the subjects treated of in this book must be looked upon as the practical vouchers for Bacon's particular mode of enquiry." The reverse of this is the case, and Bacon acted here as a mere scientific hod-carrier, to make a building out of the bricks and tiles furnished by other men. Bacon states this himself. But Liebig first accuses him of ignoring other philosophers, as Paracelsus, and then uses the very quotations from those writers to show Bacon's ignorance and unphilosophical method. Bacon is also accused of recording experiments untruthfully, and of inventing experiments; both falsely. Many of Bacon's fallacious explanations are quoted by Liebig, but he does not mention that he propounded a theory of fermentation very similar to that which is advocated in the "Letters on Chemistry;" nor that Bacon was the first to determine the relation of the volume of vapor to that of the liquid producing it. Bacon also tried the experiment proving the incompressibility of water and the porosity of the densest bodies, which is usually alluded to as "the celebrated experiment of the Florentine academicians," thirty years before the establishment of the Academia del Cimento. Liebig sneers at the inductive method as being "in unison with the popular views of the ignorant crowd," and that the fame his book procured him was not based on the recognition of scientific men, but of *dilettanti*, to whom many facts were now accessible which had previously been shut up in Latin treatises. He overlooks the fact that all of Bacon's scientific works were written in Latin, and that his books were not popular at home, but were well known to the scientific in Holland, France, and Italy long before they were appreciated in England. Another instance of Liebig's hastiness in assertion is his remark that "Bacon knew nothing of the powers that were at work in the science of the day, nor of the gigantic works produced by his contemporaries, such as Gilbert and Galileo; that he did not know of Jupiter's satellites or of the spots on the sun." But these things Bacon expressly mentions, and often quotes from both Gilbert and Galileo. There is proof that he read the "Sidereus Nuncius" within a year after its publication. Altogether Mr. Rodwell makes out a very good case for Bacon and his philosophy, though he does not claim him as a great philosopher, but one who, in his leisure moments, gave great assistance to science.

EDUCATIONAL.

On the 7th of August next the third "University Convention of the State of New York" is to be held at the capitol in Albany under the auspices of the regents of the State University. This convention is designed to include all the officers of colleges and academies, normal schools, and the higher departments of the public schools. It is purely voluntary, and in this respect is like other educational conventions. But its deliberations are directed to the subject of higher education and are designed to promote a better acquaintance among the officers of such institutions as we have named, and ultimately to advance the standards of scholarship and degrees. Of course the value of such a gathering will depend wholly on the character of the persons who attend it, and upon the carefulness with which their views are presented and matured. It has been said by those who ought to know that the standard of the colleges in New York is not equal to that of New England, and that some institutions keep down the standard so as to get as many students as possible. This is fatal to high scholarship. Another complaint which we sometimes hear applies to all American colleges. It is that the diploma is simply a certificate of good behavior during the college course, and of moderate attainments in the prescribed studies; whereas it should be a certificate of proficiency in the particular departments of research; so that every graduate would bear on his parchment the statement of his excellence as a classical scholar, a naturalist, a mathematician, and the like. The programme of the Albany convocation includes thirty topics in three groups, pertaining to colleges, academies, and general education. It will be impossible to attend properly to one-third of these themes, and it seems to us that a briefer outline of work would have been more attractive. We hope earnestly that there will be a large attendance of the right people, and that much good will come from the assembly. It may not be known to our readers that the colleges of Massachusetts, Rhode Island, and Connecticut have for some years maintained a sort of private "university convocation." The president and one delegate from the faculty of each of the associated colleges meet together every autumn at the different colleges successively, and listen to papers on questions of academic discipline. This meeting has been found highly advantageous, and is more likely, we think, to bring about good results than a larger and more public convention. Is it not worth copying in the State of New York?

—The American Institute of Instruction meets at Burlington, Vermont, August 7th, 8th, and 9th; and the National Association of School Superintendents at Indianapolis, Indiana, August 13th and 14th.

—The American Association for the Advancement of Science, whose meetings before the war were among the best educational conventions of the year, after a suspension for several years, is now called together at Buffalo on the 15th of August next. The large number of persons interested in or devoted to the pursuit of natural science who in former years were brought together by this association did a great deal, by their united action, towards diffusing through the country a respect for science and a desire to contribute to its advancement. The generous contributions of late years to scientific institutions all over the country are due, without doubt, in part to these conventions. In some instances their connection is most clearly traced.

—The National Academy of Sciences is to meet in Northampton on the 7th of August. This body, being strictly a close corporation of scientific men, has more authority than the American Association, and is in a position to do a great deal for the advancement of science; but it cannot take the place of the more comprehensive, not to say miscellaneous, body just referred to. There are many who question whether an "academy" is, after all, as useful to the country as an "association" for the helping forward of scientific undertakings; and whether the establishment of such class distinctions does not belong to aristocratic rather than to democratic countries. Time will determine. If the National Academy does nothing more than secure the adoption of the decimal system of weights and measures, its value will be above estimate.

TINKERING HYMNS.*

The Protestant Episcopal Church has taken, or is about to take, a step which the world religious and the world literary pronounce "a crime against letters." At the last general convention of the church, "hymnody" was a subject of some consideration and much discussion, and eventually received the usual American panacea of being referred to a committee. This committee has produced a small volume of sixty-five "Additional Hymns," which, "by direction of the House of Bishops, are published under the supervision of the joint committee," and are licensed for use. The hymns are strictly "additional," for the Prayer-Book ends with hymn 212, and this volume begins with hymn number 213.

The work which the general convention intended to assign to its committee, we undertake to say, was that of *selecting*. The committee, however, seems to have misread its authority into something like the following:

Resolved, That a joint committee of clerical and lay deputies be appointed to select and tinker hymns to be used in the Protestant Episcopal Church.

If the committee had acted under such a resolution we should say that its members had performed their work well, except, perhaps, that the work of tinkering too much exceeded the work of selecting.

Is it really impossible for a church to add to its hymnal hymns as their authors wrote them? Can we not have a collection of lyrics which to the element of religion shall add the element of authenticity? Will it always be impossible for a few conscientious and intelligent gentlemen to sit down to this easy and pleasant task without immediately becoming affected with this horrible mania? Did not the late Dr. Bethune once stop in the reading of a hymn and exclaim to his startled choir: "This hymn is not as Cowper wrote it! Who has dared to alter a hymn of Cowper's? Sing it thus, and not *so*." Does not a recent number of the "Contemporary Review" ridicule and revile the English collections which are labelled "Improved Versions"? Has not one of the eminent members of the bar of England, Sir Roundell Palmer, published his "Book of Praise" for the sake of restoring degraded hymns to their original purity? Does not the taste of the world religious and the conscience of the world secular cry out against all spurious emendations of an author's text? Year by year we travel back to past authors; we republish them with their antique inaccuracies of spelling; we reproduce them in the quaint garb of their old English type; we condemn the editions that have tampered with the text and cling to the original thoughts moulded in the original form. Who but a madman would rush against such settled public sentiment?

The book before us is a small volume, but a great innovation. We respect the boldness of the committee in bringing forward hymns which, a quarter of a century ago, were exclusively the property of the Methodist or the Romanist. "Brown, of Ossawatomie," stands ominously at the first page, to remind the majority of the late convention of their sickly loyalty. For every one in this nation knows that "Blow ye the trumpet, blow," was John Brown's favorite hymn, sung on his scaffold and at his burial; and little thought the world six years ago, when the old abolitionist's death gave to the rude lyric a rude repute, that an Episcopal convention would ever transplant it from the field of the camp meeting to the guarded pages of the revered and ever to be reverenced Book of Common Prayer. Yet it is there, and it is first.

An index is not much of a literary work, and, ordinarily, a reader abuses a book for not having one, or abuses the index for not having all the contents. Here he may go a little further, and say that even an index can be made an instrument of error and injustice. The compilers have appended to this index the names of the authors. They were not obliged to supply such a list; but, if they undertook to do so, they were bound to furnish one trustworthy and consistent. Yet this humble part of their work seems to have been thrown together in mere caprice, and to follow no consistent or intelligible rule. The hymn "Oh, sacred Head now wounded" is from the German of Paul Gerhardt, which is from the "Salve caput cruentatum" of St. Bernard; the index ignores the *translator*, and calls the hymn Gerhardt's. The hymn "Creator Spirit" is from the Latin "Veni Creator Spiritus;" the index ignores the *original*, and calls the hymn Dryden's. "For thee, oh! dear, dear country," is by Dr. Neale, from the "Hora Novissima" of Bernard of Cluni; the index ignores both translator and author, and calls this recent production "Ancient." "Jesus, the very thought of Thee," is credited to St. Bernard, though St. Bernard was the contemporary of the Monk of Cluni. "Jerusalem, my happy home," is called "Unknown"—a needless ignorance since Mr. Prime's beautiful little history of "O! Mother

* "Additional Hymns; set forth by the House of Bishops at the request of the House of Clerical and Lay Deputies in General Convention, October, 1865. To be used in the congregations of the Protestant Episcopal Church in the United States of America." New York: New York Bible and Common Prayer Book Society, Depository Nos. 5 and 13 Cooper Union, Fourth Avenue. MDCCCLXVI.

Dear Jerusalem." "Jerusalem the Golden" is left blank, though the work from which the hymn was copied names both the author of the translation and the author of the original. One of Dr. Neale's unequalled and original translations is called "Ancient," while three others are not named in any way. Of what value is such a list of authors?

There is one hymn with regard to which these extraordinary freaks of the index require particular enquiry. "My faith looks up to Thee" appears to be neither credited to its author nor to any one else, nor yet to be marked as "anonymous" or "unknown." It is about twenty years since the hymn was written. With the exception of Bishop Doane's "Softly now the light of day," we should say that it is more generally known and more highly prized than any other recent American hymn. Properly regarded, it is less a hymn than a prayer—a prayer deep, earnest, simple, pleading with beautiful and touching pathos. The first stanza is a supplication for hearing, the second for grace, the third for guidance, and the fourth for the hour "when ends life's transient dream." In one thing only is it defective; it intercedes for the day of tribulation, but omits the wiser and the rarer petition of the Litany, "In all times of our prosperity." Yet this hymn, so beautiful, so brief, so peculiar, is abbreviated, and abbreviated by the omission of the concluding stanza. To shorten a long hymn may be necessary; to shorten a short one of four stanzas may be excusable; but to break such a prayer as this in pieces, and to leave the suppliant asking only for the comforts of earth, striking out his cry for final mercy, is, of a certainty, a strange improvement. Yet of the hymn enough remains to be credited to its author. When a compiler takes a work without paying for it, the least he can do is to acknowledge briefly that the author wrote it. With an unknown work and an unknown author, such an omission would be of little consequence, but not so when the blank authorship relates to one of the valuable pieces of the collection.

But of the alterations chiefly to be censured we have not yet spoken. There is a small volume, published by Randolph, called "The Seven Great Hymns of the Mediæval Church," which, whatever its merits or defects, adheres with scrupulous fidelity to the text of the authors, even to the extent of noting a change in the punctuation. From this small store of mediæval wealth the compilers have taken no less than six of their sixty-five additional hymns; and (so great was their zeal) not one of these six hymns have they given as the author wrote it.

First of the list stands the renowned "Dies Iræ." It may startle some people to learn that the "Great Hymn," the famous sequence of the Romish burial service, has its eighteen stanzas spread out to their fullest extent in this brief addition to the Protestant Episcopal Prayer-Book.

Yet we do not object to this; for, although the "Dies Iræ" will not be used by congregations as a hymn, still there will be great occasions in great churches when ambitious choirs will display their talents on it, and when the people below will need a copy of the hymn as a "libretto." But when such a hymn as this is to be inserted in a book which will bring it to the homes of thousands, who will see no other translation, then the very best, if possible the *standard* version alone, should be employed. The Catholics have shown good sense and good taste by selecting for the "St. Vincent Manual" the translation of the Protestant Roscommon. Our compilers had three versions from which to choose. They might have taken that of Gen. Dix, which would have been gratifying to the loyal members of the Church and a graceful compliment to so distinguished a lay member, and would have secured also to the Church the best metrical translation of the "Dies Iræ." Or they might have taken the British version of Dr. Irons, which would have had the advantage of conforming the words of the Prayer-Book to the words and music of the "Hymnal Noted." Or they might have taken the old, established, and ever to be admired translation of Roscommon. What have the compilers given to the Church? Their version opens with three false English rhymes:

> "Day of wrath! that day of mourning,
> See fulfilled the prophet's warning,
> Heaven and earth in ashes burning."

Examining it further, we find that the body of the hymn is the version of Dr. Irons, but altered, patched, and mutilated. Some of these changes are bad and all are needless. The only alteration which is justifiable is the change of the Latin "Jesu" to its English form. Corrections are often worse than the faults they seek to remove, and the amount of the injury can never be measured by the amount of the alteration. In the third stanza the compilers have but a part of the last line, in the fifth they change but a single word. Yet the latter is worse than the former. This alteration furnishes an instance of the madness of tinkering. The stanza in the original refers to the last judgment, and the translation of Dr. Irons correctly expresses that idea. Upon the day of *judgment* is to be brought the book of *judgment*, and from its record *judgment* is to be awarded. The compilers change "judgment" to "justice" and make nonsense of the verse.

The thirteenth stanza is not by Dr. Irons, but has been taken from the version of Gen. Dix. Yet, even when interpolating a solitary stanza from another author, the mania for tinkering could not be resisted. We quote it to illustrate the needlessness and bad taste of the alterations:

GEN. DIX.

> "Thou to Mary gav'st remission,
> Heard'st the dying thief's petition,
> Bad'st me hope in my contrition."

THE HASH.

> "Thou the harlot gav'st remission,
> Heard'st the dying thief's petition;
> Hopeless else were my condition."

The word which is substituted in the first line is not in the original, and is not in the Bible; it is needless, coarse, and repulsive; it does not contain a new idea, but repeats the old idea in a low form. There are people who seem to suppose that such words can be used with impunity, so long as it is religious composition into which they are stuffed. It is time that this supposition be extinguished, and people taught that low and vulgar words *needlessly* used remain coarse and vulgar wherever placed or by whomsoever spoken.

What, then, is the version of the great "Dies Iræ" which the joint committee has placed in the hymnal of the Episcopal Church, to stand for ever in her book of prayer, and to be said and sung daily and hourly by her children? It may be analyzed thus: Six stanzas are from the version of Dr. Irons, tinkered; the thirteenth is by General Dix, also tinkered; while the three false rhymes of the first are original with the joint committee.

When a great name is attached to a hymn the ordinary supposition is that the hymn was written by the owner of the name. This supposition is almost groundless when applied to the "Additional Hymns." For when the members of the joint committee have exercised the extraordinary self-denial of not tinkering an author's lines, they still have been unable to resist the temptation of transposing, inverting, and rearranging them. The mediæval hymns are not classical Latin, but many of their translations are classical English. One would think that the most ruthless committee would, at least, spare Dryden and Dr. Neale. Let us see what our committee has done.

"The Seven Great Hymns" contains the "Veni Creator" (ascribed by some to Charlemagne, by others to Gregory the Great) and also the "paraphrase" of Dryden. The compilers take several parts of the translation, make no mention of the venerable original, and call the hymn Dryden's. It is true that the *words* are Dryden's. It is even true that the lines are Dryden's; but these lines of Dryden's are thrown together in this wise: the first four form the first stanza of the hymn; the ninth, tenth, eleventh, and twelfth form the second stanza; then the seventh, eighth, *fifth, and sixth* turn a summersault over each other and turn up as the third stanza! And these literary gymnastics are called Dryden's!

The celebrated "Alleluiatic Sequence" of Godescalcus is translated by Dr. Neale in one of the most melodious and finished translations ever made of any poem. "And," says its author, "every sentence, I had almost said every word, of the version was carefully fitted to the music, and the length of the lines corresponds to the length of each *troparion* in the original." Yet this could not be spared. Dr. Neale writes:

> "To the glory of their King
> Shall the ransomed people sing."

The compilers hunt out the insignificant little word "to," and substitute "for." Dr. Neale writes:

> "They through the fields of Paradise that roam,
> The blessed ones, repeat through that bright home, Alleluia."

The compilers re-write:

> "They in the rest of Paradise who dwell,
> The blessed ones, with joy the chorus swell. Alleluia."

The poem contains the following beautiful passage:

> "Ye clouds that onward sweep!
> Ye winds on pinions light!
> Ye thunders echoing loud and deep!
> Ye lightnings wildly bright!
> In sweet consent unite your Alleluia."

The compilers (we are not jesting) actually have transposed these alternate rhymes! Dr. Johnson said that Gray should have omitted the expletives from the "Elegy." If the joint committee had manufactured a hymn out of it, they doubtless would have combined this idea with their own, and then we should have had:

> "The curfew tolls the knell of day,
> The ploughman homeward plods his way,
> The herds wind slowly o'er the lea,
> And leave the world to you and me."

This is ridiculous; but there is one hymn in the collection which, to many readers, will appear little less than sacrilegious. "The Celestial Country" of Dr. Neale, from the Latin of the Monk of Cluni, is among the spiritually lovely poems of the language, and has taken such a strong hold upon religious minds as few works in prose or poetry have ever done. When a reader stumbles upon a hymn taken from the refreshing poem which he loves, he brightens at the discovery and congratulates himself that his favorite is to become known in part to others. But when he reads a little further and finds that it is not a quotation; that neither language nor thought nor sentiment has been retained; that the lines which have been read in sickness and in sorrow, which he may have heard repeated by the good, or which he may have repeated to the dying, have been fished out and jumbled together as children "cap verses," then something rises up within him which will never forgive or accept the barbarism. Of such a character is the hymn beginning "For thee, oh dear, dear country;" and bad as the other mutilations are, those of this hymn exceed belief. In "The Celestial Country" are two passages which, in their proper place, are so spiritual, so exquisitely beautiful, that no reader ever passed them unnoticed. To illustrate this we quote the two stanzas precisely as they are printed in the "Seven Great Hymns:"

"'JESUS *the Gem of Beauty,*
True GOD *and Man,*' they sing,
The never-failing Garden,
The ever-golden Ring;
The Door, the Pledge, the Husband,
The Guardian of his Court,
The Day-star of salvation,
The Porter and the Port!"

"THOU HAST NO SHORE, FAIR OCEAN!
THOU HAST NO TIME, BRIGHT DAY!
DEAR FOUNTAIN OF REFRESHMENT
TO PILGRIMS FAR AWAY!
UPON THE ROCK OF AGES
THEY RAISE THY HOLY TOWER;
THINE IS THE VICTOR'S LAUREL,
AND THINE THE GOLDEN DOWER!"

From these stanzas the compilers have extracted the finest figure—have hitched it to a passage with which it has no connection in thought, or style, or contiguity, and have reduced it to mere rhyme and bad grammar, in the following stanza:

"Oh one, oh only mansion,
Oh paradise of joy,
Where tears are ever banished,
And smiles *have no alloy;*
Thou hast no *shores*, fair ocean,
Thou hast no time, bright day,
Dear fountain of refreshment
To pilgrims far away."

But even this is not all. The thirty-fourth stanza of "The Celestial Country" (we cite from the "Seven Great Hymns," in which alone it is divided into numbered stanzas) contains these lines:

"Jerusalem the glorious,
The glory of the elect,
O dear and future vision
That eager hearts expect."

The forty-second stanza contains these:

"*O sweet and blessed country,*
Shall I ever see thy face?
O sweet and blessed country,
Shall I ever win thy grace?"

Will it be believed that such remote and disconnected lines have been extracted and brought together thus?—

"*Oh sweet and blessed country,*
The home of God's elect!
Oh, sweet and blessed country
That eager hearts expect.
Jesus in mercy bring us
To that dear land of rest;
Who art with God the Father
And Spirit ever blest."

The last four lines, it is to be observed, are not a part of "The Celestial Country," but are the work of some other author. Does any other hymnal in the English language possess another such a specimen of conglomerate as this unhappy stanza?

The leading and intelligent minds of the Episcopal Church will not accept these mutilated and injured hymns. They will form a subject of controversy just so long as they remain in the Prayer-Book. The originals are too well known to suffer these spurious copies to be accepted or forgotten. And by the younger members of the Church the battle will be renewed if a defeat be suffered now. Within the last two years there has sprung up a wonderful interest in these old lyrics of the mediæval church. As that study increases, this subject will be reconsidered. The student who comes back to his Prayer-Book to find that it is false to the authors who enrich its pages, will seek to purify it. The clergyman who knows the original hymn will never inflict on his congregation the spurious copy. Time will right the error, if the Church be not wise enough to right it now.

THE FOUNTAIN OF THE NILE.*

THE vagueness and worse than vagueness of the geographers, who made Inner Africa pretty much what they pleased on their maps, have been signally corrected within the past eight years by the discoveries of English explorers, among whom Mr. Baker is last in point of time, but only in point of time. Between 15° S. and 3° N. of the equator are now known to be situated four great lakes, of which two are divided by the 30th meridian of east longitude, and two lie between this and the 40th. These are, beginning at the south, the Lake Nyassa, discovered by Livingstone in October, 1863; Lake Tanganyika, by Burton and Speke in April, 1858; the Victoria N'yanza, by Speke and Grant, in 1858 and 1862–63; and the Albert N'yanza of Mr. Baker, in March, 1864. The latter pair belong to the basin of the Nile, the former draining the extreme southern watershed of that basin, which is contained, according to Mr. Baker, between the 22d and 39th degrees of east longitude, and the 3d degree of south and 18th of north latitude, the Nile delta being in latitude 32° N.

Mr. Baker's ambition was to reach the source of the Nile, and with this purpose, or determination, rather, he sailed from Cairo on the 15th of April, 1861. He was a man of means, of considerable experience of savages and a sportsman's life in India and Abyssinia, of great pluck, endurance, and decision of character, and sufficient scientific training to make his researches intelligible and valuable. He was accompanied to the end by his young wife, dressed like himself in loose trousers and gaiters, with blouse and belt—a man to all appearance, except when she shone like a Lorelei upon the savages as she combed her golden hair before them. She was a worthy companion of a Nile explorer, and in more than one instance she saved the expedition from ruin by her tact and intrepidity. The year between the date just mentioned and June, 1862, was spent in tracing up from Berber, lat. 17° 58′ N., the Abyssinian affluents of the Nile, and working round from its junction with the Atbara to its junction with the Blue Nile at Khartoum, lat 15° 30′ N. These two rivers are dry from March to June, and consist then of pools or ponds, into which are crowded all their living denizens till the rains liberate them. In May the rains begin, and in mid June first affect the courses, which swell into torrents under terrific storms and cause the annual inundation of Lower Egypt.

Khartoum was a miserably filthy and unhealthy place, of some 30,000 inhabitants, the headquarters of the nefarious White Nile trade in slaves, but for which Mr. Baker's progress would have encountered few perils, obstacles, or unusual delays. Here were gathered the traders—Syrians, Copts, Turks, Circassians, and a few Europeans; and here was an American consul, *not* gratefully remembered by Baker for his courtesy, being the son of a trader who, at Gondokoro, covered his nefarious traffic with the American flag. Physically and morally foul, horribly oppressed by the Turkish Government, so that nothing throve but infamy, Khartoum was a place to be abandoned as quickly as possible. Baker left it December 18, 1862, in three vessels, bearing forty sailors, forty-five armed men, eleven servants, twenty-one donkeys, and four camels, besides a generous equipment in other necessaries. The White Nile is two miles broad at this point, and the ground between it and the Blue Nile is a vast flat as far as the eye can reach. The voyage was dismally monotonous. Here and there the banks were lined with villages, or fringed with mimosa groves, but oftenest the shallow channel, narrowed in parts to 130 yards, wound interminably through a treeless plain, or amid tall reeds and grass that shut out the horizon; and marshes, mosquitos, malaria, and misery are the best summary of the disgusting country that bordered the river. Yet the absence of morning or evening fogs was noticeable, and the stillness of the night was disturbed only by the distant barking of dogs or the snorting bellow of the hippopotamus, which made the vessels vibrate.

Gondokoro, a place which has been reached by steamers from the Mediterranean, marked the termination of the marshes and of Baker's voyaging. He had been forty-five days in getting there. He found it, in respect of cleanliness, far superior to Khartoum, but "a perfect hell" of slave-pens and slave-dealing. His coming, as before, created consternation among the traders, who looked upon him as a spy, and they did all in their power to interrupt his advance. On the 15th of February, 1863, to his great joy, he was joined by Speke and Grant from the south, who had just completed their exploration of the Victoria N'yanza, and were able to give him the most accurate details of their own observations, and to put him on the right track to corroborate or enlarge them. This meeting was pleasantly and creditably characterized by the absence of all professional jealousy.

On the 26th the new-comers sailed for England, and a month later Baker

* "The Albert N'yanza, Great Basin of the Nile, and Explorations of the Nile Sources. By Samuel White Baker." With Maps, Illustrations, and Portraits. London: Macmillan & Co.; Philadelphia: J. B. Lippincott & Co. Pp. 516. 1866.

began his overland route. He had had a difficulty with the officials at Khartoum, and a mutiny among his own men at Gondokoro, and had overcome them both. Discipline and a uniform dress worked wonders with his retinue, which was diminished by some fifteen malcontents. He was destined to see it utterly dispersed by mutinies and desertions; to incur first the enmity and afterwards the friendship of a band of Turkish "traders;" to lose his donkeys under the attacks of a scavenger bird, and his camels from poisoned herbage, and his horses from fatigue; to be stranded with fever in a country not fuller of moisture than of vermin; to totter beside his sun-stricken and apparently lifeless wife; to be deceived by his guides, and abandoned by his porters, and tantalized, when on the eve of his discovery, by the cruel delays of a barbarous monarch.

He set out on the heels of a hostile party, who had challenged him to ollow them. In ten days he had passed through Ellyria, marched a hundred miles to the east, quelled a mutiny, formed an alliance with his enemies, and reached the town Tarrangollé in the country of the Latooka. The scenery he had now entered upon was, for nearly the rest of his journey, of the most delightful character—park-like, well timbered, with beautiful valleys walled in with high mountains of grey granite; or flat, interspersed with trees, and abounding in fruit; or a mixture of pasture and forest, with elephants, giraffes, buffaloes, rhinoceros, antelopes; or through mountain passes, under granite peaks 5,000 feet high, the invigorating air scented with the perfume of wild flowers, and the path festooned with grape-vines; or an elevated plateau with rank vegetation; or an undulating prairie without limit, the bright yellow grass dotted with dolape palms; or along a river full of rapids and islands, showing villages amid plantain groves; or, finally, through blossoming mimosa forests, or across deep morasses bridged with floating weeds. Early in May he made a three weeks' trip south to Obbo, and on his return obtained a clue to the grand object of his search. A month later, after having been greatly imperilled by the bad conduct of his allies, whose brutality in camp and raids in the neighborhood constantly menaced the neutrality of Baker's party, he left Latooka again in their company for Obbo, where with much suffering he endured the rainy season, and emerged on the 5th of January, 1863, mounted on oxen, in default of other beasts. On the 18th he passed on from the agreeable town of Shooa, where he left the last of his rice and coffee and his sponging-bath, which had served at one time as a watering-trough or reservoir, at another as a wine-press. On the 22d he saw the mist of the Victoria Nile, and the river itself before the close of the day; came shortly to the falls of Karuma—of no great consequence—and with the utmost difficulty effected a crossing and proceeded to Mrooli, the chief town of Unyoro and residence of the King Kamrasi. He was now crossing the track of Speke and Grant, who had followed down the Victoria Nile to this point, and had been pretty effectually fleeced by the greedy king.

At Obbo, Baker had met the first natives who made any pretence of clothing themselves. In Unyoro he found them fully clad, and possessed of civilized notions of decency—a fact sufficiently remarkable in view of his steady approach to the equator. Along the White Nile he had met a miserable race of beings, stark naked, improvident starvelings, begging for corn, and eating the ground bones of dead animals, and living with their cattle in smoke as a protection against mosquitoes. At Gondokoro the natives lacked the African type of thick lips and flat noses, preserving only the woolly hair; but this only in a small tuft on the crown among the men, while the women shaved clean. The Bari and Wakkala had bullet-shaped heads and low foreheads, and were of brutal appearance. The Latookas were the finest savages ever seen by Baker. They displayed, most elaborately, the head-dressing which chiefly distinguishes the tribes of the White Nile, between whom and themselves there appears to be a decided specific difference. They were excellent blacksmiths, but, except in tobacco-pipes and water-jars, did nothing in pottery. The Chopi, on the contrary, showed great ingenuity in copying after nature, taking the gourd for their model. They were well dressed, toga fashion, in bark-cloth made from a sort of fig-tree, which each family planted in its own garden, and in goatskin, also, their tailoring was excellent.

Ten wretched months were spent in Unyoro in vain endeavors to get forward, the true king, Kamrasi, never showing himself, but passing off his brother M'gambi, who did his bullying and begging for him. About the 1st of March, 1864, Mr. Baker was permitted to journey to the lake, of which he had now very definite information. His eyes and his ambition were gratified, on the 14th, with the sight which had hitherto been denied to a white man, at least in the record of mankind.

"The glory of our prize," he writes, "burst suddenly upon me! There, like a sea of quicksilver, lay far beneath the grand expanse of water, a boundless sea horizon on the south and southwest, glittering in the noon-day sun; and on the west, at fifty or sixty miles' distance, blue mountains rose from the bosom of the lake to a height of about 7,000 feet above its level.

"It is impossible to describe the triumph of that moment—here was the reward for all our labor, for the years of tenacity with which we had toiled through Africa. England had won the sources of the Nile!"

The Albert N'yanza is the grand reservoir of the Nile, in which are concentrated the entire waters from the south, in addition to tributaries from the Blue Mountains, to the north of the equator. The Victoria receives the eastern affluents, and in turn discharges into the Albert, from a difference of level of at least 1,200 feet, through the Somerset river or Victoria Nile. From the Albert to Cairo the Nile is entire, and from this magnificent fountain it maintains its constant fulness of volume, although for eleven hundred miles after receiving the Atbara it flows without a tributary.

We cannot describe here the long and painful journey homeward, beginning with the week's voyage down the lake to Magungo, with all its annoyances and dangers—a south-west wind rising every afternoon and rendering navigation impracticable, in canoes, of course. The lake narrows to fifteen or twenty miles at the northern extremity, and finally disappears in a wilderness of reeds. From Magungo, Baker traced up the Victoria Nile, to make sure that it was the same rapid stream which he crossed at Karuma, and was only arrested by the Murchison Falls, which, if not to be compared to the Victoria Falls of the Zambesi, will, perhaps, some day be celebrated for their beauty. During May and June he was desperately sick and imprisoned on Patooan Island, and from July to September was forced to tarry at Kisoona, near Kamrasi, no longer a counterfeited but too visible king, who coveted Baker's watch and double-barrelled rifle, and (barbaric impudence) his wife! On the 20th of September Ibrahim, the commander of the Turks, arrived, bringing a mail from England—not less than two years on its way. On the 15th of November they departed together for Shooa, the Turks laden with ivory, for which they were indebted to Baker's management and good faith. There they remained till February, 1865, when they pushed through to Gondokoro *via* the country of the Bari, who offered some ineffectual resistance. The plague had invaded the town from Khartoum, where an attempt on the part of the Egyptian Government to break up the slave-trade had brought on great mortality among its victims, and the frightful habits of the people had done the rest. Half of them perished, and every boat that left the place carried the plague with it. Baker carried it back from Gondokoro and had the misfortune to lose his most endeared follower, the boy Saat, who, in a climate which destroyed thirteen missionaries in six months, might have been claimed as a result of what Christianity may do for a heathen. But he was by nature "a grain of gold amidst the mire," as Baker calls him.

At Khartoum—not reached without the danger of a dam in the White Nile—our traveller learned of the death of Speke. Proceeding thence on the 30th of June for Berber, he crossed over to the Red Sea, and sailed up to Suez, his last peril being a personal encounter with sundry inhospitable Arabs under a shade tree, in which his umbrella and address were more than a match for their lances and swords. Mrs. Baker remained by him here, as in all other straits, and fortunately, unlike Mrs. Livingstone, returned with her husband to England and to friends.

This fascinating and in some respects model narrative ends as it began—as Livingstone, more missionary than explorer, ends and begins—with anathemas on the slave-trade, and earnest appeals to the British Government and all the civilized powers to put an end to it. Until this is done there can be no explorations, no missions, no commerce. Conscious of their crime against human nature, the traders seek to conceal their infernal operations under the respectable cloak of traffic in ivory. In effect they speculate in human destruction. They borrow money on the promise of ivory at half the market rates, collect each his band of cut-throats, with which he penetrates Soudan and forms an alliance with some negro chief. An enemy's town is surprised and burnt, the men all slaughtered, the women, children, and cattle captured. The cattle are sold to the chief for ivory, and this transaction is commonly succeeded by a quarrel, in which the ally and all his people are treated as were his enemies. The slaves are then sold to the men for wages, but always under a fictitious entry, as for clothing, etc. The slaves once landed at Khartoum are shipped to Arabia and Persia. The miseries thus entailed upon wide sections; the hostilities excited between otherwise naturally peaceful tribes; the barbarous desolation brought upon the rich and fertile country—are easily imagined. The mercenary Turks protect and stimulate the system, which a small garrison and a few gunboats might root up in a year. Unfortunately, everybody knows the delicate relation of Egypt to European politics, and until we have a change of rulers or of government in France it is at least doubtful if any steps will be taken to suppress the slave-trade not only here but on the east and west coast of Africa, where Livingstone found it carried on by the Portuguese. Mr. Baker

has removed the last excuse, ignorance, which remained to the non-interfering powers of Europe; and it is as honorable a service as the discovery for which he will be famous.

THE NORTH AMERICAN REVIEW FOR JULY.

THE "North American" for the current quarter, though it contains nothing especially striking, will be found a solid and valuable number. Muddled editors of newspapers and their muddled readers will be much indebted to the article entitled "The Mexican Question" for a good deal of light on a subject that sorely needed it. Most people have given up reading dispatches from the Rio Grande. We are all believers in the Monroe Doctrine, so far at any rate as concerns Maximilian, but indeed the very name of Mexican affairs has become enough to make people impatient. The Schleswig-Holstein question is not for unaided human powers, but there has seemed little to choose between that puzzle and the Mexican—the appearance, and disappearance, and reappearance of a host of politico-military scoundrels; constitutions of a day; revolution chronic; the thirty-seven (more or less) different forms of government between 1821 and Comonfort's time, each, on an average, lasting about twenty-seven days and sixteen hours less than a twelvemonth; since Comonfort's time the new revolutions, the interventions, the four hundred and odd battles, Saligny, Jecker's bonds, Almonte, Seward, Treaty of Soledad, Juarez, Sir Charles Wake, Miramon, Papal Nuncio, Drouyn de Lhuys, conventions, and what not—altogether it is not wonderful that the public mind is in a state of some confusion. Mr. Robinson is a warm partisan of the Liberal cause, but certainly little seems possible to be said for the clericals, or Napoleon's imperial agent, or the insolent French robbery.

Mr. Parton gives us a picture of John Randolph of Roanoke, which, whether exactly correct or not, is as vivid as his historical pictures are apt to be. He undertakes, also, to answer the question—how it happened that the extreme State-rights theory kept its life in the South long after it was dead in every Northern State. The Virginian orator, he says, could not have answered this question; but in his own person he was an answer to it, and this study of his character is intended to lead the reader into the heart of the mystery. In Mr. Parton's hands Randolph appears as an abolitionist by conviction, a man of genius, of desultory education, of unsound judgment—above all things a natural born Tory and hater of democratic ideas, and insanely proud of the commonwealth of Virginia. It is in these traits that we are to find the secret of his rabid Calhounism. Such, at any rate, we take to be Mr. Parton's view. We may be mistaken. Mr. Parton's strength seems not to lie in closely-connected reasoning with premise and conclusion visibly knit together. Randolph he has apparently succeeded in depicting. But in dealing with the problem which the article undertakes to solve, his success is much less, and for the reason, as it seems to us, that sufficient prominence is not given to the influence of slavery. State pride, it is true, made some men devotees of State rights; ignorant narrowness of view made many men incapable of entertaining the large idea of the nation existing behind all forms of State and Federal government; inborn Toryism made many men hate a general government sure, sooner or later, to be controlled by the innumerable mudsills of free communities; but that which made State rights a power in American politics, that which breathed the venomous breath of life into the "pernicious abstraction," was the peculiar institution of the South. Slavery was sustained by enactments municipal in character; the power which framed the sustaining enactments must be made supreme, as against a dangerous, distrusted Federal power. Randolph held the State-rights dogmas for another reason than that slavery leaned upon them; Jefferson held them for another reason than that, and another than Randolph's; but with the mass of slaveholders it was not so, nor was it so with the mass of people to whom slaveholders were able to dictate their politics. Had slavery died in 1831, Russell, of the *Times*, would not in 1861 have heard any wounded Confederate saying that it was State rights he died for; he would not have seen any Confederates, wounded or unwounded. As for that Southern willingness asserted by Russell, whom Parton confirms, to hand the South over to some scion of European royal stock, it is a thing not to be seriously spoken of. A man might talk such stuff in a bar-room, or over his claret with Russell, but the scion of royalty would have been an original fool—more than that, an hereditary fool with the accumulated stupidity of generations—who should have undertaken to come over here and be a monarch of Mississippians or Carolinians. The South was not wise in '61, but there are limits to folly. It is well enough to remark, by the way, that the invention of the phrase "masterly inactivity" is probably to be attributed to Sir James Mackintosh and not to Randolph.

Mr. Chauncey Wright, taking F. D. Maurice's last book as a text, furnishes an article entitled "The Right of Suffrage." He is severe upon Mr. Maurice, who, "as a preacher, is, of course, predisposed to divide the world into good and bad, and classify mankind on ethical principles,"—which is not philosophical. It is a predisposition which accounts for his breaking out into that rather astonishing cry of his: "So help me God, I do not mean to follow the will of a majority; I hope never to follow it, always to set it at naught." The reviewer assents, however, to Mr. Maurice's principal thesis—namely, that the right of representation belongs not to man as a human being, but to men as they exist in political classes. Soon taking leave of his author, however, he proceeds to discuss the nature of the right of suffrage, and to point out and give the reason for the wide difference between the American political practice and the "glittering generalities" of the American Declaration of Independence. The standing point of the writer is that of a utilitarian philosopher, and the essay, in this time of discussion of principles, is deserving of attention.

Mr. G. J. Adler, drawing upon the resources which recent French and German labors have placed within reach, gives us an interesting synopsis of the Hindoo epic, of which not many Americans have any but a vague knowledge. It is the immense "Mababharata," that most enormous of all literary works, unless we except the still more appalling Tartar national poem. That performance, we have somewhere heard, is seventeen miles long, and not the most patriotic of Kalmuks has ever committed more of it to memory than one and a half miles English. Of the purely poetic merits of the "Mahabharata," which some occidental critics have pronounced transcendent, especially as the catastrophe is reached, Mr. Adler has something to say, though much less than we should be glad to hear. But the essay will be welcomed for the information which it makes accessible.

The information contained in "English Poetry of the Period" was all easily accessible before, and there is nothing whatever to be learned from that article.

In striking contrast with the amazing, often monstrous, luxuriance of imagination displayed in the Hindoo mythology is the hide-bound sterility of invention which is found in the superstitions of the North American savages. Vanishing one by one on the least examination, their claims to any respect are pretty much gone. Mr. Parkman's instructive paper on "Indian Superstitions" forces the reader to Mr. Parkman's conclusion, that "the primitive Indian yielding his untutored homage to one all-pervading, omnipotent spirit is a dream of poets, rhetoricians, and sentimentalists."

In an article on "Sumptuary Laws" the teaching of Mill's essay "On Liberty" is broken up small for legislative Lycurguses, Solons by courtesy, from the rural districts.

"The Mechanics of Modern Warfare" compares the American iron clad navy with the French and the English. The palm is, of course, awarded to the United States, and, as we believe, correctly. It is *cum grano*, however, that one takes for the truth and the whole truth this statement made by the Secretary of the Navy. Mr. Welles is reporting upon the healthiness of seamen aboard iron-clads. "No wooden vessels," he says, "in any squadron throughout the world, can show an equal immunity from disease." Nobody asked Mr. Welles to prove quite so much as all that; he overdoes it. The facts on which he bases his assertion are that the *Saugus*, during four months, had but four cases of sickness on board, and the *Montauk*, during five and a half months, but one. Mr. Newton must know that it has been over and over again charged against Mr. Welles that, in order to make out a good health report for the monitors, he had their crews frequently changed, so that his report to Congress is honest enough as a statement of the health of certain seamen in the service of the United States, and is not honest enough as a report of the healthfulness of iron-clad vessels of the monitor pattern. The charge may be false, it ought to be, and it may be true—we fear it is—but, having been made, and relating to so important a matter, it should have got more notice in an article of this kind. The seaworthiness of the monitors is also dismissed after far too brief a consideration. A thorough discussion would have been well. It is true that the *Monadnock* has got into the South Pacific, and the *Miantonomah*, at the time of writing, was at Halifax on her way across the Atlantic. But even making two such trips as these does not perfectly prove the fitness of monitors to perform the duties of cruisers during an offensive war, and on that head we should have been glad to hear something further. Ramming and the use of torpedoes are but mentioned, and we hope may form the subject of a future paper.

The other long article is a lucidly written essay on "Moral Criteria and the Moral Sentiments," by G. W. Shaw. The critical notices of new books are much fewer than usual, but are quite as well as ever worth attention, and, in particular, we commend to the perusal of all interested in educational matters the long review of a very suggestive pamphlet, "The Daily Public School in the United States."

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of The Nation *should be addressed to the Editor.*

THE ADMISSION OF TENNESSEE.

Notwithstanding our ardent wish that Congress might have enforced reconstruction upon the basis of equal suffrage, yet since this policy has not been adopted, we are glad that such prompt and hearty action has been taken in respect to Tennessee. The terms of restoration are not as perfect as we hoped they might be, but such terms having been offered, it would not be honorable to refuse admittance to any State which has complied with them in good faith. Congress is not bound to keep these terms open for ever; it may rightfully impose new conditions next session upon the States yet disorganized; but it has no moral right to exclude a State which has fulfilled the conditions upon which, by clear implication, the majority of both Houses have offered to restore to the revolted States the privileges which they forfeited, while that offer remains unrevoked.

That restoration has been, in effect, offered to any State which would ratify the recent constitutional amendment, is a fact that cannot be doubted. No such proposition has been formally passed by Congress, it is true; but the amendment itself, when reported by the committee of fifteen, was accompanied by a bill promising restoration to every State adopting the amendment as soon as it should have been ratified by the requisite number of States; and this bill has been rejected simply because its terms were thought too stringent. The committee presented the amendment as the basis of reconstruction, and Congress, unquestionably, adopted it in the same sense. No other terms have been proposed by a majority of either House; and it is not to be supposed that Congress would have decided to adjourn (as it has substantially done) without proposing any terms at all. The report of the committee, the votes of Congress on incidental questions, the speeches of members, the universal understanding of the people, all combine to hold the Government to this obligation. And the pledge being made, it must be kept.

There are, moreover, peculiar reasons for dealing more liberally with Tennessee than with most of the other States, and for trusting her, more than the others, to deal fairly with the colored people. She has a large number of thoroughly loyal men among her permanent white population; men who have proved their fidelity upon the battle-field; who have been tested by the severest trials; who have suffered privation and persecution for the sake of the Union; and who can be trusted to be faithful to the end. These men have control of the State, though only a minority of the white population, and will call in the aid of the colored people rather than surrender the State to rebels. They are more likely to do this under the influence of persuasion than of compulsion; and, at any rate, it is an ungracious and unwelcome task to make hard terms with such true and faithful friends. If, after all, they abuse our confidence, we shall have all the more reason for exacting more stringent conditions from South Carolina and Mississippi.

Assuming that the action of Tennessee ought to be accepted as satisfactory, we think that the House of Representatives did well in making that acceptance prompt; except so far as this was effected by cutting off legitimate debate. The course of the two Houses, taken together, is just what the occasion demanded. The Lower House, by an act of eager and generous confidence, showed its anxiety to welcome the re-organized State on the first intimation of its compliance with the necessary terms. The Senate, by delaying its action until the news was fully confirmed, and there had been time to examine into the formality and legality of the ratification by Tennessee, protected the country from the danger of a mistake, either in fact or in law. Thus all the benefits of generosity and caution have been secured. The amendments of the Senate, moreover, assert in clear terms the vital principle at stake in the contest.

A vast amount of newspaper wisdom has been expended in showing the stultification of Congress in recognizing the validity of a ratification of the Constitutional Amendment made by a State legislature before Congress has admitted the existence of the State. It may suffice to say upon this point, that substantially the same thing has been done many times before. Whenever a new State has been admitted into the Union, senators and representatives who were elected before its admission have been received on its behalf into Congress. California organized herself in December, 1849, and her Legislature passed many laws at its first session, which adjourned months before the act of Congress admitting it into the Union, in September, 1850. It has never been hinted that the acts of the Legislature prior to that date were not valid. Every new State has been admitted under a constitution framed by a convention, while the State itself had no existence, and has been governed by officers chosen in like manner. Nobody ever doubted that the act of Congress admitting the State made all these things valid by relation, to use a legal phrase. It is well settled that Congress has power to pass a retroactive law, except in criminal cases. If, then, it could, in September, 1850, give validity to the laws of inchoate California, passed in December, 1849, why can it not give validity on the 21st of July to a resolution adopted by the Legislature of Tennessee on the 19th? It has been said that its action in the former case only prejudiced individuals, while in the latter case it prejudices the rights of States. But we know of no clause in the Constitution or principle of law which makes the rights of the States more sacred than the rights of individuals in dealing with a question like this. It has been fully determined that, as between man and man, Congress has absolute power to determine the validity of a State government, and we cannot possibly discern any principle upon which its decision should not be equally binding upon the States. And if, as is universally conceded, it may recognize the existence of a State with retroactive effect upon the rights of John Doe and Richard Roe, we cannot see how it is to be prevented from doing the same thing with the same effect upon the rights of New York and Ohio.

SHORT WARS.

Whether the war in Europe be at this moment terminated or not, no one now doubts that it cannot last many months, perhaps not even many weeks longer; and even if it be protracted until September, it will, if it end then, be an almost unprecedentedly short war. Not shorter, perhaps, than the war of 1859 in Italy, but it must be remembered that that struggle was brought to a close long before the full strength of either of the combatants had been tried, or before either had found good military reasons to despair of the issue, by means of a hasty negotiation between the two emperors, to which, if report speaks truly, they were driven by a nervous shrinking from the horrors of the battle-field.

If peace be made even now between Austria and Prussia, however, it will be due to the overthrow of one of the combatants—an overthrow so complete as to make further resistance useless except as a means of securing somewhat better terms, or as a salve for the wounded pride of a great and unfortunate house; so that it may be said that we have seen the fall of one of the oldest of European monarchies, which has come out of the bloodiest wars of nearly a thousand years without any very serious damage either in power or dignity, decided in a single campaign of four weeks, and that without any master strokes of genius on the part of the victor, like Jena or Austerlitz, but by simple hard fighting and vigorous marching.

There could hardly be a more striking illustration than this war affords of the extent to which the progress of science and the increase of wealth amongst modern nations have diminished the waste and destructiveness of wars by diminishing their duration. In fact, every one of the discoveries and appliances which *seem* likely to render wars bloodier, are found, in practice, to render them less bloody and less injurious to property and to public morals. A century ago, a struggle in Germany, such as that which we are now witnessing, would, probably, have lasted ten years, and have devastated the whole country. Prussia could never have got forces together in such numbers at the outset, or have moved with such rapidity, as to have paralyzed the smaller states. The latter would, probably, have either got off their troops to join Austria, or have been able to march them about the

country, levying contributions, and doing more or less fighting on their own account, long before Prussia could have squelched them. On the other hand, neither Austria nor Prussia could have brought together within a few weeks of the opening of the war, on one battle-field in Bohemia, the whole power of their respective monarchies. If they could have met with one quarter of their forces, it would, with the means of transport, and the kind of roads, and the commissariat then existing, have been considered a great feat; and one battle would have decided nothing. The vanquished would have been badly hurt, but would have drawn off and got ready for another trial without abating a jot of heart or hope. Any one who reads the history of the Seven Years' War, and the feats which Frederick was able to perform, will see that, in these days of railroads and high cultivation, well-filled treasuries, rich tax-payers, electric telegraphs, and macadamized roads, he would in two years have either destroyed his enemies, or been destroyed by them. In the Thirty Years' War, even on such fields as Leipzic and Lützen, neither party was ever able to bring over 40,000 men into line of battle. In our own Revolutionary war, 15,000 men would have been an enormous force. We doubt if Washington was ever able to muster in action nearly that number. That which made Napoleon's wars so terrific, and so short and decisive, and made him a "shape of dread" to the nations, was that he first, in modern times, devised means of raising and equipping and marching armies which really represented the strength of the people whom he ruled.

In the Middle Ages, governments, by drawing heavily on their feudal inferiors, sometimes got tolerably large armies together, but they rarely kept the field more than one season, inasmuch as they were essentially a militia, and had affairs at home to attend to. The breaking up was hastened, too, by the fact that they lived off the country, and the agriculture of that period was not of a nature to make "living off the country" very luxurious or even abundant. The Turks, in the fifteenth and sixteenth centuries, appeared in Central Europe with the largest armies ever witnessed in those regions in modern times, but they never, we believe, kept the field over two campaigns, and they were able to keep it in such large numbers so long owing mainly to their immense force of light cavalry, which enabled them to lay the country for fifty miles on each side of their line of march under contributions, and spread terror for double that distance. The Spaniards were the first to organize a commissariat, and provide a military chest, and pay their way in the field, and thus secure discipline amongst their troops, and it was undoubtedly his which gave the Spanish infantry the prestige which it preserved unbroken down to the bloody and disastrous day of Rocroi. But the French troops before and in the earlier part of Louis XIV.'s reign, and until Louvois had reformed the army, were disorderly, ill-fed bands of marauders, whose exploits every summer, great as they were considered at that time, were no measure of the military capacity of the French nation. The men were the dregs of the population, and their officers lived by cheating them. In the field the army spent twice as much time in robbing as in military operations. The consequence of these defects of organization was that wars dragged on year after year with prodigious loss of life, destroying industry, laying the country waste, familiarizing the people, often through a whole generation, with rapine and bloodshed, and breaking almost every bond that holds society together. There is little doubt that the traces of the Thirty Years' War can still be detected in the condition of the German peasantry, and there is, perhaps, not a single state in Europe, except England, whose social and political progress has not been profoundly affected by the length and indecisiveness of the wars in which it has borne a part, and of which its soil has been the theatre.

In our day the advance of science, the growth of wealth, and the increasing efficiency of the machinery of government have, happily for mankind, made it possible to bring the whole strength of a people into the field at once. Armies are raised by an exact and vigorous conscription, which secures at once the force of the country. Their health and efficiency are secured by good food, good clothes, and good hospitals, all of which are due to the greater effectiveness and regularity of modern taxation. Railroads and macadamized roads enable them, on the outbreak of hostilities, to be hurled over distances, in one week, which it would have taken them, in Napoleon's time, six weeks to traverse, and they are thus brought face to face with the enemy in the best condition, while the telegraph enables immense combinations to be effected, which, when communication was altogether dependent on mounted couriers, would have been utterly impossible. The improvements in modern firearms, also, enables the amount of destruction necessary to win a battle to be accomplished in half the time, as we see in the case of the Prussian needle-gun, so that there is little difficulty now in deciding a quarrel by one great battle and a few "combats," if the territory of the belligerents is not too far apart, as in the case of the allies and Russians in 1854, when the conditions of warfare were very much what they were one hundred years ago.

Our own war may seem to furnish an exception to this rule, but it is only in appearance. That war was not from the outset carried on on military principles. During the first year at least the raising of armies and their movements in the field were governed by political rather than by military considerations, and the whole strength of the North was not then called out. Moreover, until a very late period in the struggle no attempt was made to induce the South to concentrate its forces for a decisive trial of skill and strength. The "anaconda" policy, and the marching up and down, in remote corners, of such heroes as General Banks, produced much the same effect, in spite of the unparalleled efficiency of our commissariat and ordnance and quartermaster's departments, as were produced in bye-gone days in Europe by bad roads, and scanty supplies, and difficult recruiting. The struggle was thus prolonged, engagements multiplied, and the circle of suffering and devastation dreadfully widened. Had it been possible to put the whole military strength of the North and South face to face in Virginia, in the very first year, and have them pound away at each other week after week, as they did under Grant and Lee in the Wilderness, the slaughter would have been frightful, and all the old ladies would have cried shame, but there is no question that humanity and civilization would have gained immensely by the rapidity with which a final decision would thus have been reached. Dreadful as are the scenes that are witnessed on a great battle-field, and awful as are the rows of figures which it furnishes to the newspapers, the real misery of war must be sought elsewhere. It is the sick who perish by inches in the hospitals month after month, the farmer who broods in despair spring after spring over his wasted fields, the women and children who lay their heads in terror night after night on their pillows, who drink the cup to the dregs. It is in the widespread sense of insecurity which long wars diffuse, the familiarity with violence and disorder which they breed, and the air of hopelessness with which they surround the pursuits of peaceful and steady industry that their real mischief is to be found.

THE HARVEY CASE.

Congress has just been doing one of those things which majorities long in possession of power are very apt to do, and which never fail, in the long run, to help to drive them out of power. Mr. James Harvey, our Minister to Portugal, wrote, some time ago, a very foolish letter to Mr. Seward, praising that gentleman and the President and his "policy" "to the skies," in that style of fulsome laudation with which "Our Washington Correspondent" has made the public so familiar. The rhetoric, as might be expected, is tawdry and detestable. The President's opponents are compared to the Duke of Alva and the Inquisition, the negro receives the regular hack politician's sneer, and, in fact, nothing is left unsaid either by way of abuse of those who disagree with Mr. Johnson, or of praise of Mr. Johnson himself, that seemed necessary to Mr. Harvey, experienced as he is in the politician's arts, to make himself "all right" with his superiors.

But the letter was a private letter, addressed to "his dear governor," Mr. Seward. It was an excessively silly and weak letter, and "the governor," having read it, ought to have torn it across the middle, put the fragments gently in the waste basket, and then have written down the name of James E. Harvey on the list of the faithful admirers of "the President's policy." He, however, showed it to Mr. Johnson, and that gentleman was struck with its arguments, and found its balderdash

so soothing, that he requested "the governor" to publish it, to which "the governor," weakly and foolishly, and without any regard to the interests or feelings of Mr. Harvey, assented.

The result was, of course, that Congress was anything but edified by seeing this wholesale abuse of itself and its opinions from the pen of a man whom it pays, and whose official position abroad makes him, in an especial manner, the representative of the whole nation, and not of any party in the nation, binds him to a strict neutrality in domestic politics, and to a rigid and equal respect of all branches of the national Government. Had Mr. Harvey printed and published such a letter, we admit he would have been worthy of any punishment which Congress could, with a due regard to its own dignity, inflict on him. As the matter stands, even, we admit we have not a particle of sympathy for him. The worst that can possibly happen our rampant diplomatists abroad, for dabbling in things that do not concern them, is, in our opinion, not a whit too bad. So that what we say in reprobation of the action of Congress we say not from any regard for him, but from a regard for Congress itself. It has thought proper to pass a bill stopping Mr. Harvey's salary, the sole justification for this unheard-of step being that he had expressed opinions which he had a perfect right to hold, in a private letter to two gentlemen, so fond of flattery and so indifferent to the proprieties of private intercourse as to publish the letter without the writer's permission. As far as the justice of the matter is concerned, it is Mr. Seward's salary, and not Mr. Harvey's, that ought to be stopped, for it is he who has committed the offence against Congress. We have yet to learn that it is a crime for an American citizen to write to a friend that he considers Mr. Johnson a king of men, and all his enemies knaves and humbugs; or that, if it be a crime, that Congress has any right to punish it by a heavy fine or dismissal from office. To all honorable men, a private letter published without the author's consent, except in a judicial proceeding, ought to be as if it had never been written. If it does mischief, the person to blame is the person who has made it public.

We have frequently had occasion during the past year to condemn what we considered Mr. Johnson's usurpation of power. We have condemned in an especial manner his attempts, present and prospective, to use his appointing power either as a means of rewarding his friends or punishing his enemies. We have supported Congress in its efforts to take that power away from him. We are, therefore, all the more shocked and grieved to find Congress committing the very offences which have called down so much reprobation on Mr. Johnson. They have, in attempting to drive Mr. Harvey out of his office, sought to punish him for the private expression of political opinions, and they do this at the very time when they are talking of sitting all summer for the purpose of preventing the President from pursuing a similar course. Moreover, in stopping Mr. Harvey's salary by bill, they inflict a heavy fine on an absent man for an offence unknown to the law, and which we confidently trust will, in America, never be known to the law; in other words, grossly and scandalously usurp judicial functions and pass sentence by a party vote.

Perhaps the worst feature in the whole case was Mr. Spalding's use of "the previous question" to prevent Mr. Raymond being heard on Mr. Harvey's behalf. A more discreditable display of tyranny or greater abuse of parliamentary forms is not often to be met with in legislative annals. The "previous question" has been prostituted often enough this session to the strangling of discussion on questions of the highest public interest. The public has been lenient about it, owing to the peculiar circumstances in which the majority has been placed. But there is a limit to public patience. Nothing will preserve for the majority, in spite of its zeal and its services, either the respect or confidence of the country but a rigid respect for law, for usage, and for forms. If it has got to the point of supposing that its zeal for equal rights at the South will palliate indifference to any of these things, or will justify its fighting Mr. Johnson with his own weapons, it will find itself, next December, shorn of everything which now makes it respectable except its good intentions. Most intelligent men will advise it to give Mr. Harvey his salary and deprive him of the honors of martyrdom. If a buncombe letter from such a man has to be punished by act of Congress, there must be something rotten in the state.

THE AUSTRIAN M'CLELLAN.

On the 4th of July Marshal Benedek, commander-in-chief of the army of the North, is said to have been removed from command by order of the Emperor, and at the same time Generals Clam-Gallas, Henikstein, and Krismanitsch were put under arrest and ordered to report in Vienna. The Emperor quite lost the little stock of patience and reason that he possesses, and, irritated beyond measure by the more than seven days of continuous defeat and disaster that his petted army had suffered, with one stroke removed the men for whom his own mismanagement had rendered victory impossible and summoned them before him. It is reported on good authority that he wishes to take command of his army in person, but is dissuaded from so disastrous a measure only by the most strenuous exertions of his family and cabinet. With the Emperor at its head, the army of the North would lead the Prussians into Vienna as certainly and as uninterruptedly as the needle follows its magnet.

The magnitude of his command and responsibility, as well as the brevity and misfortunes of his career, will make interesting a few facts of the history of the late general-in-chief. Marshal Louis von Benedek was born in Oldenburg, in Hungary, in 1804, and is the son of a physician. What motive of policy, in addition to the soldier's own merits, determined the Emperor in selecting a Hungarian for this high office, perhaps not even the Marshal could tell. He went through the Imperial Military Academy at Neustadt, graduating when he was eighteen, and entered the army as a cadet. His Hungarian origin seems to have given him no sympathies for the Poles, for in 1846, as a colonel, he won a decided victory over them at Gdow, for which he was honored with the cross of Leopold and introduced at court. In 1848 he rendered distinguished service, still a colonel, in Italy under Radetsky, who recommended him for promotion to the Order of Maria Theresa. In the same year, as a major-general in command of a brigade, he turned his sword against his native Hungary, and in the battle of Comorn contributed largely to the defeat of his countryman, Klapka. He was particularly conspicuous in the passage of the Theiss, where he had command of two brigades. After serving again in Italy, and again in Poland, he was sent to Italy a third time, where he commanded the rearguard in the retreat from Milan to the Mincio, and the right wing in the battle of Solferino. From April to October, 1860, he succeeded the Archduke Albert as Governor-General of Hungary; but his previous conduct had rendered him distasteful to the Hungarians, they were intractable under him, and he was recalled and sent to Italy as commander of the army and province of Venetia, where he remained until he was called to the chief command of the army of the North, where he now is.

A correspondent writing from Olmütz describes his personal appearance as follows: "A man of short stature, powerful frame, rather lean, quick in all his movements, rapid and energetic in his walk, head always erect, so that, under the thick, dark-brown eyebrows, his great, fiery, piercing eyes see everywhere and everything. His face is small, narrow at the chin, and, by his long residence in Italy, become very swarthy. He wears a small whisker, in which, as in his hair, appear already many white hairs. But, before everything else, next to his eyes, is Benedek to be recognized by his moustache. This he nurtures most carefully, first preparing it with a thick pomade, then twisting it into rolls, and finally turning the points upward, so that his nose appears as if set in a frame. When he is in the street, and his hands are not occupied, he is certain to be twisting his moustache. He always returns the salute of his soldiers with a friendly nod. In politics Benedek is—an Austrian soldier. He sat in the House of Lords, but it appeared to give him little pleasure. Whenever he was in Vienna he came punctually to the session, and listened attentively but with small satisfaction."

For what share of the accumulated dishonor and disaster that have overtaken the Austrian army within two weeks past in Bohemia Marshal Benedek is personally responsible, and what amount must be laid at the door of the Imperial palace, perhaps not even the future historian will be able to determine. But certain it is that Benedek had the almost unlimited confidence of the Emperor when he took command, which makes it highly probable that in matters purely military he acted principally upon his own motion. But it ought to be

understood, as a salvo for Benedek, that he has never had so great an army under his command in Bohemia as is popularly supposed. In the first place, the old dread of Italy, where Austria has so often suffered defeat, caused the superstitious Emperor to divert thither more troops than were necessary. There is good authority for saying that there are 100,000 Austrian soldiers in Venetia—at least 40,000 more than are needed to defend that province against the fiery but unsteady Italians. Then, too, there are large detachments scattered through Hungary and along the Silesian and Polish borders, one-third of whom might have been spared to be massed in Bohemia. The truth is, the Austrians, with their usual Bœotian impenetrability, had entirely underrated the Prussian strength and daring, and were quite taken by surprise when the latter, having swallowed up Saxony at a mouthful, debouched from the mountains of Silesia into Bohemia with such fierce audacity. Instead, then, of the 380,000 men that Benedek was supposed to have wherewith to meet an attack, or, much more probably, it it was thought, to make a leisurely advance through Saxony, and then to press the Prussians slowly back upon Berlin by the sheer weight of his masses, he had not much, if any, over 225,000. To this number the retreating Saxons added one corps, about 50,000 men. But still he had more than the Prussians, and, with good generalship, might have kept the decision of the campaign in his hands.

The second and chief blunder of the Austrian campaign thus far has consisted in waiting too long for the middle states to get out and set in order their little contributions of bandbox warriors, while the Prussians were taking strongholds and sifting and compacting their new regiments by hard marches through Saxony and Silesia. All this time the Austrians lay in Bohemia, and the green troops improved but slowly. Napoleon never wished any further discipline for his raw levies than could be given to them in the course of a slow, steady march from France to the scene of his operations on the Continent. Many of the troops of both armies were new recruits, and the Prussians wisely adopted the best means of putting theirs in fighting trim by advancing the whole, instead of half, the distance to meet the enemy. Neither did the Austrians get any considerable accessions to their forces by waiting, since the Prussians, by their activity, cut off all except the Saxons from reaching Bohemia. This delay, however, is attributable to the Emperor, not to Benedek.

But, in the strictly military plan of the campaign, Benedek stands accused of gross errors. His principal one consisted in keeping his army too much scattered and fighting it by corps, and against odds. In this manner he managed to bring the Sixth against a heavier force, on the 27th, at Skalitz, and got it badly shattered; the Tenth in the same way, two days later, near Königinhof; the Third, on the 1st of July, on the Elbe; the First, between heavy cross-fires, at Münchengrätz, on the 28th; and left the Saxons, the next day, completely cut off, for a time, from the rest of the army. The troops could say with truth, in many instances, as they do, that they were outnumbered. Still we incline to believe that they reported themselves outnumbered oftener than was the fact, from the astonishing rapidity with which the Prussian infantry fired with their improved muskets. In this lies one of the chief secrets of the almost uninterrupted success of the Prussians in Bohemia. The "flint needle-musket" (Zündnadelgewehr) has spread as much terror in the Austrian ranks as did our gunboats, for a year or two, among the Southerners. This musket is breech-loading, though not revolving. A section of the breech, about six inches in length, can be removed by means of a fixture similar in principle to that by which the bayonet is removed from the muzzle of the Springfield musket. When the piece has been fired the soldier brings it down a little, and, by two movements of a little arm ending in a knob, which can be made in a second, unfixes the section, drops the butt of the gun on the ground, in two seconds more inserts the cartridge in the forward end of the section, brings up his piece, claps in the section, and, by two movements of the little arm, has, at the same time, fixed the section and shoved the cartridge forward into the muzzle. Another movement sets back the hammer, and he is ready to fire. The average rate of firing is about ten times a minute, and the universal testimony of the wounded Austrians is, that they cannot fire oftener than once while the Prussian fires five times. The destructive effect of the needle-gun is great, and gives the Prussians as much advantage over the Austrians as the rifled cannon of the French gave them at Magenta and Solferino. If the Austrians will use their old 8-pounder smooth-bores and the common musket, they must expect to make poor history.

It smacks somewhat of the bulletins that used to come up from the banks of the Potomac, and the editorials that backed them up, to read in one of Benedek's despatches to the Emperor the following: "Continued storms of rain kept the powder-smoke on the ground, rendering all sure vision impossible. Favored thereby, the enemy succeeded in pressing forward into our position in Chlum. Suddenly and unexpectedly he poured out from there a heavy fire upon our flank and rear, the troops wavered, and nothing could prevent them from falling back." It would seem from this that the Prussians have also "a superior article" of spy-glasses, enabling them to penetrate smoke that to the Austrians is only thick darkness.

The rule of strategy which would have required Benedek to meet the Prussians in front of the Silesian range of mountains instead of in the rear, is too obvious to need comment. If he had gone over to fight instead of staying on this side, it would not now be necessary for the Viennese to be fortifying their city.

A SEVEN DAYS' WAR.

It is hardly possible for the mind to follow events in their terrible rapidity. On the 15th of June the majority of the German Bund at Frankfort votes the mobilization of the federal armies. On the 16th Prussia secedes from the confederation, and her armies, already under marching orders, invade Hanover and Saxony. No resistance is offered to them: the Hanoverian army retreats with the King in the greatest haste. The Saxon army takes refuge in Bohemia. On the 24th June the King of Italy crosses the Mincio with 100,000 men; he attacks the positions which are between Peschiera and Verona, with the hope of isolating Peschiera and of cutting afterwards the communications of Verona with Tyrol. But the Archduke Albrecht storms the positions which are occupied by the Italians, and obliges them to recross the Mincio. This battle goes by the name of Custozza.

On the 26th of June the Prussians, already masters of Saxony, determine upon entering Bohemia. They have two armies ready: the army of the Elbe, under the command of Prince Frederick, and the army of the Oder in Silesia, under the command of the Crown Prince. The Austrian army, under Benedek, occupies Bohemia from Theresienstadt to Olmütz. They have made every preparation against an invasion of Bohemia by the valley of the Elbe or by Upper Silesia. But the two Prussian armies choose a more difficult but more central road. They cross the mountainous frontier of Bohemia in two great columns, by the roads which follow the eastern and western ends of the Riesengebirge. Had Benedek been able to destroy one of the two armies issuing from the mountains, he might have secured victory to Austria. But his troops are spread everywhere, and during three days try in vain to oppose the advancing columns of the Prussians; the needle-gun of the Prussian soldiers everywhere gives them the advantage. In all the battle-fields one Prussian is found dead for six Austrians. The two armies of Prince Frederick and of the Crown Prince achieve their converging movement on the 29th June; they meet at Jitschin (Jicin, in Slavonic) which they take by storm. Benedek retreats towards Josephstadt; on the 3d July he tries again, with the whole army, the fortune of arms, but the Prussians are again victorious at Sadowa, and the Austrian army, utterly demoralized, is obliged to fall back on the passes of Moravia. In this short campaign I estimate that the Austrians have at least lost 120,000 men in killed, wounded, and prisoners.

On the 5th of July the French *Moniteur* announces that the Emperor of Austria abandons Venetia to the Emperor of France, and accepts his mediation for all the pending difficulties in Germany; thus a new and terrible lesson is given to Austria. It has always been her misfortune to have to carry on war at the same time in Germany and in Italy. Whoever reads her history will see that her German victories have always been made sterile by her defeats in Italy, and reciprocally. It so happened twice under Napoleon I. and so it happens again now. The victory of Custozza has been of no avail, and the men who, under

Albrecht, won it in Venetia would have been better employed in defending an old province of the Austrian territory against the Prussian invaders. But why did not Francis II. abandon Venetia to the Italians, or to the Prussians, who have conquered it in Bohemia for the Italians? Now that Italy is to be united, independent, and free, there will be no reason why Italy and Austria should be enemies; it would, therefore, have been more generous to hand Venetia directly over to Victor Emanuel. This is, I think, the first instance in which a territory is abandoned by a belligerent, not to another belligerent, but to a neutral.

This phenomenon, however, has an explanation. By giving Venetia to Napoleon III. Austria wished to prove that his was not a real neutrality; she wished to place upon him the responsibility of the war and of the present complications; and by accepting Venetia Napoleon III. implicitly accepts this responsibility. At the same time the cession made to Napoleon III., and the acceptance of his mediation, are intended to create difficulties between the French Emperor and Bismark. The triumph of the Prussians has been too complete, too terrific, too overwhelming, to satisfy completely the French Emperor. His desire must be now to put a stop to this succession of Prussian victories. But will the Prussians consent to this? Prussia has been, as it were, revealed to itself, and so has the needle-gun. But much as I value the needle-gun, it is folly to attribute *all* the success of Prussia to it; the needle-gun is only good in the hands of calm and disciplined soldiers; the strategy of the Prussian army has been as perfect as its armament. The truth, disagreeable as it may be to many, must be acknowledged: by its traditions, its organization, its intelligence, the Prussian army is a formidable army; and the Emperor of the French, perhaps, now regrets having led this army on the path of conquest. Why did *he* tell Prussia that her frontiers were unsatisfactory? Why did *he* invite her to remodel the German constitution? Why did *he* unite her with Italy against Austria? Bismark knows that the advantage of the Prussian armament must be a temporary one, as all the nations in the world will now rapidly remodel theirs and follow her lead. She may be inclined to use this temporary advantage even against the French Emperor. She has deceivedAustria in her Danish duchies; she may deceive the French Emperor on the Rhine.

Now that Italy is satisfied, the Italian question is thrown into the background; but the German question remains with all its difficulties.

A Frenchman.

July 7, 1866.

PARIS GOSSIP.

Paris, July 6, 1866.

The glorious news of the cession ot Venetia by the Emperor Francis Joseph to the Emperor Napoleon, and of the virtual termination of the horrible slaughter which the Prussians and Austrians have been inflicting on one another, has been received here with enthusiastic delight, for no one doubts that the armistice which, at the request of the Kaiser, the modern Sphinx has demanded of the Prussian and Italian Governments, will be followed by a diplomatic settlement of the questions which have given rise to the war now desolating so large a portion of Central Europe. The gay world will now be able to take its flight to the German spas, and the alleys of the Bois de Boulogne, now so animated, will be given up to the birds of passage, principally English, who flock to Paris during the long days of the year. The giving of dinners, of which the fashion has been imported of late, with so many other things, from "perfidious Albion," has gone on merrily during the past week—dinners on a very small scale as regards the number of the guests, but of the most exquisite luxuriousness in point of fare and service.

The re-appearance of cholera on so many points of Europe bodes ill for the enjoyableness of the next six months. At Amiens the deaths have risen to sixty-seven daily, and great alarm has been felt by the townspeople. The Empress, anxious to impart, by her example, her belief that this dreaded disease is not contagious, set off on Wednesday, attended by two or three ladies and gentlemen of her household, for Amiens, where she spent the day in visiting the cholera wards of the various hospitals, addressing a kind word to all the patients, and distributing the contents of the great baskets of medicines, clothing, and comforts she had brought with her from Paris. She was attended in these visits by the authorities of the various establishments. She visited and examined, with equal intelligence and care, all the arrangements of the cholera wards. On leaving one of the hospitals she was shown two young children who had just been orphaned by the terrible disease, and adopted them on the spot. The news of her visit having spread through the town, large crowds soon collected to welcome her, and she was received, on leaving the hospitals and on returning to the station, with the warmest acclamations. The Emperor was to have accompanied her on this errand of charity, but was prevented by the work of mediation so suddenly placed in his hands, and which he is proceeding to accomplish with his usual vigor and celerity.

The great American anniversary of the Fourth of July has been celebrated by a fête in the Pré Catalan, that charming enclosure in the Bois de Boulogne, so often alluded to in these letters as the scene of concerts, balls, and other "genteel" amusements, to say nothing of milk-drinking and occasional illuminations. On the present occasion the fête was got up by subscription, under the auspices of a committee, including Dr. Evans, Messrs. Munroe, Tucker, Lherbette, Kane, and other leading members of the American colony. The usual attractions of the beautiful garden in question were greatly enhanced by the loan of a great quantity of magnificent plants and flowers, in token of good-will, from the city conservatories, by the Prefect of the Seine. Large tents for dancing and for refreshment were arranged on various points of the ground, others being set apart as shawl-rooms. These tents were profusely decorated with American and French flags; and portraits of Washington and the present Emperor of the French were suspended in the dancing tent. The American ladies, so famed for their beauty, and whose love of dress is conspicuous even in Paris, came out in great force, and constituted one of the most ornamental features of the display. An immense number of children were present, and evidently enjoyed themselves to their hearts' content, dancing with a spirit and zeal that would have defied a far higher temperature than that under which we have been shivering for a week past, and delighted out of their youthful wits by the delightful tombola, so skillfully managed that every child got not only "something," but "something" that generally proved to be exactly what the getter had been most wishing for. The fête opened at two P. M., the gentlemen of the committee acting as stewards, and receiving the guests as they arrived. Among those specially invited were—Mr. Bigelow, the American Minister, and his family; Mr. Fox, the Assistant-Secretary of War; Captain Beaumont (of the monitor *Miantonomah*, now lying at Cherbourg), with several of his officers; Mr. Beckwith, U. S. Commissioner for the great exhibition of next year; the Rev. Drs. Hitchcock, Thompson, Eldridge, Davenport, Smith, and Cummins, the latter of these gentlemen having unwittingly caused no little disappointment in this city, as, being advertised to preach, a Sunday or two ago, in one of the American churches, a number of persons rushed to hear him, under the delusive impression that he was the Dr. *Cumming* whose name has been so long and so prominently before the church-going public of London, in connection with the Beast, the number 666, and the other unexplained problems of the apocalyptic vision. These gentlemen were accompanied by their families, and seemed to enjoy the scene as heartily as their non-clerical friends.

At the request of Dr. Evans, the Emperor allowed the Prince Imperial to honor the fête with his presence, a favor which, notwithstanding the Emperor's well-known friendliness to the United States, he certainly would not have accorded to any one but the worthy doctor, who occupies so high a place in the Imperial favor. His little highness arrived with his tutor, M. Mounier, alighting from his carriage at the garden gates, like the other guests, and being received there by Dr. Evans and Mr. Tucker. The guests had hastily formed into line to welcome their "august" little visitor, who walked onwards to the seat provided for him, bowing and smiling as he went, with a mixture of imperial dignity and childish pleasure very pretty to see; a fine little fellow, with a bright, intelligent face and ready smile, graceful and easy in his movements, with all the self-possession of an emperor *en herbe*, but with a thoroughly boyish appreciation of whatever may be going on. The children present danced a quadrille, of which his little

highness was a delighted spectator, and in which he would probably not have been sorry to join. Refreshments were handed round during the afternoon, and a sumptuous repast was laid out at half-past five in the refreshment tent. The chairman of the committee, Mr. Tucker, then alluded, in a brief speech, to the associations of the day which they had assembled to celebrate, and called upon Mr. John Jay, of New York, for an address. This demand was complied with by Mr. Jay in a very witty and brilliant speech on "The American Invasion of the Old World," which elicited continual laughter, and wound up amidst immense applause. Mr. Jay was followed by Professor Hitchcock, Rev. J. P. Thompson, Pastor Monod, of this city, Governor Cox, of Maryland, and others of the guests, and, after the speeches, Mr. Hornor read some very striking verses written by him for the occasion, which were received with unanimous plaudits by all present, after which promenading and dancing were resumed, to the light of the illuminations among the trees and of the stars above them, and kept up with unflagging spirit until near midnight, when the company separated.

The evening lectures on scientific and literary subjects which have, of late, been gaining favor in this city, under the title of *conferences*, have found a generous patron in M. Bischoffsheim, a rich banker here, who has built and presented to a society, formed for the purpose of doing honor to the donation, a fine hall at the corner of the Rue Scribe and the Rue des Mathurins, which hall is to be used exclusively for lecturing, the entrance fees to be low, and the profits to be devoted to enterprises of popular amusement and instruction. The new Athenæum (as it is to be called) will be open every evening from half-past eight to half-past ten; it numbers, among the members of its committee, M. Ernest Legouvé, Jules Simon, Laboulaye, Uhlbach, and de Rémusat, and will give salaries of varying amounts to the *savans* and *littérateurs* who will lecture regularly within its walls, and medals to those who lecture occasionally, or who decline any other species of remuneration.

We are beginning a new experiment here in the "regulation" of cabs. The monopoly of cab-letting, which has hitherto been maintained in favor of the great "Cab Company," is overthrown; and any one who chooses to do so may set up a cab. Unhappily for the public, the rates of fare are raised. The law has fixed a maximum price, above which "cabby" may not screw his victims; but derisively "authorizes" him to accept lower terms if he pleases to do so. As though a Paris cabman would ever consent, under any possible circumstances, to take a centime less than the law permits! An immense number of vehicles, some new and smart, some old and musty, have been added since the new law came into play to those already in use in the streets of Paris; and very peculiar specimens of the genus Jehu are to be found in connection with these additional vehicles. It is asserted, moreover, that a practical joker, in order to test the extent of the new "liberty of driving," astounded the *habitués* of the Passage de l'Opéra by driving, on the day in which the new law came into operation, a carriage and pair down the whole length of that favorite but narrow lounging-place.

THE GIFT OF THE GAB.

General Sherman made a few observations the other day at Dartmouth Commencement on Congressional debating, which express the secret feeling of, we venture to say, nine out of every ten intelligent men one meets. He said he had asked Chief-Justice Chase whether, when he was in Congress, "he ever changed his vote by reason of any debate he ever listened to, and he answered that he did not believe he ever did." There is, in fact, all over the country a growing impression that Congressional debates are farces intended to amuse or befog the country people, and that everybody who takes part in them, and listens to them, knows well that they will exercise no influence on legislation, and that the sole purpose they serve is to show constituents that their member is a "live man," and has not deserted his party. The discussions in the House are, in fact, very much like the duels one sees on the stage, in which there is a prodigious clicking of foils and a good deal of wriggling of the body, leading children and servant girls to fear that when one of the combatants flops on his back, and tosses his manly legs in the air, it is all over with him. But the regular attendants and the intelligent public generally know well that it is all gammon, and that the whole thing was settled at the rehearsal, and that the dead Smith will that night eat a heartier supper than ever in consequence of the thrusts of the foeman's steel. Of the real parliamentary fighting—of the controversies which settle votes, trace outlines of policy, in which arguments *pro* and *con* are produced, and in which members show the real stuff they are made of, the country sees no more and knows no more than if it were governed by the Aulic Council or by the British Cabinet. A member may sit in Congress ten years without giving his constituents, by anything he says or does there, the least clue to his real qualities as a legislator. Legislation is all prepared in secret conclave, or, in other words, in committee. The bill is produced ready cut and dry, and the more important it is, the later in the session; and, with the aid of "the previous question," it is "rushed through" before the public have had time to read it, much less think about it. The speeches the members make during its passage are not speeches. The other members do not make even a show of listening to them. They are generally ponderous essays, written out beforehand, with great elaboration, with the aid of "Plutarch's Lives" and "Smith's Dictionary," from which are drawn the classical allusions. The similes and the grand moral sentiments come from the swelling bosoms of the speakers. No matter what the subject may be, they commence its treatment by ascending to the dawn of history, and then flounder down through the ages, to the bill or resolution under discussion, followed helter skelter by nearly every conqueror and sage of antiquity.

Of the English of these compositions we have not space here to speak. Those woh peruse them in the pamphlet form in which they are distributed through the country know what the beauties and peculiarities of the language are. Suffice it to say that every subject, from the opening of a sewer to the stopping of a salary, is treated with as much solemnity and grandiloquence as if the orator considered it just the theme for an epic poem, and was driven to discussing it in prose simply through want of time. Sometimes, too, when the display promises to be more than usually bombastic, and Xenophon, Cyrus the Great, Cato the Censor, Sesostris, and Nebuchadnezzar are likely to play a more than usually prominent part in the discourse, the services of the Washington correspondent of one of the New York daily papers is enlisted, and he telegraphs in his "special despatches" what the French call an "appreciation" of it. He describes it as "Mr. Smith's great effort in the House to-day"—a "magnificent burst of eloquence;" says "it was a rare privilege to listen to it," and that, during its delivery, "the members crowded round the orator, and, at its close, shook him warmly by the hand."

Much of this unfortunate state of things is to be ascribed to the want of sound education and literary taste and culture on the part of great numbers of the members; more still to the fact that the real work of legislation is really done secretly in committee, and thus there is no need and no inducement to cultivate the art of clear statement, close reasoning, and ready reply in the open debates in the House and Senate; but more than all to the undue importance given in our colleges and schools to the mere "gift of the gab." Facility in speaking, assurance and self-possession on one's legs are things which, in America, do not need much cultivation. They have become hereditary qualities, and American young men will, we have no doubt, in a few generations more, address large audiences as naturally as a duck swims. The art which we need most of all to cultivate amongst the young is the art of having something to say, and of saying it in clear, pure, *unadorned* English. This ought to be the aim of all college debating societies. There is nothing, if young men and members of Congress could be got to believe it, more difficult of its kind than to make a statement of facts perspicuously, or arrange an argument logically; and if our "young men of promise" would devote the time which many of them spend at the very outset of their career in talking rant on the stump during canvasses to the study of good books and practice in composition, we should not only be better governed, but have legislative oratory of which we should not be ashamed. It is thought and not words that in the long run governs nations.

DE MORTUIS.

When Diogenes, seeing his end to be near, ordered his body to be cast out on the highway, and requested of his horrified friends a stout stick with which to keep off the dogs and the vultures, he was neither the first nor the last philosopher who has wished to ridicule the fear of death. Burial or cremation being as much a sanitary as a religious custom, it would be difficult to determine whether with the growth of Christianity and of the belief in immortality, which is also shared by Islam, men have become more or less indifferent to the fate of their corporeal remains than they were in times when no such belief, or hope even, prevailed. The Catholic Church, in past ages, succeeded in making uncomfortable the repose of those not admitted within its sanctified enclosures, and the grave-yard in Christian countries has never become so much of a republic as to welcome all comers without distinction. There has been, in spite of our doctrines, a close analogy between

the preferences for bed-fellows above and under ground, and some, it must be confessed, have shown a greater fastidiousness in the latter respect than in the former, setting, apparently, a higher value upon a Christian burial than upon Christian associations while in the flesh. Suicides, murderers, and those who, for whatever cause, have suffered capital punishment, have been generally ruled uncompanionable by their kindred clay, though the first-named are much less under the ban than formerly. Still, even in regard to them, we believe our large public cemeteries have explicit and rigid rulings which render it hard for them to enter the undertakers' paradise; and the real "God's-acre" or kirk-yard discriminates still more nicely among applicants for sepulture. Dr. Francis, of this city, obtained with difficulty a resting-place for the actor, George Frederick Cooke, within the precincts of St. Paul's, and Bishop Hobart intimated that the privilege could extend no further—at least not so far as a mural tablet. As for colored people . . . .

A respect for graves and their contents has been supposed to be nearly universal among all nations and under all conditions. There is a tribe in Africa which makes no burial of those who fall in battle, but which buries other deceased near their own doors for a season, till decomposition has done its work, when the bones are exhumed, cleaned, and carried in earthen jars to a sort of Ceramicus, where they are set down and for ever after neglected. But the rule is otherwise, at least for the newly dead. International law on this subject, however, cannot be said to exist, seeing how in the Old World and in the New the tombs of antiquity are despoiled—for gems and pottery in Etruria, for golden images in Chiriqui, for papyri in Egypt, and Indian relics in Ohio. And the newly dead in civilized countries have not been safe since the rise of scientific anatomy and therapeutics. Body-snatching was a part of the training of medical students till the state conceived the happy idea of turning over its lawful victims to the surgeons—a measure which brought relief to the feelings of the better class of the community at the expense of those of the worse. Still, there is a vulgar prejudice among paupers and the poor generally against passing from their last bed to the dissecting-table, as Edmund About relates with great effect in his "Notary's Nose." Monsieur L'Ambert can only hinder Romagné from starving himself by threatening to have his body carried to the hospital theatre. There "it will be thrown on a stone table and cut in pieces. One student will split open your great ass's head with an axe, another will lay bare your breast with a scalpel to prove if there be a heart under the brutish covering, another"—but Romagné cries him mercy, and swallows the proffered soup.

The doctors early perceived that the odium which they incurred in running counter to what might have been the popular superstition in regard to the dead was to be braved or removed by their own example; and so, from time to time, eminent practitioners have directed in their wills, one that his skin shall be dried and hung up, another that his skeleton shall be mounted, in some museum of the faculty. In one instance that we recall, a morbid fear of being buried alive induced a distinguished medical gentleman to ensure for his corpse the treatment of Marsyas; and flayed he accordingly was, if not by the father of Æsculapius, by one of his devoted followers. Similar testaments have not been wanting in this country. Only a month ago, in Covington, Kentucky, Dr. W. B. Powell, a scientific writer of high repute, emeritus professor of cerebral physiology in the Eclectic Medical Institute of this city, died and bequeathed his head for the advancement of science to his dear friend, Professor A. T. Keckeler, across the river in Cincinnati. The legatee, accompanied by a venerable brother physician, proceeded to the cemetery at Covington, and quietly gained possession of his property. When the will came up for probate, however, and the facts transpired, there was no little stir in the town which Dr. Powell had honored both by living and dying in. The professor testified with provoking sang-froid that he had written the will at the dictation of the deceased, and that the signatures of the witnesses as affixed were true and genuine. Judge Moore, on the other hand, addressing the court, denounced the will as irregular, and a disgrace to the records of the commonwealth of Kentucky; the testator was insane when he made it, and so was the witness who had just testified, or any other person that would undertake to support and authenticate the will; and he concluded by moving that the court order the will and evidence of the witness to be engraved on copper-plate and published for the world's information and (haply) indignation. He also gave warning that the grand jury was about to make a presentment of the matter; and at this stage proceedings ended for the present.

Now, to approach this delicate question afar off, it is evidently unsafe to make a general charge of insanity in the absence of all proof of mental aberration in him who gave his head to his friend when he had no further use for it, and the said friend who prized the gift enough to go after it. But, still more remotely, what greater desecration of the dead was this decapitation, no doubt with professional skilfulness, than the *post mortem* examinations which so many men of high and low degree undergo? How do we know the weight or dimensions of Cuvier's brain, or of Gall's, or of Webster's? As Hahnemann tried his medicines on himself, so Spurzheim, dying in this land of his adoption, contributed in his own person to the furtherance of his beloved science of phrenology. Have we not seen his ear preserved to this day in spirits? And may not one see, in the same city of Boston, the skeleton of the late Dr. Warren, set up by his particular request?

Chacun son goût. One need not, with Byron, make a mockery of death by turning skulls into drinking-cups—brainless aids "to steal away the brains," as Othello hath it. Horror and disgust surround the trinketry of Bull Run and the mutilation of the Federal dead on the field of Shiloh. Only in a barbarous community could it have been possible to see, as our Southern correspondent saw on a planter's piazza, the bleached and grinning trophies of his lawless vengeance. And, after all, these are nothing to the violations of the living perpetrated by the Confederate rebels in Texas, in Tennessee, on the sacred soil of Kentucky itself. Rather in this age we need to be reminded of the sanctity of human life and of human rights, and to multiply on copper-plate, if that will foster them in our hearts, the principles of that Declaration which we have striven to make the head of the corner, but which, with no protest from Kentucky that we hear of, is sought to be detached from the body politic, and consigned as a curiosity to some glass case in the Patent Office. Perhaps the grand jury of the country will indict this madness at its next sitting in November.

GOLD-BEARING PUBLIC LANDS.

It would probably be impossible to find anywhere in the Christian world any large collections of men more ruffianly, more lawless, less deserving the name and less enjoying the blessings of true communities, than the crowds of people of all religions and all nationalities who congregate in our far Western mining districts. Representatives are there of all parts of the earth—the idolater from the Flowery Kingdom, the Five Points Christian, whose only show of religion is to swear by "Melican man's joss," and with these the fortune-hunters and desperadoes of every clime. Of this promiscuous assemblage the honestest occupation is best described as a lottery where the blanks are ninety-nine, the prizes one, and the cost of a ticket enormous. Its immediately attainable pleasures are furious gambling and furious drinking; the pleasure it looks forward to is to be "flush" and have a long spree in "Frisco." Its law is often the code of Judge Lynch and oftener still the law of the bowie-knife and revolver. Of course the observances of religion, the benefits of education, are not to be expected in regions where women—women worthy of the name—are almost unknown; where the family, the foundation of government and social order, is an impossibility; where there is no such thing as home, and existence is nomadic.

This is a description hardly too darkly colored of society as it has existed, as we fear it exists still, in great portions of Dakota, Nebraska, Colorado, New Mexico, Arizona, Utah, Nevada, California, Oregon, Washington, Idaho, and Montano—in short, in the million square miles of mineral lands, gold-bearing most of it, owned by the United States.

Hitherto the Government has been unwilling to sell any of these lands. It has preferred to be a great landlord, with the miners as tenants—tenants, we may add, of a most unprofitable kind, as might have been known from all past experience. To instance in the case of the copper mines: the expense of the tenant-system, from the year 1841 to the year 1844, both inclusive, was $26,000; the rents received amounted to the sum of $6,354, and the loss would appear still greater if account were taken of the waste of timber and the waste from careless mining. Four years is not a long term. But if we examine the working of the leasehold system as applied to the lead-lands during the period of twenty-four years, between 1821 and 1845, the results are not much more satisfactory. The cost of management in that time was over $68,000, the revenue was $76,704; and this $8,704 of profit was dearly bought under a policy which deferred for years the settlement and civilization of the lead regions. The system of leasing stands confessed a failure. The United States has long ceased to apply it to copper, coal, lead, and iron mines, and adheres to it only in the gold and silver-bearing country, where it produces its customary bad effects.

The pioneer miner, hunting gold or other metals in the States and Territories above named, prospects as he pleases, and when he begins to dig begins theoretically to pay rent to the Government. His title to the land on which he happens to be, is no better than his title to any other unoccupied spot that may strike his fancy, except in this, that while he digs he has a possessory right defined by local law. The local civil law is in about the same condition as the local criminal law. Two hundred diverse codes govern-

ing this matter exist in the single State of Nevada. Some of them prevail over five miles of territory, some over fifty; none of them have an authorized expounder, and most of them are overriden by some unrecorded usage. The miner is probably poor; but he can borrow no money on a land claim to which he can give no sound title, and capital does not flow in where there is no security. It is not worth the miner's while to make improvements; he cannot make himself a home; he is but a transitory tenant, here to-day, and to-morrow his camp is moved. No wonder that, under such a system, the Government reaps small advantage in the way of revenue from its immense property, that the development of our mineral resources is slow, that the miner is apt to be, and if not, is apt to become, vicious and thriftless and a bad rent-payer. Such being the moral and material aspects of this question, it is to be hoped that Congress may act favorably upon the bill not long since reported by Mr. Julian, of the Committee on Public Lands, which provides for the speedy survey and sale of every acre of mineral land now held by the Government. Mr. Julian's report points out that the leasing system, existing in the gold and silver countries, is now exceptional; that it was so signal a failure in the case of other mines, as to have been long since discarded; that it is a drain upon the Treasury; that it is anomalous, in a political point of view, for it makes the Government a feudal baron, as it were, and the miner a serf, or, at the best, a tenant-at-will, which, in effect, is to make him a nomad instead of a citizen. It may reasonably be hoped, the committee think, that, after giving to every man a good title to the land he now occupies, there will be enough remaining to bring into the public coffers, as products of a sale, something like five hundred millions of dollars.

The proposed gift to the miners of the fee simple of their lands is liberal, but, in the committee's opinion, not more than just, when it is considered how severe, and precarious, and unremunerative to themselves their labors and discoveries have been, and yet how advantageous they have been to the country in opening up the distant regions of our vast territory. There are other considerations to be borne in mind, as, for instance, the probability that within the next ten years a very much greater quantity of gold and silver would be brought into commerce under the new than under the old policy; that the country is laboring beneath the burden of a vast debt which the proposed sale would materially lighten; but the incalculable detriment which the old system has wrought, and the good results of the new wherever it has been tried, are sufficient reasons for giving the committee's plan a chance.

Correspondence.

LETTER FROM THE AUTHOR OF THE "NEW GOSPEL OF PEACE."

To the Editor of The Nation:

Removed as I am from active life, I do not always see in the journals of the day all in which I am really interested. It was only this morning that I had The Nation's article upon the fourth and last book of the "New Gospel of Peace" brought to my attention. Permit me to say that I am grieved to find the precious book which I have been humbly instrumental in bringing before the learned world spoken of by a paper of The Nation's discrimination as a parody and a jest. Is there nothing serious to this frivolous and ribald age? A manuscript is discovered embodying those truths which belong to all ages, and which are, therefore, well called eternal; a manuscript which teaches these truths with the felicity of oriental parable and the richness of phrase peculiar to oriental utterance; it is painfully deciphered and given to the world, and a paper of The Nation's pretensions treats it as a burlesque! After that, where may simple truth and solid merit hope for recognition? You more than intimate that two Irish gentlemen named Roberts and O'Mahony are treated with unseemly levity in the last book. Where is this to end? We shall next have C—rn—l—s V—nd—rb—lt and D——n R—chm—nd declaring that they are spoken of disrespectfully as being of the Durrektahs.

Apropos of the book in question, you mention a Chaldee manuscript by a writer named Hogg. Now here is something truly interesting. I have never seen this MS. But I do not hesitate to say that I very much doubt the genuineness of a MS. professing to be Chaldee which yet was written by a person whose name was that of the unclean beast. For that beast was an abomination to the Chaldees as well as to the Hebrews, who in fact were but an offshoot from the Chaldee stock. I shall be much pleased if you will inform me where I can get a sight of this manuscript. I do not indeed expect to find any near affinity between its language and the Iangkie tongue in which the "New Gospel of Peace" is written; but the worship among the Iangkies of an idol called the Almighty Dahl Lar leads me to suppose that they originally came from the plains of Shinar, and I may, therefore, find it not unprofitable to compare these two ancient writings.

You seem to have drawn conclusions different from mine as to the opinions of the unknown author of this book. What you mean by dragging Irishmen and negroes into the discussion I cannot conceive; and what you mean by Radicals I cannot understand. The word *radical* is an adjective; how can it have a plural? The point to which I particularly refer is your conclusion that my author was at some time in his life ill-used by women. I, on the contrary, have found him as gallant and devoted an admirer of the sex as is possible to an Oriental writer, and one who lived at such a remote period. Indeed, your aspersion of my author forces me to say that I have omitted certain passages of his manuscript revealing the tenderness of many women for him, and his grateful devotion in return, because, beautiful and touching as they are, I should blush to translate, much more to print them. There is hardly anything more trying in this respect in the "Song of Solomon" itself.

I regret to see that at the close of your article you couple this immortal work with the name of a carping sciolist whom I once thought a scholar and a critic, but who paid no attention to a conjectural emendation which I sent him of the famous passage in Shakespeare about *runaways' eyes*, although I took the trouble to elucidate it in an explanatory note which filled forty-seven pages of manuscript, and who has omitted from his "Poetry of the War" some of the most charming and spirited effusions of the American muse. But I wish you distinctly to understand that his failure to put in my "Wail of Jephtha's Daughter"—an omission which has been noticed by many of my friends, whom he has also shamefully neglected—has nothing to do with my opinion of the volume in question.

Your obedient servant,

U. Donough Outis.

IMPORTATION TO ORDER A SPECIALTY.

"The grand addition to the Geography of Inner Africa made by Mr. Baker."—*Sir Roderick I. Murchison, Bart.*

JUST PUBLISHED,

THE ALBERT N'YANZA,

GREAT BASIN OF THE NILE, AND EXPLORATIONS OF THE NILE SOURCES.

By SAMUEL WHITE BAKER, M.A.F.R.G.S., and Gold Medallist of the Royal Geographical Society. With Maps; numerous Illustrations, engraved on wood, by J. Cooper, from sketches by Mr. Baker; and a Chromo-Lithograph Frontispiece of the Great Lake from which the Nile flows; and Portraits of Mr. and Mrs. Baker, beautifully engraved on Steel, by Jeans, after Photographs. In 1 vol. 8vo, Cloth. Price $6.

"A model of what a book of travels should be."—*London Saturday Review.*

"A book which everybody must read."—*North British Review.*

"As a Macaulay rose among the historians, so a Baker had arisen among explorers."—*London Reader.*

"There is not a page in it that will not repay perusal, and not a chapter that is not in some way or other suggestive."—*London Athenæum.*

"Charmingly written, full, as might be expected, of incident, and free from that wearisome reiteration of useless facts which is the drawback to almost all books of African travel."—*London Spectator.*

"No one who has any feelings to be moved can read Mr. Baker's exquisite narrative without extending to him and his noble wife the warmest sympathy."—*London Review.*

J. B. LIPPINCOTT & CO.,

Philadelphia, Publishers.

NEW BOOK OF CHURCH MUSIC,

BY L. O. EMERSON.

THE JUBILATE, by the author of the "Harp of Judah," "Merry Chimes," "Golden Wreath," etc., combining all the excellent features of his previous work, with many new and important ones—a collection unequalled for Choirs, Congregations, Societies, Conventions, Schools, and Families—This Day Published. Price $1 38 a copy, on receipt of which it will be sent post-paid. Per dozen, $12.

OLIVER DITSON & CO., Publishers,
277 Washington St., Boston.

Miller's New Guide Books.

NEW GUIDE TO THE HUDSON RIVER,
WITH
FORTY ILLUSTRATIONS. BY T. ADDISON RICHARDS.
Price $1 25.

NEW GUIDE TO THE CENTRAL PARK.
By T. ADDISON RICHARDS. Illustrated.
Price $1 25.

MILLER'S STRANGER'S GUIDE TO NEW YORK,
With Thirty-two Illustrations and Maps.
Price $1.

JAMES MILLER,
Publisher,
522 Broadway.

A NEW NOVEL BY THE AUTHOR OF "MADGE."

D. APPLETON & COMPANY,
443 and 445 BROADWAY, NEW YORK,
Publish this Day,

"SHERBROOKE,"

By H. B. G., author of "Madge."
1 vol. 12mo. Cloth, price $2.

"The scene is laid in a New England village; the plot is most admirably conceived, and the style is eminently chaste and pure. The whole tone of the work is elevating and ennobling; at the same time the story is intensely interesting and exciting, obliging one who has commenced the reading to finish, even to the laying aside of all ordinary duties. 'Aunt Lydia' and her proverbs would never be forgotten by the reader. 'Hope,' the heroine of the story, is a model in many respects, and young ladies would do well to imitate her example. We predict for 'Sherbrooke' an immense sale."

D. A. & Co. have Just Published,

A BRIEF TREATISE UPON CONSTITUTIONAL AND PARTY QUESTIONS, and the History of Political Parties, as I received it orally from the late Senator Douglas. By J. MADISON CUTTS. 1 vol. 8vo. Price $1 75.

MEDICAL RECOLLECTIONS OF THE ARMY OF THE POTOMAC. By JONATHAN LETTERMAN, M.D. 1 vol. 8vo. Price $2.

POST-BIBLICAL HISTORY OF THE JEWS; from the close of the Old Testament, about the year 420 B.C.E., till the Destruction of the Second Temple in the year 70 C.E. By MORRIS J. RAPHALL, M.A. 2 vols. 12mo. Cloth, price $4.

CONVERSION OF THE NORTHERN NATIONS. By CHARLES MERIVALE, B.D. 1 vol. small 8vo. Price $2.

Either of the above sent free by mail on receipt of price.

The Two Summer Books.

THE WHITE HILLS;

THEIR LEGENDS, LANDSCAPE, AND POETRY.

With sixty illustrations, engraved by ANDREW from drawings by WHEELOCK.

BY REV. THOMAS STARR KING.

Small quarto. Price $3 50.

"The name of Rev. T. Starr King will attract immediate and general attention to this work. . . . Those who would possess a most graphic and lifelike description of the White Hills of New Hampshire; those who are pleased with exciting narrations of adventures in climbing their steep and craggy summits; those who love to pore over Indian legends and stories of early settlers; those who are delighted with vivid and enthusiastic descriptions of the boldest and grandest scenery in America, will find in this book a gratification far beyond ordinary opportunities of like nature."

Carter's Summer Cruise.

A SUMMER CRUISE ON THE COAST OF NEW ENGLAND.
BY ROBERT CARTER.
16mo. Price $1 25.

"When that royal lunatic Xerxes offered a reward for a new pleasure, he was stupidly at fault not to have anticipated Mr. Carter by a summer cruise among the isles of Greece, instead of bringing himself to grief at Thermopylæ and Salamis."—*Commonwealth.*

"It is written in a most charming manner; close observation, valuable information, and a delightful play of humor combining to produce as felicitous a result as bookmaking in this country can boast of this season."—*N. Y. Evening Post.*

NEW AND IMPORTANT PLANS OF LIFE INSURANCE.

WHERE TO INSURE.

UNION MUTUAL
LIFE INSURANCE COMPANY.

NEW YORK OFFICE, 151 BROADWAY.

ASSETS, over - - - - - -	$1,500,000
RECEIPTS for the year, over - -	700,000
DIVIDEND paid during present fiscal year	69,160
TOTAL DIVIDENDS paid - - -	419,000
TOTAL LOSSES paid - - - -	944,042

NEW FEATURES—NEW TABLES,

By which all Policies are NON-FORFEITING and ENDOWMENT, payable at about the same cost as ordinary Life and Ten-Payment Policies payable at death only. We call special attention to these Tables as exceedingly attractive and ORIGINAL with the UNION. In case payments are discontinued, after two premiums have been paid, the Company contract to pay, AT DEATH or the SPECIFIED AGE, an amount in proportion to the number of premiums paid.

The Percentage system of Dividends used by this Company affords greater protection to the family than any other plan, as in event of an early death the amount of policy paid is twice that paid by all cash Companies with the same cash outlay of premiums.

The greatest possible liberality in assisting parties to keep their Policies in force.

Liberality and promptitude in the settlement of claims.

We refer to the Massachusetts and New York Insurance Commissioners' Reports for 1864 and 1865 as an evidence of the Safety, Reliability, and Unparalleled Success of the Union Mutual.

The Week.

THE Cable has at last been laid and is working. Some eminent scientific men still doubt whether it will work well, or work long, owing to the inequality of pressure at the various depths at which it lies, the abrasion on the rocks, and other causes; but this is for the present idle and profitless speculation; time only can test it. In the meantime let us all unite in rejoicing over it, as one of the greatest, perhaps the greatest, triumph of human ingenuity—one whose beneficent results, both moral and material, are still only foreshadowed, but which seem likely to pass all present imagining. It is the complement of the application of steam to navigation. It strikes the last grand and, we hope, fatal blow, not at national distinctions (for we hold national feeling and pride to be as necessary to civilization and freedom as individual self-respect and independence), but at international hates and prejudices—at the mediæval philosophy which makes national isolation the highest good, and the Chinese empire a model polity. There is, perhaps, nobody connected with the enterprise who deserves so much credit as Mr. Cyrus Field. In England the Cable was a national undertaking, and those who worked at it were surrounded by sympathizers and supporters. Mr. Field kept his faith and his energy here amidst the scoffing, doubting, or indifferent, and we are glad to say he has his reward.

CONGRESS has adjourned, the Senate laying on the table before doing so Mr. Banks's two little follies—the Mexican loan, and the revision of the neutrality laws—and some other similar pieces of absurdity. Mr. Colfax's adieu was sensible and manly, in good taste, in good feeling, and in good English. We commend it as a model to some of the students of Plutarch who listened to it. We have discussed the history of the session elsewhere. The good effects of the exclusion of liquor from (we may be excused for mentioning) the Capitol were visible in the closing scenes.

OF the riots at New Orleans the accounts are not very clear, as they come by telegraph and through Copperhead sources. But the facts of the case, so far as they can be got at, are simply these: A convention, professing to be a constitutional convention, has met in New Orleans. Its enemies call it the "Extinction Convention," its friends, the "Convention of 1864." It is composed of Radicals, and largely of men who adhered to the Government faithfully both through the horrors of 1861 and the temptations of subsequent years, and the modifications it proposes to make in the constitution are avowedly "radical" in their nature. The conservatives and rebels, if the two terms be not, in Louisiana, synonymous, deny its legality, deny that it has been legally convened, or that it has any legal right or authority whatsoever to propose any constitutional change. In spite of these protests, however, it duly met and proceeded to business. Its legality, be it remembered, was a question for the courts or for the United States Government to determine. If it were not legal, the only result would be that it would be simply a private meeting, that its resolutions would be simply expressions of the opinions of private individuals. Or, even if its legality were acknowledged, its decisions would not be final; they would have to be submitted to the popular vote, so that no conceivable harm could result from its meeting, or from its violent language, supposing its language to have been violent, as its enemies allege. It has, however, been set upon by a mob, many of its members massacred, and, in company with them, every negro who showed his face in the neighborhood. The Mayor of New Orleans, whom Mr. Johnson recently pardoned to enable him to take office, avows in his proclamations his sympathy with the mob—treats them as men who have a right to be angry, and stigmatizes their conduct not as criminal but as imprudent. After a long delay the military were called out, martial law proclaimed, and order restored. The whole case will probably be much plainer than it is now by the time this is in the hands of our readers. But it is already plain enough that there is not even now, and that there is not likely to be for some time to come, such a thing as free speech even in the great cities of the South; and we repeat that any reconstruction which does not secure for Wendell Phillips the power of delivering one of his most radical lectures in any town or village of the South, in complete security, must be a mockery, a delusion, and a snare. Without this there is no such thing as free government at the South. Mr. Johnson's despatch to the Louisiana Attorney-General, we have no hesitation in pronouncing disgraceful. There is not one word in it of reprobation of this atrocious massacre. He formally commits to the military the task of suppressing "illegal or unlawful assemblies," forgetting that if Louisiana be, as he maintains, in the Union, there can be no such thing as an "illegal or unlawful assembly" which simply discusses. No assembly is unlawful in America which is not collected for a breach of the peace, or which is not engaged in an overt act of treason. Any twenty-six men have a right to meet and revise the constitution of this State, and declare that the Governor ought to be deposed and their fellow-citizens disfranchised. It is only when they attempt to impose their decisions on the community by force that their conduct becomes criminal, and the military are entitled to interfere with them. The Louisiana Convention had, according to its enemies, no legal character whatever, and no force at its disposal. Therefore, to call it "usurping" is balderdash.

MR. BOUTWELL'S long-deferred report upon Davis's alleged complicity with the assassins of Mr. Lincoln has finally appeared, and seems to contain nothing very conclusive upon that point, and almost nothing that is new. Davis was willing and anxious that the black soldiers and white officers of United States regiments should, when captured, be put to death. He must have been well aware that Northern men in Southern prison pens were treated with savage cruelty; letters have been found which were read by him, as appears from the endorsement, calling his attention to the wretched state of the prisoners at Florence and other places of confinement. It would not be wonderful, the committee think, if a man capable of permitting such gross violations of the laws of war and of common humanity should allow himself to become accessory to an assassination. Direct.

proof, however, is wanting. Before the investigations of the committee began, witnesses had been examined on oath by the Judge Advocate-General, and their testimony was perfectly conclusive of Davis's guilt. They made affidavits to the fact that they were present at an interview between John Surratt, Benjamin, and Davis, who agreed upon the murder of Mr. Lincoln. But, being brought before the committee, these witnesses declared themselves perjured, and retracted all that they had said before Judge-Advocate Holt. The committee will not undertake to say whether the witnesses were telling the truth when they made their affidavits or when they confessed themselves liars. But their evidence was not considered in the preparation of the report. Andersonville, the treatment of negro soldiers, the kind of war waged from Montreal and Toronto upon St. Albans and the lake cities—upon these is based the main argument of the committee. That Davis was a partaker in these crimes is susceptible of proof. But there is some direct evidence. Not a dollar of the rebel secret service money could be disbursed except by Jefferson Davis. It is well known that John Surratt, in February, 1864, had a considerable sum of this money, which he had obtained not in Canada but in Richmond itself. Of Surratt's connection with Booth there is, of course, no doubt. Letters in the rebel archives show that more than one proposal was made to the Richmond Cabinet to murder the members of the Cabinet in Washington, and it is certain that such proposals were not rejected with abhorrence. The committee conclude by urging that the President be called on to prosecute further an investigation which they were unable to carry to a conclusion. We think the revelations of the report certainly justify further researches, and we suppose, as Mr. Boutwell says so, that such researches among the remaining manuscripts may, perhaps, be rewarded. We confess, however, that we are of those who expect Mr. Boutwell's report to do more service in the coming elections than in bringing on the trial of Jefferson Davis for murder.

The House Committee's report on the Memphis riots abounds in details which amply support the popular judgment of that bloody business, which, we believe, has not been without compensation for the country at large in its revelation of the spirit of the reconstructed South. As for Memphis itself, a positive return of good for evil has been made it in the metropolitan police system, to which it reluctantly submits. It is to the so-called police of the lately rebellious States that are due a large proportion of outbreaks between blacks and whites, and of passive suffering on the part of the former. The withdrawal of the United States troops was the signal for activity to these petty persecutors, and the altered disposition of the President has encouraged them immensely. We are inclined to believe Memphis one of the safest cities for the colored race between the Ohio River and the Gulf.

"Central Organizer" Stephens has issued a proclamation containing an extraordinary amount of good sense, advising the Fenians not to sell themselves to political parties in America, and arguing that the Fenian battle must be fought in Ireland. Roberts is, in the meantime, said to be "negotiating" with Mr. Johnson for the return of the arms and ammunition taken from the Brotherhood on the Canadian border, and, while urging on the Canadian authorities the release of the prisoners taken in the late raid, is said to be preparing for another raid. It is hardly dignified for a "belligerent" like Roberts to "negotiate" with anybody for the return of his own arms. Why does he not march on Washington, put the President in jail, elevate Nathaniel P. Banks to an imperial throne, and then turn his arms on Canada? We think he has borne with Messrs. Johnson and Seward with extraordinary patience and equanimity, considering that he is within a few days' march of the capital, and could crush them any moment. A truce to trifling, say we. There is the less reason for his forbearance, as Mr. Banks is now released from his Congressional duties, and may be induced to draw "his battle blade" in what he calls "the present struggle for Irish independence." We tremble for the Canadians.

The Secretary of State rather tartly inducts the House of Representatives into the knowledge that the United States Government is not in the habit of holding any "correspondence directly, upon any subject, with the authorities of any country, province, or dependency of any sovereign State." Therefore the resolution requesting the President to urge upon the Canadian authorities the release of the Fenian prisoners now held for trial cannot be complied with. The Secretary goes on to show that this expression of sympathy for the Fenians, made by Congress on the 23d of July, was later by a month and a half than a sympathetic appeal made by President Johnson, who, so long ago as the 11th of June, had a note sent to Sir Frederick Bruce. The President had been informed that the British had captured Fenians on the soil of the United States, and that the Canadians thought of hanging all their prisoners at once without trial. Both reports proved, however, to have been unfounded. A second resolution, requesting that proceedings against Fenians in U. S. courts be suspended, "has been received," Mr. Seward says. He omits to say whether or not it is the Government's intention to regard it favorably; but, on the whole, it will be rather a strange thing if we hear anything more of Commissioner Betts and Ludlow Street jail, except when Mr. Roberts or a Roberts head-centre lifts up the voice of eloquence.

Mr. Sinclair Tousey has sent us, a little in advance of the Philadelphia Convention, the thirty-nine articles of faith which he conceives will be adopted by that nondescript body. Their logical arrangement and phraseology are probably not those with which the public will be favored; but that men entertaining in their secret hearts every one of these articles will be admitted to good and regular standing, and will determine the character of the convention, we have not the faintest doubt. This implies, we are aware, the endorsement of the theory of secession, a justification of the rebellion in its origin and means, and the adoption of any "policy" which leaves to the South even a small portion of its pet iniquity. Article XXIV. is no travesty: "We believe that white Confederate soldiers ought to be represented in the national Congress before any black man who fought for the Union. Black Federals have no rights which white Confederates ought to respect." Nor this, from Article XXX.: "We believe that a great, magnanimous Christian nation ought to forgive all the mistakes and crimes (even if not repented of) of all its people. . . . All who attempt wrong desire forgiveness (when not successful)."

Montgomery Blair prints a letter which he has just received from A. H. Stephens, whom Mr. Blair of course holds up to admiration as "the representative man of the Union party of the South" at the outbreak of the war. That Mr. Stephens never was. He had the name of being so, and it suits Mr. Blair just at present not to examine the ill-founded claim too closely. Stephens's Unionism in those days amounted to this: the United States Government, he said, had always been pro-Southern and pro-slavery; it bade fair to continue so; Georgia had a right to secede from the Union whenever she liked, but it would be foolishness for her to secede while she and her sister slave States controlled the Union. In short he was and he is a secessionist in principle, although on the 14th of November, 1860, he thought secession was bad policy. He is to-day, as he was then, a Georgian, and not a Unionist, and his words are entitled to no additional weight because written by a cooler-headed rebel than Roger A. Pryor. Mr. Blair's other reason for publishing the letter—namely, that Mr. Stephens is "the recognized exponent of the Southern sentiment at this moment," is a better one; authentic information on such topics it is always well to disseminate. It is not easy to see, however, of what particular value to Mr. Blair's cause this expression of sentiment is going to be. No one doubts that the Southern people would be very glad to see "a speedy, full, and perfect restoration of the Government under the Constitution" as it was. No one doubts that if that cannot be, they would acquiesce in the Constitution as it now stands, although slavery is abolished. No one doubts that most of them will work with the Philadelphia or any other convention which would bring the late Confederate vice-president into the United States Senate before Georgia has ratified any more constitutional amendments. To call Mr. Stephens to tell us this is very much as if a conjuror "should Plato summon, or the Stagirite, to prove that fire ascends," or that losing gamesters would like to play on till they win back some of their losings.

The Board of Delegates of American Israelites in this city entreat the people of North Carolina to reject that part of their proposed constitution, to be voted on this month, which excludes from office-holding any person "who shall deny the being of Almighty God, or the divine authority of both the Old and the New Testaments, or who shall hold religious opinions incompatible with the freedom and safety of the State." The Jews on this occasion, as on many another in the world's history, are advocating a cause which is not theirs alone—the cause of religious liberty. It is easy to show, as the Board of Delegates have done, that such a proscription is opposed to the Constitution of the United States and to the spirit of the age. The trouble is that North Carolina cannot see that she is behind them both. The lash is still a part of her penal code, but she would be amazed to hear that the whipping-post is not in fashion in all civilized countries.

As the *Times* remarks, "there need be no grand, lofty, chirographicies" about the successful laying of the Telegraph Cable. "The enterprise possesses all the elements of moral and political grandeur, needing no trumpetuous heralding nor unseemly puffing." If a man thus recognizes the beauty of silence or the fitness of subdued speech in the presence of sublime objects which are themselves eloquent, it is safe to affirm that the haven of Heart's Content must afford excellent anchorage when it extorts from him this utterance: "Such a harbor must have a destiny. Like that at Acapulco, it would seem impossible for the Creator to fashion it by accident." Of course it was impossible. But let us not quarrel with that Attic urbanity which says "would seem;" it is by no means too common among the gentlemen of the Press.

In a former letter from our Paris correspondent a specimen was given of the bills-of-fare of grand dinners published regularly in *La Liberté*, which have contributed not a little to the extraordinary success of that new journal. Sometimes the public find it difficult to divine the mode of cooking a dish from its new-fangled title, and sometimes, it appears, they regret that the descriptions are so explicit. It is said that the editor frequently receives letters to this effect:

"Sir: Your bill-of-fare yesterday contained *poulets aux tomates farcies*. I ate of them and was disturbed by them, as were my entire family. I have the honor to inform you that if such a thing occurs again I shall be compelled to stop my subscription."

The Cable has rather confused the regular, if tardy, sequence of war intelligence from abroad. In South-western Germany we have to note the occupation of Frankfort by the Prussians, who immediately dissolved the contingent force of that city, exacted 6,000,000 florins for the support of the war, and threaten to bleed the inhabitants to the extent of 25,000,000 more. Mainz is besieged, and the navigation of the Rhine prohibited above that fortress. The Bavarians have refused to accept a truce, and an army of 58,000 Prussians is said to be marching on Munich. In Austria, on the 15th, in an engagement before Olmütz, victory remained, as usual, with the invaders. On the 17th, Prince Charles occupied Lundenburg, on the borders of Moravia, thus separating Olmütz from Vienna, and menacing the latter city from the nearest point yet. There are said to be marshalled in defence of the capital 400,000 men, with 600 guns, under the command of the Archduke Albrecht. General Benedek subsides into a corps commander. From noon of the 23rd, an armistice of five days was granted by the Prussians, and on the 28th, as we learn by the Cable from London, peace preliminaries were in progress. The first step towards invading Hungary had been taken.

The Italians have occupied Rovigo, and are extending the civil administration in the territory they have thus far recovered. Austria holds Venice, Verona, and other fortresses, and gives evidence of an intention to endure a siege before retiring. Off Lissa, an island on the coast of Dalmatia, on the 18th, the Austrian and Italian fleets engaged each other, to the great detriment of the latter, which lost the Re d'Italia (built in this port) by collision, and three other iron-clads by explosion. The remainder were said to be making for Ancona.

CONGRESS.

Tuesday, July 24.—In the Senate, the Northern Pacific Railroad bill was postponed till December. The House army bill was passed; also the Indian appropriation bill also the House tariff bill, with amendments.

In the House, a message was read from the President notifying them that he had approved the joint resolution concerning Tennessee, but protesting that the resolution had no force of law and was entirely superfluous, and that he would not stand committed to its doctrines. These views excited a good deal of laughter, some derision, and, on the part of the Democratic members, applause. The credentials of the members elect from Tennessee were referred to the Committee on Elections, who reported them in due form, and three of the members were then sworn in amid congratulations. The Indian appropriation bill was passed.

July 25.—In the Senate, Mr. Ely Ross was admitted to the seat of the late Senator Lane, of Kansas. The credentials of Senator Fowler, of Tennessee, were presented. Voted to adjourn on the 28th. The civil appropriation bill was passed in evening session.

The House passed a bill incorporating a national farm school for orphans and dependent children of colored soldiers and for other colored children; also one to restore the possession of lands confiscated by the authority of the States lately in rebellion. The national currency bill was postponed till the next session. Two other members of the Tennessee delegation were admitted, and a motion to pay them from the beginning of the present session prevailed. The report on the Memphis riots was presented and (yeas, 86; nays, 23) ordered to be printed. The day fixed by the Senate for adjournment was agreed to.

July 26.—On motion of Mr. Sumner, the Senate referred the credentials of Mr. Patterson, Senator elect from Tennessee, to the Committee on the Judiciary, on the ground that he had at some time held a judicial office under the late Confederacy—yeas, 26; nays, 14. In the course of the debate Mr. Doolittle admitted the truth of the charge, and that Mr. P. had taken the oath of allegiance to the rebel government, although protesting at the time that "he spat upon and scorned it." The joint resolution for printing an official history of the rebellion was passed; also the deficiency bill.

The House passed the Western railroad and telegraph aid bill; also a bill distributing the reward for the capture of Booth; also, unanimously, a bill more effectually to preserve the neutral relations of the United States—almost identical with the neutrality law of 1794.

July 27.—The bill to admit Nebraska was passed in the Senate—yeas, 24; nays, 10. Mr. Sumner's amendment in the interest of impartial suffrage was defeated—yeas, 5; nays, 34. The Judiciary Committee reported Mr. Patterson duly qualified to be admitted to a seat; but for this was substituted a joint resolution that Mr. P. be admitted on taking the usual oath, except as follows:

"I have neither sought, nor accepted, nor attempted to exercise the functions of any office whatever, under any authority or pretended authority in hostility to the United States."

The vote on this resolution was—yeas, 35; nays, 2. Later, in the evening, a simple resolution admitting Mr. Patterson, after taking the oath required by the Constitution and the laws, was offered by Senator Poland and adopted—yeas, 21; nays, 11.

The House passed the air-line (Washington and New York) railroad bill—yeas, 58; nays, 41; also, a bill to provide increased revenue from imported wool. The civil appropriation bill as it came from the Senate was amended by striking out the appropriation for the Mississippi levees, the provision for payment of bounties to the loyal masters of enlisted slaves, the clause increasing the compensation of senators and representatives (yeas, 3; nays, 125, on concurrence), and by tacking on the bill to equalize bounties. The report of the Conference Committee on the tariff bill was agreed to. The joint resolution to admit Senator Patterson was laid on the table (yeas, 88; nays, 31) after a debate in which Mr. Stokes, of Tennessee, opposed any alteration of the test oath. The bill to admit Nebraska was passed—yeas, 63; nays, 52.

July 28.—The Senate agreed to the report of the Conference Committee on the army bill; also, that on the civil appropriation bill, which included increased pay of members of Congress and equalization of bounties. The bill to increase the duty on wool was tabled—yeas, 22; nays, 12. Senator Patterson was sworn in. Adjourned, *sine die*.

The House passed, without amendment, the bill admitting Nebraska—yeas, 63; nays, 52; also, the army bill and the civil appropriation bill, from Committees of Conference—the latter by yeas, 51; nays, 50. A message was received from the President vetoing the bill erecting Montana into a surveying district. Adjourned, *sine die*.

FREEDMEN.

In *Virginia*, at Cold Spring, a freedman was murdered (May 5) by three white men, brothers—no conviction; at Flint Hill, a freedman killed (July 1) by his employer, who was acquitted; at Fredericksburg, a negro assaulted by a white man with a hammer—colored testimony being rejected by the court, Gen. Grant's order secured the arrest of the assailant; a Mrs. Abrahams, of King William County, officially charged with most inhumanly torturing her freed help, all of whom were permanently maimed, and several killed; at Drummondton, on the Eastern Shore, a disturbance in the early part of July in consequence of an attempt to disarm and otherwise pillage the negroes, and, arrests having been made, the court compelled by a mob to desist from its hearing, and the dispersing negroes violently set upon. The military had to be summoned. *In South Carolina*, a colored man was murdered for entering the whites' gallery of a church in Columbia. *In Georgia*, according to Gen. Tillson, the civil authorities will not do justice or afford protection to the freedmen: "Judge Robert Walton killed, with his own hands, a freedman who had been arrested and bound by the sheriff upon the warrant issued by the judge," the victim's crime being an act of self-defence; the practice of whipping has been revived. *In Alabama*, at Mobile, on the 17th July, a sloop having 150 kidnapped freedmen on board, and *en route* for Cuba, was overhauled by a U. S. revenue cutter. *In Louisiana*, whippings, hunting with dogs, and murders, have occasioned the arrest of several persons under the civil rights act, and the late riot in New Orleans is but a continuance of outrage. *In Arkansas*, the testimony of blacks is often excluded, and their marriage certificates refused for record; near Texas, men are still held in slavery. *In Kentucky*, a riot between whites and blacks, begun by the former, took place at Columbus on the 21st July. Several of the latter were killed.

Notes.

LITERARY.

The obituary record of graduates of Yale College was presented in the usual pamphlet form, at the meeting of the Alumni, on the 25th of July. Sixty-nine deaths are reported, of which sixty-five were from the academical department. Eighteen were from Connecticut, thirteen from New York, seven from Massachusetts, and the remainder from other States. Twenty-three were clergymen, twenty lawyers, and five physicians. The average age of the deceased was fifty-nine years. The oldest, Levi Robbins, of the class of 1796, had attained the age of 91 years. Dr. Joseph E. Worcester (1811), the lexicographer, and Hon. George E. Badger (1812), formerly U. S. senator from North Carolina, and Secretary of the Navy under President Harrison, and Ex-Mayor Caleb S. Woodhull, of New York (1812), were the most notable of the dead. Dr. S. W. S. Dutton (1833), of New Haven, the Secretary of the Alumni, and Dr. Wm. T. Dwight, of Portland, Me. (1813), were prominent clergymen of the Congregational Church. To Mr. Augustus Russell Street (1812) the college owes benefactions amounting to nearly $300,000. He founded the Street professorship of the modern languages, and erected the Yale School of the Fine Arts, which is now nearly completed, and partially endowed it. By his will he left money for the foundation of a professorship in the Theological Seminary. Two changes in the faculty of the college were announced at this the 156th commencement. Prof. Wm. B. Clark resigned the professorship of Divinity and Chaplaincy, and Mr. Othniel C. Marsh, F.G.S. (1860), was elected Professor of Palæontology.

—The American Numismatic and Archæological Society have recently begun the publication of a bulletin called the "American Journal of Numismatics." It is an eight-page, double-column octavo, with a cover, published monthly, and is devoted entirely to the description and cataloguing of coins, and to the journals of the different numismatic societies. There is hardly enough matter in American numismatics to fill even a journal of this size. If more space were devoted to the archæology of the country, which is a great field for explorers, the journal would be greatly increased in value, and, we doubt not, would gain subscribers enough to warrant an enlarged size. One of the best and most thorough papers recently written on American archæology is the essay by Prof. O. C. Marsh, F.G.S., in the July number of the "American Journal of Science," on the exploration of one of the ancient mounds at Newark, Ohio.

—Something about the natural history of the great North-west can be learned in a very pleasant way from "The Naturalist in Vancouver's Island and British Columbia," by John Keast Lord. Mr. Lord was attached for some years to the British North American Boundary Commission, whose duty was to mark a line along the forty-ninth parallel of latitude to serve as a visible frontier between the United States and British Columbia. He devoted himself chiefly to study of the animals and fisheries of those regions and to collecting specimens, though he once went to San Francisco to purchase mules, and returned overland with them to the headquarters. His book is not entirely scientific, but abounds in anecdotes and tales of personal adventure. His account of the various kinds of salmon that ascend in countless numbers the rocky and icy streams of British Columbia will attract many readers. It is a book more worthy of republication, especially as it relates to this country, than many which engage the attention of publishers.

—The "Prison Life of Jefferson Davis," ostensibly by Dr. Craven, but really by "Miles O'Reilly," was not written with the privity of Mr. Davis. He is said to feel very much annoyed at its appearance, as he has always had the greatest contempt for persons who kept diaries and journals, and entered into them private conversations which were not intended for the public ear. He objects to many of the statements, especially that regarding the manacling, as erroneous. The substance of many, not all, of the long conversations was jotted down by Dr. Craven; but their form is entirely due to the enterprising editor. He was obliged to write fast, in order to get ahead of a book which, it was understood, General Miles was writing on the same subject, so that his work was not properly revised. In his anxiety to show Mr. Davis's leniency he has distorted some of his expressions of feeling; notoriously in what is said about Davis's relations to Gen. Hunter. The surprise with which Mr. Davis regarded Gen. Hunter's course in South Carolina and Virginia is utterly ignored.

—Two of the chief Russian reviews, the "Covremenik" (Contemporary) and "Russkoe Slovo" (Russian Word), have recently been suspended after the proper number of warnings. The ground of their suspension was their continued publication of articles having a tendency subversive of law and social order, and their antagonism to religion and good morals. Their loss will be quite deeply felt, as they were monthly journals of the size of the "North American Review," and had a very great variety of contents. The leading writers of Russia were their contributors. All novels are published first in a review, and the public will not read those published in any other way. This suppression is probably a consequence of the accession to the Department of Public Instruction of Count Tolstoi, who is noted for his illiberal proclivities. He was a violent Church partisan, a man of no culture, and was esteemed by many of his acquaintance as little better than an idiot.

—The Early English Text Society has just issued the first instalment of its texts for this year, seven in number—namely, "Seinte Marherete, the Meiden ant Martyr," three texts of about A.D. 1200, 1310, 1330, first edited in 1862 by the Rev. Oswald Cockayne, M.A., and now re-issued; "The Romance of Kyng Horn; Floris and Blancheflour; and the Assumption of the Blessed Virgin;" edited from the MSS. in the library of the University of Cambridge and the British Museum, by the Rev. J. Rawson Lumby; "Political, Religious, and Love Poems from the Lambeth MS., No. 306, and other MSS.," edited by F. J. Furnivall; "A Tretice in Englisch, breuely drawe out of the Book of Quintis essencijs in Latyn, *that* Hermys *the prophete* and King of Egipt, after *the* flood of Noe, fader of Philosophris, hadde by reuelacioun of an aungil of God to him sente," edited from the Sloane MS. 73, by F. J. Furnivall, M.A.; "Parallel Extracts from 29 MSS. of Piers Plowman, with comments, and a proposal for the Society's three-text edition of the poem," by the Rev. W. W. Skeat, M.A.; "Hali Meidenhad," about 1200 A.D., edited for the first time from the MS. (with a translation) by the Rev. Oswald Cockayne; "Sir David Lyndesay's Monarche, Part II., the Complaynt of the King's Papingo, and other Minor Poems," edited from the first editions by Fitzedward Hall, Esq. Four more texts are in the press for this year's subscription, namely, "Some Treatises, by Richard Rolle de Hampole," to be edited from Robert of Thorntone's unique MS. by the Rev. G. Perry, M.A.; "Merlin, Part II.," edited by Henry B. Wheatley, Esq.; "Dan Michel's Ayenbite of Inwyt, or Remorse of Conscience," in the Kentish dialect, 1340 A.D., to be edited from the unique MS. in the British Museum by Richard Morris, Esq.; "Levins's Manipulus Vocabulorum," 1570, the first of the Dictionary Series, to be edited by Henry B. Wheatley, Esq. If further subscriptions come in, the society will be able to issue six additional texts. This young society has already proved one of the most useful of the English publication societies. It issues from six to twelve texts every year, all of great value to students of English. The subscription is only a guinea a year, and the back issues can be obtained at the same price. Subscriptions can be sent to Mr. G. P. Philes, No. 64 Nassau Street, the agent of the society in this country, or through Messrs. Scribner & Welford, 654 Broadway.

—Ex-King Ludwig I. of Bavaria recently presented the town of Mannheim with a statue of Iffland. He has promised another, which is to be erected in the course of the summer, provided that Mannheim does not in the meantime become Prussian ground by the victory of Aschaffenburg. The new statue is to be of Wolfgang Heribert von Dalberg Reichsfreihen, and younger brother of the Prince Primas and Grand Duke of Frankfort. Dalberg was born in 1749, the same year as Goethe. He devoted his services to Baden, and rose to various high positions. He is better known for his cultivation of dramatic poetry. For several years he presided over the management of the Mannheim theatre and made it a national theatre. Schiller found shelter and began his literary career here. A better counterpart to the statue of Iffland could not have been imagined: both represent one of the most interesting periods Mannheim ever had.

SCIENTIFIC.

LANDSCAPE ARCHITECTURE.—There is such a demand for parks, cemeteries, and gardens that a profession of "Landscape Architecture" has arisen to give advice in these matters. Judging by the finished product, there exists in the profession an axiom to this effect—all paths and water-lines must meander. To the vulgar mind this is by no means self-evident, and we have, therefore, thought it not uninstructive to recall the scientific basis of the doctrine. Brooks and watercourses, in general, are apt to meander, though it is not without example that they go tolerably straight. An Alpine road winds up the side of the mountain. The brook seeks always to go down, and it accepts a descent in whatever direction it can find one. The mountain road endeavors to surmount a steep height gradually, and winds about the mountain side seeking for moderate grades, such as men and beasts can ascend and descend with ease. Differences of level are thus the cause of devious water-lines, and a justification of winding paths and roads.

Across a level meadow the cow-path never goes straight; though the general direction of the path be tolerably straight, yet it is full of little bends and slight departures from the direct course. Looking to the cause of these deviations from the shortest path to the bars which will be dropped for her at evening, it will be found that the cow set her foot aside to avoid a hummock, or rounded a whortleberry-bush, or steered clear of a rock or a mud-hole. Herein is to be found the second natural and sufficient justification of curved roads and paths; the avoidance of obstacles, small or great, bushes or forests, boulders or mountains, is a prime cause of windings, and demands the best skill of the professional engineer. It is as short, and vastly easier, to go round the hill as to go over it; the old turnpike, stretching away straight over hill and valley, was as stupid a contrivance as ever made progress difficult.

A third cause of curved paths is to be found in the frequent necessity of changing direction, which the narrow limits of parks and gardens often impose upon those who design the walks and drives. For changing direction a curve is, doubtless, more graceful than a sharp angle; nature rounds her corners, except in crystals. This third cause is really but a special case of the second; the park fence is the obstacle to be avoided.

In a very few of the best public parks and gardens in this country these principles find perfect illustration, but in the vast majority of both public and private pleasure grounds they are utterly disregarded. Who has not found himself impatiently following gravel *s*'s over an absolutely level and unobstructed field of grass? Who has not seen with disgust scallop-edged tanks cut out of a grassy plain as flat as a barn-floor, and provided with curb-stones to hold the water in? Such tanks are more like wash-tubs than nature's ponds. Such art mocks nature.

In promenading, as in more serious matters, the pleasure men take in devious ways is quite destroyed if all the world can plainly see how devious they are. The fact is that a genuine Yankee, even if he be pushing a feminine left elbow in the hollow of his right, sees with impatience that he has walked a hundred feet to advance ten, or that the path he follows wriggles like a snake along the unobstructed turf.

But, must all paths be straight? Must we drive on alleys whose tiresome perspective suggests fatigue? By no means. But "landscape architects" must justify their curves by manufactured, if there be no natural, differences of level, and by artificial obstacles, like planted shrubbery and trees, if nature's woods and underbrush and rocks be lacking. A slight curvature, no greater than the width of the path, conceals the distant way as well as half a circle, and long sweeps and gentle curves are much more natural than *u*'s and *s*'s. Above all, water-boundaries should be determined solely by the varying level of the surrounding land, and the edges of artificial ponds should invariably be sloping, and made of sand, gravel, or pebbles, never of masonry. An arch or a stone bridge is a fine feature in a landscape, yet we do not build a series of arched bridges across an unbroken plain, simply in order to meander up and down, after the manner of the mythical sea-serpent. Horizontal meandering, without due cause, is quite as absurd.

EDUCATIONAL.

COLLEGE commencements are gradually losing the hold which they once had upon the community. The increasing number of colleges, the innumerable orations and poems, the lack of distinctive features in the successive annual gatherings, the absurd multiplication of honorary degrees, and the increase of other exciting conventions and public meetings throughout the country—these and like circumstances have taken away much of the éclat which used to mark "commencement." Almost everywhere we hear the same complaints. Distinguished orators from a distance are listened to by thin and listless audiences; the speeches of the graduating class are so many in number that no one but the President pretends to hear them all; the literary societies are not as flourishing as they used to be; and the frequency of railroad trains leads the graduates to come in at the last moment and leave at the earliest opportunity. The remedy would seem to be to lessen the quantity and increase the quality of the exercises at each college anniversary. One day, or at most two days, given up to the festivities, would be better than four or five, and one good oration annually would be better than three or four; and eight or ten addresses from the graduating classes would be more acceptable than twice or thrice that number.

—Andover, the seat of the well-known Phillips Academy for Boys, and of the Theological Seminary, is rejoicing in three new public buildings, all of them substantial and ornamental, showing a great advance in taste and means since the barracks were put up thirty or forty years ago. The academy already meets in the new academy hall, a most convenient and beautiful building. The library building is nearly ready to be occupied, and the foundations are about to be laid for a chapel. The site of the latter is admirably chosen at the termination of a fine row of shade trees, which will give character and dignity at once to the approach to the new building.

—The Ohio Teachers' Association held its eighteenth annual meeting at Zanesville, in the first week of July. The sessions lasted two days and an evening. Prof. Eli T. Tappan, of the Ohio University, presided, and made the opening address. He took up the defence of the high school, while admitting the popular indifference to any instruction beyond what is afforded by the grammar school. To overcome this apathy he recommended the establishment of State scholarships in colleges to be the reward of the most proficient graduates of high schools. The association appointed a special committee to report upon this subject. Hon. S. S. Fisher, President of the Cincinnati Board of Education, delivered the annual address. His theme being "Teaching as a Profession," he insisted on the value of normal schools and the deficiency of Ohio in this respect. Though the doctrines of the author of "The Daily Public School in the United States" were thus opposed, if not controverted, it by no means follows that his trenchant criticisms were unknown to the association or its orators. His sketch of the Ohio system was too unflattering to escape notice, and, perhaps, excite some resentment. In the general discussions "object lessons" failed to receive unqualified approval. Gen. Garfield was thanked for his support of the bill creating a National Bureau of Education.

CUBA.*

IN the great ocean westward from Africa, says Diodorus Siculus, at a distance of several days' sail, lies a large island with a fruitful soil, partly hilly, partly level, filled with trees of divers sorts, and watered by navigable rivers, covered with costly buildings and picturesque villas, and fit to be the dwelling-place of gods rather than men. Of this island the Phœnicians, and their kindred the Carthaginians, had knowledge, and they praised it above Sardinia and Sicily as rich in fountains of sweet water, and wild game, and delicious fruits; and this island, says Sivers, was probably Cuba, for what other could it be?

This is beginning, indeed, with German thoroughness at the beginning; but, as our author does not stop to discuss the hypothesis, we shall dwell upon it no longer than to remark that America was probably not so utterly unknown to the ancient nations as we are apt to fancy, for the researches of science are every day disclosing here and there shreds of that great web of affinity, so to speak, which overspread the world at a period now but darkly

* "Cuba, die Perle der Antillen. Reisedenkwürdigkeiten und Forschungen von Jegór von Sivers. Leipzig: Verlag von Carl Fr. Fleischer. 1861."

known. The real history of Cuba begins with its discovery by Columbus, whose ashes it enshrines; but its real interest for us lies rather in the future than in the past. With the Monroe doctrine, indeed, as it is commonly interpreted, we have little sympathy; for, as such, it is merely political in its character, and neither good nor evil can yet be predicated of the experiment of a government upon a vaster scale than that which we are now trying to establish. But to the moral progress of an island like Cuba, lying at our very door, and endowed with such extraordinary gifts, we can never be indifferent; and it is, therefore, with pleasure that we welcome a contribution to our knowledge of it so excellent as that which Mr. Sivers has presented. It is, to be sure, of several years' standing, but things do not move so fast in Cuba as with us; the torpor of Spain is upon its dependency; and, with few exceptions, a picture of Cuba, ten years ago, is the picture of it to-day, as it has been the picture of it for more than two hundred years. Of the railroads and of Lopez, of the botany and zoölogy of the island, and the cultivation of tobacco and the sugar-cane, there is a very good account, while the occasional sketches of the scenery of the plantations, and of the streets of Havana, give a liveliness to the book to which German erudition does not often descend.

As to the condition of the slaves, however, and the general aspect of the question of slavery as it presents itself in its somewhat modified form, the work is unsatisfactory—not, indeed, for its conclusions, but from its deficiency of material; it furnishes little information, and that of too general a character. The author is not what we should have called, several years ago, an abolitionist, but he does not believe in slavery; no man with his eyes open can fail to see, he asserts, that it injures those most whom it is supposed to benefit; but he cannot see his way out of it, and so drops the subject, not, however, without giving an account, in his interesting sketch of the literature of Cuba, of the Cuban poet Gabriel de la Concepcion Valdes, who, under the name of Placido, acquired so much reputation thirty years ago as the best illustration of the capacity of the colored race for the highest intellectual development.

The illegitimate offspring of a negro and a rich Creole lady, Valdes was at his birth at once consigned to slavery, in order to conceal so unheard-of a dishonor. He was given to a negro woman, and brought up in place of her own child in the bosom of slavery. But what he wanted in education he made up in talent; and the pressure of his bondage was lightened by the exercise of his poetic faculties as well as by the general regard which was paid to him as soon as he began to exhibit the possession of such unusual ability. For, if the Spaniard is, on the one hand, exclusive in his social pride, and severely controlled by the prejudices of race, he is, on the other, generously disposed to recognize talent wherever it may be found, among high or low, white or black; just as all earthly distinctions are abandoned when he kneels before the altar and feels himself in the presence of God. And nowhere, moreover, says Sivers, is society so ready to recognize intellectual gifts, especially in literature, as in Cuba; so that the first specimens of Placido's composition were scarcely seen before he was sure at once of all the aid that the sympathy of the higher classes could afford him. It was a shock, indeed, to find so charming a poet of African origin; but all prejudices speedily gave way, and the young bard of the Yumuri was admitted an honored guest into the best society in the island. He was associated in the editorship of several journals, and soon found means to devote himself wholly to literary pursuits. And if his hot African blood had not made him so susceptible of annoyance from that low-minded class of persons who will be found to infest society in all countries, to whom no offence can be so great as the possession of merit, and no insult greater than to tell a man that he is not white, he might have passed his days in comfort in the midst of the satisfaction and the honor of a successful literary career. But his temperament was too delicate to enable him to bear the affronts which were put upon him, and he descended to revenge.

"I made an altar of hard earth," he says, "in the shadow of a tree upon a hill-top, at the outlet of a narrow valley, where a silver streamlet invites me to drink of its waters. And there, stretching my hands to heaven, I swore to be the eternal enemy of the tyrant, and to bathe my garments in his blood, and to die, if need be, under the arm of the executioner, that so I may break this yoke of slavery."

He organized a general uprising of the blacks, and his plan was maturing when it was betrayed to the government, as one account says, by a woman who had discovered that her son was involved in it, on condition that his life should be spared; or, according to another account, by a black slave girl of Placido's, out of jealousy of her master. The bloody vespers were to occur in April, 1845; but, in the preceding December, the conspirators were already on trial for their lives. The most distinguished persons in the island pleaded for the pardon of Placido, but they pleaded in vain. He met his fate with dignity, and was shot with the rest, while all the details of the plot were carefully suppressed. But even if the revolt had succeeded, it may be doubtful whether Placido would have been accepted as a leader by the blacks.

He left behind him a great many verses, odes, epistles, sonnets, among the best of which are perhaps the "Flower of the Café," and the "Fisher of San Juan," and the "Hymn to Pan," a mountain near his birth-place at Matanzas, and, finally, his "Adieu to his Mother," written upon the eve of his death, and his verses upon the usefulness of labor—flowers all of them, as he was conscious himself of a genius without culture, rich in fragrance and gorgeous in color, but nothing more—a promise, not a fulfilment.

Yet stagnant, or worse than stagnant, as has been the condition of Cuba owing to the principle so steadily acted upon by Spain ever since it first laid hands upon it, of sacrificing the well-being of the colony to what was meant to be the prosperity of the mother country, there have not been wanting occasional attempts at reform. Don Miguel Tacon, for instance, who was made Governor in 1832, made an earnest effort to sweep clean the Augean stables of corruption. There has been much dispute, however, as to his character and aims; and, no doubt, he was a person of iron will, as obstinate as he was energetic. Sivers takes his part; and at a time when the country swarmed with highway robbers, when even one of Tacon's predecessors had not been ashamed to say to a person who complained of this total want of security, that if he wanted to be safe he had better go to bed every night at seven o'clock, as he did himself; when every judge was corruptible, and every malefactor safe who had money to bribe him, there was need of a strong hand, if not of harsh measures. Tacon suppressed the robbers, and closed the gambling-houses, and exhibited in iron cages the heads of the criminals he had executed, while he set those who had not yet deserved a capital punishment to work upon public buildings and roads, and upon the theatre which bears his name.

But how fearless and severe he was may best be imagined from the singular story which Sivers tells of him—a story possible only in the East, one would think, under the Caliphs, certainly without its parallel at so late a day in the West.

Miralda Estalez was a beautiful young girl of Havana, who, after the death of her parents and of her brothers and sisters, found herself sole heiress of her father's house and cigar-shop. She was but sixteen years of age, but the sorrows of her early life had tinged her character with a certain melancholy, which, however, did but enhance the charm of her beauty. Her shop soon became the universal resort for cigars. The idler as well as the busy merchant never failed to make a detour through the Calle de Comercio when they wanted a cigar, and often when they did not want one. She treated all her patrons alike, showing none of them the slightest preference, until at length it was generally said that she specially favored a young boatman named Pedro Mantanez, who plied between the Castle Morro and the Punta.

The Count Almante, however, one of the gayest cavaliers of Havana, paying no attention to the report, persisted in considering himself her favorite, without observing that she was as affable towards everybody else as towards him. For days he sat chatting with her, and when at length he fancied that the proper time had come, he entered her shop one evening and smoked a cigar and kept her in conversation till the other neighboring shops were closed and the streets were deserted. As soon as he thought himself safe from intrusion, he made his explanations, offered her whatever sum she asked for her present shop, and put at her disposal another shop in his palace in the suburb Cerro, where she could carry on her business, if she would live there as his mistress. Instead of replying to the proposal, the girl mentioned the name of another shop where they sold better cigars than she did, and expressed the hope that in the future the Count would supply himself there. Almante thinking she was in jest, came nearer, but Miralda, who seems for a good while to have feared such an event, drew a dagger, and, with flashing eyes, bade him beware, and he retreated. The girl breathed freer then, and congratulated herself on being released from her persecutor. But several days only had elapsed when, in the evening, a squad of soldiers halted at her door, and the officer accompanying it commanded her in the name of the law to follow them. Unconscious of guilt, she did not dare to oppose Tacon's orders, and so obeyed. But when she found that they had passed by the prison, and were taking her out of the city, her fright was extreme, and she entreated them to tell her where they were going. Silence, however, was the only answer she obtained till she arrived at Almante's castle in the Cerro, where the Count, with a smiling face, received her, and expressed the hope that she would relax her obstinacy. Miralda answered only with a gleam of her dagger as she entered the apartment prepared for her. There she remained several days alone, refusing the visits of the Count, in the sure hope that Pedro, to whom she had related Almante's persecution, would discover the place of her conceal

ment. He did discover it, and, disguising himself as a monk, obtained access to her, when they resolved to appeal to the justice of Tacon. Pedro at once repaired to the Governor, who gave him a ready hearing. "Is Miralda your sister?" he asked with a gloomy expression, as Pedro finished his story. "My betrothed," replied Pedro. Tacon then bade him come nearer, and, holding up a crucifix, commanded him, with a look that penetrated to his very soul, to swear to the truth of what he had said. Pedro knelt and kissed the cross and swore. Tacon then told him to wait in an adjoining room, with the assurance that his affair would soon be attended to. In the course of a couple of hours Miralda and Almante were brought before the Governor. "You have abused the uniform of the police for the abduction of this girl?" he said to the Count. "I was so rash as to do it," replied the latter; "I cannot answer for it before you." "The supreme judge, in a moment. At present I ask you, upon your honor, has violence been done the girl?" "On my honor, none." Tacon then wrote a note and despatched it; and, after the examination had been continued and the answers compared with one another, in their presence, Pedro, a priest, entered, and Tacon commanded him to perform at once the ceremony of marriage between Miralda Estalez and the Count Almante. In vain did the Count protest and appeal to his nobility, in vain did Pedro entreat it might not be. Miralda stood as if bereft of her senses, and, before one of the parties concerned could recover his presence of mind, the ceremony was over. Almante was then commanded to leave the castle, while Miralda and Pedro were directed to remain. Tacon then went on quietly with the other business before him. But half an hour had hardly elapsed when the officer on guard entered. "Is my order executed?" said Tacon. "Yes, Excellencia! Nine bullets passed through the Count's body as he rode round the corner of the street you mentioned." Tacon then turned to the priest and said, "You will see that the legal announcement is made of the marriage just performed here, as well as the legal announcement of the death of Count Almante, with the addition that, on account of the want of relations to inherit, his widow becomes sole heiress of his property and his name." Miralda and Pedro were then dismissed with the benevolent injunction to attend to the further prosecution of the case for themselves.

TWO RECENT SOUTHERN BOOKS.*

Modesty, that sweetest grace of heroic spirits, is not, we should say, among this cavalry hero's charms. Not in his book, at any rate, does he appear as a shamefaced person. Impudent, most people would call him, though some might say that his impudence and self-conceit are of the unconscious kind. It is true that autobiographies are seldom prepared with a view of covering up the writer's merits. And the ex-colonel may plead that he was in a manner forced to tell his own story; that a majority of his countrymen believed him to be what he has been roundly called—a murderer and a thief; that a biography, satisfactory or otherwise, was hardly to be hoped for; that as for history, the severe muse, it is likely, will do no better for him than tell posterity that H. Gilmor was a rebel major whose command, one day in July, 1864, got between Baltimore and Havre de Grace, and, before retreating, stopped a train on the Philadelphia railroad and pillaged the passengers. And even, he might say, if the historian bestows on him a sentence more, he might, perhaps, expect a sentence that not the meekest, most self-depreciatory of men could rest content with; not improbably it would be to the effect that this Gilmor was one of those rebels whom their foes, their friends, and they themselves might all call traitors, as having not only waged war upon their country but also committed treason against their "sovereign" native State.

Whether or not he needs to brag, or knows that he is bragging, these three hundred pages are filled full with Gilmor's tale of Gilmor's prowess and exploits. Every Confederate general presses his hand warmly and thanks him for the abundance and accuracy of the information which he collects. He goes round and round the Yankee army and through it and back again. Every Confederate general congratulates him on the splendid dash and endurance of his cavalry. The Confederate rank and file, when he rides to the head of the column, break forth in a simultaneous cry, "All right, boys; there goes our Harry to the front." Therefore, no wonder that, with his long bright blade raised in *tierce point*, he rides exultingly into the battle, swearing never to be taken alive, and kills the Yankee incessantly. Sometimes he shoots the Vandal with a revolver: as he rides at a gallop past telegraph posts he can put a ball into each of half a dozen posts. Sometimes the invader falls beneath his fist. But for choice he smites him with the sword. His gallant gray ranges alongside some Federal; the colonel delivers a right cut at him; the foe defends by a *tierce parry;* with thought-like speed the colonel makes a *moulinet*, and the fight is won. If ever a blue-coat escapes death or captivity it is not by superior valor. Mounted on his bay mare, a splendid blooded animal, the colonel leaps two or three high fences and wide ditches; his men follow; they aid their leader, who has charged a fleeing squadron of the enemy; he rises in the stirrups and makes a cut in front at one undemoralized Yankee who shoots as he runs; but just previously he had made a rear cut and turned his sabre in tierce; it is but the flat of the blade which crashes upon the head of the Federal, therefore he is not cleft to the chin; nevertheless down he goes headlong to the earth.

Of course the bold dragoon is successful among the fair. He rides into a town, and the Confederate maids wave handkerchiefs at him. White fingers dress his wounds. Not seldom he is embraced. Like a dashing cavalier, who courts as he fights, he loves and he rides away, but kisses not a few are bestowed upon him, if we may credit his own story. For with him it is the same in love as in war; he kisses and tells as he kills and tells, although, we are bound to say, he always conceals the names, and often conceals even the initials, of those who grant him favors. In short, our partisan ranger appears to be not a little of a puppy. We wish he was no worse; for he has an engaging frankness about him which conciliates one's liking, and though it is he himself who tells us of his daring, his determination, his indefatigable activity, we incline to think that he really has plenty of courage, and was a brave and vigilant scout and marauder—a hero of the type most admired by the brave, frank, gasconading, card-playing, tobacco-chewing, whisky-drinking, good-looking, half-educated, empty-headed, horse-racing, negro-hating, negress-loving young slaveholders of the South. That he was a murderer we will not say. His ancestors, one would think, might have been murderers for several generations before their descendant could have committed some of the hard-hearted cruelties here recorded. And these are doubly odious and disgusting when done by a pretender to chivalric honor; by a man who cries out in lofty indignation against Federal severities in the Shenandoah Valley, where the inhabitants, "farmers by day and guerillas by night," had for the most part richly earned a halter. Imagine half-a-dozen chivalrous young gentlemen assembled in Richmond. One high-toned knight is from Snicker's Gap say; one is a cavalier from Hinesville, Georgia; another has ridden to the sacred soil from near Andersonville, Sumter County, in the same State; one or two are from South Carolina; and Gilmor is another. They belong to the class which finds Yanks too low down for their use, who, despising mudsills, dress magnificently in bombazine armor and go to tournaments. And imagine,

> "If any care for what is there,
> Survive in spirits rendered free,"

that some Sidney or Raleigh visits the Spottswood and listens while the high-toned Gilmor relates this incident. It occurred in Maryland. Gilmor is endeavoring to take a barrack which is held by a party of Federal troops. He captures some prisoners, and thus he utilizes one of them:

> "Four of my men were killed in the door of the barracks, and, for a time, it was doubtful whether we could take it. Just then I caught a soldier, pushed him before me to the barrack door, and demanded a surrender, threatening to show no quarter if they did not immediately throw down their arms. All complied but three who deliberately fired; but, instead of hitting me, a ball struck the poor fellow I used as a shield, mortally wounding him."

Any ordinary pirate of the seventeenth century might have licked his lips over that atrocity, and claimed promotion for it. Had any of those defenders of the barracks been present when Gilmor was made prisoner, either the first or the second time, we have our doubts if that sacred oath of his would not have been kept. He would hardly have been taken alive.

As to his being a thief, we have his word that he was not, except, perhaps, on one or two unimportant occasions when his theft may pass for foraging. His men, he does not deny, may have frequently been thieves, but not because of his orders; and if they robbed the passengers at Havre de Grace they did it in direct disobedience of orders. The writer's hard swearing and hard drinking, of which he candidly allows us an occasional glimpse, are not matters that concern us, they are natural to the trooper. In taking leave of him we revert to that quality of his which we have already mentioned—his brazen impudence. He has the effrontery, the mingled assurance and wilful ignorance, to speak in this way of the Confederate States military prisons of Salisbury and Andersonville and their unhappy occupants:

> "It will come out before long that the large mortality in the Southern prisons must be attributed to other causes than the want of food—"

* "Four Years in the Saddle. Col. Harry Gilmor." New York: Harper & Brothers. Pp. 291.
"Andersonville Prison. Ambrose Spencer." New York: Harper & Brothers. Pp. 272.

That, we may say, has pretty well come out already. Sherman found food enough.

—"chiefly to the uncleanly habits of the prisoners themselves."

Certainly the Yankees at Andersonville were not clean. That much may be learned from a narrative which lies before us, prepared by a Southern eye-witness, Mr. Ambrose Spencer, of Americus, Georgia.

—"When taken sick they made up their minds they should die"—

So did Wirz and Winder.

—"and in such cases they seldom recovered. Here in our prison (Fort Warren) the word was, every man must be clean and wash himself from head to foot constantly, and not a night passed but you might see five or six men bathing and scrubbing."

At Andersonville no Yankee was ever seen washing himself from head to foot. Spencer says:

"Dr. John E. Bates, who was on duty there, says that when he first entered a ward of the hospital he was shocked. Men were lying partially naked, dirty and lousy in the sand, wasting under gangrene, putrid from fever-sores, and literally dying from starvation. Crowded together in small unserviceable tents, they asked for a teaspoonful of salt; they begged for some of the siftings of meal; they even entreated to be allowed to gnaw a bone as they lay in their filth, destitute of medical attendance as of everything else. . . . . The effluvium from the hospitals was sickeningly offensive."

And here is a soldier who does, undeniably, seem to have been home-sick, as Mr. Gilmor says, and his uncleanliness is disgraceful. He also is a patient of Dr. Bates's,

"A prisoner of but sixteen years of age, down with both gangrene and scurvy. He talked of and cried for his absent mother, and prayed for her tender hands and gentle care to soothe his anguish or dress his sores, and, as he moved his restless, emaciated body, seeking a repose that was denied him, the sand would rub into his sores and disfigure the very pollution that was destroying him. Although it was against specific orders to give the patients any food or what might help their condition, yet the doctor now and then smuggled into his little patient's hand a potato or a biscuit to appease his ravenous hunger; but, notwithstanding, to use the witness's simple but heart-rending words, '*his sores gangrened, and, what with the scurvy and want of food and from lice, he died.*'"

"Each of us," says Gilmor, "had but a straw mattress and one blanket, which were frequently aired and shaken and every effort made to keep the bunks clean and the floors well swept."

Here is where the Abolitionists lived at Andersonville:

"Meanwhile the crowds within the stockade had attained the highest limits as to numbers which were reached during its continuance, there being in the month of September 36,480 in all. With this increase there was a corresponding augmentation of their sufferings. The rains of the autumn season, together with the constant tread of so many men, converted the interior at times into one vast bed of muddy slush nearly a foot deep—an aggregation of the semi-liquid filth through which the miserable prisoners unceasingly tramped in their unvarying round of pointless existence. Then for some days the hot sun would pour down upon this quagmire, feculent with putrefaction, and draw from its depths vapors saturated with the fetid stench which it exhaled, and which corrupted the air they had to inhale."

And here is where most of them slept:

"No box or coffin was permitted; no decent shrouding even in the ragged blanket was allowed. . . . When about twenty feet of mortality was huddled side to side, lime was scattered upon the bodies and the earth carelessly thrown over all. A few days of rain, or the depredations of animals, would here and there leave exposed some luckless leg or arm or head of the dead ones, and, as the torrid heats of the summer suns poured down their decaying powers, a taint of effluvium and corruption would pervade the atmosphere for miles around. Here, over this ghastly spot, could be seen at almost any time countless hosts of sluggish buzzards."

"I had been at Fort Warren but a few days," says Gilmor, "before numerous letters from kind sympathizing friends in Boston and elsewhere brought me offers of money, clothing, provisions, and whatever else I might need, but, as I was within reach of relatives in Baltimore, I had to decline. . . . Thanks to our fair guardians in Boston, the time latterly was made to pass more pleasantly by frequent presents of strawberries, currants, and other delicacies to us."

General and Church-warden Winder says to a man, who sought permission to carry food to the sick within the stockade at Andersonville:

"G—d d——n your 'mission of mercy.' I wish that you and every other d——d Yankee sympathizer, and every G—d d——d Yankee too were all in hell together."

So the provisions were carried back, and the unfortunate wretches starved in agony by the thousand, or kept themselves alive by resorting to means of subsistence which do not bear recital.

Mr. Spencer's book is the work of a loyal Georgian, who, during all the war, lived but a little way from the dreadful prison pen. He gives us, in the form of a brief narrative, a digest of the evidence given at the trial of Wirz, and this he supplements by what he himself learned in his many visits to the place. His work is very ill written; but skill and eloquence can add nothing to, and the want of skill and eloquence detract nothing from, the horrible impressiveness of the naked facts which form his subject matter. It is a book which will overwhelm with fresh sorrow many women and men who read it, and most men and women, besides those mourners, it will rouse to anger. Yet it ought to be read. It is the very truth, we firmly believe. Also, we believe that the same social system which produced young men like this Gilmor—courageous, wilful, cruel, boastful, ignorant, cunning, and thoughtless—was also responsible for Andersonville, and in every county through all the South could have laid its hand on a Wirz whom itself had made. From this book it is possible to learn something of what there is to be done down there.

THE MAGAZINES FOR AUGUST.

THE "Atlantic" easily maintains its supremacy among the monthlies. Too easily indeed. If there were a rival near the throne, we might probably gain the loss of such poetry as "My Farm," and such prose as more than one of the articles in the August number. Yet it must be pronounced a good magazine which gives us contributions by Agassiz, Hawthorne, Lowell, Stowe, and Reade. And the critical notices are very pleasant reading. The "Passages from Hawthorne's Note-Book" are, if possible, more delightful than any previously published. The Concord River in rain and shine, a wet day in the fall, an exasperating walk in the underbrush, are perfectly depicted, and every now and then, as when Margaret Fuller appears, there is a characteristic touch of half-sarcastic, quiet humor which is pleasant enough. Ten or twelve pages from John Neal's note-book, "London Forty Years Ago," is a disjointed article, dull even where it is full of conceit and ill-nature. Perhaps the next ten or twelve pages may constitute a justification for publishing this instalment. When Professor Agassiz indulges a hope that he has "contributed something to the results of modern geology," the article in which he thinks he has done it is worth attention. The geologic formations of the entire valley of the Amazon, or, as he calls it, of the Amazons, from the Atlantic to the Andes, consist, in his opinion, of three uniform sets of deposits, none of which are older than the glacial period. This view opposes the one hitherto prevalent, and the author promises a fuller exposition of it. Mrs. Stowe asserts that a good many neighborly calls, and little social gatherings, without so many different kinds of cake and ice-cream, are much better and more sensible than one grand stupid party once in a twelvemonth. She admits, however, that Mrs. Bogus, who gives but the one big party, though not so good as Mrs. Easygo, who gives the many small, may be actuated by good motives, and really does some service to society. Griffith Gaunt, "still from one sorrow to another thrown," is freed from his two wives in this number, but is probably murdered and sunk in a pond. We regret to say that we think it would have been as well if Mr. Gaunt's act of organic memory had escaped the recording pen of his biographer. The man and his wife, and their life and manners, are, as Mr. Reade never forgets, of Fielding's day. He has now for a moment forgotten—for the first time, we think, forgotten—that himself and his readers live in a less outspoken and more delicate age. Of immorality we find none. Mr. Lowell's "Miner" expresses a thought with which he is familiar. The other articles are, in no respect, valuable or remarkable. Miss Alice Cary concludes her singularly feeble and ineffective tale, "The Great Doctor." "A Maniac's Confession" is the effusion of a very harmless bibliomaniac. "What did She see With?" is a story told by a young lady whose queenly mamma, an out-and-out aristocrat, was descended from the regal house of Stuart. It is nothing if not psychological; and, if it pleases no one else, ought to please the clairvoyants who advertise in the newspapers. Dr. Wilder makes a readable article out of his experience with that huge silk spider, of which he may be called the discoverer, which inhabits the Carolina Sea Island region. In "A Year in Montana" it would seem as if the writer had not made the most of his materials.

"Our Young Folks" is hereafter to be adorned by a series of full-page illustrations. In this number the various flowers which are accustomed to giving good advice, and the flower fairies and other such insipid personages, fill up the usual number of pages. "A Summer in Leslie Goldthwaite's Life" continues to be one of the most admirable juvenile stories which has recently fallen under our observation. Mr. Higginson proceeds with his narrative of Miss Carrie's wanderings, and promises more. More is threatened of "Afloat in the Forest." Mrs. Stowe, Mrs. Hale, Lucy Larcom, and Gail Hamilton are among the contributors.

"Hours at Home" contains nothing of importance. The editor is very angry with Gail Hamilton because she says, "I do not believe that God anywhere commanded *us* to keep the Sabbath." Also, he says that Louis

Napoleon sways "an influence greater than any man in ancient or modern times has swayed over the political destinies of civilized nations." Here now, we should think, argument would be better than dogmatism. G. M. Towle, who is announced as "United States consul at Nantes," writes an article upon "Student Life in Germany." His style is a model of its kind, which is the forcible-feeble, but he is really very careless in his use of compound adjectives. Of the feudal barons of Germany he remarks: "And then the most ardent zealot for progress cannot but feel a thrill of admiration when he reads of the magnificent courage, the profuse hospitality, the *death-recking* devotion to an idea which animated these rude and haughty hearts of old." Miss E. Stuart Phelps imitates the author of "Margaret Howth" in one of those painful stories in which warped, diseased natures show us their sores. "De Rebus Ruris," by Donald G. Mitchell, is readable. Mr. Mitchell's little bit of affectation in using "*'twould*" when he ought to say "*it would*," is something to which not even the example of Emerson can reconcile us. "Rambles among the Italian Hills" is, on the whole, the most satisfactory of the articles, though the long review of Baker's "Nile Explorations" is commendable for giving a very good idea of the contents of that book.

A much better sample of this sort of review is the article on "Simson's History of the Gipsies" in "The Catholic World." The other original articles in that magazine are not numerous. The borrowed articles are chosen with judgment, the prominent selection this month being a review of "Ecce Homo." It is said to be from the pen of Dr. Newman, but this, in our opinion, is a mistake. It is exceedingly well written, however, and, though of unequal ability, and, as we think, sophistical, it will repay perusal. The critical notices of new books are very weak.

WILSON'S PHRASIS.*

This book is one of the most striking instances that have in a long time come under our notice of fruitless learning and industry misapplied. It is evidently the work of an enthusiast, of one who regards himself as sent into the world to revolutionize the science of linguistics, and refute the errors of numberless generations of philologists. The self-estimation with which it is put forth is indicated by the author's introducing his own photograph as its frontispiece—as if his readers must be eager to see the form and features of one who taught them such wonderful things. This feeling, like the book itself, has its respectable side, but certainly also its ludicrous side; nor is it without its saddening aspects. The result of no ordinary amount of reading, of serious study and thought, is here laid before us; the writer, we doubt not, is guilty of no exaggeration in his account of the toil it has cost him, of the sacrifices of leisure and ease he has made in its preparation, of his expenditure in the collection of authorities and the final publication; and yet he has done it all for naught, and less than naught. He has not the faintest conception of what language is, of how it lives and grows, and is to be studied. Along with not a little acuteness in matters of minor detail, he shows a total want of sound judgment and sober sense; his general views are wrong to preposterousness; even his account of facts and phenomena is so tainted by them that the general reader cannot possibly extract any nutriment from what he serves up. Of the numberless poor and pretentious books about language, the greater part sin by emptiness, showy superficiality, and facile sophistry; but about this one there is nothing shallow, it is profound and laborious absurdity. The author's idiosyncrasy leads him to see things turned wrong end foremost and topsy-turvy. We can hardly fear that the public will be misled by him, because the quality of his lucubrations is too palpable to be mistaken. It is impossible to enter into a serious analysis and criticism of such a production; one would as soon undertake a historical examination of Gulliver or Munchausen; we can only give a specimen or two of it, to justify the opinion we have expressed.

"It is the leading law of nature," says our author, "that the part is as great as the whole," etc. (p. 143). Any one may easily guess what is likely to be accomplished in a science by a reckless application of such a "law." One of its simplest corollaries is that "adding letters to a word . . . . gives it no sound that was not in it before" (p. 146). Perhaps the most cardinal principle in his philosophy is, that things which seem to be different are, in reality, one and the same, everything being equal to everything else. So *byggja* (p. 148) is made out, the general equivalence of letters being conceded, to be the same as *yyyyya*; we only wonder why not the same as *yyyyyy*, and why all our words should not be reduced to this letter, and Mr. Wilson's whole book printed in *y*'s: it would in that case be, suggests a friend, a far *wiser* book than at present. "Our *have* is, in French, *a*, for *have* equals *aave*, *aaue*, *aauu*, *aaaa*." "The identity of the plural with the genitive singular has been noticed elsewhere" (the difference of *horse's* and *horses* being infinitesimal, a mere apostrophe); "just as much as the genitive is a form of the nominative, so much, again, is the plural a form of it also" (p. 38). "*Have* and *be* are the same word (p. 105); for are they not used sometimes in the same sense, as when we say either *I have come* or *I am come?*" We are taught (p. 185) how to "find Greek etymology easy;" it consists merely in a due recognition of the identity of letters: thus, *kupto* equals our *stoop*, because *k* equals *t*, or *st*, and *pt* equals *p*. It is likewise easy, as we know, to derive *Melchizedek* from *Moses:* we have only to cut off *oses* and add *elchizedek*. There is throughout the book the queerest mixture and confusion of the phonetic and the orthographic; one circumstance which proves the equivalence of *b* and *m* is that "Ethiopian *m* is *B* on its back;" the association of *p* and *s* in one letter, *psi*, in the Greek alphabet, is accounted for by the pregnant fact that the Russian *z* is a *p* turned upside down; *t* is equal to *e*, *i*, *u*, and *h*, because *T* is an *E* whose middle stroke has developed unduly, atrophied and dwarfed the other two, and toppled the whole structure over upon its face, and so on (pp. 151–3). Nothing can exceed the originality of Mr. Wilson's views as to the relationship of languages. "The Albanian, we do not hesitate to say, is to be classed as one of the remote forms of Greek, especially of modern Greek" (p. 297). Or, as we should say, John Smith is a distant relative of the Bonaparte family, especially of the little Prince Napoleon. "Let it be remembered that Persian, while it agrees so nearly with ours, is still, nevertheless, eminently a Tartar and a Semitic language" (p. 301). The zoölogist would express a similar truth somewhat thus: "Bear in mind that the whale, though so much like us, is yet emphatically a rattlesnake and an elephant!"

This anthology might be indefinitely extended, and, what is more, it could not be counterbalanced by any array of extracts of an essentially different character. We say again that a madder book, one more empty of true knowledge and edification, is rarely issued from the press. That doctors of law, divinity, and philosophy can be found among us who are ignorant enough, or careless and unscrupulous enough, to praise and commend it to public attention, is a marvel and a pity.

Harper's Pictorial History of the Rebellion. By Alfred H. Guernsey and Henry M. Alden. Part first. (Harper & Brothers, New York.)—This illustrated quarto owes its size to its illustrations, which, with few exceptions, appeared originally in *Harper's Weekly*. It was well to preserve them in this form, though, so far as the maps and plans of battles are concerned, they might have been reduced in scale without disadvantage. Writing history is much like editing country newspapers (in which, it is understood, the pen is nothing and the scissors everything) in this, that it is very embarrassing to choose what to retain where so much must be rejected; and if country newspapers are, in the abundance of good material, a marvel of dulness and trashiness, a history of a great epoch which is brief without being meagre is equally marvellous. The editors of the present work announce that one more volume will probably enable them to round out their design—that is, will carry them from the end of the Peninsula campaign to the break-up of the rebellion. This power of condensation is not to be despised, especially when space which one would expect to see jealously hoarded is surrendered not only to helpful cuts, but to cuts which are only a disfigurement and a hindrance. There is, in our mind, a very clear ruling to be observed in this matter of illustrating history, and military history in particular. Pictures celebrating events are useless, except as they are true to the topography of the places in which they occurred, or (as in a naval fight) to instruments and actors. Furthermore, compositions are admissible only on the most urgent necessity. But it is not necessary that we should endure this "Battle of Rich Mountain," which was probably drawn in a sky parlor on Broadway by a man who had never smelt gunpowder, and which could not be disproved to represent the battle of Antietam, if you had only so labelled it. And this "Zouave Relating his Exploits," or "Unionists of East Tennessee Swearing by the Flag," or "Issuing Passes at St. Louis"—this is palpably unnatural and untruthful drawing, which ought never to have been draughted upon the block. If the editors had, for the pictures of the key of the Fort Moultrie magazine and Major Anderson's candlestick, devoted half a dozen additional lines of text to the abolition movement, they would perhaps have done it less gross injustice than is contained in a few epithets and a compressed misstatement of its character and aims. For this and, by inference, for other distortions, one might also have dispensed with the going back to 1750 in the opening chapter, and even with the Constitution *in extenso* and the Declaration of Independence in fac-simile, or with some of the portraits which are stale and have been superseded. It is possible, we admit, to differ about essentials in making this concentrated extract of history, and a page of bad drawing, telling of what never did take place or could have taken place, may be preferred to a page of careful and unprejudiced narration; and if the reader's preferences are the same as the writer's, there will be no difficulty between them. We cannot refrain from expressing our confidence in the general impartiality with which the war evidence has been sifted and judged in these pages; and the foot-notes embrace some of the most valuable documents of the late revolt.

* "Phrasis: A Treatise on the History and Structure of the different Languages of the World, with a Comparative View of the Forms of their Words, and the Style of their Expressions." By J. Wilson, A.M., Author of "Errors of Grammar, and Nature of Language." Albany: J. Munsell. 1864. 8vo, pp. 384.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE LATE SESSION OF CONGRESS.

THE Thirty-ninth Congress of the United States has just closed its first session, having submitted its policy to the country, after long consideration and debate. By its fruits it will be judged; and the judgment to be passed upon it is the main question at issue in the approaching political campaign.

It is comparatively easy to "lay judgment to the line and righteousness to the plummet," in criticising the action of others. We have naturally given much thought to the state of the country, and arrived at very definite conclusions as to the policy which it would be best for the nation to adopt. It costs little trouble to compare the action of Congress with the course thus marked out for it; to praise it where it has followed that course, and to condemn it where it has failed to do so. But when our criticism was complete, its value would be neutralized by hundreds of contemporaneous critics, all equally sincere and equally in earnest, and no two of them exactly agreeing with us. Congress is a body of 240 persons, 160 of whom have been compelled to agree upon a policy. Could any of its critics select 160 intelligent, active, well-known citizens, from as many different districts, who would agree with each other, and with the person selecting them, upon every question pertaining to reconstruction? We do not believe that Mr. Phillips on the one side, or Mr. Johnson on the other, could succeed in procuring an *honestly* unanimous body of 160 men, if either of them were entrusted with the nomination of Congress to-day. Certainly *we* are not so presumptuous as to think that we could do better.

While, therefore, we regard it as essential that thoughtful men everywhere should freely express their concurrence with, or dissent from, the conclusions of Congress, so that it may be known how nearly they represent the judgment of the people, it seems to us that, in deciding whether Congress should be approved or condemned, the most important considerations are whether, as a body, it has fairly represented the advance of public sentiment in the direction of justice, whether it has acted up to its own convictions of duty, and whether it has, when judged from its own standpoint, and in view of all the circumstances, done the best that it could for the public welfare.

The new Congress assembled last December under circumstances of peculiar difficulty. A large majority of its members were fully satisfied that the President's policy could not safely be carried out, and were convinced of the necessity of securing some extension of the suffrage to the colored race. They were greatly strengthened by the signal victories of their party at the fall elections, which in several important States were more decisive than had been gained since 1861. But they were embarrassed by the attitude of the President, who quietly assumed that Congress had no voice in the matter of reconstruction, by the unqualified endorsement of his action by the Union party conventions in several States, and by the opposition of Connecticut, Wisconsin, and Minnesota to an extension of the right of suffrage in those States. It is true, and it was well known at the time, that the sanction given by the Union party to Mr. Johnson's plans was given under the belief that they were mere experiments, to be submitted to the final decision of Congress, and that the majorities against equal suffrage were not a perfectly fair expression of the popular sentiment. But it may be as truly said of legislatures as it has been of juries, that when a bare fact is set up against a plausible explanation, ninety-nine times out of a hundred they will judge by the simple fact rather than by any adverse explanation, however logically complete it may be. Moreover, the explanation was one which, in the light of subsequent events, gave little satisfaction. The people had, it was said, only voted against equal suffrage in order to avoid making an issue with the President. As it became every day clearer that the President was more opposed to equal suffrage than had been supposed before these elections, the probability of a change in the vote diminished. The members from Indiana and Southern Illinois well knew that their constituents had barely overcome their prejudices sufficiently to tolerate even the residence of negroes among them, and that any greater liberality would be highly repulsive to them. At the very outset, therefore, Congress hesitated to carry out the policy which at heart it believed to be the wisest, from the fear that it would not be sustained by the people.

It was evident, from a very early day, that it would be useless to pass any measure of reconstruction by less than a two-thirds vote. This made it necessary to feel the way very carefully; and for this purpose the first act of the House of Representatives was to provide for a joint committee of the two Houses, whose special duty it should be to investigate the whole subject, and prepare a general plan of re-organization. This course was so obviously wise and conformable to precedent—so far as there could be precedents for an occasion of such importance—that it commanded the unanimous support of the Union members, with one or two exceptions from Southern States. It was plain that so vast a question, if precipitated upon the House without the advice of a responsible committee, would lead to a trackless wilderness of crude propositions and fruitless debate. The committee on the part of the Senate was a strong one; but the members on the part of the House of Representatives can scarcely be said, upon the whole, to have added to its weight. Mr. Stevens is a man in whose patriotism and earnestness the Northern people have faith, but in whose judgment and tact they have very little confidence. Some other members were rather noted for brilliancy than for discretion; and it must be said, if the plain truth is told, that the country would have been more satisfied with the opinions of Mr. Fessenden and Judge Trumbull, without the aid of the nine members from the lower House, than it was with that aid.

In January, the feeling of the House of Representatives upon the suffrage question was plainly manifested by the passage of a bill establishing manhood suffrage in the district of Columbia by a vote of 116 to 54, some twenty "Union" members voting in the negative—all from the border States. The bill has been several times brought up in the Senate, but never finally voted upon, owing to the fear of a veto. Here, it seems to us, is a clear case of dereliction of duty. The bill should have been modified so as to secure a two-thirds vote, and then passed into a law. If Congress is not prepared to allow colored men to vote upon any terms in Washington, where they form so large a part of the population, it can hardly be justified in demanding that the Southern States should do so. It is conceivable that in States having only a minute proportion of the colored race in their population, a distinction may be made between their case and that of States where two-fifths or more of the whole people are disfranchised; and there may be some excuse for claiming that the former are republican in their form of government while the latter are not. There is, moreover, an undoubted distinction between the States which have preserved loyal governments and those which have not. Over the former, Congress has no power to regulate the suffrage, according to the general belief of the community, while over the latter the weight of opinion asserts its authority. But both arguments apply to the District of Columbia with at least as much force as to Arkansas. In hesitating to deal with this subject, therefore, the Senate has weakened its moral power over the whole question.

So far as the non-political rights of the colored people are concerned, Congress has displayed a most commendable firmness and courage. The failure of the first Freedmen's Bureau bill cannot be charged upon the *majority,* and even the minority upon that issue proved that they were not all unfaithful. The amended bill, purged from some features of at least doubtful merit, was finally enacted by a two-thirds vote over a veto. The passage of the civil rights bill and of the constitutional amendment were, however, the great events of the session, and largely redeemed the reputation of Congress from the charge of timidity. The promptness and emphasis with which the former measure was passed over the veto had a most inspiring effect upon loyal men throughout the whole land.

Much complaint was made of the delay of Congress in determining upon a policy of reconstruction. But, as we have shown, the subject, in itself difficult enough, was involved in still more difficulty by the obstinate attitude of the President, and the anxiety of good people, who could not believe him to be treacherous, to have their representatives avoid all conflict with him. Two-thirds of the session was spent in

vain but well-meant efforts to harmonize the executive and legislative branches of the Government. Mr. Johnson repudiated his own propositions, when endorsed by Congress, and proved that he was determined to break up the party to which he owed all his honors. Some of us had long foreseen this result; but the people, generally, would have refused to sustain Congress in accepting the breach before it was clearly inevitable.

There is every reason to hope for even better things from this Congress at its next session than at the last, if its past action is approved by the people. So far as it has gone, it has, in the main, deserved such support. It has done nothing harsh or unjust to the South. Its offers of reconstruction are, if anything, too liberal; but it has not tied its hands from modifying its terms next winter, if they are not accepted now. Under all the circumstances, it may well be doubted whether it would have been possible to elect a Congress that would have done better. If we are dissatisfied that it has not gone far enough, it is nevertheless true that others blame it as having gone too far.

We have freely censured the practice of repressing real debate, and encouraging Saturday afternoon speeches. In this respect the Thirty-ninth Congress has erred even beyond the measure of its predecessors. But it has followed the disposition of the American people, who love speeches when they have no practical bearing or result, and detest them when important questions are awaiting decision. The fault is not Congressional merely, but national.

The final action of the two Houses upon the tax and tariff bills was wise. In the matter of the currency, we think they made a mistake—not, indeed, in refusing Mr. McCulloch a discretionary power for which he has not proved his fitness—but in resisting all attempts at contraction. The country will soon learn wisdom upon these questions, and mould Congress to its will. We cannot say that the prevailing sentiment of the people was not in accordance with the action of Congress, for we think it dictated that action. The manufacturing classes, especially, seemed to dread a return to specie payments, and strongly opposed all efforts in that direction.

The question of adjournment was a difficult one. The recent intelligence from New Orleans may raise a doubt whether a little delay might not have been judicious; but long sessions are mischievous in their effect upon Congress, and disagreeable to the people, whose financial interests are prejudiced by the doubt which hangs over the system of taxation until Congress has actually gone home. We certainly do not think that Congress should keep in perpetual session for the protection of office-holders, however meritorious they may be; and the general interests of the country will probably not suffer by allowing the President to develop his real disposition for the next four months. If he does any great mischief, it will have a salutary effect upon the public mind, which may more than counterbalance the evil.

Though not without many and grave defects, we gladly accord to the present Congress the credit of a high patriotism, a fervent love of justice, a zeal for liberty, and a union of courage with moderation which will make it memorable in history. Its faults have been mainly negative, its virtues positive. Nearly all that it has done has been good; and if it has failed to do as much good as seemed to some possible, yet that is a fault common to all mankind. In a time of supposed re-action, it has advanced the standard of progress; in the midst of treachery, it has stood nobly faithful; surrounded by cowardly advisers, it has maintained undaunted courage. If its rhetoric has sometimes excited a smile, it is only fair to remember that such rhetoric is traditionary, and that the "giants" of the last generation, whom it is the fashion to deify, were accustomed to pour out just such tawdry eloquence, and made their reputation out of speeches really as absurd as the lofty flights of General Banks. These "giants" led their trusting constituents into a morass, out of which Congress has had to extricate them. Had Webster and Everett been more faithful to their convictions, more fearless in their discharge of duty, they, and not the legislatures of to-day, might have had the honor of saving their country.

The faults of the Thirty-ninth Congress are inherited; its virtues are its own. May it meet again, supported by the popular verdict, strengthened by contact with the people, comforted by their sympathy, to take a bolder and a higher stand in behalf of the great cause of human rights for which it has shown so true a regard!

MR. BANKS AS A LAW REFORMER.

It was the fashion during the war to illustrate the wretched condition of bondage to which the Confederates were reduced by reference to the practice of holding "secret sessions" in which the rebel congress indulged so largely. At one time the larger portion of the Confederate legislation was done in this way, ostensibly to conceal the proceedings from "the enemy," but in reality to conceal from the people of the South the names and arguments of those who were engaged in voting away their lives and property, and riveting their chains, at the bidding of Mr. Davis. There were probably few things which indicated more clearly than this the decline of the Confederate power and spirit. It was at once the cause and consequence of weakness. It separated the congress from the people in opinion as well as in feeling; put an end to popular interest in the debates; and, in fact, transformed the legislature into a many-headed tyrant and its acts into ukases.

The assertion that our own Congress is falling into the same bad habits may be very startling, but it is nevertheless true. The practice of preparing bills in committee and dashing them through the House and Senate without, or almost without, debate, is making legislation public only in name. It is in vain that the galleries are crowded day after day by an admiring and interested public; in vain that the members' essays and sayings are transferred to the *Congressional Globe*, and that summaries of them, as well as of those little spurts of conversation which occasionally enliven the proceedings, are duly published in the daily papers; the public, after all, has no knowledge of the proceedings of Congress in the proper sense of the term. Legislation is not public when the people does not hear each measure discussed section by section, slowly, carefully, and deliberately, and is not fully informed by its promoters what arguments and what considerations have influenced them in introducing it. We have, be it well understood, not one word to say against the practice of preparing bills in committee. Everybody knows that this is absolutely necessary to the despatch of business. The preliminary work must be done by somebody, and Congressional committees are generally composed of men who have some special fitness for it. But it is essentially preliminary work. It never is so done, and never ought to be so done, as to dispense with all further discussion in the House or Senate. No member of either body, we care not who he is, has any business to flatter himself that the minute he has a bill read to him he is competent to vote either for or against it. And even if he is, or thinks himself competent, a decent respect for the nation, whose servant and creature he is, requires that he should deliberate before deciding, and that he should state publicly and carefully the reasons which influence him in voting. We do not propose, of course, that every member should make a speech on every bill and resolution; but we do say that if every member did make a speech, if there were no such thing as the "previous question" or the one-hour rule, although, perhaps, not more than one bill would be passed in a session, the country would be a gainer by it. We could get along with very little legislation if what we did get was sound and well weighed. The curse of our time is the multitude of our laws.

These remarks, or rather the repetition of these remarks, for the substance of them has already appeared more than once in our columns, have been, of course, suggested by Mr. Banks's escapade about the neutrality laws. We have very little to say against the changes proposed by his bill. It may be that our neutrality laws ought not to be more stringent than those of Great Britain; but of course every thinking man must see that this formal and solemn copying of English legislation would be a virtual abandonment of the ground on which we based much of our complaints of English action during the war. When we asked for certain restrictions on rebel dealings, they fell back on the letter of their statute. We maintained that if their statutes were insufficient to enable them to enforce international obligations, they were bound to amend them, and pointed with pride to our own. This they refused to do. Mr. Banks's bill and his oration would have furnished them with the very thing they wanted—a justification of Lord Palmerston's course in refusing to alter the law.

The haste with which the bill was passed in the House was indecent, insulting to the public, and calculated to disgrace our Government. It was all the more so because it was made a matter of boast by its

leading promoter that it was done in the interest of the Fenians—men who have attempted to lead large bands of city thieves into a peaceful province, for purposes of rapine and murder, in defiance of our law. The leader of these bandits is at this moment under bonds for his appearance before our courts. He has made a boast of his indifference to his obligations as an American citizen, and his determination to break American laws as often as it seems to him necessary to help what he considers the cause of Ireland; and yet he was on the floor of the House when this bill was passed, and was probably brought there to witness his triumph over the American Government.

The whole Fenian fraternity are ignorant, passionate, and turbulent, impatient of the restraints of law, and unused to self-government. Their presence in this country has already had a very debauching effect on our politics, and adds terribly to our catalogue of crimes. The community bears with this patiently, in the belief that time and education, and native influence and example, will elevate and enlighten them. All Americans feel, or ought to feel, that their first duty towards their foreign population is to impress them by every means in their power with respect for the law, and with a sense of the value of obedience to it. But what amount of teaching of this kind can counterbalance this wild approval of their law-breaking which the House of Representatives has been pleased to bestow?

When Mr. Banks undertook so eagerly to report on the neutrality laws, we expected great things from him. We knew the report would be a wonderful piece of rhetoric, and that his bill would make the hair of tyrants and aristocrats stand on end; but we did not expect that the House would pass it unanimously at one sitting, and that even the few, like Mr. Raymond and Mr. Patterson, who had the good sense and patriotism to be scandalized by it, and to remind the House of what it owed to its own dignity and the national good name, would be so cowed by "President" Roberts, of the Bowery, as to be afraid to record their votes against it.

Mr. Banks is now laboring hard to acquire the position of the rhetorical champion of the nation. He appears to be, we are glad to see, conscious that his career in the tented field, while filling many a home with desolation, did not cover him with much glory. So he has come home determined, if he cannot make the country "glorious with his sword," that he will, at least, make it "famous with his pen;" and he is certainly succeeding. He has contributed already some thrilling bursts of eloquence to our parliamentary annals, and has hurled defiance to four points of the compass, like the King of Hungary on his coronation day. He has proposed to send monitors, big guns, and generals and admirals to the Paris Exhibition, in order to make Europe tremble. His rhetoric is, however, tolerably harmless. It does not raise the national reputation for good sense or sober-mindedness; but then we have borne up under worse buncombe than his. What we regret most is that he should have come to the conclusion that he has only to be shut up with a resolution in a committee-room for a week or two to enable him to produce a bill fitted to change a policy originated by the best men of the Republic, persevered in for fifty years through good and evil report, and which, perhaps, has done as much to raise the American name in the eyes of foreign nations as any other incident in our history;—a bill so perfect in all its provisions as to be passed without debate, and to warrant him in insulting (as he did Mr. Patterson) anybody who ventured to oppose it. He may rest satisfied, after his display of last week, that Providence has not made him an alchemist, and that his rhetoric, entertaining and instructive as it may sometimes be, can be of little public service. A chairman of a committee on foreign affairs who gravely declares that it is the popular heart, and not the popular head, which should regulate international relations, is of about the same political value as a judge who should propose to decide legal controversies by a match on the banjo between the counsel in the case.

HANOVER.

States are like men, "some are born great, some achieve greatness, and some have greatness thrust upon them." In this latter category it was once the good luck of Hanover to be reckoned. She was hardly born great, and certainly did not achieve greatness; but in a lucky hour, more than two centuries ago, the Duke of Hanover, for it had not yet been erected into an electorate, married the penniless daughter of a bankrupt king, to wit, of the King of Bohemia, who might, at the lowest ebb of his fortunes, have answered for the head of the mythical kingdom which hath its provinces in all great cities and counts very famous men and women among its lieges. But then his Bohemian majesty, while yet the Elector Palatine, intermarried with the Princess Elizabeth, the daughter of James I., from which fortunate alliance sprang all the prosperity of the Electoral Duchy. For the Princess Sophia, the daughter of Bohemia, married the Duke of Hanover, afterwards created Elector in 1692 by the Emperor Leopold I., in consideration of his services and sufferings in the wars of the House of Austria against Louis XIV. After the death of her husband, and after James II., her nephew, had exchanged St. James's for St. Germain's (saints of very different rank, in the political calendar at least), and the Parliament were looking about for a Protestant successor to William III., they bethought them of the daughter of the Princess Elizabeth. Probably very few people outside the Herald's College knew of the existence of such an old lady as her electoral highness until it was thought necessary to make a queen *in posse* out of her. Few royal persons could have seemed further removed from such royal luck, and until that time few were more attached to the exiled family than she. When the ambassador commissioned to communicate the act of succession was presented to her he was surprised to see the royal dame scuttle with more haste than dignity to a corner of the room, plant herself with her back to the wall, and there remain a fixture until the ceremony was over. It afterwards leaked out that there was a portrait of James II. standing in that corner, of which she suddenly bethought herself and executed this manœuvre—fell back in more or less good order—so that the counterfeit presentment of her nephew only might be a witness of her tergiversation.

The old duchess, for she was then past seventy, had not the slightest disinclination to being metamorphosed into a young queen, and her principles of legitimacy and family loyalty were abolished by the same act of parliament that opened to her view the prospect of a kingly crown. We presume that the portrait on which she had turned her back, thus symbolizing her change of attitude towards the original, was relegated to the lumber room to which the portraits of poor relations are apt to be consigned. She herself became a thorough Revolution Whig, and waited impatiently for Queen Anne to die. She was getting towards fourscore; she passed that *ultima thule* of human life, and still Queen Anne persisted most ill-naturedly in living on and hindering her of a royal crown on her wrinkled brows and on her coffin. She narrowly missed this gratification, however, as she died but a month or two before her grand-niece. On the demise of that sovereign the son of the Princess Sophia had the crown his mother had so nearly clutched thrust upon his stupid head. And then began the golden days of Hanover, for George I. had always a notion, of which he could never rid himself, that England was a kind of dependent appendage to Hanover. He was not unaware of the larger quantity and better quality of the pickings which it afforded, nor of the opportunity it gave him of directing a goodly portion of them to his beloved hereditary domain. Parliaments and constitutional governments puzzled his dull brains, and he could not easily discern why the simple way in which Hanover was governed was not a more excellent one than the complex system of checks and balances invented to bother sovereigns, whose natural right it was to do as they pleased. However, he had sense enough to do as he was bid, and pocket what he could. It was certainly not a very lively life his majesty led—in a country of which he did not speak the language, carrying on the government, by means of infamously bad Latin, with Sir Robert Walpole, as did the second George after him, with no domestic comfort but quarrelling with his son and heir, and no relaxation but the society of his hideous mistresses. It is no wonder that he loved to run over to Hanover whenever he had a chance.

But the English people did not share in his affection for his continental dominions. By all the Tories, of course, he and his son after him were regarded with contempt and hatred, as usurping intruders into an office which, by divine right, belonged to James III. And the Whigs looked upon them only with a factitious loyalty, which, being interpreted, meant only protection from a Catholic dynasty, and re-

garded their love for Hanover as mere ingratitude, and an ill return for the splendid gift of a diadem. Whig squires, as well as Tory ones, were of one mind with each other and with Squire Western, that "their land should not go to Hanover." Hanover rats was the term of contempt applied by the Tories to the supporters of the new family, and there was nothing in the mental, moral, or personal character of the two first sovereigns of the dynasty to excite respect or loyal feeling. They were regarded as dykes of dull Dutch earth raised up to keep out the tide of Catholicism and despotism from overflowing the land. There was nothing about them that appealed to the imagination or the heart. All that was personal and individual about them found its expression in a wish to get to Hanover as often as they could, and to get all they could for Hanover. Thus Hanover became the *bête noire* of England for near fifty years. She was to England during the reign of the two first Georges what Scotland became during the first years of the third of the name—the quicksand which was swallowing up English money, never to be seen again. The caricatures of the first half of the last century represented the White Horse of Hanover riding on the back of the British Lion, or trampling on the lion and unicorn, while Britannia sits drooping and disconsolate looking on. And even the loyal Dr. Johnson had his sneer for the royal love of Hanover when he says, speaking of the multiplication of crimes in London:

> "Scarce can our fields, such crowds at Tyburn die,
> With hemp the gallows and the fleet supply:
> Prepare your schemes, ye senatorian band,
> Whose Ways and Means sustain the sinking land;
> Let ropes be wanting in the tempting Spring
> To rig another convoy for the King!"

During all those years Hanover was constantly in men's minds and mouths, and occupied a much larger share of public and private attention than its specific importance would seem to justify. Still it was a continual occasion of continental complications, and the English nation was more than once obliged to espouse the quarrels of Hanover, and the King to fight the battles of the Elector. And Hanover, too, had her *downs* as well as her *ups* in consequence of her connection with her powerful ally—such as dwarfs who join their fortunes to those of giants are apt to catch from time to time. However, with the accession of an English-speaking king the royal love and the popular hatred of Hanover very much died out, and it sunk to its natural place among the minute powers. And nobody was sorry when the operation of the Salic law divorced her from England, and everybody was glad that she took the Duke of Cumberland along with her when she went. She could have taken nothing that England would part with more willingly. And now her career of independent existence seems about ended. The Bible maxim, which is that of the world as well, that to him that hath shall be given, and from him that hath not shall be taken even that which he hath, is now proving itself on the continent of Europe, and the only question seems to be who of those that have shall help themselves to the havings of those that have not. The poor blind King of Hanover has not shown a disposition to imitate the example of his ancestor, the old blind King of Bohemia, who charged at Cressy, between two knights, and fell, leaving his crest and motto to Princes of Wales unto this day. But it would have availed little if he had. The day of the small powers is over, and it will not be the worse for their subjects that it is. For they are, as a general thing, despotic and cruel in proportion to their smallness. Hanover, indeed, was one of the best governed; but the world can spare her for all that. The old connection with England, indeed, will probably re-attach in the form of the royal ducal family of Cumberland, to be fully provided for as a prince of the blood royal. But as she loves such luxuries, and, indeed, considers them as necessaries of life, it is fit she should pay for them, and, to do her justice, she always seems ready enough to do so.

PARIS GOSSIP.

PARIS, July 13, 1866.

THE Italians seem so little disposed to accept, as a gift, the splendid province which, despite the unsuccessful issue of an engagement in which the Austrians not only fought under the protection of the strongest fortresses of this day, but also outnumbered them in the proportion of three to two, that the hope of a speedy restoration of peace is, perhaps, rather less confidently entertained than was the case a week ago. Crowds of intending tourists, who, on learning the cession of Venetia and the acceptance by all the belligerents of the mediation of the Emperor Napoleon, were eagerly preparing for their departure to the various German spas, have countermanded these preparations, or resigned themselves to passing the dog-days at the favorite French watering-places. The important interests at stake just now will keep the court here some time longer, and thus delay the departure of the ministerial world and the circle in contact therewith. Altogether, the "season" promises to be prolonged beyond its usual period, and, though the delay causes no little fretting on the part of those who are thus forcibly detained among the hot, white walls of this rejuvenated city, the industry of the capital rejoices in the unusual windfall. The avenues of the Bois still present something of their usual animation as evening comes on, and the stream of returning "fireflies" is prolonged till close upon midnight.

One of the novelties that have come into favor of late in the world of fashion is the ingenious modification of the ordinary visiting-card which has been so generally adopted in London. Instead of the usual *p. a. d. n.*, or *p. p. c.*, written in pencil under the name of the caller, these cabalistic signs and two other similar abbreviations are engraved in the four corners of the card, the visitor turning down one or the other of these corners, according to the message he wishes to leave. The filling of the corners is not always the same, and those who provide themselves with two or three sets of cards thus prepared are able, by choosing among them the one which contains the sign of the intimation they wish to convey, to communicate, without the trouble of writing, almost any of the little messages habitually interchanged between people living in the same social circle.

Another innovation of the "season" which, though already dead, still delays its own burial, is the increased use of ponies by the children of the rich. A few years ago comparatively few riders were to be seen in Paris, even among men, and almost none among the other sex, but the increased intercourse between England and France, and the importation of two or three dashing individualities of the *demi-monde*, who commenced their objectionable career of conquest on horseback, was speedily followed by a great increase in their number. The habit of driving, so common among English ladies, imitated here by several of the leading ambiguities, has also been followed, as usual, by the lady-leaders of the *ton*; and numerous pretty turnouts are to be seen daily in the Bois, driven by elegantly-dressed women, with husband or brother seated on the left, and a trim groom or gorgeous Mercury on the seat behind them. At first, the sight of a lady driving would bring all the walkers to a stand-still; now it is regarded as a matter of course, and no one supposes, as formerly, that a vehicle so driven must necessarily come to grief. But the crowning innovation in the aspect of the Bois is the number of ponies and pony-carriages, ridden and driven by children—an innovation resulting partly from the favor enjoyed by the pretty little carriages, drawn by four goats, and hired at so much per ten minutes, which have long formed one of the distinctive features of the groves of the Champs Elysées, partly from the increasing use of horses among the richer classes of the Parisians, partly from the example of the Prince Imperial, and partly, also, from the sight of the pair of small boys, "got up" in the smartest style of fancy-tigers, with large capes to their coats, top-boots, plush breeches, and cockades, who, since the foundation of the favorite circus, have spent their time in perambulating the principal thoroughfares of the quarter of the Champs Elysées, seated on a charming pair of minute Shetlands, and each carrying a red and white banner on which is inscribed the magic word "Hippodrome." As these children, like their ponies, have remained exactly the same size during the five years they have been employed in advertising the establishment to which they belong, they have evidently been changed at regular intervals. But, for the delighted children of Paris, they are always the same pair, and the sight of them always fills all the other children with the same equestrian enthusiasm. Of the pony-equipages driven by children the most stylish that has yet appeared belongs to the Duke de B—, a sort of landau of very elegant build, the wheels picked out with red, drawn by a pair of beautiful Sardinian ponies, scarcely bigger than sheep, black as jet, brushed to a state of preternatural polish, and stepping with the regularity of a machine, a small groom perched on the back seat, and the duke's three little boys, in nankeen suits, occupying the front seat. Whenever this curious turnout appears, driven by the biggest of the three children, who sits between the two lesser ones, and handles the reins and the whip with all the *aplomb* of a miniature Jehu, everybody turns to look, admire, and laugh, including the Mercuries of the crowded grand equipages among which the pretty little landau wends its way with the most perfect self-possession.

The new wheat, which has just begun to arrive here, and is said to be of peculiarly good quality, has just given rise to a curious lawsuit, brought by a commune in one of the central departments against a land-owner, who

had refused to allow the poor of the neighborhood to exercise the prescriptive right of gleaning in his fields after the harvesting. The suit, carried from court to court, has just been decided against the land-owner by the Supreme Court, which has laid down the law as follows: "1. The owner has no power to bring sheep into his own fields until two days after the gathering-in of the harvest, so as to give the gleaners time to avail themselves of their rights. 2. That the owner, or farmer, has the right to glean as long as his field is not entirely reaped, but that he has not the right to sell or otherwise cede that right to third parties, as, by so doing, he would defraud the indigent of the resources which the humanity of the legislator intended to reserve to them." This judgment is quite in accordance with the habitual regulation, by legal enactments, of details that are left elsewhere to regulate themselves. Thus, no land-owner in France is allowed to cut down a single tree on his estate without the consent of the *garde forestier* of his region, a functionary whose duty it is to exercise a careful superintendence over everything in the shape of trees, wild or planted, to keep an exact register of all the trees that are planted within the circle of his beat, and to regulate the cutting of trees according to the provisions of the law. When an owner wishes to cut down trees, he sends for the *garde forestier*, who examines the woods or trees on his land, and marks those which may be cut. This supervision is exercised with a view to prevent the deterioration of climate and the danger of drought or floods resulting from a deficiency or excess of trees in a given locality. But what other civilized people would consent to such a restriction of the rights and privileges of sylvan ownership?

In regard to the culture of tobacco, now an important item of French agricultural industry, the law is even more stringent. Tobacco being a government monopoly, no one can grow even a single plant of tobacco in his garden without a permit. If a peasant wishes to plant a field with tobacco, he makes a declaration to that effect to the proper authorities. An inspector then visits the field to be planted, measures it carefully, and enters the measurement in his book. When the tobacco comes up every plant is counted, and the number entered in the same book. Every week the inspector vists the field, counting every stem, and when the plants are approaching maturity *every leaf is counted*, and an entry of the number of leaves of each plant is made in his book. If a leaf is attacked by an insect or withers, the farmer must not remove it, but, on the next weekly visit of the inspector, the dead leaf is taken away by him, and an entry to that effect is made in the book, and the entry for that particular plant is corrected as to the number of leaves. When the crop is fit for gathering, the inspector makes his final examination. If the quality is found to be defective, he causes the whole to be gathered and burned, the unhappy owner, in such case, not receiving a single centime, but losing the whole of his year's work. If the quality is satisfactory, the inspector superintends the cutting, counts the leaves before having them carried away, and pays the regulation price for them. This price is very large, so that the tobacco-grower risks the chance of a heavy loss against the chance of a rate of profit very much higher than he could make by any other branch of agriculture. But, as the tobacco is a very delicate plant, and subject, in this climate, to various diseases and other mishaps, its cultivation so often proves a failure that the French peasant, sharp as he is after gain, is growing every year more and more shy of it, so that the amount of tobacco grown here is steadily diminishing, and its culture will probably cease altogether.

The proposed tunnel between France and England, for which Mr. Hawkshaw, with the Emperor's consent, has been so busily boring holes on each bank of the Channel, is likely to have a formidable rival in the "ocean-ferry" proposed by Mr. Fowler, who would employ enormous steam-vessels, like the *Great Eastern*, to ply between the two shores. These boats, starting from special docks at Dover and Calais, would take the trains on board and convey them across, so that there would be no delay, no changing of carriages between London and Paris, and, as the roughest weather would have no sensible effect on the motion of the mammoth ferry-boats, the demon of sea-sickness would be banished from that favored highway. The tunnel would take twenty years to complete and cost £20,000,000 sterling. The "ferry-boats" could be ready in thirty months, and would only cost £1,500,000, so that Mr. Fowler's appears to be quite the most practicable proposal.

A laugh has been got up against M. de Lamartine, to whom an old lady admirer has just been writing from the country, informing him that she has all his works in her bookcase, and a portrait of him in her bedroom; that she reads a portion of his verses every day, and that she has framed, and is "never weary of reading, again and again, the delightful poem, beginning—

'Combien j'ai douce souvenance
Du joli lieu de mon enfance;
Ma sœur, qu'ils étaient beaux ces jours
De France!
O mon pays, sois mes amours
Toujours!'"

On getting which letter, M. de Lamartine is described as reading it to a friend, and remarking, with effusion, on coming to the old lady's quotation, "It is, perhaps, the best thing I have written!"—the point of the joke being that the verses in question are *not* by M. de Lamartine.

M. Emile de Girardin, who, as will be remembered, contests with the younger Dumas the authorship of the successful melodrama entitled "Le Supplice d'une Femme," has just given, in honor of the hundredth representation of that popular piece, a grand banquet to the manager and artists of the Théâtre-Français. The irreverent public, which has enjoyed the spectacle of the quarrel between the rival paternities even more than the play which has given rise to it, is asking what would have happened if Dumas, junior, who chances to be travelling just now, had been in Paris, and had determined to give a similar banquet in honor of the same event, on the same day, and whether Messrs. Thierry, Regnier, and Lafontaine, and Mesdames Favart and Pousin, in order to do honor to the double invitation, would have heroically consented to cut themselves in two?

MEDICAL ETIQUETTE.

[SECOND ARTICLE.]

THE common mind finds no good and conclusive reason why women should be debarred the privilege of practising the healing art. Why should we not employ a doctress if we like? We might, it is true, have our suspicions and opinions as to the likelihood of her retaining, in so high degree as one of the sterner sex, efficiency and *sang froid* in a case of dire emergency. We might be in doubt as to her being always ready, competent to act, and clear-headed at the seasons of infirmity to which her sex is heir. If we were ourselves feminine, nervous, and fidgety, we might well be dubious as to whether there could be derived much of soothing presence or of sympathy from the visits of a female physician. But if, after all, in spite of these things, we prefer to seek her services, it is not easy to construe our act as one radically vicious or absurd. This from the secular stand-point. To the physician it presents another aspect. It is esteemed to be *unprofessional* for the reputable male physician to hold communion of any kind with a female physician. By the tenets of his class, he must neither consult with nor advise her; nor should he even visit the sick in her presence. If there be nowadays exceptional cases in which these rules are violated, they are still exceptional, and subject to professional censure. To ordinary people all this is, at first sight, inexplicable; but, upon closer examination, some grains of sense will be found to qualify the apparently absurd illiberality of these regulations. In the first place, it is nowadays by no means so easy a thing for the woman, as it is for the man, to obtain a thorough medical education. Medical teaching, whether by dissections, demonstrations, lectures, and diagrams, or by the run of the hospital, becomes so unpleasantly complicated by that regard for the *biensèances* which a mixed audience require, that as yet very few professors of note have been found willing to instruct such audiences. This difficulty, it must be admitted, is serious; but it does not justify the inference drawn from it by the great body of physicians, viz.: that a female doctor must, of necessity, be so grossly ignorant as to be unworthy of recognition. While recognizing, to the full, the enthusiasm, self-devotion, and perseverance which are, in some special cases, manifested by the female medical student, regard for truth demands the further admission, that female aspirants for the medical profession must, as a general rule, from the very nature and condition of things as they now are, be persons at whom the individual male physician may well be pardoned if he looks askance; it is only the corporate action of his class against female physicians which is open to criticism as illiberal and unjust.

Advertising is another vexed point in medical etiquette, the discussion of which has given a world of trouble to the profession. The decisions which have been promulgated with regard to it are scarcely of a nature to satisfy those who believe in free-trade, or, indeed, any one not an M.D. The precise manner in which a man, or a doctor, shall inform the public of his desire to serve them is manifestly a matter which it belongs exclusively to this particular individual to determine. It is a matter with which neither the profession nor trade to which the man belongs, nor any other person, has the smallest legitimate concern, so long as no real sin against humanity is committed. In point of fact, the medical profession has served the public a particularly bad turn in putting down, or trying to put down, professional advertisements, for, except long-continued personal intercourse, no better test than their respective advertisements could well be found by which to distinguish between the man of merit and the *blagueur*.

Most absurd of all medical regulations, however, and most in harmony

with the customs of bygone centuries, is the fee-bill, so called. In the opinion of the American Medical Association, "some general rules should be adopted by the faculty in every town or district relative to pecuniary acknowledgments from their patients, and it should be deemed a point of honor to adhere to these rules with as much uniformity as varying circumstances will admit. . . . . A wealthy physician should not give advice gratis to the affluent, because his doing so is an injury to his professional brethren. The office of a physician can never be supported as an exclusively beneficent one, and it is defrauding, in some degree, the common funds for its support when fees are dispensed with which might justly be claimed." That the rules thus recommended are almost everywhere adopted is notorious, yet, as will be admitted by every unprejudiced person, there is needed no formal demonstration to show that such rules are not in accord with the dictates either of justice or of reason. The idea of paying at the same rate for the services of the fledgling, fresh from his apprenticeship and the lecture-room, as for those of the veteran practitioner, ripe with the accumulated wisdom and experience of a half century of service, is a marvellous absurdity. It is no wonder that there are men who hold it in awful reverence. But there is no need to combat a doctrine like this. It may safely be left to fall through inherent weakness. It has been repeatedly shown heretofore in the pages of The Nation, that every attempt to fix the price of labor arbitrarily, to require the same wages to be paid to the bad workman as to the adept, or to prevent the individual workman from exercising his natural right to labor on such terms as he sees fit, is in direct defiance of resistless laws, and must, therefore, ultimately fail.

Of course it would be idle to suppose—even if the present objectionable codes of ethics were done away with—that the relations now subsisting between the members of the medical profession would at once undergo any very material change, or that there would quickly spring up any intimate connection between educated physicians and the irregulars. The written code probably does but little towards creating the antagonism of these two classes, which is, perhaps, as natural as that of dog and cat, or of veteran troops and militia. If the code were annihilated to-day, its spirit would still remain to control the feelings and actions of all men who cling to established usages. There would still prevail an unwritten law which could never be made a whit more equitable than the general tone of society would allow. But there would be this enormous advantage in removing the written bulwark, that professional matters would then be open to criticism, amenable to the laws of reason, and directly subject to the influence, not only of such liberal minds as the profession may itself contain, but to all the ameliorations which, with the progress of refinement, are induced upon society at large.

If the associated doctors would but give a little less heed to matters of etiquette, be less fearful of compromising the professional dignity, and employ whatever of time or money they can control in collating and consolidating the vast amount of undigested wisdom with which the now chaotic annals of their art are filled; or if they would but labor systematically in either of the departments of science upon which that art depends, they would themselves soon see certain idols in a very different light. They would quickly do away with a multitude of restrictions which, though now carried as armor, serve only to hamper the movements and cripple the power of the profession, without, in reality, affording to it the slightest protection.

Correspondence.

A LETTER FROM GOLDWIN SMITH.

To the Editor of The Nation:

Sir: In your notice of the American edition of my "Lectures on the Study of History" there is an expression which, though I am not sure that I quite understand it, leads me to assure you that the special lecture on "The Foundation of the American Colonies" was not selected for publication in the same volume with the general lectures by way of propitiating American opinion.

The lecture was delivered before this University on a special occasion, some time before the outbreak of your civil war, and long before I could have imagined that any production of mine could ever be reprinted in America; and it is the only historical lecture on a special subject that I have ever published.

I am, your faithful servant,

Goldwin Smith.

Oxford, July 9, 1866.

[The ambiguous phrase in question was employed on the supposition that the American publishers had, as they are sometimes accustomed to do, published a compilation of his lectures without consulting Prof. Smith; when anything relating to this country would naturally have been selected. There is, it is needless to add, no public which stands less in need of "propitiating" by Prof. Smith than the American.—Ed. Nation.]

MEDICAL DEGREES.

To the Editor of The Nation:

Some recent remarks in The Nation upon medical etiquette contain, with some mixture of truth, so serious an amount of error as, in the interest of justice, to call for protest.

Beginning with the most important misconception, I deny, and challenge any one to prove, association or "acknowledgment of respectability" by any regular medical college in favor of an institution in which "a degree can be bought outright for gold." Moreover, I deny that in the city which has always graduated the largest number of physicians in this country any such institution exists, claiming the name of regular, or recognizing the code of ethics of the American Medical Association. Should any such be "notorious" elsewhere, on evidence of the fact I can, and will, without presumption, undertake to have it branded with public disgrace by the official action of the American Medical Association itself.

But, further, it is well said in your article that there is "something of wisdom in the assertion that a regular medical education furnishes the only presumptive evidence of professional abilities and acquirements." If so, certainly, for the protection of the uninformed many, quite as much as for the *esprit de corps* of the profession, it ought to be fully *asserted*. Talent or genius will prove itself without official recognition. In war, lately, our country suffered many times by neglecting the principle that a military education furnishes the only presumptive evidence of fitness for command—witness Banks and Butler. Tendencies are rather toward such neglect than towards the abuse of professional restrictions. Besides, medical degrees are not so hard to get but that a man of natural talent may, without undue difficulty, obtain recognition by them.

Could medical men be ever so well convinced of the practical ability of particular "irregulars" or empirics, still to "consult" with them would be to mingle incompatibles. As well might Mohammedan rites be performed by consent in a Jewish synagogue, or the High Church service be enacted before one of Henry Ward Beecher's sermons. Humanity must gain most, on the broadest view, by each idea acting itself out in its own way and place.

There is a common misconception of the acknowledged principle and *animus* of regular medicine. Any "practice based on an exclusive dogma, to the rejection of the accumulated experience of the profession," is, *because* of this rejection, condemned as a system of course. Such exclusivism is necessarily unscientific and preposterous. An inventor of a new lens would have as much right to ignore Kepler's laws as the discoverer of a new remedy has to deny the utility of quinine, opium, and iron.

Medical men do constantly enquire into the value of newly-asserted remedies. For example, Wilson, the leading English dermatologist, has written much in praise of the hot-air bath, and all medical sanitary writers do full justice to the new gymnastics. Much that is made *panaceal* in novel systems of empiricism has really been in vogue for ages in the profession. Let me, then, modify some of the words of the article referred to, so as to express the truth, thus: "The spirit and creed of scientific medicine *enjoin* upon every physician to seek out and apply, *on proof of its merits*, whatever there may be of good in any of the empirical methods which are in use about him."

H. H.

Philadelphia, July 21, 1866.

[Of course no medical college *professes* to sell degrees. An exposition of the manner in which medical degrees can be obtained from certain institutions would be too invidious if thorough, and unprofitable besides, because none know better than the members of the medical profession, to whom the article on "Medical Etiquette" was especially addressed, the easy terms on which degrees are to be had from some schools duly authorized to confer them. The phrase in "H. H.'s" second paragraph, "for the protection of the uninformed many," begs the whole question. So long as the regular physicians absolutely refuse to recognize or consult with persons who have not received a medical degree, the great majority of the "uninformed many" will be, as now, in the hands of empirics who will neither be restrained nor enlightened

by any contact with better educated workers in the same field, such as the writer of "Medical Etiquette" desires for them. The "uninformed many" are certainly not protected by the existing professional etiquette; on the contrary, they are only the more freely exposed to fraud and quackery by that regulation which makes it "unprofessional" for the regular practitioner to employ and supervise useful empirical methods. To adopt "H. H.'s" comparison, the writer of "Medical Etiquette" undoubtedly shares "H. H.'s" partiality for regular officers, but still ventures to believe that the Government did wisely in *accepting the services* of volunteers, and he suggests that the government of the medical profession might safely imitate so encouraging an example. It is precisely that "incompatibility," which "H. H." so strongly states in his third paragraph, which the original article deplores and wishes to see done away with. The writer of "Medical Etiquette" does not applaud the empiric because he believes only in his empiricism—does not uphold the inventor of a new lens in laughing at the laws of astronomy—he only begs those well instructed in medical science not to hold in unjust contempt new instruments, remedies, and methods, though they be empirical ones; not to refuse all intercourse with the inventor of a new lens, on the ground that the ingenious man is not acquainted with Kepler's laws. Lastly, the object of the writer of "Medical Etiquette" would be well-nigh attained if his slightly modified words, as quoted by "H. H.," could really come to be, what he by no means thought them to be, the actual spirit and creed of the medical profession. It was the object of the original article to show that it is the duty of regular physicians to seek out, enquire into, experiment with, and satisfy themselves about, empirical matters, and to employ them, whenever useful, without the least regard to the question whether the men who invented them, or who make a specialty of their application, are regular or irregular practitioners.—Ed. Nation.]

MR. GRANT WHITE AND THE "NEW GOSPEL OF PEACE."

To the Editor of The Nation:

In The Nation of last week you published a letter from the author of the "New Gospel of Peace," containing a not perfectly good-natured allusion to myself; as to which I will only say that, considering the service I have rendered to the person in question, I think it might have been gracefully, at least, if not generously, forborne. On the other hand, I was surprised to find that Mr. Bartlett, in his copious and serviceable Bibliography of the War, attributes the "New Gospel of Peace" to me, without the least authority for so doing, while he does not mention me as the author of other pamphlets which I did write. Of course, I will not affect ignorance of the fact that I am among those to whom this anonymous work has been assigned by rumor—I cannot conjecture why, unless it be because of the friendly offices in regard to business matters which I have performed for its author. And, indeed, it has not been without a peculiar interest that I have received the positive assurances of evidently well-informed strangers, whom I have accidentally met in the book-stores of other cities, that this yet unclaimed bantling was the offspring of such or such a gentleman of repute in the world of letters, and that the report that it was by Mr. Grant White was quite preposterous—it was entirely out of his style. My vanity, which is naturally great, could not but be gratified at finding myself so well understood by persons whom I had never before had the pleasure of meeting. Perhaps I should also feel more flattered than I do, that others have given me such credit as attaches to a series of pamphlets, the popularity of which I cannot deny; but I may be pardoned if I do not find the bitter satire and broad humor of St. Benjamin quite so much to my taste as some persons seem to find it to theirs.

The Nation, in its notice of the Fourth Book, compared the series with "The Scottish Chaldee Manuscript," published in "Blackwood's Magazine" fifty years ago; remarking that "it is hardly doubtful that we should not have had it if Hogg had not previously produced 'The Chaldee,'" and adding that "that famous parody is superior to this in other respects than priority in time. Its biblical style is better preserved, fewer of its expressions being modern."

The "New Gospel of Peace" having interested me somewhat as a reproduction of what may be called the sacred style of Elizabethan English, this criticism of The Nation's led me to seek for the "Chaldee Manuscript," which, until about three weeks ago, I had heard of but never seen. I sought it in vain for awhile, but finally found it, not in "Blackwood" or Hogg, but in Dr. Shelton Mackenzie's edition of the "Noctes Ambrosianæ." And I there found why I had never met with it. It was suppressed; and to obtain a sight of it, even on the other side of the Atlantic, has been so difficult, as Dr. Mackenzie tells us, that he "searched all the national and public libraries in England and Scotland where sets of 'Blackwood' are kept, and never succeeded in meeting one . . . containing the 'Chaldee.'" He finally found the only copy he ever saw at a bookseller's in this city. Thus, although the "Chaldee Manuscript" is half a century older than the "New Gospel of Peace," it is, I think, quite impossible that the latter should have been written in imitation of the former, or even because of its precedence. It was the successor of the "Chaldee Manuscript," but not its consequent. Nor can I agree with you as to the comparative faithfulness of the two in style to their common model. The positive merits of either, in this regard or in any other, I do not propose to discuss, but some remark upon their phraseology and cast of thought may not be without interest.

The author of the "Chaldee Manuscript" seems not to have been able to *think* in the dialect (so to speak) in which he undertook to write, but to have used it as a speaker, for instance, uses French or German who has studied it and acquired a vocabulary which he has yet not assimilated, and who, therefore, does his thinking in English, afterwards translating the words in his mind into the language he is called upon to speak. This always produces awkwardness of expression and strangeness of effect, even when there is not absolute verbal incorrectness or false construction. In the very first chapter of the "Manuscript" are these phrases, which I do not hesitate to say are quite out of keeping: "Whereunto I may employ you," "and enrich themselves with the wool," "all things that relate to learning," "and they proffered unto him a book," "that had put such amazing words into the book," "put your trust under the shadow of my wings," "and by these means you shall wax very great," "who dwelleth in the old fastness," "and he framed songs," "and they heard a voice of one screeching at the gate." Now each one of these phrases contains either a word, as "fastness," "screeching," or a construction, as "these" applied to "means," "framed" to "songs," which is foreign to the dialect in question. And this is not a strangeness inevitable from the novelty of the objects introduced, which would be permissible if it could not be avoided; it appears in the use of words common to the language in all styles and all ages. For instance, again, the Chaldee writer, wishing to describe taking snuff, says, "And he took from under his girdle a gem of curious workmanship of silver . . . . and he took from thence something in color like unto the dust of the earth." Here the use of "gem," "from thence," and "something" is incongruous with the style. A translator from the Chaldee two hundred and fifty years ago would have been much homelier and more direct in his phrase. He would, I venture to say, have simply written, "And he took from under his girdle a *box curiously made* . . . . and he took from *it dust* in color like unto the dust of the earth." He would not have shrunk from the repetition of "dust;" and certainly would not have avoided it by writing "took something," which is very colloquial and modern. But it is worthy of remark that the invitation to take something is not nowadays supposed toi ndicate snuff. Errors like this are not uncommon in the "Chaldee Manuscript," brief as it is; but, although the "New Gospel of Peace" is ten times as long, I have been able to discover in it no important defects of this kind. The "Chaldee Manuscript" also commits the fault of applying Oriental names arbitrarily to Scotch places, calling, for example, one river—the Tweed—"the Jordan," and another "the brook Kedron." This means nothing and effects nothing but confusion. One might as well have been called Abarnar and the other Parphar. The subject of the "Manuscript" is, besides, so obscure—the mere personal affairs of some men of letters and their publishers—that it is not only quite incomprehensible now, but must have been so when it was written, except within the comparatively narrow circle of the friends and acquaintances of the personages who figure in the story.

Although the "New Gospel of Peace," whatever may be its peculiar faults, is, as far as I am capable of judging, almost entirely free from such as are above mentioned, upon close examination I find two or three passages obnoxious to criticism in this respect. Compelled by the exigencies of a speech made by the individual whom he calls "Phernandiwud," the author has used the phrase "a splendid despotism." It need hardly be said that not only the language but the cast of thought in this phrase is peculiarly modern and quite inadmissible. He also speaks of "the government" of Unculpsalm and of "slavery." Now government, meaning the capacity or the act of governing, was, as an idea or a word, familiar enough to Elizabethan writers; but government, as an institution, admitting the indefinite article—a government—is, I think, a conception but little older, if at all, than the middle of the seventeenth century. Even in the phrase "the government shall be upon his shoulder," the word "government" has quite a different sense from that which it has in "the government of such or such a

country." So, although we read in Shakespeare and his contemporaries of slavery as a condition of the individual, it is not, I believe, until Milton's time that we meet with the word representing the abstract idea—the institution of slavery. This author also makes "Phernandiwud" prophesy that, under certain conditions, "the lion of the South and the lamb of the North shall lie down together." He should have known better than to fall into this almost universal misrepresentation of a well-known passage in Isaiah's writing. The Hebrew prophet says nothing about lions and lambs. He knew the terror of the shepherd better. He wrote "the *wolf* shall dwell with the lamb," "the *wolf* and the lamb shall feed together," and I doubt much whether, if "lion" and "lamb" began with the same letter in Hebrew, he would have been tempted by alliteration into inaccuracy.

One fault is common to both the "Chaldee Manuscript" and the "New Gospel of Peace." Both use the neuter possessive pronoun *its*; the latter in a single passage (Book I., chap. IV., v. 27), the former in several. This word is unknown in the sacred dialect of the Elizabethan period; and in the first quarter of the seventeenth century was but just struggling into use among secular writers. This I remarked in my notes to "The Winter's Tale," published six years before, and in those to "Hamlet and Cymbeline," published the year before the first appearance of the "New Gospel of Peace." The author of that book will, I hope, pardon me for pointing out these defects in it, and may be sure that no one less than I would willingly deprive him of any well-earned approbation. His incognito, since he chooses to preserve it, I shall certainly respect, although at the cost of some annoyance to myself; and so, I cannot doubt, will the few friends who, I have reason to believe, have shared his confidence with me from the beginning.

Your obedient servant,

RICHD. GRANT WHITE.

HAVE LATELY PUBLISHED

THE RESOURCES AND PROSPECTS OF AMERICA: Ascertained during a Visit to the States in the Autumn of 1865. By Sir S. Morton Peto. Crown 8vo, cloth, $2.

STORIES THAT MIGHT BE TRUE, AND OTHER POEMS. By Dora Greenwell, author of "The Patience of Hope," etc. Small 8vo, cloth, $1 25.

THE LETTERS OF EUGENIE DE GUERIN. Crown 8vo, cloth, $2.

Matthew Arnold says: "At least one good book has appeared in 1865—'The Letters of Eugénie de Guérin.'"

A SECOND EDITION OF THE JOURNAL OF EUGENIE DE GUERIN. Crown 8vo, cloth, $1 75.

The "Edinburgh Review" says: "We have never read a more touching record of devoted piety, sisterly affection, and 'love strong as death.' Eugénie de Guérin is an Antigone of France sublimed and ennobled by the Christian faith. Her 'Journal' is the outpouring of the purest and most saintly mind that ever existed on earth."

DE PROFUNDIS: A Tale of the Social Deposits. By William Gilbert, author of "Shirley Hall Asylum," etc. Crown 8vo, $2 50.

The *Spectator* says: "Mr. Gilbert's novels do more to enlarge the field of actual experience than those of any other writer of the day. . . . . De Foe and Mr. Gilbert alone of English novelists seem to give the ore of English life, while the novelists of equal power give only the extracted metal. . . . . We think 'De Profundis' the most powerful of Mr. Gilbert's powerful novels."

A SUMMER IN SKYE. By Alexander Smith. New Edition, with colored Frontispiece. Crown 8vo, Elegant, $2 50.

CITOYENNE JACQUELINE: A Woman's Thoughts on the Great French Revolution. By Sarah Tytler, author of "Papers for Thoughtful Girls." Crown 8vo, $2 50.

George Eliot, author of "Adam Bede," "Felix Holt," etc., when reviewing "Citoyenne Jacqueline" for the *Pall Mall Gazette*, says: "The author charms us immediately into keen interest in the scenes and sympathy with the characters of her story, which show a power of catching and reproducing to the life French piquancy and levity."

The above books may be had of all respectable Booksellers, or mailed, post-paid, on receipt of advertised prices by the publishers,

ALEXANDER STRAHAN & CO.,
139 Grand Street, New York.

SUMMER REST.

BY GAIL HAMILTON.

1 vol. 16mo, $2.

This bids fair to be one of the most popular of all the works of its popular author. It is full of fresh thoughts, expressed with straightforward independence, and is thoroughly alive and eminently readable.

"A volume of lively sketches or essays, picturing various shades of country life, and combining much that is useful and sensible with much that is pleasant and entertaining."—*Auburn Advertiser.*

"There is no need to puff Gail Hamilton's books. She is one of the most pungent, racy writers of these times; sharp, witty, keenly satirical, seeing clearly the comic and the serious sides of life, and able to describe them graphically."—*Green Mountain Freeman.*

"As a writer upon nature in her visible manifestations and associations, and of those living creatures which inhabit and vivify all her places, her open pastures and her secret dells, Gail Hamilton is especially charming."—*American Art Journal.*

"'Summer Rest' is among the best of her writings. It is more tender, more thoughtful and religious, while it is not less spicy and juicy."—*Christian Advocate.*

"Gail Hamilton's humor, like beauty, is its own excuse for being."—*Detroit Post.*

THE HEAVENS:

An Illustrated Hand-book of Popular Astronomy. By AMEDEE GUILLEMIN. Edited by J. NORMAN LOCKYER, F.R.S.A. Illustrated by 40 colored plates and 191 fine wood engravings.

1 vol. royal 8vo. Cloth, bevelled, $15 75.

This elegant work, in addition to being a most thorough and comprehensive one on Astronomical Science, embracing all the most recent investigations and discoveries, presents to the reader, in able and fascinating language, all those interesting and important facts, without any sacrifice of the accuracy and detail which scientific investigation requires.

For sale, wholesale and retail, with all recent English publications, by

NEW FEATURES—NEW TABLES,

By which all Policies are NON-FORFEITING and ENDOWMENT, payable at about the same cost as ordinary Life and Ten-Payment Policies payable at death only. We call special attention to these Tables as exceedingly attractive and ORIGINAL with the UNION. In case payments are discontinued, after two premiums have been paid, the Company contract to pay, AT DEATH or the SPECIFIED AGE, an amount in proportion to the number of premiums paid.

The Percentage system of Dividends used by this Company affords greater protection to the family than any other plan, as in event of an early death the amount of policy paid is twice that paid by all cash Companies with the same cash outlay of premiums.

The greatest possible liberality in assisting parties to keep their Policies in force.

Liberality and promptitude in the settlement of claims.

We refer to the Massachusetts and New York Insurance Commissioners' Reports for 1864 and 1865 as an evidence of the Safety, Reliability, and Unparalleled Success of the Union Mutual.

J. W. & H. JUDD, GENERAL AGENTS.

☞ Active and efficient AGENTS wanted. Apply as above.

For Sale by Private Contract.

SULGRAVE MANOR FARM,

Comprising about 213 acres of land, and SULGRAVE MANOR, formerly the seat of the WASHINGTON FAMILY. The estate lies in the parish of Sulgrave and in the county of Northamptonshire, eight miles from Banbury, on the Great Western Railway, and eight miles from Brackley, on the North-western Railway. The Farm House, a part of the former mansion and as such the former residence of the Washington Family, might well be restored to its original size and condition, and would then form a most desirable residence, to the honor of the family, the advantage and improvement of the village and neighborhood, and the comfort of the owner. The land is good and in suitable enclosures, well timbered and well watered. It is now, except about seven acres of woods and plantations of a residential character, in hand, let to respectable yearly tenants, and can be viewed with their permission. Terms, with further particulars, may be learned on application to Mr. WILLIAM BARBER, Jr., Willingdon, Hurstgreen, Sussex, England.

JOSEPH H. RICHARDS, PUBLISHER, 130 NASSAU STREET, N. Y.

The Week.

SENATORS and representatives are at home and begin to meet their constituents. We hear of speeches made by Rousseau, Speaker Colfax, Doolittle, Dixon, Wilson, and Trumbull. Judge Trumbull's was delivered before a very large gathering in Chicago, and for its matter and its author will be generally accepted as the Union party's arraignment of the President and his policy. The story, with which the country is so familiar, of Mr. Johnson's threats and promises and his performance of them, was once more told; how treason was to be made odious, and how not one traitor has been punished; how traitors were to take a back seat in the work of reconstruction, and how Monroe, and Orr, and Perry, and Humphreys got the President's pardon in order that they might take front seats; how Mr. Johnson was to be the Moses of the negro race, and how he twice vetoed the Freedmen's Bureau bill, which he had seen in manuscript, which he had seen in print, which Mr. Trumbull had repeatedly talked about to him, to which he had never lisped a word of opposition; how he said in his annual message that it was the duty of Congress "to mete out exact and equal justice to all," and how he vetoed the Civil Rights bill; how he acknowledged his obligations and declared his adherence to the Union party which made him Vice-President, and how he goes into convention in Philadelphia with Vallandigham and Stephens, rebel and copperhead, to devise, if possible, some plan to take the country from the men that saved it and give it over to the men that endeavored to destroy it; how he proclaimed State rights, and has trampled on the asserted rights of every lately rebellious State. The speech is an able one—temperate, condensed, and weighty. But it is pitiable that Mr. Trumbull, a man of ability, of legal training, of judicial experience, a man whose course in Congress has given him an honorable name throughout the country, should be found willing to prostitute his influence to the encouragement of the most criminal folly merely because he hopes to seduce Fenian marauders from their natural allegiance to the Democratic party.

OF course there are several accounts of the way in which the New Orleans riots began. The *Times* of that city insists that a white man was harmlessly looking at the procession of negroes marching down Canal Street, when a freedman shoved him aside. The policemen near by supposed the negro had struck him, and attempted to make an arrest. On the other hand the *Tribune*, also professing to give the testimony of an eye-witness, asserts that the white man shoved aside had previously fired his pistol into the crowd of negroes. And the accounts are nearly as conflicting as they proceed further. One or two things, however, seem tolerably clear. The procession above mentioned, about one hundred strong, and preceded by a band of music, was evidently not equipped for fight. The same thing may be said of the negroes gathered around the Institute building; they seem to have been for the most part unarmed, and chiefly anxious, after the attack began, to escape with their lives. The *Times* gives an anti-negro account, but it admits that the negroes seemed little inclined to attempt a rescue of the persons first arrested. The people within the Institute were not many of them armed. Of the members of the Convention, only one seems to have had a pistol with him, and he at the request of the others left the hall when hostilities appeared to be imminent. And certainly the victory of the police was an easy one. On the whole, Sheridan's view is doubtless the correct one. Blood, much blood, has been wantonly spilled. Had it been necessary to arrest every Union man in New Orleans, it could have been done without the loss of a single life.

DISPUTES about who fired the first shot in New Orleans are really disputes about the occasion of that horrible outbreak and not about its cause. That is to be found revealed in the atrocities which were perpetrated upon Union men and negroes, when once the mob had fairly got at them. Says the New Orleans *Times:* "To see the negroes mutilated and literally beaten to death, as they sought to escape, was one of the most horrid pictures it has ever been our ill fortune to witness." A negro who runs for his life, and takes refuge behind a pile of lumber, is shot at for a long time, till at last he is killed. Two negro boys are taken out of a street car and shot by the police. A negro, "who had probably escaped from the main building through the adjoining yards, is shot by a policeman, and lies dead in the street; by and by a white woman comes and throws a stone upon his head." "Another and another fell," the *Times* says, "killed while the police were bearing him off." Dr. Dostie, when the mob and police together enter the hall of the Convention, is shot by a policeman, and falls to the floor. As he lies extended a second policeman comes and fires four or five balls at him. Then he is dragged alternately by the hair and feet, and flung aside with some other bodies supposed to be dead. Being removed by friends to the Hôtel Dieu, it is found that his head and arms are bruised badly as if with clubs or bricks, that he has knife wounds in the neck, and one in the chest. We read of another Unionist whose dead body has seventeen knife and bullet holes in it. The hatred which mangles and mutilates its enemies in this way, and we dare to say that the half is not yet told, would hardly stand long tormented by scruples, waiting till some negro shot down an unoffending white man.

IT has been the custom among certain people to deride the notion that when the Southern States are re-organized and put irrevocably into the hands of their own citizens, there is danger that the guarantees extorted from them by Mr. Johnson would eventually be repudiated. Mr. James Alcorn, of Mississippi, makes an address to his fellow-citizens in which he laughs at such a supposition and pours contempt on the meanness of soul which could harbor apprehensions of that sort. Yet Chief-Justice Ruffin, whose legal abilities and legal knowledge are venerated by every North Carolinian, maintains, in a recently published letter, that the Reconstruction Convention of that State was in no proper sense a convention, and that none of its acts are lawfully binding. It was a body of men, he thinks, which represented the will of Andrew Johnson, a military dictator, and did not represent the people of North

Carolina. Judge Manly, a prominent member of the Convention, also supports this view. In fact, all the experience of the past year goes to show, what might have been known *à priori*, that whatever gains of the war are to be held permanently by the loyal people must be bound fast by ties which nothing but a new war can loosen. Amendments to the Constitution of the United States are better, apparently, than amendments to the constitution and changes in the statutes of North Carolina.

We can never be too well informed of the motives and intentions of an Executive whose dread of centralization leads him to deny the loyal men of Tennessee the support which he volunteers the ex-Confederates of Louisiana. Not enough publicity has been given to a threat of interference in another State upon which peace has brought a return of peril with the first elections. The new constitution of Missouri directs the General Assembly to frame a complete and uniform registration law, by which qualified voters may be distinguished, and provides also an oath conditional of voting, by which rebels are disfranchised. Mr. Noell, who belongs to the party which is aggrieved by both these restrictions, recently made a visit to the White House, and has reported his conversation with the President, which was substantially as follows:

Q. Suppose Governor Fletcher, under pretence of carrying out the registry law, surrounds the polls with his militia and overawes the voters?

A. Then apply to the Secretary of War.

Q. But our people will not apply to the Secretary of War.

A. Then apply to me. It is the duty of the President to protect citizens in their rights.

If the conflict thus foreshadowed is to be precipitated, it is evident we have not yet seen the worst usurpation of which Mr. Johnson is capable. For if it is a part of the "rights" of citizens to vote without regard to the conditions lawfully imposed by State authority, there is nothing to prevent the subversion of the elections in every State where these conditions exist; and New York, equally with Louisiana, may be set down as lost to the cause of Union and republican government.

The long and bitter contest in Kentucky for the clerkship of the Court of Appeals has terminated, and the result is what we fancy most people in the State and out of it were expecting—General Hobson, Unionist, is badly beaten by Mr. Duvall, whom it is not a misuse of language to call the rebel candidate. Many circumstances connected with the canvass are remarkable enough as occurring in a State in the Union. Men in the uniform of the rebel army have occupied places on the platforms of Democratic speakers; Grant's name or Sherman's it was usual to hiss and groan, while those of Lee and Johnson were received with cheering. Hurrahs for Jefferson Davis were always in order. Mr. Vallandigham and Mr. Pendleton were imported by the friends of Duvall to stump the State in his behalf. But Mr. Pendleton was found to be of no service; in the eyes of the Kentucky Democrats his association with McClellan in the presidential campaign of 1864—small a crime as that would seem to be—was an offence not to be overlooked, and the lion of the hour was Mr. Vallandigham. It is not to be supposed that the condition of public sentiment in Kentucky is not far better than in the excluded States.

The *World* objects to the statement made by a correspondent in a recent number of The Nation, that it is perilous to utter "Union sentiments" at the South. With the probably wide difference in the definitions which we should each assign to the phrase quoted, it would not be profitable to debate the question. We ask no other concession than the *World* itself makes, that *some* persons "may easily get into personal trouble" by speaking their own minds freely in the lately rebellious States. The test of the good government and liberty of any community is that protection is extended not only to "decent men of ordinarily considerate behavior"—who are not supposed to need it—but to those not included in that euphemism; the men, in other words, whose opinions differ from those of their fellow-citizens, but whose right to entertain and to utter them is just as indisputable. Neither public sentiment nor the law permitted free speech or free thinking at the South in times past. The recent occurrences in New Orleans show that the rule of mob violence is returning with even increased ferocity.

The policy of acquainting foreign and quasi-hostile powers with the secrets of our monitor system, as Secretary Fox is doing with the *Miantonomah* on the other side of the Atlantic, has been more generally censured than discussed. The chances of European attack on this country are, however, always very slight, in view of the great ocean to be crossed; and the stronger the conviction abroad that we are abundantly able to defend ourselves, and fertile in every kind of expedient according to the exigency, the smaller the likelihood of our being molested. Now the achievements and capacity of our navy were always disparaged in England during the late rebellion, and with a degree of sincerity which only ocular demonstration to the contrary could unsettle. What Mr. Banks and his "live admiral" would have done in an offensive manner, Mr. Fox has accomplished by unostentatious courtesy, and the tone in which the British press treats the question of iron-clads already betrays less confidence in Capt. Coles and less contempt for Capt. Ericsson. It would not be generous, nor is it necessary, to attribute to Mr. Fox's visit Lord Stanley's proposition to make indemnity for the *Alabama's* depredations; but the support which it may receive will, perhaps, have been largely determined by the recent presence of a monitor in British waters.

Mong Chaw Loo, who has been living in America for some eight or nine years and getting himself a liberal education, has just brought a suit against the owners of the packet-boat *J. H. Best*, which plies on the Muskingum River. He claims damages in the sum of five thousand dollars "for mental and bodily anguish suffered." It appears that the Burmese gentleman had paid full fare on the boat, and when the barbaric dissonance of the gong of his native land summoned the first-class passengers to dinner, he was ordered back from the table, stigmatized as "a colored person," and directed to wait. Every American, we suppose, will feel a natural sympathy with the exquisite grief and pain of this first-class passenger, intent on "a square meal" (for he was educated here) and determined to get his money's worth, who, in the midst of his rush to the dinner-table, is, for any reason whatever, stopped and turned back. On that ground we should look to see Mr. Loo recover exemplary damages. But the element of color always complicates these matters. A Muskingum jury will probably consider Mong Chaw Loo a Chinaman, and to allow a Chinaman the luxury of despising the negro, of suffering mental agony because a colored waiter takes him for a countryman, is more than will probably be done.

A gentleman who has already published a little work entitled "The Steam Locomotive Revealed in the Bible," and who may, therefore, be supposed to possess a very peculiar fitness for conjectural criticism, has just put forth a remarkable explication of the third chapter of Habakkuk. It consists of the prayer of the prophet, and, if Mr. Gregg knows anything about it, "indicates the great achievement of the laying of the ocean telegraphic cable." Of such edifices a sample brick enables one to judge. The eleventh verse reads as follows: "The sun and the moon stood still in their habitation;" and Mr. Gregg comments thus: "Through telegraphic rapidity the element of time seems eliminated, as though the heavenly bodies were stationary." "In the fourteenth verse," says the critic, "I translate villages or villagers *unlearned fools*, a paraphrase, as I believe (saving their favor), for the political economists."

The facetious Dr. Nott is willing, as he says, "to stake what little reputation I may have upon the assertion that the negro must fail as an agriculturist." We have known more venturesome wagering than this, so far as stakes are concerned, though, as the doctor has very little to live upon besides his reputation, the loss of it would be serious indeed. We suppose he means a free agriculturist; for, in the palmy days of the patriarchal institution, we had thought that at the South a cultivator and a black man were pretty nearly synonymous, and slavery, as we all know, was the right place for the right African. Our distinguished ethnologist is undismayed by the "flattering accounts from all quarters, to the effect that the negroes are working well, and that a large crop of cotton in 1866 will be the result." This is all

due to the high rates of cotton; but, that stimulus over, the freedman will first forsake his hoe, then "deteriorate morally and intellectually," and finally become extinct—out of regard for Dr. Nott's little reputation, which has been rudely shaken by the slave's surviving his emancipation four-and-twenty hours. The doctor's theory, that the negro will not till the soil for wages, seems to have been extensively adopted among the planters, who find it convenient, at least, to withhold the wages after the soil has been tilled.

THE cholera is unmistakably prevalent in several parts of England. The London *Spectator*, with a singular degree of positiveness in a matter which is, to say the least, quite debatable, rebukes the officials who have ventured to call the disease contagious. The cholera could no more, it says, "be brought in a ship across sea than gout could;" the proof being that in India a regiment attacked with it has only to march a few miles to get rid of it; and the conclusion being that "the poison, though it may travel, is conveyed by the air, and not by sick persons." We should prefer, before accepting this reasoning, to learn something about the locality reached as compared with that abandoned, and to be persuaded that the constant change of the place of the deposits of the regiment had nothing to do with checking the communication of the poison.

IN the midst of the greatest war ever undertaken by her, Italy has, almost silently, achieved a great social revolution. By the royal decree of the 7th of July, conformable to the law of the 28th of June, religious corporations throughout the peninsula, excepting, of course, the Papal territory, have been suppressed, and their property confiscated to the uses of the state. The members of the various orders, the monks and nuns, and the servants of the establishments thus dissolved, are classified and indemnified either by annuities or subsidies. Opposition to the execution of the law is visited with severe penalties and forfeitures. Books, manuscripts, scientific documents, the archives, monuments, and objects of art, valuable antiquities, etc., found in the edifices belonging to the suppressed bodies, are to be deposited in the public libraries and museums of their respective provinces. Several buildings famous for treasures of this sort are specially named to be preserved. The fruits of this important measure are to redound immediately to the benefit of public instruction. The overthrow of monasticism, however, is in itself the removal of the last fetter on human intelligence bequeathed by the Middle Ages; for Popery henceforth is to darken only the narrow space which it holds with temporal supremacy—nor that, we believe, for ever nor for long.

WHEN the Austrians, after a contest, had been obliged to abandon Olmütz, they retreated into Hungary in order to gain Vienna without molestation. Just before Pressburg, which lies east of Vienna on the Danube, they were confronted and cut off by the enemy, who had crossed the river March at Skalitz, in anticipation of their retreat. The engagement which ensued on the 22d was interrupted in behalf of a five days' armistice; and since that time peace has been uppermost in the minds of the high contending powers. On the 25th, an eight days' suspension of hostilities was agreed upon between Austria and Italy. Prague has been selected for the place of final settlement, and Austria there goes into conference upon terms infinitely more humiliating than those which she rejected when offered by the Emperor Napoleon. It is already agreed that Germany north of the Main—that is, nearly, north of the 50th parallel—shall constitute a confederation under the lead of Prussia. Southern Germany may take care of itself, and form another confederation, with or without Austria. The latter relinquishes her portion of Schleswig and Holstein, as well as Venetia. She also is to make indemnity to Prussia, for war expenses, of several millions of dollars.

Prussia, it remains to add, had penetrated Bavaria as far as Hof, and, toward the Rhine, had occupied Mannheim and Heidelberg. Gen. Manteuffel's exactions from the wealthy city of Frankfort had been met with protests and appeals to the King of Prussia, and, by the Chamber of Commerce, with a flat refusal to pay the additional 25,000,000 florins.

THE FREEDMEN.

A BOARD is now in session in Washington revising the orders and regulations of the Freedmen's Bureau. It is composed of the following officers: Brevet Maj.-Gen. David Tillson, president; Brevet Maj.-Gen. J. W. Sprague, Brigadier-Gen. E. M. Gregory, Surg. T. B. Hood, Chap. M. French; Capt. J. W. De Forest, Secretary.

—The U. S. Marine Hospital at Charleston, S. C., has been purchased at auction by the Episcopal Home Missionary Society of South Carolina, for a freedmen's school-house. Rev. A. T. Porter, of that State, is trying to raise a portion of the purchase-money at the North.

—The Superintendent of Schools, Mr. Alvord, makes a report of the number of schools, scholars, teachers, etc., of which the following is a recapitulation: Number of freedmen's schools in the South, 1,002; of teachers, 1,409; of scholars, 91,413. These are only those that are regularly reported. There are many more that cannot be got at—of those taught by white teachers as well as colored. South Carolina shows the largest estimated number of scholars, 12,017 being the number reported. Virginia comes next, having 11,784. The District of Columbia has 74 schools, 132 teachers, and 6,552 scholars. In South Carolina the colored people in several localities have entered earnestly upon the work of erecting new school-houses, and have defrayed a fair proportion of the expenses. Superintendent Tomlinson reports that "the educational efforts of the past term have had another result not less satisfactory than the progress of the colored children—a growing conviction among the white residents of South Carolina favorable to their education. . . . In many districts the bitterness that was openly manifested toward Yankee teachers is abating, and, in some cases, requests have been made by planters for Northern teachers to be sent to their neighborhoods." Still, violence is yet to be apprehended in all parts of the State, from turbulent men, who are emboldened by the withdrawal of the Federal troops.

—Certain citizens of Oxford, Mississippi, including a chancellor, two professors, and a trustee of the University of Mississippi, and two prominent members of the local bar, have united in an address to the people of the State concerning the education of the freedmen. They set forth their duties to the colored race on the ground of the divine injunction to preach the Gospel to "every creature" and of human gratitude for past services. They propose to sustain a Sunday-school for oral and other instruction, and have already organized one with a hundred pupils and twelve teachers.

—North Carolina has 119 schools in operation, 5 teachers, 130 scholars, and a daily average attendance of 9,034 pupils.

—It is painful to continue the record of wrongs and violence done to the blacks at the South, but the gradual development of the President's policy, and the illustration of it in the New Orleans massacre, forbid us to expect a cessation of acts which a few months ago it was difficult to cite. The mildest with which we can head the list is the refusal of a passage to a Mrs. Jacob and daughter from Savannah to New York after they had purchased first-class tickets. Mrs. Jacobs is the author of a slave-autobiography called "Linda," and both she and her daughter are, besides being nearly white, of perfectly ladylike behavior. In the same city, in order to exclude the colored people, the authorities closed the park upon all citizens. The courts in Kentucky and Virginia are officially reported to the Bureau to be, so far as the rights and life of freedmen are concerned, devoid of justice. In the former State the military authorities are prompt in making arrests under the Civil Rights act. In Virginia, Gen. Terry knows no remedy for the existing evils but the re-opening of the Bureau or military courts. The mayor of Richmond commits two colored men, victims of an assault, to prison, refusing witnesses in their behalf, with the remark, "I do not intend for you niggers to be equal with white men while I am mayor." Ex-mayor Saunders, a magistrate, tells a woman whose little girl has been beaten, "I am not in a humor for giving warrants. You must go away from here." In Tennessee, the "Reverend" P. C. Ament shoots a colored woman (July 25) in broad daylight, at twelve paces. In Arkansas, negro testimony is refused in many places. Justice Gray and Judge Smith are to be prosecuted accordingly. Justice Hopwood, of Calvert Co., Md., has been arrested for similar malfeasance. Lieut. Butts, of the Bureau, was [illegible] and robbed in Jackson Parish, La.

Notes.

LITERARY.

The Sacramento *Daily Union* for June 25, 1863, published a summary of the bibliography of California, consisting of notes on over seven hundred volumes in print and manuscript, between 1544 and 1863, taking up twenty-five columns of the *Union*. This was the most extensive account of works on California then published, and contained much very valuable matter. A supplement containing over two hundred books and maps, some of them of very great rarity, was published in the same paper of the date of March 13, 1866. The compiler, Mr. Taylor, offered the catalogue as "notes and materials to aid in forming a more perfect bibliography of the old Alta California domain of 1750." It is to be hoped that these notes will be carefully digested and published in book form by the author, which will then be a most valuable contribution to the literary history of this country, and will bring to the knowledge of many what is now attainable only to the readers of the Sacramento paper.

—The Atlantic cable has at last been laid, with every prospect of continued success. The history of the partial success, of the failures and the struggles of the twelve years that intervened between the first organization of the Atlantic Telegraph Company and the successful trip of the *Great Eastern* this summer, is to be told by the Rev. Henry M. Field, the brother of Mr. Cyrus W. Field, who is the person best known to the American public in connection with the telegraph. The author has had access to all his brother's papers, and knows the inside history of the thing from beginning to end. With such advantages he can hardly fail to produce a readable book. Meanwhile, in the "Fortnightly Review" for July 1, can be found an interesting account of the same subject, and the lessons to be drawn from the previous failures, by Mr. J. Stephen, a practical electrician, whose preferences seem to be for the North Atlantic line *viâ* Greenland.

—Some steps have been taken by the city government for the establishment of a large free public library in New York. Some of the London papers are agitating for a similar institution there. In their appeals they bring New York up as a conspicuous example of a city abounding in free libraries. This seems rather absurd to the actual inhabitants of the city, who, if they are detained at their business during the day, find the Astor Library closed, and to whom the only one accessible for a small fee is the Mercantile Library, imperfect as that is. Until the passing of Mr. Ewart's act, in 1850, for enabling town councils to establish public libraries and museums, there was not in all England a single strictly free public library. Many of the smaller towns have taxed themselves and erected such libraries, but London still remains without one. The libraries of the British Museum, of Sion College, and of Dr. Williams, are subject to restrictions which prevent their free use, and are open at such hours as to exclude entirely the man of business, the clerk, the mechanic, and the artisan; yet these are the only ones at all available. Paris now possesses seven perfectly free public libraries, and they are being organized by the government in every village; Berlin has two, and Vienna three. If the city government of New York would only start the library, rich men enough would be found who would be glad to fill it with books.

—The Palestine Exploration Fund has begun to yield most promising results in a province where they were least expected and most needed, viz.: in that of Semitic Palæography. A number of photographs, taken by the exploring expedition on various spots of the Holy Land, and comprising representations of some of the oldest Samaritan manuscripts, and, further, Samaritan and Hebrew inscriptions of a remote age, were submitted by the committee to Mr. Deutsch, of the British Museum. This gentleman has now reported upon them at some length, and, it appears, has been able to arrive at some very interesting conclusions, chiefly with regard to a long-contested Samaritan inscription found upon a stone in a Mohammedan minaret at Nablous. Mr. Deutsch has completely restored the reading of this, probably, oldest Samaritan epigraph in existence. The contents of the stone are, briefly, an abbreviated form of the Ten Commandments as found in the Samaritan Recension (8 lines); a sentence taken from the interpolated passage following these commandments in the Samaritan codex (line 9); and, finally (line 10), the formula, "Arise, O Lord!" "Return, O Lord!" which is of frequent occurrence in Samaritan worship. A great deal of additional light is also thrown by these new materials upon the vexed question of the age and primitive shape of the square Hebrew character, the final decision of which must be of the highest import for Biblical and post-Biblical criticism, archæology, antiquities, history, and the rest.

—The French Academy pays its tribute to the increasing importance of the United States, by selecting as the subject for the prize poem of next year "The Death of President Lincoln." Few themes from modern history could be more suggestive to the poet.

—At a late meeting of the Academy of Science, M. d'Archiac exhibited a round pebble, coated with a greenish micaceous schist, and possessing a fine grain, which was discovered by M. Garrigou in the lower grotto at Massat-Arriège, in the midst of a vast quantity of human remains and flint implements of the age of the fossil reindeer. On the smooth surface of this fragment, which is eighteen centimetres long and ten broad, is the profile of a bear, in the act of walking, extremely well executed.

—Professor Beesly, who not long ago set forth the character of Catiline in the new light of a representative democrat, has recently been doing the same for Clodius. In a late number of the "Fortnightly Review" he has given a new and very plausible version of the difficulty between Clodius and Cicero, which is said to have led to the latter's banishment. The difficulties in the received account, which depended chiefly on the information furnished by Cicero himself, were very great. It is a little too much to ask any one accustomed to reflect on political phenomena to believe that Cicero, stained with the blood of the popular leaders whom he had unlawfully put to death, was respected and beloved by the Roman populace, and that his exile and all the troubles that befell him were simply the result of a personal quarrel with Clodius. The trial of Clodius, Prof. Beesly thinks, was merely gotten up by the Senate in order to rid them of a man who they foresaw would be an awkward and dangerous enemy. For this purpose they raked up a charge of sacrilege, said to have been committed seven months before, but which had been entirely disregarded at the time, as few of the Roman nobility still believed enough of their religion to attach any importance to such a charge. At this trial Clodius was acquitted, not by bribery, but because the majority of the jury, following the precedents of the time, thought it for the best interests of their party. The banishment of Cicero was, no doubt, entirely owing to the part which he had taken in the *coup d'état* which ended in the smothering of the Catilinarian conspiracy. His recall was not asked for by the people, but was one of the conditions of the compact between the Senate and Pompeius, and was only obtained by breaking up the popular meetings by a mob of gladiators, by intimidation of the tribunes, and by importing enough Italians, attached to the Senate, to swamp the people's vote. Altogether, Mr. Beesly has thrown much light on the part which Cicero took in the Roman revolution, and his two articles ought to be read, especially by those who have lately perused Forsyth's "Life of Cicero," in order to counteract the erroneous impressions that they may have received from that entertaining book.

—Among recent publications in England are "The First Man, and his Place in Creation," by George Moore, M.D.; "Julius Cæsar," a series of lectures by Prof. Saint-Hilaire, translated; "The Lake Dwellings of Switzerland," by Dr. Keller, of Zürich, translated by Mr. J. E. Lee; that absurd and readable book which has amused the subscribers to "Blackwood," "Memoirs of the Confederate War for Independence," by Heros Von Borcke, chief of staff to Gen. J. E. B. Stuart; and a volume of the viceregal speeches and addresses of the Earl of Carlisle during his Lord-Lieutenancy in Ireland. Longmans & Co. announce for October "The Life and Correspondence of Richard Whately, by Miss Whately; the ninth and tenth volume of Froude's "History of England;"—for November, "An Introduction to the Study of National Music," by Carl Engel; and "Sound," by Professor Tyndall. Messrs. Moxon & Co. will shortly publish "Lyra Elegantiarum," a collection

of some of the best specimens of Vers de Société and Vers d'Occasion, in the English language, by deceased authors, edited by Frederick Locker.

—A Sanskrit periodical is projected by the professors of the Benares College, to be called "The Pundit." It will be a sort of Indian "Notes and Queries," and, as such, will be valuable to Sanskrit scholars everywhere. It will also be devoted to the publication of singular and rare reliques of Sanskrit literature. It will afford to European scholars an opportunity which they have long been denied, of testing the famous learning of the Benares Pundits, and finding out whether it is only the remnant of traditional lore or a reality in itself.

SCIENTIFIC.

Clark's Object-Glasses for Telescopes. — The American Academy of Art and Sciences, at their meeting of May 30th, awarded the Rumford Medal to Mr. Alvan Clark, of Cambridge, Mass., for his improvements in the manufacture of achromatic lenses, as shown in his method of local correction. The optical parts of an astronomical telescope are: first, a large compound lens, called the object-glass, which forms an image of any object to which the instrument is directed, at a given point called the focus; and secondly, a combination of small lenses called the eye-piece, by which this image is magnified. The making of an eye-piece is a very simple optical problem, and the perfection of the telescope depends almost wholly on the excellence of the object-glass. In order that this may form at its focus a perfect image of the object to which it is directed, it is essential that *all* the rays of light, which it receives from any one point of the object, should be so bent by the glass as to meet exactly at a corresponding point of the image. Each one of the luminous points of the object sends to the telescope a separate beam of diverging rays, and a perfect object-glass will concentrate at a single point the whole light of each beam, and the collection of these points constitutes what we call the image.

Now no single lens can fulfil this condition; for the different colored rays, of which white light consists, are bent unequally not only by glass but also by every transparent material known, and the focus of the violet rays is nearer the lens than the focus of the red rays, while the other colored rays of the spectrum fall into intermediate positions. Hence the image formed by such a lens is more or less blurred and bordered by colored fringes, the defect thus caused being known as chromatic aberration. In order to correct this defect we must bend back the colored rays, and each to such an extent that they may all fall together. It is known that a concave lens acts oppositely to a convex lens, and, if placed behind the other, may be made to produce the correction required. But, if the concave lens is made of the same material as the convex lens, it will, while correcting the defect, bend back all the rays to their original directions, and thus destroy the whole effect of the first lens. Fortunately, however, for science, different kinds of glass bend the different colored rays very unequally. Flint-glass separates, or, to use the technical term, disperses, the colored rays much more than crown-glass, and hence a concave lens of flint-glass may be used to correct the chromatic aberration of a convex lens of crown. It will, it is true, bend back all the rays to a certain extent, so that they will not meet so soon, and will thus increase the distance of the focus from the lens, but, by its greater inequality of action on the different colored rays, it will, while thus only partially reversing the action of the lens, bring together at one point even the extreme colors. Such a combination of a convex lens of crown-glass with a compensating concave lens of flint-glass, is called an achromatic lens, and on its perfection the power of the modern telescope depends.

Another defect of lenses, fully as injurious as chromatic aberration, arises from the fact that, on account of the insuperable difficulties of grinding any other figure, the surfaces of lenses are necessarily made, at least in the first instance, spherical. Now no simple lens with spherical surfaces can collect at one point all the rays which a given luminous point sends to it. Those rays which strike the outer zones of the lens are proportionally more bent than those which strike the central zones, and are, therefore, brought to a focus sooner, and this inequality of action tends to blur the image even more than does the dispersion of the colored rays already referred to; this defect is called *spherical* aberration, to distinguish it from chromatic aberration. As in the former case, the defect can be remedied by combining together two lenses so arranged that the second shall compensate for the irregular action of the first, and happily it is found that the same combination which corrects the chromatic aberration may be made to correct the spherical aberration as well. The desired result can be obtained by a combination either of two or three lenses; but although, theoretically, the last should give the most perfect image, it is found, practically, that the simpler combination is the best, and this is now always used, at least for large telescopes. In the double achromatic object-glass there are four surfaces, and to determine that relative curvature of these surfaces which will produce the best results is a problem which has engaged the attention of the best mathematicians. A form of object-glass very commonly used for astronomical telescopes was devised by Herschel, and consists of a double convex lens of crown-glass combined with a concave lens of flint-glass, the inner surface of the flint being made slightly concave or slightly convex, or even absolutely flat, as the density of the glass may require. Those who are curious in regard to the subject will find given in the "Proceedings of the American Academy" (vol. vi., page 169) the exact values of the radii of the spherical surfaces, not only in the system of Herschel, but also those in the systems of Fraunhofer and Gauss, either of which affords an equally satisfactory solution of the optical problem, although, on account of the greater mechanical difficulties in the execution of the curves, or in the mounting of the lenses, the system of Herschel is preferred by Mr. Clark.

In order to make an achromatic object-glass, a separate tool must be prepared for each surface to be grooved. The tool is simply a thick plate of cast iron or brass, which has been turned in an engine-lathe until the required curvature is obtained. In order to form a convex surface the tool must be evidently concave and for a concave surface the reverse. On this tool the glass is ground to the required form with sand or emery, and afterwards polished with jewellers' rouge, the interior of the mould in the last stage of the process being covered with a coating of pitch. The achromatic lens thus obtained is far from being perfect. It is true that in some rare cases a lens has been found to be excellent, just as it leaves the tools, but such a result is a pure accident. The defects arise from several causes—first, from the imperfection of the theory itself, since it is impossible by any combination of spherical surfaces to eliminate wholly the effects either of chromatic or spherical aberration; secondly, from the inequalities in density even of the best optical glass; and, lastly, from the necessary defects of mechanical execution. When we consider the extreme accuracy required, we are surprised that lenses even of moderate excellence can be thus made. Nevertheless, all ordinary achromatic lenses, such as are used for small telescopes or opera-glasses, receive no further finish, and, until recently, the most celebrated European makers could do but little more, even for their best instruments. If the lens was very defective it was again polished on the tool, but it was very much a matter of chance if the defect was removed, and the whole process of correction was one of pure empiricism.

More than twenty years since Mr. Alvan Clark, of Cambridge, introduced into the manufacture of achromatic lenses a method of local correction, by which he is able to remove all the defects just mentioned, and by gradual approximations to reach at last an almost perfect result. In order to understand his method, we must conceive of the lens as placed at some distance from a brilliant, luminous point in front of it. If the lens is perfect, all the rays emanating from this point and falling on the front surface of the lens will be concentrated in a single point behind it, the focus. When now the eye of the observer is placed at the focus it will see the whole surface of the lens illuminated. Let the eye be moved slightly to the right or the left, and the light will be seen to flash on and off the surfaces, as the eye passes alternately in and out of the converging pencil of rays. If, now, the eye is placed just within the focus, and slightly at one side, at the point where the light first flashes over the surface, the lens, if perfect, will appear equally illuminated from the border to the center. On the other hand, if there are any defects, one or more rings or zones of the lens will be seen to be lighter than the rest of the surface. This indicates that the corresponding portions of the lens have too slight a curvature, and, therefore, send their light to

a more distant focus; hence also the eye, placed on the borders of the converging pencil, receives an undue proportion of these straying rays. To remedy the defect, the adjacent dark zones of the lens, which have relatively too great a curvature, must be made thinner by polishing. The amount of material to be removed, however, is exceedingly slight, and, in practice, Mr. Clark, after placing the lens on its support, simply rubs over the portions indicated with a little rouge on the end of his finger. The lens is now examined as before, when it will probably be found that the position of the rings has shifted. Their position is again noted, and the lens treated as before; and this process is repeated many times, until at last an equal illumination of the disk is obtained. In examining his lenses so as to discover the position of the rings just described, Mr. Clark makes use of a long subterranean box, into one end of which the light is reflected from the zenith by means of a mirror, while at the other end there is a support for the eye. The lens is pushed into the box to the required distance on a little truck, which runs on rails, and is there immersed in air of perfectly uniform temperature—a condition of prime importance in the process we have described. This process, as may be readily imagined, is exceedingly tedious, and it requires several weeks to correct the figures of a lens of moderate size. Mr. Clark was employed over nine months on the large eighteen-inch lens which has been recently mounted at Chicago. But true success in any department of science comes only as the reward of toil, and, in the hands of a skilful artist, this method of local correction becomes a process of constant approximation, by which, in time, an almost perfect lens must necessarily be obtained. It has enabled Mr. Clark to carry the manufacture of achromatic lenses to a higher perfection than has ever before been attained. The great glass of the Chicago telescope could not have been constructed by the methods which are still almost universally used in Europe. A similar method of local correction was also used by the late Mr. Fitz, of New York, and the excellence of his glasses is well known, although he does not appear to have carried the method to the same degree of perfection which has been attained by Mr. Clark. It is a noteworthy fact that these methods, which are essentially alike in principle but entirely different in details, are both wholly American. A few years since M. Foucault, of Paris, applied a similar method to the construction of silvered-glass mirrors for reflecting telescopes, and in a paper presented to the French Academy describing his process, he suggests that a similar method might be used in constructing achromatic object-glasses, evidently wholly ignorant of the fact that the method had been used in America for many years. The importance which this eminent physicist attached to his own comparatively simple achievement sufficiently attests the value of these American methods. To which of the two American artists the priority of discovery belongs is a matter of little importance, and cannot now be determined. Mr. Clark alone lives to receive the medal which the American Academy have so worthily awarded him.

SIR ALEXANDER GRANT'S ETHICS OF ARISTOTLE.*

We regret to believe that this work has found and will find but few readers in America, although it deserves the study not only of classical scholars but of all who are interested in ethical and metaphysical enquiries. A more remarkable work of learning has not appeared in England during the present generation. It is not merely a thoroughly critical edition of one of the most interesting of the treatises of Aristotle, but it also displays in a very high degree the enlightened spirit of modern scholarship in the determination of the real meaning as well as of the literal text of the original, and in the illustration of it with all the large appliances of modern thought. Sir Alexander Grant has aimed at bringing the "Ethics of Aristotle" into its just place in the current of philosophic thought, at showing its relation to preceding and to subsequent thought upon the topics which it treats, and at exhibiting its influence on the development of moral theories, and on the methods of enquiry and the terms of moral science. In accomplishing this object he has given proof of the possession not only of abundant learning, but of rare original powers of mind. The student of his "Essays and Notes" is continually led to admire the critical discrimination, the clear analysis, the acute penetration, the philosophic spirit and thoughtfulness which they exhibit. One recognizes the hand of a master dealing with the material of his work, aware alike of its difficulties and of his ability to overcome them. The style of the "Essays" is excellent, and the more thoroughly they are studied, the higher becomes the student's estimate alike of the literary talent and of the judgment and character of their author.

Some of our readers may remember the "Essay upon the Ancient Stoics," which originally appeared in one of the volumes of "Oxford Essays," and which is here reprinted as part of the general survey of the development of moral consciousness and speculation among the Greeks and Romans. It were to be wished that this essay, together with that "On the History of Moral Philosophy in Greece previous to Aristotle," and that "On the Relation of Aristotle's Ethics to Modern Systems," might be issued in a separate volume for the use of such readers as are unable or disinclined to give the requisite attention to the remainder of the work.

In the very interesting essay "On the History of Moral Philosophy in Greece previous to Aristotle," the author traces the gradual development of moral notions first through the era of popular or unconscious morality, as represented by Homer and Hesiod, the "Gnomes" of the Seven Sages, the moral sayings of such poets as Theognis and Simonides, the doctrine of the mysteries, and the moral opinions of the Pythagoreans; and, secondly, through the era of transitional, sceptical, or sophistical morality, as represented by the sophists and rhetoricians on the one hand, and by Socrates and the Socratic schools on the other. The investigation into the character of the sophists, the nature of their methods and doctrines, is full of interest, and presents a better and more complete view of them and their influence than is to be found, so far as we know, elsewhere in English. The third and concluding era is that of philosophic or conscious morality, and though the commencement of this epoch is marked in the teachings of Socrates, and in the dialogues of Plato, yet it is not too much to say that ethics only began to have an existence as a separate science with Aristotle. "Before the fifth century," says Sir Alexander, "philosophy had been entirely physical or metaphysical. With the sophists and Socrates thought was directed to the *rationale* of human life, to discussions of virtue and justice and the duties of a citizen. But before Plato there were no scientific treatises on moral subjects, and even in Plato there was no separation between morals and politics. Aristotle, beginning his treatise in a tentative way, and partly following the lead of Plato, speaks of his science as 'a sort of politics;' at the same time he gives it a treatment which effectually separates it from politics" (i. 44).

No one can study the ethics of Aristotle without being forcibly struck with the difference between the point of view from which he regards the subject and that from which it is regarded in modern speculation. Ethics, as he considers it, does not start with questions concerning the individual. It has primarily to do with society and the state. To the Greek the individual has no meaning except as a member of the state. The state is prior to and superior to the individual. "The end for the state is diviner," said Aristotle, "than the end for the individual." And his argument is directed to show that the chief good for the individual is *à fortiori* the chief good for the state. The fundamental question of his ethical system is, What is the end of action, or the chief good, the end which is never a means, the end in itself, the end to which all other ends are means? His answer to this question displays at once the weakness of his system and the noble height of his aim. "Philosophy and speculation are the end not only of the individual but also of the state. 'If it be true to say that happiness consists in doing well, a life of action must be best both for the state and for the individual. But we need not, as some do, suppose that a life of action implies relation to others, or that those only are active thoughts which are concerned with the results of action; but far rather we must consider those speculations and thoughts to be so which have their end in themselves, and which are for their own sake.' A moment of contemplative thought is most perfectly and absolutely an end. It is sought for no result but for itself. It is the realization of the divine in man, and constitutes the most absolute and all-sufficient happiness, being, as far as possible, in human things, independent of external circumstances. This, then, constitues the most adequate answer to the great question of ethics, What is the chief good?"

There is, unquestionably, in this conclusion, especially as applied to the state, much that is vague, even mystical. Nor does Aristotle solve the difficulties that attend it. And yet, if we make explicit what was only implicit in his thought, if we seek to find the full meaning of what he imperfectly expressed, we "can hardly escape the conclusion," to use Sir Alexander Grant's words, "that it is the deepest and most vivid consciousness in us

* "The Ethics of Aristotle, illustrated with Essays and Notes. By Sir Alexander Grant, Bart., M.A., LL.D., Director of Public Instruction in the Bombay Presidency, and formerly Fellow of Oriel College, Oxford." Second edition, revised and completed. London: Longmans, Green & Co. 1866. 2 vols. 8vo, pp. xiv., 436; iv., 351, lxxxvii.

that [in the conception of Aristotle] constitutes our happiness," and is the true end of our being.

It is plain that in this theory there is very little affinity with modern modes of thinking upon ethical topics. It is a characteristic of Aristotle's system to confuse the subjective and the objective together. He gives little attention to the moral subject, "the relation of the *me*, of the will and consciousness of the individual to the good in life and action," while he deals "profoundly with those conceptions that form the *object* of moral action, the good or happiness, and the beautiful or virtue." This characteristic of his thought is the result in great measure of the absorption of the idea of the individual in that of the state, which prevents the questions relating to the nature and destiny of man as an individual moral being from assuming their just importance. The ideas of duty, of right, of obligation, which are the starting-points of modern ethics, find no place in Aristotle's discussion of happiness and virtue, of the chief good, and the end in itself. Conscience and responsibility are conceptions which are foreign to his system. All that side of morals by which it is connected with religion is unknown to it. The great question of modern ethics as to the ground of action, the ideas of utility and of duty, the notion of an innate moral sense, or of an acquired moral standard—all these imply conceptions to which man had not attained in Aristotle's day. They are the late result of two thousand years of human experience, and of the development of the religious nature of man under the influence of the teachings of Christianity. The ethical systems of our day are deeper than that of Aristotle, but there have been no thinkers upon the subject in modern times who have thought so deeply or with such effect as he.

In spite of Aristotle's calling his subject "a sort of politics," he virtually separates ethics by his treatment of it from its supposed dependence on political science. But it is, nevertheless, worth while to note, as an indication of the change that thought on these topics has undergone, that the prevailing tendency of modern philosophy is to classify politics under ethics, and to treat political as a branch of ethical science. The American view of the relation of the individual and the state is precisely opposite to that of the ancient Greek. Instead of the individual existing for the state, the state is conceived as existing only through and for the individual. The modern Christian notion of a community, the notion which it is the highest object of our political science to render practicable and embody in actual life, is the intellectual opposite of the Greek state. Our ideal commonwealth has little in common with Plato's republic. It rests upon the foundation of individual morality, and its form is determined not by external authority or theoretical considerations, but by the moral sense of its members, and their capacity of self-control as determined by their moral civilization.

Sir Alexander Grant concludes his "Essays" with the following eloquent words: "It is only by an effort of mind, and not immediately or at first sight, that we can understand Aristotle's ethics as they really are. It is a difficult task to throw aside our associations and views, which all belong to what Bacon calls 'the old age of the world,' and to go back to the era of Alexander, and put ourselves into the position of this early but deeply penetrating thinker. We have seen that much of his thought has been amalgamated with our own. There is much else in the profounder parts of his ethical system which is, when properly discerned and felt, a real revelation with regard to human life. Taken as a whole, however, when we consider this noble treatise in relation to modern thought, we feel that there is something about it that stands apart from ourselves; that its main interest is historical; that we look back on it as on an ancient building shining in the fresh light of an Athenian morning."

SIMSON'S HISTORY OF THE GIPSIES.*

The title of this work is a misnomer if by it the author intends to convey the impression that he has produced a general history of the gipsies. Of that portion which treats of the history, customs, and language of this singular people, more than five-sixths are devoted to the gipsies residing in Great Britain, and particularly in Scotland. The account of gipsies in other parts of the world is a slight sketch, not exceeding the limits of an ordinary cyclopædia article. In addition to these we have a preface, introduction, and notes, and a tedious, rambling "Disquisition on the Gipsies," by Edward Simson, who edits the work, and whose contributions comprise nearly half the volume. The author, a native of Scotland, soon after the establishment of "Blackwood's Magazine," contributed to it several short articles on the Scottish gipsies, whose mysterious origin and language had aroused his curiosity. The information which these contained had been obtained with so much difficulty, owing to the habitual caution of gipsies in speaking of themselves, or even admitting that they are gipsies, that the author was advised by Scott, who expressed considerable interest in his researches, to complete all the information he could collect before alarming them by a premature publication. He took the hint, and prosecuted his enquiries with extraordinary assiduity, patience, and caution. But, partly from fear of personal danger, in consequence of the revelations it would make, partly from a sort of morbid dread of literary criticism, he withheld, during his life, the manuscript from publication, and now only, after the lapse of thirty or forty years from the completion of the work, is it first given to the world. The notes and other additions supplied by the editor, it is asserted, render the history complete to the present date. So far as the original work is concerned, the writer's apprehensions, we must think, were groundless. The facts given by him are so interesting in themselves, so obviously derived from personal observation or conscientious enquiry, and so unaffectedly related, that they would have been esteemed a welcome addition to the history of a people of whom, notwithstanding they have been established four centuries and a half in Europe, only too little is known. And as to the vindictiveness of the gipsies, it may be doubted whether the revelations made by Mr. Simson are of a character to call forth any considerable degree of resentment from them.

As an account of the history and present condition of the gipsies in Scotland the volume possesses many claims to attention, and will prove a very storehouse of romantic incidents. These, of course, relate for the most part to former times. With the increase of population, the diffusion of wealth and intelligence, the opening of railways and other avenues of trade, the enclosure of waste lands, and, which is of not less importance, the establishment of an efficient rural police in most parts of Great Britain, the movements of the gipsies have been greatly curtailed, and their peculiar vocations and once-tolerated depredations may be said to have practically ceased. Sir Roger de Coverley and his friend the *Spectator* might now ride for many a day over his fields without meeting one of the vagrant people who told him that his roguish leer made a pretty woman's heart ache, and at the same time picked his pocket. Swarthy and wrinkled old women, with red cloaks and the gift of second sight, "handsome jades," with "white teeth and black eyes," and all the picturesque accessories of the woodland encampment, are now chiefly seen on the stage or on the canvas, and it is probably very many years since a stolen baby was identified by moles or other marks upon its body. The nomadic, tented gipsies in the British isles comprise, at the present day, but a handful, and few, if any, of these exhibit the characteristic features of the race. Intermarriage has so mixed the blood that one could almost reckon on his fingers those of pure descent. In the face of these facts, which are fully admitted by the editor, we have his assertion that "there cannot be less than 250,000 gipsies of all castes, colors, characters, occupations, degrees of education, culture, and position in life, in the British isles alone, and possibly double that number;" and he further states that in Europe and America together there are upward of 4,000,000 of them in existence. The number in the remaining quarters of the world he does not venture to compute.

These statements involve a pet theory of the editor, which is so frequently thrust forward and so persistently argued that the patience of the reader is likely to be wearied if his mind be not convinced. According to Mr. Simpson, the gipsies, as a race, never die; on the contrary, they increase from age to age with a prolificacy which in time threatens to absorb the whole population of the globe. A vagrant mode of life in a densely populated country becomes inconvenient in the nineteenth century; fortune-telling, pilfering, tinkering, or kidnapping proves unprofitable or dangerous, and the gipsy betakes himself to more reputable employments. But, though lost in the vortex of society, engaged in respectable pursuits, and even gaining eminence as merchants, lawyers, divines, soldiers, scholars, or statesmen, they are gipsies still, says Mr. Simson, and gipsies they and their descendants must remain. It is not improbable, notwithstanding so radical a change of habits and occupation, and the practical disappearance of the race by reason of its absorption into the body of the community, that its members, of unmixed descent, may retain their individuality and nationality beneath the disguise they have assumed. But in the British isles, to which Mr. Simson's experience is almost exclusively confined, by far the greater part of the so-called gipsies have probably not so much as an eighth or a sixteenth part of the blood in them; and to call this class of people gipsies is to take a liberty with their social position against which they have an undoubted right to protest.

"Some would naturally think," says our author, "that these would not be gipsies, but the fact is otherwise; for, owing to the dreadful prejudice which has always attached to the name of gipsy, these white and

* "A History of the Gipsies, with Specimens of the Gipsy Language. By Walter Simson." New York: M. Doolady. 1866.

parti-colored gipsies, imagining themselves, as it were, banished from society on account of their descent, cling to their gipsy connection, as the other part of the blood, they imagine, will not own them. They are gipsies, and, with the public, they think that is quite enough. They take a pride in being descended from a race so mysterious, so ancient, so universal, and cherish their language the more from its being the principal badge of membership that entitles them to belong to it. The nearer they approach the whites as regards blood, the more acutely do they feel the antipathy which is entertained for their race, and the more bitter does the propinquity become to them. The more enlightened they become, the stronger becomes their attachment to the sept in the abstract, although they will despise many of its members."

So morbid a sensitiveness does this imply in persons having but a slight infusion of gipsy blood that we cannot but regard the picture as overdrawn. Push the writer's argument to its logical conclusion, and we shall find a man having an infinitesimal amount—say, a dozen drops—in his veins in such a chronic state of uneasiness that life would be almost insupportable. If he were obliged to carry on his back a placard stating that he was descended from one of the degraded race, and was, therefore, to be shunned by all reputable persons, it is possible he might meet with some unpleasant rebuffs in society. But society, as a rule, does not trouble itself greatly with a man's antecedents, ancestral or otherwise, provided he conducts himself with propriety; and it may be doubted if one person in a thousand knows or cares whether the "white or parti-colored gipsies" are of "Egyptian" origin. In the United States, where, according to Mr. Simson, many thousand gipsies are to be found, such antipathies as are hinted at in the text can have no real footing. We therefore dismiss as purely fanciful the idea that an infusion of gipsy blood necessarily makes one a gipsy, or that there is such a thing as compelling him to remain a gipsy, because his great-grandfather mended kettles or his great-grandmother lived in a tent and told fortunes. Others of his ancestors in the same degree may have been Jews, or Turks, or Hottentots, or Tartars, and he might with equal propriety pretend to belong to any of those races. But, no, says Mr. Simson, though you be but one-sixteenth part gipsy and all the rest Turk or Tartar, you are an unmistakable gipsy, and so will be your children, even should they be ignorant of their descent. He even goes so far as to say that "the simple fact of knowing from whom he is descended, that is, who he is, in connection with having the gipsy words and signs, *although these are not absolutely necessary*," is sufficient to constitute a gipsy at the present day. The sentence, without the words we have italicized, might be intelligible, on the supposition that modern gipsies are a species of masonic order. As it now reads it seems unreasonable, not to say nonsensical. The only sensible rule to adopt in such cases is, that a race which resigns its hereditary occupation, habits, or language, and disappears from view by intermarriage with other races, practically loses its distinctive character. John Bunyan is claimed by Mr. Simson as a gipsy on the ground that his father was a tinker, and that he himself was brought up to the same calling. He even hints that Professor Wilson showed his gipsy origin by spending several weeks, during a youthful frolic, with a wandering band of tinkers and fortune-tellers. The reader can judge for himself what affinities these men displayed in their writings or lives for the vagrant race with whom it is sought to associate them, or with what propriety they are pronounced to be gipsies.

On the origin of the gipsies and their history the work sheds not one additional ray of light, and the theory of Grellman, and other later writers, that they were originally a low-caste Indian tribe, driven out of Hindostan by the ravages of Tamerlane in the latter part of the fourteenth century, is adopted by both author and editor. The latter, indeed, attempts to show that they were the "mixed multitude" who went out of Egypt with the Israelites, from whom they subsequently separated, going south, for no assignable cause, into Hindostan, where they remained until expelled by Tamerlane. During this period, he assumes, while preserving their homogeneity and caste, and other external features, they gradually exchanged their language for Hindostanee. This theory harmonizes with the tradition universally held by the gipsies, that they came originally from Egypt, and which is perpetuated by their name, a corruption of the word Egyptian. Beyond the fact that the tribe received some accessions from Egypt in the first half of the sixteenth century, in consequence of a revolt against the conquest of Sultan Selim under one Zinganeus, which drove his followers forth as wanderers over the world, there is not a particle of evidence to sustain Mr. Simson's point. The attempt heretofore made to derive the name Zingari, by which the gipsies are known in Italy, from this Zinganeus also fails, as the name was employed nearly a century previous by Pope Pius II., in a bull denouncing the gipsies as thieves and vagrants. Mr. Simson's explanation of the manner in which the original language, brought by the "mixed multitude" to Hindostan, was lost, is by no means satisfactory, and, indeed, conflicts with much of his reasoning in other parts of the work. Living together in Southern Asia as a distinct caste, it might be supposed that their language would be one of the last things that they would part with. At least we ought to find a trace in it of the parent tongue. On the contrary, however, it is unmistakably a dialect of the Hindostanee; and although much corrupted by the introduction of foreign words, according to the various residences of the gipsies, it is still to so great a degree one language that gipsies from all parts of Europe can readily communicate with each other by means of it. This is, indeed, remarkable, considering how widely the race has been scattered since its arrival in Europe in the beginning of the fifteenth century; and the fair inference from the fact would seem to be, that if, under such adverse circumstances, the language has not been lost, the original tongue brought from Egypt should *à fortiori* have been preserved in Hindostan. Otherwise, the "phenomenon of the perpetuation of the gipsy language," of which Mr. Simson has so much to say, is no such wonderful thing after all.

Not the least interesting portions of the book are those describing the efforts of the author to obtain a vocabulary of the Scottish gipsy dialect. His enthusiasm in what he calls "gipsy hunting," combined with considerable adroitness, enabled him to succeed where most others would have failed. But the sum of his acquisitions is by no means remarkable. A few dozen words and phrases seem to have been all that he was able to worm out of his gipsy acquaintances, and the fact that he was cognizant of these was, he alleges, cause of much grief and consternation to them, and possibly of danger to himself. These words correspond very nearly with those of the same signification in other gipsy dialects, and afford additional evidence of the universality of the language. Mr. Simson admits, however, that the language in Great Britain is so broken as "to consist rather of expressions or pieces, which are tacked together by native words—generally small words—which are lost to the ordinary ear, when used in conversation," although it serves the purposes of a speech. As it has no letters of its own, and no literature beyond a few rude songs, this corruption is scarcely to be wondered at.

Although this "History of the Gipsies" is by no means so comprehensive as its title would imply, the reader will find the Scottish phase of gipsydom fully and, we doubt not, faithfully delineated. If by one we are enabled to know all, it may answer the purpose of a general history, so far as national characteristics, habits, and language are concerned. Without accepting the fanciful hypothesis of the editor, we can readily admit that the race is of high antiquity, of mysterious origin, of peculiar and unchangeable habits where left untrammelled by social laws, and the possessor of a language, for the most part secret, and which, with certain private signs or catch-words, gives it a degree of power not easy to determine, but which must be considerable. Though systematically oppressed and hunted down in former times, and now generally despised, it has never been reduced to servitude, and its gradual extinction, or, more properly, absorption, by other races, is owing to no physical causes, but has been controlled by a constantly increasing standard of civilization, against which nomadic barbarism finds it impossible to contend. Its physical vitality may well be contrasted with that of the aborigines of North America, to whom contact with European races was fatal; whereas the gipsies have thriven and multiplied in the face of serious obstacles, and, though reluctantly compelled to abandon their characteristic mode of life, have infused a vigorous physical element into other races.

GRINDON'S "LIFE."*

THE title below is broad and suggestive, but we doubt if the majority of readers will form, even from that, an idea of the variety of subjects touched upon by the author. The contents of the book remind us of a course of lectures we once attended, which were announced to treat of physiology, but when the lecturer opened his subject we were informed that physiology began with polyps and ended with prison-discipline. Mr. Grindon treats of life upon as broad a basis, and introduces subjects far wider apart than those just mentioned. Much that he has written on physical, physiological, and psychological matters is very acceptable teaching, but too often it is put in figurative language when a plain statement would have been so much shorter and better. This, however, is the least of his faults, for, with whatever there is of good in his book, there is mingled an equal quantity which is utterly imaginary—sheer nonsense. One might read with profit what he says of the ordinary phenomena of the respiratory functions, but when he speaks of the air as "a cellarage of aerial wines, as the heaven of the spirits of the plants and flowers, which are safely kept there till called for by the

* "Life: Its Nature, Varieties, and Phenomena. By Leo H. Grindon." Philadelphia: J. B. Lippincott & Co. 1866. 12mo, pp. 578.

lungs and skin," and tells us that "all the virtues of the ground and vegetation are in the atmosphere by exhalation," and that the air "is a kind of solution of some of everything that the world contains, and from it as from a fountain all come into the lungs and circulation," one sees that his imagination is without a guide. Life, according to Mr. Grindon, is co-extensive with the universe, "is the sustaining principle by which everything outside of the Creator subsists, whether worlds, metals, minerals, trees, animals, mankind, angels, or devils, together with all thought and feeling." "There is as much life outside of animated nature as inside." One is puzzled to know why he calls this "sustaining principle" of the physical world life, since he distinctly asserts in another place that it has nothing whatever in common with organic life. To those who wish to know what spirit is, and are willing to take Mr. Grindon as an authority, we recommend the following views: The spiritual body is a substantial organized form, and when disengaged from the physical body at death still holds intact both the human configuration and every lineament on which personal identity depends, and by which individuals are recognized and distinguished, with this condition, however, that it may acquire an infinite access of beauty or deformity, according as its governing principle is good or evil. Man's physical body is permeated by his spiritual body, as the animal part of our skeleton is with lime; either may be removed, but the form will be unchanged. These spiritual bodies are our ghosts, and are visible to our spiritual eyes; but these, buried deeply in our flesh, are rarely opened; they were, however, to those present at the transfiguration, and so Moses and Elias were seen. They are opened even now on certain occasions, so that it "is possible for the spiritual body to be beheld." Mr. Grindon thinks it was only the ghost of Elijah that was taken up by "the chariot and horses of fire," since "flesh and blood cannot inherit the kingdom of heaven."

The doctrines of "prefiguration" and "correspondence" are favorite ones with our author, and enter largely into his book. Everything in nature is the sign of something higher and more living than itself. The geological history of our planet is the biography of human nature; stratification, disruption, change of surface, and the succession of living beings are symbols of man's emotional and intellectual development. From chaos, through the creation of land, water, light, and life, we have the record of man's advance from infancy to maturity; the huge pre-Adamite animals "consist, we may see at a glance, with the wild ambitious phantasies of early youth, when the 'Arabian Nights' are thought to be solid facts, and the small number of species with the scanty stock of emotional experiences and ideas." The amethyst, lapis-lazuli, and emerald give promise of the flowers of plants, and are the blossoms of inorganic nature; the frost on the window-panes or the pavement prefigures the mosses and the "pectinated" skeletons of such fishes as the sole, and also remind us of the footprints of the sea-gulls in the sand; the starry snow crystals foreshadow the Star of Bethlehem and the star-fishes. The plants in their turn prefigure all kinds of animals, even to details of structure and function; the evening primrose and the *Cereus grandiflora* are the precursors of the owls and nocturnal animals; the flowers only fragrant in the evening prefigure the nightingale; the wild convolvulus and other "matutinal" species, the lark and the blackbird. The leaf of the plant prefigures the vertebrated animal; the mammal is an infinitely perfected leaf; the stems of the balsam and carnation tell us, in their slender shafts and peculiar joints, of the bones of the leg and arm. The pea-pod, folded with such fine symmetry on its little spine, is the miniature idea of the human frame; the walnut with its shell and kernel is the hint of the human skull and brain, while the cocoa-nut "gives tidings of the round brown head and comical visage of the monkey." "Everywhere in nature the mother's breast is foretold;" it is seen in the rounded hills which the French so appropriately call *mamelons*, and the streams which give drink to the beasts of the field, where the wild asses do quench their thirst, are the "adumbrations" of it in the great world of inorganic nature; but, above all is the exquisite presignificance conveyed in the perfect representation of it in the pomegranate, and so, imitated in gold, it formed one of the chief ornaments in Solomon's temple. Every flower, as it was created, showed that the bird's nest was to be expected, as also the "curtained sanctuary of married love."

The above is no travesty, but a literal rendering of the author's views.

Mr. Grindon attempts to give the reader a little insight into a subject which, of all things, most puzzles botanists and zoölogists, viz., the basis of classification, and in this attempt he has not been fortunate. In a little work published by him not long since, and called "Phenomena of Plant Life," he informs us that, in the book of Genesis, "*three* distinct classes of plants (trees, herbs, and grass) are enumerated by the inspired writer, and that learned and pious men have been led from this circumstance to believe that at the very gateway of holy writ there is set forth the great principle of triplicity which science in these later ages has demonstrated." In the present work all that is changed. Four is the magic number. There are four great divisions of plants and as many of animals, and each of these is separated into four subdivisions—one of each of the divisions forms the archetype around which the others are grouped, radiating from it, the highest of each being nearest the centre. This substitution of divisions by fours instead of threes is rather damaging to "the great principle of triplicity demonstrated in these later times," and the classification itself works badly. The object of all classification should be to bring together the forms which are the most like. Mr. Grindon does the opposite of this—in bringing the highest of each to a common centre, he brings together those which are the most unlike. The highest reptiles and fishes are nearest, while the lowest of each are furthest, from each other. Fishes and reptiles touch with the fish-like batrachians and the reptile-like sauroids—so that even Owen despairs of drawing the line. The same objection would apply to each of his divisions.

If we leave the book here the reader must not suppose that the two or three subjects we have noticed occupy more than a small portion of its pages; besides the circle of physiological subjects there are many others, the variety of which may be inferred from the following selection: "The Resurrection," "Spiritual Life," "The Spiritual World," "Unity of Nature," "Homology," "Instinct and Reason," "Man the Epitome of Nature," all of which are treated in a somewhat similar style, and present an odd mixture of sensible thoughts and wild vagaries. It were unjust, however, to leave out of sight the tone that pervades our author's writings; he seems to have a deep feeling for nature in all her aspects, and stands reverently in her presence.

Homes without Hands. Being a description of the habitations of animals classed according to their principle of construction. By the Rev. J. G Wood, M.A., F.L.S., etc. Illustrated. (Harper & Brothers, New York.)—In a general sense everybody knows that "the foxes have holes and the birds of the air have nests," and is more or less familiar with one or other of these sorts of habitations. Few comparatively have the opportunity to investigate these matters, and then only within a limited area of personal observation. Mr. Wood therefore brings welcome information to a very large circle of minds; and he writes in such a simple and attractive manner, aided by the best efforts of the draughtsman and the engraver, that the service he performs is deserving of a very high degree of praise. If we enumerate his classifications we shall have done all that can be done, apart from liberal quotations, which our space will not permit. He begins with the burrowing animals, including man, and then treats successively of those that suspend their homes in the air; the real builders; those that make their habitations beneath the surface of the water; those that live socially in communities; the parasitic; the branch-builders, etc. The author aims purely to be an instructor in natural history, and adheres rigidly to his purpose, reserving, of course, the latitude of telling something about the animal as well as about his home. Incidentally he gives a glimpse of the part his subjects have in the human and cosmical economy: as the robber-crab, which, in the genuine *sic vos non vobis* spirit, strips the cocoa-nut of its fibres for the benefit of the Malays, who plunder its nest when they want "junk" for the seams of their vessels, or stuff for mats, etc., together with the crab of the Simooan Islands, that even detaches the nut from the tree; the esculent swallow, whose gelatinous nests appear on the table of Chinese gourmands; the termite, on whose mounds the traveller is certain to find a crop of delicious mushrooms, and the hunter an observatory for game, and the game itself an observatory for its pursuer; the foraging ants, which serve as the scavengers of vermin for a whole village in their line of march; the *Cynips quercusfolii*, producing the nutgalls which yield us ink; the fowls whose eggs may be eaten; the *Teredo navalis*, that sends ships and their freight to the bottom of the ocean; the *Pholas*, which honeycombs the chalk cliffs of England, and dooms them to crumble before the invading sea; the beaver, which destroys forests, creates artificial ponds and lakes, and promotes the formation of peat-bogs, with all the attendant consequences to the climate and the comfort of man; the corals, finally, the repairers of continents and architects of islands. For those philosophers who, seeking to draw from the Divine constitution of the animal kingdom justification for wrong-doing in the case of sentient beings, have cited the Amazon ant in support of slavery, Mr. Wood has little encouragement. The Amazons are really the ones to be pitied, while their serfs are not only able to take care of themselves but to sustain their incapable and unproductive lords. "The real masters in the nests are the slaves; for upon them the Amazons are dependent from their earliest days to the end of their life, and without them the entire community would perish."

Memoirs of the Life of the Rt. Hon. Richard Brinsley Sheridan. By Thomas Moore. 2 vols. (W. J. Widdleton, N. Y.)—This republication affords no room for remark except as to the manner in which it is brought out. Externally, it is of very convenient size and neat appearance. Internally, the slightly tinted paper fails to conceal the well-worn plates from which the edition is printed. An error on p. 327 of the second volume, by which *then* is allowed to stand for *than* in a comparative sentence, makes nonsense of it. The editing of the French which Moore introduces in ample measure is inexcusably careless. We do not believe that Mme. de Genlis (p. 151) wrote "état," as she is reported; or that Bossuet (p. 331) is responsible for the total lack of accents in the sentence quoted from him, from "prononcee" to "arreter." As for *verb de société* on p. 325, who would have guessed, had not the translation been annexed, that it was intended for *vers de société?*

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

"USURPATION WILL NOT BE TOLERATED."

ACCORDING to Mr. Johnson's doctrine of the status of the States lately in rebellion, they occupy towards him precisely the same relation as Massachusetts or New York. The only important difference between their political condition and that of these States lies in the fact that, while Massachusetts and New York are represented in Congress, they are not; but their right to be so represented is perfect. If their representatives do not occupy their places in the Capitol, it is simply owing to an abuse of power on the part of the majority. It is true that by some theory of Mr. Johnson's, the nature of which we have never understood, and which neither he nor Mr. Seward has ever thought necessary to be explained to the public, he, the President, still possesses the power of suspending the *habeas corpus*, or rather of keeping it suspended, and of exercising as much or as little of the arbitrary authority which this gives him, as he pleases. But while claiming full discretion in the matter, he has of late made some parade of refusing to interfere in State concerns at the South. He has scolded Congress severely for seeking to exercise such interference for any purpose, however laudable, and has painted in glowing colors the danger of not allowing States to manage their own affairs in their own way, no matter what present inconvenience or suffering this abstinence may entail on individuals. In fact, if he be not at this moment the great champion of State independence, what is he? what other political principle does he represent?

This being the case, most people will have read with surprise his telegram to Governor Wells, of Louisiana, taking him to task for calling together the Convention of 1864. Governor Wells, be it remembered, according to this theory, Mr. Johnson's pertinacious advocacy of which is at this moment convulsing the nation, is responsible for his acts, whether official or non-official, only to the people of Louisiana. The enquiry from the President why he calls a Convention is either an impertinence or a private communication from Mr. Andrew Johnson, of Tennessee, which the Governor is at liberty to answer or not, as he pleases. If the Governor be legally empowered to summon a Convention to revise the State constitution, the General Government has, according to Mr. Johnson's message, no more right to criticise his action than that of the Governor of New York. If Governor Wells calls a Convention, not being legally empowered to do so, the result is—what? That the President may declare martial law, and take the government of the State into his own hands? That he may set aside the Governor and put the Attorney-General in his place? That he may break up the Convention by force of arms, and throw the members into prison? Nothing of the kind. The question of the legality or illegality of conventions and of all other public assemblies is a question for the courts and not for the President to decide. If illegal, the sole result is that their resolutions, instead of being legislative enactments, become merely the written opinions of a certain number of private persons, of no legal force or effect. When the members go home their work descends into the same limbo with the Saturday speeches of the House of Representatives, and there is an end of it. Nobody has been guilty of any crime; a certain number of gentlemen have wasted some time, and that is all.

We have supposed Governor Wells to have called the Convention. It appears he did not do so. If we concede that the person who did call it was not clothed with legal authority to do so, we still repeat that its meeting at his summons made it simply an assemblage of private persons, and made its votes so many expressions of the opinion of private citizens. The monstrous phrases which we read in the "Conservative" press and in Mr. Johnson's telegrams, asserting it to have been "an illegal and unlawful convention," and that this is a justification for its forcible dispersion, show how rapidly he and his followers are drifting away from the great principles of American law, of which they profess to be the champions. There can, in this country, be no such thing as an "unlawful convention" or meeting, unless it be engaged in a breach of the peace or the commission of treason. If a convention be not a constitutional convention, it becomes, no matter for what purpose or by whom it may have been called, not illegal, but simply a meeting of American citizens, whom Mr. Johnson and all civil officers are bound to protect, even while uttering any sentiments they please, however wild or violent or imprudent. If they were to draw up a resolution annexing the United States to Hayti, the resolution would be not illegal but silly; the members would forfeit none of their right to freedom of speech and action, until they attempted to carry out the resolution by force.

All this is so familiar to every man and boy in the country who possesses the slightest acquaintance with the principles of our Government, that Mr. Johnson's course with regard to the Louisiana Convention, and the emphatic approval which the "Conservative" press is bestowing on it, are amongst the strongest and most alarming signs of the times. Here are men who profess to be engaged in the defence of the Constitution and the rights of States, and who clap their hands when the Executive sets aside the governor of a State, directs the military to suppress public meetings, and borrows in his denunciation of them the vocabulary of the French police. We dislike arbitrary power, and we are opposed to all schemes for treating the South as conquered territory. But, if the South is to be treated as a conquered territory; if its governors are to be responsible to the General Government for their official acts; or if the local courts are no longer to be allowed to pass on the constitutionality of local legislation, we believe the great majority of the public will, before very long, unite in demanding that the South be governed by *law*, and not by the arbitrary will of one man; that the rules which restrict freedom of speech and of action shall be drawn up by the whole Government, and set down in black and white.

It would not be necessary to add one word on its atrocity to make the New Orleans tragedy the most striking illustration we have yet had of the absurdity of the President's "policy." The day he telegraphed to Governor Wells, he burst the whole bubble, and more than justified Congress in its resistance to it, even if that resistance seemed factious. He showed that there is no legal or constitutional principle at the bottom of it; that he insists upon it, not because it is either expedient or wise, but because it is *his*. But the coolness with which he has refrained from expressing one word of honest indignation at the slaughter, in an American city, of unarmed men by a mob of their political opponents for political reasons—a mob, too, composed in the main, no doubt, of men from the ranks of the Confederate army, is, perhaps, the most alarming incident in this sad affair. His speech to the crowd in Washington last winter filled the country with anxiety. It seemed to inaugurate a new political régime, to throw a Mexican or French glare over our party contests. But even his worst enemy hardly expected to find him, six months later, deciding out of his own head that a meeting was "illegal," and half-justifying a band of cut-throats in massacring those who attended it.

If there be one thing more repulsive than his course in the matter, it is the course of his satellites in the press in supporting him. Some of the articles in which the New Orleans mob is whitewashed—such, for example, as that in which the New York *Times* talks of Mr. Dostie's murder as "the penalty of his violence"—will, we trust, help to open the eyes of the country to the nature of the moral and political abyss to which Mr. Johnson and his followers would fain drag us, and to the absolute necessity of putting an end at once to the reign amongst us of arbitrary power, and of restoring the reign of *law*—because law, whether just or unjust, wise or foolish, is, from the fact that it is written and known, immeasurably superior to the arbitrary decrees of even a good and great man. We at least have no substitute for it, and can find none, and cannot return to its shelter one minute too soon. We cannot trust ourselves to speak of this transaction as it deserves, or as we feel, because we are anxious to avoid, at a crisis of such gravity, even the appearance of exaggeration or of violence of language. But we think Mr. Johnson may be safely assured that, to use his own words, such usurpations as those of which he is now guilty will not much longer be "tolerated." We shall not submit either to the dominion of "illegal conventions" or of bloodthirsty mobs; but neither of them is one whit more obnoxious or more dangerous than the dominion of a

man who displays, as he has done in this last affair, as much contempt for the moral and religious feeling of the country as he has already displayed for the authority of its legislature.

AN INTERNATIONAL PANACEA.

"In the following year," says that graphic if not veracious historian, Gustave Doré, speaking of the reign of Jaroslav of Russia, the contemporary of William, Duke of Normandy—"in the following year he established his famous code, which fixed the value of every member of which one man should deprive another; and the consequence was that the proletary, anxious to gain an honest and not too toilsome livelihood, was never weary of procuring mutilations from the rich. This system permitted the Boyards henceforth to reckon their spleen among their minor pastimes. Thus, too, anger was measured by the capacity of one's purse, and it was a common thing to see citizens consulting it before coming to blows, and one of the assailants retreat at sight of the pocket-book of his adversary."

At the present day it must be admitted that, other things being equal, when nations go to war, the soundest exchequer is sure to win in the long run. They may keep on hacking one another with the most perfect reciprocity of loss and gain, there comes a time when one party has nothing to match against the last regiment, the last stronghold, or the last penny of the other. It is evident, therefore, that the justification for war between powers of the same class is vastly diminished since we may ascertain with the greatest accuracy in advance what the issue of a contest will be; and the advantages of the Russian method are so incontestable that it seems worth while to dwell upon them a little. For consider how human suffering might be abridged and posterity relieved of its ever-gathering burden, if, instead of hurrying troops to the frontier, two nations in dispute should send each other an elegantly bound copy of the last census, along with the latest quotations of consols. A glance at the state of manufactures, at the condition of the crops, the yield of mines, the receipts of railroads, the number and character of schools, the circulation of newspapers, the extent of libraries, the sanitary regulations of the metropolitan cities, the issues of the patent office, the efficiency of the courts, the proofs of public spirit in charitable and scholastic endowments—a glance at all those statistics, in which political economy has taught us to read the real wealth and forces of a state, would satisfy one or other of the disputants that he would be the loser by promoting a trial of endurance. Thus not only army and navy, but ministers of war and of marine would become superfluous, and even your minister of foreign affairs, who would naturally merge in the secretary of the interior; and this saving in the departments of government would mightily ease the taxes of the people. Perhaps domestic order might be preserved by a similar procedure, and the reading of the riot act be superseded by a demonstration of the comparative superiority of society to the mob—in point of numbers, of intelligence, of resources, and of unity in self-defence. Jails would in that case be changed into lunatic asylums, to which those would be committed who could not be convinced that lawlessness is irrational and always against odds.

We are aware that this proposition to dispense with dockyards and arsenals will hardly approve itself to the generation that now is; but the principle on which it is grounded is elastic enough to suit even the *status quo*. The *status quo* for nations which are at peace is to spend, in addition to their outlays for fleets and standing armies, vast sums in testing the warlike inventions of nations which have the misfortune to be at war. England did not venture to embroil herself with this country during the late rebellion, yet she felt obliged to bring her armament up to a par with ours, at an expense not smaller than that of wars which have decided the fate of empires. The cordial understanding between France and England differs, as respects jealousy of each other's prowess in arms, from open hostilities only as the decay of a log in the forest differs from its speedy consumption in a camp-fire. Each nation excuses itself by arguing that the best guaranty of peace is the highest preparation for war. But what is the highest preparation? Austria thought it was, aside from a just cause, men enough and fortresses enough. Prussia showed her, beyond a doubt, that a single improved weapon sufficed to turn the scale against her. Are we not reminded of the Russian method again?

Grant equal sincerity in both parties to the German quarrel, and a mutual desire to avoid the effusion of blood. Then suppose Bismark, when neither party would budge from its position, to have sent Francis-Joseph a specimen needle-gun, with a full explanation of its superiority over muzzle-loaders, and twenty-four hours to consider. The incredulous Emperor might at first, and at worst, have returned the gun with his compliments. Bismark, still shuddering at the thought of fratricidal slaughter, and preferring to lose the home elections rather than save them by conscripting the supporters of parliament, would then have offered to pit a regiment of Prussians against a regiment of Austrians, and so let the truth of his representations appear. Every one must see that if this had been done, there would have been no battle of Sadowa, and no such awful desolation as has befallen the hearths of both countries. If Prussia, big with her recent triumph, should ever menace the United States, her insolence would be pricked on receiving a case of Spencer rifles, beside which the needle-gun ceases to be formidable. By and by there will be no wooden frigates to overawe with iron-clads; but while England and France are determining whether the *Warrior* ought to quake before *La Gloire*, or *vice versa*, the United States moors its monitors at Sheerness and at Cherbourg, and Napoleon's response to their fifteen-inch guns is, once more, "L'empire, c'est la paix," while Disraeli borrows the broadbrim of John Bright.

This, some captious critic may interpose, is simply to deliver the world over to the rule of the strongest or, what is quite as demoralizing, of the most ingenious. "Behold," says a European observer of the present war, in the same sense, "behold, then, right, justice, all the instincts of liberty and of nationality, annulled at pleasure by a bit of iron skilfully inserted in a gun!" But he adds: "Surely, if anything could heighten the horror which war ought to inspire, and the contempt with which we ought to brand the bloody judgments pronounced by victory, it would be what we see taking place to-day." That is, the nearer war comes to being a purely mechanical contest, and therefore, under certain conditions, a foregone conclusion, the more palpable will be the absurdity of such a mode of settling questions of right, and the more odious will be a resort to it. Nations will at length perceive that dominion has been given to ideas, and that supremacy by brute force is not only shame but weakness when compared with leadership in civilization. So that we return to our starting-point; and the veritable Peace Congresses are the Universal Expositions at London, Paris, or New York, at which mankind, sitting as a jury, award honor and rank to the competitors, and which are followed by the discarding of effete notions and usages and material instruments, and the taking on of the newest and best. Here governments are put on trial and summoned to account; the condition of peoples is weighed; to have made two blades of grass grow where only one throve before, is respected more than to have coaxed six discharges a minute from a musket in place of one; a model school-house overshadows a model iron-clad; an ocean cable puts a torpedo to the blush. It is long before destructive ambition will give way to constructive, but the tendency is certain. Time will gradually teach that most difficult of lessons, that God has made different races not to squabble about territory or balance of power or the hegemony, but to accelerate human progress by the most varied contributions to the knowledge and the well-being of mankind. In that day civilization will perhaps "get forward" on something less clumsy than a "powder-cart."

OUR CREDIT ABROAD.

Five-twenties range in London at 68 to 69—equal here to a trifle over par, with gold at 148 to 149. The latest quotation by Atlantic telegraph is 68¼. At the same time the British three per cents are selling at 86 to 87. If the credit of the United States stood as high in London as the credit of England, our five-twenties would command nearly twice as much money as the British funds. If the latter continued to rule at 86 to 87, our six per cent. five-twenty bonds would, in the supposed case, command about 150.

It is not likely that we shall see five-twenty bonds selling in London at 150. Long before that price is reached, U. S. securities will be shipped

to Europe in such large quantities that the market will be fully supplied and the demand satisfied. But between 68 and 150 there is a wide gap. It is not at all unlikely that this gap, which divides the present market price of five-twenties from their value as measured by the standard of the British funds, will, within a comparatively brief period, be materially reduced.

The high credit of the British nation, which enables the British Government to maintain its three per cents at a price which yields less than four per cent. to the investor, is due to two causes: first, the unvarying ampleness of the revenue; and secondly, the general belief in the honor of the British Government. If it were generally understood that the revenue of the United States is as ample as that of England, with much smaller liabilities, and that the determination of the United States to pay their debt in full, principal and interest, on the day set apart in the bond, is quite as fixed and as sure of general approval as the determination of the English to pay the interest on their funds, our bonds would rise in Europe (not perhaps to twice the value of the funds, as our securities run but for a few years, but) to a price which would yield the investor very little more than British consols. The first of these conditions can be readily established. Our public revenue last year was over $550,000,000; and out of this, after paying all expenses of Government, army, navy, etc., the Secretary is understood to have applied no less a sum than $125,000,000 to the reduction of the public debt. If he could do this during the first year of peace, when claims of all kinds arising out of the war were being pressed for settlement, it would seem fair to infer that no less a sum than $125,000,000 will be available each year hereafter for the like purpose of reducing the debt. At this rate, in about fifteen and a half years the entire debt would be extinguished. So far as this condition is concerned, we may compare favorably with every other nation of the world. There is not a king, emperor, or potentate in the world who is able to reduce his debt at the rate of $125,000,000 a year. However dense the film of prejudice may be, it cannot be long before Europeans realize the fact, and admit the credit of the United States is at least as good as, if not better than, that of the wealthiest foreign nation.

Recent occurrences, however, have rendered it more difficult than it was a year or two since to argue convincingly that the United States are incapable under any circumstances of even seeming to wish to repudiate their debt. Especially among these occurrences has been Senator John Sherman's financial bill, by which it was proposed to rob the holders of 7.30 bonds of one-twelfth of their option, by making them decide four months before the maturity of their notes whether they intended to renew or collect them. It may be said that John Sherman is not a representative man; that his financial schemes have been abortions; and that he never expected his bill to pass, but merely introduced it for effect in Wall Street. All this may, or may not be founded on fact. The truth remains that Mr. Sherman is a prominent leader of his party, which is the controlling party; that his influence is great in the Senate; and that he rules the Finance Committee of that body more absolutely than Senator Fessenden, its chairman. Now, if this man can persuade the United States Senate to pass a measure, cheating the holder of 7.30 notes of four months of the time his option has to run, it is not difficult to guess that some stockjobber and demagogue may, at the next session, introduce a parallel measure for the reduction of the interest on the public debt. If the public creditors can be cheated in one particular, they can be cheated in other particulars. If they can be robbed in respect of time, they can also be robbed in respect of money. It is not more dishonest to attempt the one than the other. The faith of the Government was pledged to a three years' question on the 7.30 notes. If that faith can be safely violated by so much as a quarter of an hour, it can, by the same rule, be violated in every other particular—as to payment of interest, and as to payment of principal, and as to the kind of money in which payment is to be made;—this is one reason why our six per cent. bonds sell in Europe nearly twenty per cent. lower than the three per cent. bonds of Great Britain.

It is to be feared that other occurrences next year will also contribute to injure our credit. Next summer the "old five-twenties" mature. When they were first issued, and within the two following years, the question was constantly asked, Will they be paid off at maturity in coin or in paper? Mr. Chase, then Secretary of the Treasury, was so importuned on the subject that he wrote a letter stating his confident belief that they would be paid in coin; and the financial organ of the Government, the New York *Times*, not only reiterated the prediction day after day, but went out of its way to denounce all doubters as copperheads, traitors, and rebels. We are now rapidly approaching the day on which these bonds mature. It is clear to every one that, unless some providential accident should put gold down to 110 or 115, the Government cannot pay off these bonds in coin in 1867. It is morally certain that the United States will not avail themselves of their option on those five-twenty bonds, so far as coin payment is concerned, and it is quite possible that the Secretary of the Treasury, reading the law differently from Mr. Chase, may avail himself of his option and pay them off in paper—with 66 cents on the dollar. The former proceeding might justify no comment; the latter would injure our credit very gravely.

There is, in fact, something more needed than mere wealth and strength to secure credit. Many wealthy houses are in poor credit because they neglect business principles, and administer their affairs loosely. Just so with Government. The country is rich enough and yields revenue enough to establish the public credit on as high a pinnacle as the credit of the richest Government in the world. But if our leading statesmen advocate repudiation, even on small collateral points, and the Administration makes promises which it cannot perform, we must not be surprised if it takes time to convince foreigners that we are as good as we are.

PARIS GOSSIP.

PARIS, July 20, 1866.

THE Emperor is still absorbed in his difficult work of peace-making, and has sent the Empress and the little Prince to represent him in the "progress" which the good people of the west had counted on his making through their principal centres. The reception given to the "august" visitors appears to have been most enthusiastic, and the outlay made, not only by the authorities, but by the richer inhabitants, to have been almost lavish. The scene at Nancy must have been very picturesque. The fine old cathedral was decked out with the greatest splendor, and the Empress was met at the doors by a procession of priests in their grandest toggery, who escorted her to her chair of state, carrying a dais of cloth of gold above her and the child. There were present three archbishops, eleven bishops, and priests innumerable, and masses of people belonging to various religious orders, all *en costume*, processions of girls in white, with colored sashes, from the schools, a grand gathering of official people and troops, and such a flock of peasants from the neighboring communes that the vast building was crammed and the town filled to overflowing. After this successful blending of pomp and piety, the Empress visited all the charitable institutions and public schools, enquiring into all their details, and delivering various little homilies to the scholars, whom she exhorted to do their duty and make themselves good and useful members of society. It appears that the students at the military school were so much affected by the little sermon of so charming and exalted a preacher, that they declared themselves determined to follow her advice, upon which, with one of her pleasant smiles, her graceful majesty quitted them with the parting remark, "Remember, I have your promise," and glided away, holding her son by the hand, and followed by the enthusiastic *vivats* of the assembled youths.

After this long peregrination the active lady, who is becoming so great a favorite with the French people, gave a splendid banquet to the official world of the department, the town illuminating and getting up torchlight processions in her honor. At other points the reception has been just as brilliant, and the popular welcome as general and enthusiastic. It may interest lady readers to learn that her Majesty, at the magnificent ball offered to her by the town, at Nancy, appeared in a cloud of transparent white muslin, trimmed with ivy leaves and diamonds, a dazzling diadem of diamonds—necklace, ear-rings, and so forth—of the same glittering species of coal. And ambitious mammas may like to know that the "hope of France" was arrayed entirely in black velvet, with the Grand Cross of the Legion of Honor. The two made the tour of the rooms, set five deep all round with ladies in the most elegant toilettes, and crowded with rejoicing males, distributing bows and smiles with gracious liberality, and winning, apparently, all hearts. It is certain that both the members of the Imperial firm contrive to make a very agreeable impression, due either to nature or to art, or, perhaps, to a happy compound of the two, on those with whom

they come into personal contact. The Empress is impulsive, very kind, and has a smile that would be really sweet and charming in any woman, and that, naturally, loses none of its charm by showing itself in the face of an empress to a world still weakly partial to "majesty." The charm of the Emperor's smile is, in its way, just as effective, its power being often acknowledged even by those who detest him the most cordially, as in the case of M. Prevost-Paradol, one of his bitterest political opponents, who, having been received by the Emperor, as is the custom here, after his recent reception into the Academy, on which occasion he had crammed his discourse with ingeniously yet transparently covered allusions to the Emperor of the most bitingly malicious character, and, being questioned shortly afterwards by a friend, as to the impression made upon him by the interview, could not avoid expressing his sense of the charm of the Emperor's manner, and added, quoting a well-known French proverb, "The fact is, *mon cher*, that in order thoroughly to hate people one should not see them too near!"

Among the "farewell dinners" of the past week, some of the most elegant have been given by Americans, who are preparing to cut a figure among the gay gatherings at such of the fashionable watering-places as are out of reach of cannon-shot, while many European "highflyers" in the sky of fashion are said to be intending to cross the ocean, for the purpose of passing the season at Saratoga and Balston, whose waters are gradually coming into vogue among the extraordinarians of this hemisphere.

A grand banquet has also been given at Lemardelay's, in honor of the official introduction of horse-flesh into the Paris market. Several horse-flesh shops have been opened in this city within a few days, and, accordingly, one hundred and eighty hippophagists assembled to celebrate the auspicious innovation. M. Quatrefages, of the French Institute, was in the chair. The dinner was composed mainly of the new article of food, and was pronounced to be fit for the gods. The horse-flesh soup, the horse-flesh sausage, horse-flesh *à la mode*, horse-flesh pie, and lastly, fillet of horse-flesh, were devoured amidst general acclamations. Other dishes were served during the repast, but the guests declared the horse-flesh so "superior" that they ate little else. At the dessert various speakers proposed toasts, and grew excited on the topic of the hour. The chairman toasted the "Hippophagic Committee," which has been fighting the battle of horse-flesh for the last six years; M. Duméril, representing the Acclimative Society, toasted the new food; M. Sibère thanked the committee in the name of the Society for Prevention of Cruelty to Animals; Dr. Blatin, President of the Hippophagic Society, gave a general glorification of the same, as did the Marquis de Béthizy and other gentlemen. An enthusiastic working-man thanked the gentlemen interested in the "movement" for having introduced a "new and delicious element into the humble larder of the poor;" a rather hard saying, seeing that even a fine, fat young horse's flesh is admitted to be "firm" even by those who will by no means allow it to be "hard," that the flesh of old, worn-out horses is confessedly rather "firmer" than ordinary shoe-leather, and that, therefore, as the cost of a prime horse ranges from eight to a hundred times higher than that of an ox, we have no choice between the aforesaid shoe-leather and an outlay absolutely out of the reach of the laboring population. But this somewhat obvious reflection not appearing to suggest itself to the excited minds of the hippic revellers, the working-man's outburst had an immense success. M. de la Bédollière, the veteran editor of *Le Siècle*, next sang two new songs, composed expressly for the occasion, and which, being regarded as extremely witty and appropriate, were applauded to the—chandeliers. The company then became generally jolly, and enjoyed the gathering so much that they remained together until near midnight. In spite of which brilliant demonstration, and the opening of the fine shops for the legal sale of horse-flesh (each joint "stamped" by the market inspectors, and thereby warranted to be "all right"), the unappreciating public is still asking itself, with a not very flattering expression of its nasal organ, "How near to starvation must I find myself reduced before I could contrive to swallow a first mouthful of this new species of butcher's meat?"

The safety of the Johannisberg cellars is confirmed, and Prince Metternich is able to sleep without dreaming of the havoc committed by thirsty Prussians among his renowned casks. The equally renowned vintage of Rudesheim has also escaped the forced contributions that its owner feared would be laid upon it. But the magistracy of Bremen have been less fortunate; and a good many bottles of the fabulously costly "Rosenwein," kept in twelve great casks with silver hoops, in what is thence styled "The Apostles' Cellar," and only drunk on rare occasions by the municipal fathers, by the sovereigns to whom they sometimes present a bottle, and by the sick citizens of the town, who have a prescriptive right to receive a bottle gratis in case of need, were disposed of by the Prussians. Under no circumstances is this precious liquor ever sold, for no fortune short of Aladdin's lamp would suffice to enable its possessor to adopt so costly a style of beverage, for the value of wine increases, like that of diamonds, in the ratio of the growth of the compound interest of the capital expended on its first purchase; so that, as a "piece" of German wine, containing 204 bottles, cost, in 1624, at which period this famous wine was placed in the Apostles' Cellar, 300 rix-dollars, or 1,200 francs, the cost of keeping up the cellar, the amount of taxes paid upon it, and the compound interest upon all this outlay through nearly two centuries and a half, the same "piece" of wine now represents a sum of 600,000,000 of rix-dollars, and each bottle would be worth, on the spot, 2,750,000 rix-dollars, that is to say, over ten millions of francs. And as a bottle of wine is supposed to contain eight glasses, each glass of this unparalleled wine costs 1,400,000 francs, and each drop 1,400 francs. The Prussians could not resist the temptation of tasting this wine, but they appear to have contented themselves with very little. Possibly they found it less delicious than they expected, for one who has been favored with a taste of it declares that it was by no means agreeable, the vinous flavor having changed to a weak acid, and the wine itself being of a dark brown hue, approaching to blackness. During the occupation of Bremen by the French some of their generals made heavy demands on this wonderful wine; and the burgesses of Bremen therefore assert that that town paid to France a ransom heavier than that of all the other towns of Germany put together.

AMERICAN CROQUET.

Of all the epidemics that have swept over our land, the swiftest and most infectious is croquet. While cholera skulks only in tenant hovels and blind alleys, croquet rolls boldly up to our very doorsteps; and while trichina confines its devastation to the swinish multitudes at the West, not even the *butterflies* of Newport and Nahant have escaped the croquet fever! "An uncroquetable lawn" is as much a stranger on this shore of the Atlantic as it is on the opposite; and if the "clever woman of the family" would honor us with a visit this summer, she would be warmly welcomed with the waving of mallets and the clicking of balls; and, moreover, she would find all the clever women of our family wrangling over the rules and misrules, that increase in number and stupidity with every new moon.

It is a great pity that for this charming game nobody has yet published, in this country, a simple, terse set of directions, that can replace the thousand-and-one diverse authorities that come with the different games; for every man who makes the implements puts into the box a set of rules to suit his own ideas. There is as much confusion and much more ignorance here than in England, as there the authorities are a grade above our lawgivers—*the mallet-makers*. But even there the conflict has waged furiously, till it was decided to call a croquet parliament of the best players, and give them ample time and full power to make a set of rules that should be above dispute—letting their decisions be final and binding for all croquet grounds, as the verdict of the "Jockey Club" is for the turf.

The committee, after sitting for a long time, and after receiving communications from all parts of the country, have just published their report; and we offer them our grateful thanks for the satisfactory way in which they have fulfilled their trust. Although differing in several minor points, we should be willing to accept their report as the standard; but there seems no chance of having it imported or reprinted in this country this summer, and no journal has as yet alluded to the subject, or to any of the English reviews upon it. In the hope of bringing a little order out of chaos, and giving a few hints to good American players, this article is written, and the writer trusts that a good deal of information and a great deal of enthusiasm may win him a fair hearing.

To begin—*usque ab ovo*—very little is known of the origin of this game; whether like Topsy "it grew," increasing from ball to ball and multiplying from wicket to wicket; or whether, Minerva-like, it sprang at a bound into full growth and good society at once, is uncertain. One thing is certain, that it is of rare antiquity and of the best connections. Far back in the days when kings wore love-locks, and courtiers were splendid in velvet and lace, when wise men played boys' games in public places, croquet flourished on Pall Mall. We can fancy "the curled darlings of chivalry" laughing to see Wilmot a *booby*, and Leicester a *rover*; and we wonder whether the customs courtesied to great kings, or whether Buckingham boldly accused his royal master of *spooning*, and dared to drive him off the field. There is no allusion to any ladies on the ground in these early days, and we are left in ignorance as to whether the manners and morals have improved or been impaired by their joining the sport. Certain it is, that more quarrelling and greater cheating could never have existed, and why people lose their temper and double their winnings is hard to understand. There must be some malign influence in sunshine and pleasant society to bring out the

evil that is in one; the perpetual disputes about rules are not enough to account for it. All horse dealings make jockeys into scamps; and, perhaps, croquet must make men—but, *place aux dames!*—make ladies and gentlemen into dogs, delighting in barking and biting.

But this is an endless theme, and while we are moralizing, the subject of our memoir has crossed into Ireland and found there "a local habitation and a *name*"—that is to say, the stroke which we now call *croquet* was there called *croky;* whether they called the game by the same name we do not know. This little variety of spelling is very dear to the heart of the antiquary, and proves its age, if further proof were needed. Did you, kind reader, ever know a Howell or a Lowell or a Powell who did not talk a great deal of the "Wars of the Roses" and such times, when he was called Howl or Lowl or Powl, as the case might be? From Ireland croquet wandered to France, perhaps under the banners of those earlier Fenians, those dashing, joyous soldiers of fortune, the Marshal McMahons and the Maurice Tiernays of that day. Here it definitely took its present name, and here, after a bright reign of many years among the *jeunesse dorée*, it apparently slept its hundred years, and waking "on science grown to more," returned to its native land and crossed to America, to find everywhere a warm welcome, a clean lawn, and—let us add with Sarah Battles—"the rigor of the game." And now to business.

The definitions are:

Roquet.—The act of hitting another ball, be it friend or foe.

Croquet is the stroke the player is entitled from having roqueted.

There are two kinds of croqueting. Tight croquet and loose croquet, or, as it has been badly called in this country, roquet-croquet.

Tight croquet is placing either foot upon your ball and striking it with your mallet, sending the other ball in any direction you please.

Loose croquet is laying the two balls together, and striking your own, without putting your foot upon it. There are several forms of loose croquet, to wit: "Rolling shots," "Splitting shots," and "Taking two off."

Rolling shot is putting the balls one behind the other, in a direct line for the place you wish to reach, and with a long, pushing stroke sending them along together.

Splitting shot.—Sending the two balls in opposite directions.

Taking two off.—Placing the two balls together, and, without moving the other ball, sending your own to any place you please, and then taking the second shot.

A booby is a ball which has missed the first wicket.

A rover.—One which has run all the wickets, and is ready to help its friends.

A fluke.—A lucky accidental shot.

Spooning.—Pushing your ball from behind.

Scooping is using the side of the mallet.

Flinching is letting your ball slip from under your foot while croqueting.

In play.—A ball is in play to another when it has roqueted it and has not yet taken the croquet.

In hand.—A ball is in hand when it is not in play, that is to say, when, having finished its run on one ball, it is at liberty to take another shot elsewhere.

Filibustering is leaving your own position and going off to help a friend or annoy an enemy.

We think these are the only definitions that the game requires, so we pass rapidly through a few necessary rules:

1. The player must stand on one side of his ball and never behind it.

2. Strike a clean stroke and never push, except in a rolling shot when a following stroke is allowable.

3. Strike with the end of the mallet-head and never with the side, unless it is agreed to allow scooping to a ball lying in front of the turning stake and touching it.

4. A ball missing the first wicket must be picked up and begin again the next turn.

5. A ball running its wicket and rolling back cannot count the wicket. Where a ball stops there it must remain.

6. A ball must be entirely through the hoop, so that the mallet-handle laid across the sides does not touch it.

7. If the ball flinch, the player loses the rest of the turn.

8. The player may use either or both hands.

9. Neither hand must be within eighteen inches of the head of the mallet.

10. If croqueted outside the bounds, the player may pick up two feet inside, on the line where he crossed.

11. While in play, a ball cannot count any other point which it may make, but must finish with the first ball, before it plays at anything else.

12. A captain can allot the colors as he pleases.

As this article is written for the amusement of good players and not for the instruction of beginners, we have not mentioned the simple rules nor definitions that every one knows; such as what running a wicket or touching the stake means, or, that if you run your wicket or touch the turning stake, you are entitled to another stroke. Neither will we waste time giving directions for laying out the field or arranging the wickets. The proportion of length to breadth ought to be as five to three, and the bounds some ten feet outside. If the ground is arranged with nine wickets, a cage may be substituted for the centre one—a cage being two wickets, one over the other, at right angles, with a bell hanging in the middle. Or, as in England, a stake with a bell upon the top, according to the fancy of the field-marshal.

In selecting the implements, care should be taken to have them heavy enough. Lignum vitæ makes the best mallets, and any hard wood will do for the balls. If the latter are too light, they are apt to hop just where they ought not to. Let the mallet handles be long enough for ease and not too smooth for a tight grasp. Except in the weight and strength of the wood, the very expensive English sets are no better than the cheaper home-made ones. Order your own set at the factory to suit yourself, is our advice, unless you are a crack player, when of course you will have your own fancy mallet, your inseparable companion on many a hard-fought field. Apropos of mallets, there are still exhibited in London Tower the identical ones King Charles played with on Pall Mall; they are very like ours, except that the ends or heads are not at right angles with the handle, being rounded, as if they were a few inches cut from the rim of a cart-wheel, the spoke serving for a handle.

And now a word or two upon playing. Suppose the ground well arranged, with nine wickets; as that plan throws the balls more together in the centre and admits of more croqueting, we prefer it to any other way of arranging them. We place a ball anywhere within a mallet's length of the starting stake, and strike for the first wicket, with steadiness and caution. Brilliant, dashing play is of no use here—even if you send the ball through two wickets with one stroke, it counts nothing, as it is not considered "good style" to claim the mallet's length you are entitled to. Many good players drive their ball sideways through the first wicket, so as to leave it in a good position for an oblique shot through the second, with the hope of getting into position before the third wicket on the second shot, and so making three wickets on the first tour. If your ball miss the first wicket, it is to be picked up and begin from the starting-point the next turn. So decides the English committee with great good sense; for, although at first sight the advantage seems to be all to the booby, on further examination we find much to be said on the other side. For instance, a good player could put his ball there on purpose, he could not be croqueted away by the enemy because he was a booby, but would lie there as an impediment to his adversaries and ready to help any partner who comes to put him through. Of course the first object in a croquet player's mind is to keep the side together as much as possible, and two balls when well started can easily keep together for a long while.

If there are eight balls playing, or even six, it generally happens that some of them are at the centre wicket before the best player, who is usually the captain, begins. He therefore plays hard through the second wicket, and then croquets upon some of the leading balls. After croqueting his own side where they wish to go, and scattering the enemy with one exception, he takes a splitting shot upon the ball he reserved for his own use, and sends himself in front of the third wicket and the other ball behind it. With his second shot he runs the wicket, roquets the same ball, and splits for the centre wicket, or if the ball is out of position entirely, leaves it and takes two off. He is now in position before the centre wicket, which he runs, picks up one of the balls on his side, which he had croqueted through, and rolls with it up to the fifth wicket; and so on, *ad infinitum*. A good captain, with a successful start, can make an enormous run, and the objection generally raised by poor players against what is called "Scientific Croqueting," *i. e.*, splitting shots, loose croquet, and taking two off, is that it lengthens the game and admits of endless filibustering. All this we grant and glory in. There was a time when getting through the wickets and sending an enemy into the flower beds, was to us brilliant playing, but in these our wiser but not sadder hours, we are ready to leave our best position, to dash to the rescue of our worst ally, to annoy the enemy, to be used by the captain—in fine, to strengthen our side with the wildest self-sacrifice. And to the unappreciative poor players, we say, Go on! play your best, learn science, and before long you will insensibly be on our side.

In making a loose croquet, if you strike your own ball below the centre, it drives the other a great distance without moving itself much. For a

splitting shot you must arrange the balls at the proper angle and hit according to the distance and direction required.

It is almost impossible to give any useful directions for these strokes, only a knowledge of billiards and practice will teach them; the latter will readily enough, and half an hour devoted to fancy shots is worth reams of paper rules.

In "taking two off," the English committee decide that the other ball *must* move, be it ever so slightly; and upon this one point we fully and firmly disagree. Let it be one thing or the other for the sake of peace; either require the ball to be moved six inches, according to the old rule, or raise the point entirely. A decided movement might affect one's own stroke, but just joggling it does neither party any good. A gentle wiggle will only raise a most ungentle wrangle, and every one knows that to avoid points of dispute is the first desire of croquet players! Therefore let the balls touch, but do not require anything else. In many English croquet fields it is considered ungenerous to put an adversary's ball out; but we cannot understand why damaging the enemy is not as much a part of the game as supporting a friend, and every one who plays well enough to be in danger of this fate, must know enough not to go through the last hoop. He is just as useful to his side as a "filibuster" as when he is a "rover," and it is no harder to run his last wicket on his return to the stake, than it is to go outside of it.

Some authorities require no penalty for flinching, allowing a player to continue his run. But it is so easy to flinch your ball a full mallet's length in the direction you want to send it, *accidentally* gaining a good bit of ground, that in memory of the lack of honesty in all croquet grounds, we decide *pro* punishment! We have yet to find any good authority or crack player in either country that endorses "spooning," and yet it still lives! We have the patriotism to add that the best American players we have seen spurn it, and the best English use it. But no one, who has watched the two styles, hesitates to say that the single-handed, lightly swung stroke is much the most graceful. It is certainly less steady, but better to devote a week's practice to steadying your right hand than ever to double yourself up like the "crouching Venus" *en culottes* and bearded.

We agree that spooning is perfectly fair in a match of gentlemen; but is decidedly ungenerous when playing with ladies, unless those ladies are Bloomers—when, for all we know, it may be the correct thing. Our domestic experience with Bloomers has been strictly nautical, and as they never appear out of water, we remain in blessed ignorance. Ignorance, we mean, of Bloomers; but not, we humbly hope, of croquet.

Correspondence.

"PROTECTION TO NATURALIZED CITIZENS."

To the Editor of The Nation:

An article with the above heading, published in The Nation of May 29th, appears to me to ask, in behalf of foreigners naturalized in the United States, a political action which the American Government neither can, nor, as a general rule, ought, to exert for their protection. The rights of a person naturalized abroad and returning from his new country to that of his birth or native allegiance, and consequently the duties of his adopted country towards him, may be determined—first, by treaty; secondly, by the local legislation of the country from which he emigrated and to which he has returned; or thirdly, by the general principles of international law.

1. We have, I believe, no treaty with any European power on this subject, and I think the facts I shall adduce in the course of this article will show that we ought to have none until Congress shall have more clearly settled what are the duties of naturalized foreigners to the United States, and provided some effectual securities for the fulfilment of those duties. The enjoyment of the privileges of American citizenship, and the extension of that citizenship over the whole world, are not matters of universal, common right, and the foreigner upon whom those privileges are bestowed ought to return an equivalent of some sort for the advantages secured to him. The right to protection as a citizen ought not to extend beyond the fulfilment of the duties of a citizen, and it is no injustice to a naturalized foreigner to demand from him securities for the performance of those duties which are generally superfluous in the case of a native-born American. The partialities of birth and education, the ties of family and friendship, the force of habit, the possession of property, and a more or less fixed character—all these constitute guaranties of continued residence, or of return from foreign travel, and of fulfilment of civic duties by the native, which in most instances either do not exist at all, or exist in a much less efficient degree, in the case of the foreigner; and the experience of our late war has shown that the temptation to shirk the civil and military responsibilities of the citizen is yielded to with infinitely greater readiness by the naturalized stranger than by the native-born American.

2. Every country claims and exercises absolute and unqualified jurisdiction over every person found within its limits, except so far as by treaty stipulation it may have conceded privileges and exemptions to subjects or citizens of foreign powers. In modern times the spirit of commerce has secured so numerous and so important immunities to merchants and other persons trading, travelling, or residing in foreign lands, that under most Christian governments the stranger is more "favored" than the native, and the civic burdens of mercantile men are lighter in alien countries than in their own. The determination, in any given case, of the question whether a person claiming immunities as a citizen or subject of a foreign state is legally to be considered as such citizen or subject, must rest with the local tribunals, who, in the absence of treaty provisions, will be governed by the *lex loci*, or by the established principles of international law. The laws of a foreign country—the United States, for instance—may confer upon a native-born subject of the Pope civic rights which he may enjoy free from interference or control by his natural sovereign so long as he remains within the jurisdiction of that foreign country; but the moment he returns to the country of his birth he is amenable to its laws, and no mere foreign legislation can invest him with any rights as against the government to which he owed allegiance by birth. Some European states—Great Britain, among others—deny the right of expatriation altogether. "Once a subject, always a subject," is the maxim of British law, and this principle has been extended so far as to embrace the foreign-born children of British subjects. In other countries the right of emigration, expatriation, and naturalization abroad has been tacitly allowed without express law, and in others, again, it is regulated by special legislation. In no case, however, is it admitted by any Christian power that the American law of naturalization is, of itself, of force to release a foreigner from every bond of native obligation, and invest him with all the rights of exemption and protection to which a native-born American might be entitled.

3. Judicial constructions of the principles of international law on the subject we are considering cannot be said to have been very frequent, for the reason that naturalization has always been comparatively rare in Europe, and it is only to America that there has been anything like an emigration *en masse* in modern times. It is, however, certain, that expatriation and naturalization have never been regarded as matters of legal right, and it is generally held in Europe that, without the express or implied consent of his sovereign, no man can renounce his allegiance to his native government and acquire the rights of a subject or citizen of a foreign state. But whatever differences of opinion may exist as to the abstract principle, one point of great importance in relation to our duties to naturalized foreigners is well settled. I refer to the doctrine of the rehabilitation of subjects naturalized abroad and returning to their native land. It is laid down by all writers on the law of nations that a person who, after having acquired rights of citizenship abroad, again takes up his residence in his native land, under circumstances which afford a legal presumption that he left his adopted country without the *animus revertendi* to it, forfeits those rights and is remitted to his original condition of a subject of the government of his birth-place. There can be no reasonable doubt that this is sound doctrine, and whether it is so or not, it is a principle which cannot be overruled by any legislation of ours, nor can its operation be avoided except by treaty negotiation.

The United States, then, can neither release a British, an Austrian, or a Russian subject from the obligations of his native allegiance, nor can they prevent the lapse of any rights he may have acquired, if he forfeits them by a voluntary return to his birth-place. In every case where a naturalized foreigner claims the protection of American diplomatic or consular representatives against the authorities of his original country, such representative is bound to enquire whether the applicant was ever legally released from his native allegiance, and, in the next place, whether he has forfeited his rights as a naturalized citizen by an abandonment of the country which conferred them upon him.

Americans who have contended for an absolute parity of rights between the native and the naturalized citizen, have often overlooked not only the principles of international law applicable to these questions, but the actual facts upon which the questions usually arise. Independently of the great number of foreigners who emigrate to the United States, in the hope of bettering the condition of themselves and their families by a permanent establishment in a new home, the recent political agitations of Europe have driven thousands of political refugees to seek temporary protection on American soil.

In nine cases out of ten, these persons, as well as the multitudes of foreign fugitives from justice who infest our shores, go to the United States with no purpose of becoming American citizens, and many of both classes return to their native country on the first lull in political or judicial persecution, without ever having made even the preliminary declaration required by the naturalization laws. If, however, circumstances compel them to protract their stay in America, they commonly become naturalized, either because they despair of ever being able to repatriate themselves, or, more frequently still, in order that they may come back to Europe with a passport which will afford at least a partial protection against political persecution. I have personally known repeated instances where European political agitators have gone to the United States with the avowed purpose of acquiring a title to American protection and of returning to renew their operations as soon as they could obtain evidence of American citizenship. Not only such persons, but many who have emigrated with the honest intention of becoming permanently domiciliated among us, are often called back by political changes, actual or prospective. If they find their party in the ascendant, they sink the American as long as is convenient and take office with their friends; but upon the first reverse, they whip out their American passports and claim exemption from all local jurisdiction.

Besides this, every commercial crisis in America sends back to Europe numbers of naturalized foreign speculators who have fled from American creditors, and who return to their native soil to commence business anew, with the privileges and immunities secured to them by an American passport; and our national credit has suffered severely from the disrepute thrown upon us by whitewashed bankrupts of this stamp. Within the last four or five years the number of returned emigrants has been vastly increased by the fear of taxation and conscription. Many thousands of naturalized Europeans have gathered up their property, and fled with their goods and their families to their fatherland; and I doubt whether it would be an exaggeration to say that one-half of the American "adopted citizens" now in Europe have left the United States, since 1860, to avoid the payment of taxes and liability to military duty. Very often these persons have come without passports, though provided with certificates of naturalization. When they are called upon for taxes, or for military service, they produce such papers as they have, and, in a great majority of cases, the local authorities, overawed by the seal of Mr. Nunes, or some other naturalization and passport broker, report them as foreigners, and they secure the desired exemption without any further proceedings. The number of persons who in this way escape taxation and military service on both sides of the Atlantic, and thus enjoy the protection of two governments without performing the duties of citizens of either, is vastly larger than those whose attention has not been specially drawn to the subject would imagine. There are in Europe thousands of naturalized American citizens who have never been enrolled among our national defenders, millions of property owned by these persons which have never paid a mill of taxes for the support of our Government. Besides all this, naturalized foreigners have been among the most active and efficient agents of the rebel cause in Europe. The ablest writer in England, in support of that cause, was an Americanized Swiss and a naturalized Italian. "Professor" Manatta is the author of a pamphlet on the negro race, in which the religious and "scientific" arguments in favor of the perpetual slavery and degradation of the children of Ham are maintained with a zeal which has given great satisfaction to the Papal court and other sympathizers with the rebel cause at Rome.

I see no ground of justice or expediency upon which the United States should embroil themselves with European governments for the sake of "protecting" fugitives from taxation, from conscription, or from criminal justice; or, in fact, any other persons who do not become abiding members of our body politic, abiding elements of our national strength.

Great numbers of foreigners become naturalized without ever having acquired a legal residence, or fulfilled the conditions which confer State citizenship anywhere. They make a declaration in New York, float off to New Orleans, wander about in the West for a year or two, turn up gold-diggers and obtain their certificate of naturalization in California, and then return to Europe, engage in commercial or political life under the protection of the American flag, without ever having contributed to the support of the American Government or performed any one duty of an American citizen, unless it be reckoned such to have cast a vote for the pro-slavery ticket in some town of which they were not freemen at the first election after they have obtained their certificate.

I am by no means disposed to deny or to undervalue the services which naturalized foreigners have rendered to our country in former and in recent periods, but I cannot shut my eyes to the notorious fact that a vast majority —certainly not less than three-quarters—of that class of our citizens have, from the organization of our Government to this hour, sustained the political interests of the South, slavery included, against the cause of the Union and of human liberty; and I do not hesitate to say that, but for the support which Southern policy has received from Irish and German-Catholic influence, slavery would long since have died a natural death, and we should have been spared the crimes and the curses of the late rebellion. The naturalized American citizens who have swarmed over the continent of Europe during the war have been, with few exceptions, favorable to the success of the rebels, and it has not been easy to find an individual among them who has not been, if not an open enemy, at least a very lukewarm friend to the Federal Government.

It seems to me not unreasonable to demand from foreigners, of whose character and history nothing is usually known to those whose office it is to admit them to the right of citizenship, some guaranty before conferring upon them such large privileges. When Esau sold his birthright, he got at least a mess of pottage in return from the brother to whom he surrendered it. Shall we bestow our birthright upon the stranger without asking even a small security against the abuse of that birthright?

It is now proposed, in many quarters, to impose an educational test as a qualification for the exercise of the elective franchise. Would it be too much to insist that the emigrant European, who asks admission as a citizen, should be able to read the certificate which testifies his enrolment as a member of our political community? Would it be ungenerous to require him to show that he has fulfilled the conditions of *State* citizenship before he is recognized as a citizen of the United States? I do not know that the attainment of the moderate amount of knowledge which could well be demanded, or the possession of taxable property, would be an effectual security against the evils which we are suffering from the existence of a numerous class among us who have the largest measure of political rights and yet are attached to our commonwealth by no moral, no material interests; but I strongly suspect that the law-breakers in the streets of New York in 1863, whom Bishop Hughes, in his flagitious speech, pronounced to be "not a mob, not rioters," the servant girls who are contributing their wages to support the Fenian army, and the Fenian army itself, have been mainly persons who neither read letter-press nor pay assessments.

In my judgment, then, no foreign-born stranger should be admitted to the privileges of American citizenship without furnishing some evidence, some securities, analogous to those which nature herself provides in the case of the native. But if it be thought inexpedient to demand such from foreigners *bonâ fide* resident among us, let us, at least, not extend our ægis over those who, if they ever had moral claims upon us, have forfeited or voluntarily renounced them. Our ministers and consuls abroad ought to be instructed to recognize no man of alien birth as an American citizen, unless he produces a passport from the State Department; the State Department ought to be forbidden to issue such passports, except upon evidence of performance of military duty, if otherwise liable, during the preceding year of State citizenship and residence, the payment of taxes upon property, and the open possession of property sufficient to secure such payment during the contemplated absence; ministers should be empowered to renew passports from year to year, on satisfactory proof that the applicant is absent from the United States for temporary purposes only, and official evidence that he has paid taxes on all his taxable property for ten years preceding the application.

Such regulations as these would exclude from American protection no person who is morally or legally entitled to claim it; they would secure a considerable increase of our national revenue, and they would much reduce the number of vagabond adventurers who are disgracing our national character abroad by parading a nationality which they misrepresent, and which they have no right to boast. H.

BERLIN, June 22, 1866.

WHAT THE "ADDITIONAL HYMNS" ARE.

TO THE EDITOR OF THE NATION:

A few words about your review of the "Additional Hymns" of the Episcopal Church.

In the first place, they are a mere experiment, *allowed* to be sung for the next three years on trial, and are not to be allowed between the covers of the Prayer-book.

Second, A church-hymnal cannot have the authors' names attached. This was not allowed with the hymns of the old collection, and this part of the index was a mere gratuity.

Third, The hymnal is not, and cannot be, a collection of poems on Dr. Bethune's principle. For an authentic copy of an author's poem, look into his works. The church's hymns must pass under her revision. Several of

Cowper's hymns must be thrown out altogether, or must be pruned; and the same is true of many other favorite poems. In the *Dies Iræ* the name *Mary* is left out, because there is no evidence that the sinful woman was Mary.

Fourth, Neither these hymns nor any others are *in* the Prayer-book. The church has never set forth any other than a tolerated collection—hymns "allowed to be sung"—and this binding up of the hymns *with* the Prayer-book is only a bookseller's scheme.

These remarks premised, I fully agree with you as to the egregious faults of this collection; but there is no cause for alarm. The only hope for a permanent hymnal was found to co-exist with a disposition to let everybody tinker a while at the old one. This license is already working its own cure, and those who know assure us that as the darkest hour is just before daybreak, so the present chaotic state of our hymnody is the first step towards order and harmony.

A Member of the General Convention.

July 23, 1866.

THE TEXT OF HYMNS.

To the Editor of The Nation:

The article on "Tinkering Hymns," in a recent number of The Nation, very properly exposes what has been for many years a general nuisance, and is of late beginning to be felt as such. But it is possible to go too far, and there is something to be said on the other side.

To the question, "Can we not have a collection of lyrics which to the element of religion shall add the element of authenticity?"—if thereby is meant perfect textual accuracy—it is safe to answer, No. A selection of sacred poetry is one thing, a hymn-book proper is another; and the requirements of the two are very different. A volume which lies on the parlor table, and is adapted to the uses merely of hand and mind, may and should preserve strict literary integrity, and give its verses as their authors wrote them; but a book intended to guide the vocal worship of congregations is subjected to restrictions unknown in the other case. Its great objects are practical utility and fitness to the purposes of praise or prayer; exact literary integrity, though far from unimportant, is a secondary matter. We are tolerably sure there never was, we greatly doubt if there ever will be, a hymnal of any size and value whose contents are just as their authors penned them. The difficulties in the way of that result are such as none can estimate who has not set himself to the task of compilation, with an honest desire to let his authors speak for themselves. The older hymnists—whom scarcely the straitest Anglican would altogether set aside—abound in crudities, carelessness, and even vulgarities; not to speak of passages which, if not poetically offensive, are yet unsuited to the worship of this age. That would be a bold or a stupid man who, at this day, would uniformly sing good Dr. Watts—even at his best—in Watts's own words. His predecessor, John Mason, produced several hymns of rare beauty, if one is content to "tinker" them with a steady and skilful hand; as they stand, most of them are practically worthless. Several of the finest pieces of Newton and Kelly are defaced by puerile platitudes, occurring between lines or verses of no small pathos and power. With writers more modern in date and spirit, as James Montgomery, and still more, Dr. Neale (the most elegant translator of lyric poetry whom England has yet produced), there is less difficulty. Yet if even Homer sometimes nods, surely these are liable occasionally to misstate their meaning, to state it not quite worthily, or not as one who desires to use the song would have it. There is scarcely a writer of English hymns whose ideas a compiler of thoughtfulness and culture could be content to take uniformly in his own unaltered words. The dilemma is constantly arising, to alter a hymn or not to use it. The latter would be a loss. It may be said, better lose than do wrong. But why is it of necessity a wrong? When the church's poets composed the church's songs, they were surely thinking of God's glory and their brethren's good, rather than of their own petty vanity. What they did is the legacy of all. The edification of many is of more moment than the reputation of one; and he must be a miserable fellow who would not rather have his productions tampered with, if thereby they can be made useful, than leave them to rust in profitless purity.

The testimony of usage and authority we do not value greatly. The weight of precedent is altogether on our side; too much so, indeed, for our own views. John Wesley mended his brother's hymns; Toplady took liberties with John's; Cowper, if he had made a hymn-book, would doubtless have done the same with Toplady's; Montgomery rewrote some of Cowper's, and made wild work of it; Josiah Conder tampered with Montgomery's. Each of them (or several of them at least) protested against the alteration of his own hymns; and each nullified the protest by doing the same ill office for his brother. The worst botches have sometimes been accomplished by men of fine talent and acknowledged taste. It is curious what a fearful mess one good poet will make of the effusion of another.

The writer of the article referred to is mistaken in supposing that "such settled public sentiment" demands entire preservation of original texts. Great Britain is far ahead of us in these matters. The Church of England especially has produced of late years a vast number of new hymns, translated or original, and an almost boundless quantity of collections for public use. The authors of many of these are men whose birth, position, and education might entitle them not only to the possession of refined taste, but to be representatives if not leaders of public opinion. Not a few of these volumes are by us as we write; but we do not see that one of them has aimed at strict literary integrity. That most popular of all, the famous "Hymns Ancient and Modern," goes slap-dash through the compositions of all writers, old and new. Its chief editor, Sir Henry Baker, himself a respectable hymnist, has *rewritten*, not only often, but as a general thing, the lyrics of the living men of his own school, as Chandler, Copeland, Isaac Williams, and even Neale. Some of these alterations (especially in the case of Dr. Neale, who has himself admitted the fact) are evident improvements; many, we think, are unnecessary and unimportant; others seem to us for the worse. Yet there is no volume in which changes so extensive have been made with such uniform good taste; though we cannot, for the reason expressed, call the *judgment* equally good. If any explanation is needed of this apparent distinction without a difference, it may be found in the statement that the altered readings are always gentlemanly (so to speak), never offensive; though, as we have said, not always called for. Another collection of some repute, the "Salisbury Hymnal," by no less a person than the Rev. Earl Nelson, abounds in reckless changes of text, many of them of the most abominable and absurd description.

We have shown, we think, that the Episcopal "Additional Hymns" (for which we have no interest nor disposition to apologize) at least sin in good company, and not so grossly as some; and that "settled public sentiment," so far as the usage of those who ought to know gives any indication of it, has not yet required the entire retention of the original text. But we are very willing to diminish the large liberty of "tinkering" which has been and is yet allowed, and to help public sentiment towards sterner demands than she has yet made in this direction. The promiscuous, idle, and unbridled mutilation of standard lyrics by every tasteless, thoughtless, or stupid person who chooses so to do, is not only a public affront but a public injury. Yet any remedy, short of absolute prohibition—which is both wrong in theory and impossible in practice—seems neither clear nor easy. It is a notorious fact that American hymn-books have been usually prepared by persons who know either just nothing about the subject, or so little that the difference, like their fitness for the work, might be expressed by a figure 0. A reform in the particular we are discussing will doubtless be accomplished when compiling committees become acquainted not only with the wants of churches for which they are purveying, but with the rules of literary criticism in general, and as applied to hymns in especial. When those entrusted with this work shall attain and use this knowledge, in addition to one equally essential, a loving familiarity with the history, spirit, aims, and needs of Christian hymnody, we shall doubtless improve in regard to genuineness of text and of all other matters. Until then, we can hardly do better than lay down one or two principles, which are so obvious that only sad experience could convince us the mention of them is not an impertinence.

A hymn-book was put together a year or so since, in the preparation of which some approximate knowledge of the subject, and some attempt at honest independent thought, were actually employed. (It was privately printed only, and is not yet published for church use, so we are not advertising gratis.) The compilers determined to be purists as far as possible, and prefer the original text, other things being the same, to their own alterations or anybody's else. Nay, even for a slight and immaterial improvement they would not sacrifice primitive genuineness. But as other things very often were neither the same, nor nearly so, they permitted alterations only for one or other of two reasons: 1. When some fault or peculiarity in the original reading rendered a change *essential;* 2. When an evident *improvement* could be made. The first of these cases often occurred; the second was occurring perpetually. For instance, Lady Huntingdon wrote, in her vigorously Methodistic hymn, "Come, thou Fount of every blessing," that surprising line,

"Praise the mount—oh, fix me on it."

There is nothing for one who lives in the nineteenth and not the eighteenth century, in a civilized neighborhood, and not in the wilds of Tennessee or

Texas, but to change or omit that verse; either of which is an alteration. Watt's Hundredth Psalm runs thus:

"Nations attend before his throne,
With solemn fear, with sacred joy."

Who would not accept John Wesley's "tinkering,"

"Before Jehovah's awful throne,
Ye nations bow," etc.?

Again, Dr. Neale translates

"Christ is made the sure Foundation,
And the precious Corner-stone."

There are those who prefer that a hymn should preserve throughout, when possible, the *form* as well as the spirit of praise or prayer; and rather address itself *to* the object of worship, than speak *about* him; so it seemed appropriate to turn this into

"Christ, Thou art the sure foundation,
Thou the Head and Corner-stone."

The "Country Parson" worked himself into a fine frenzy, some few years since, "concerning cutting and carving." Some of his arguments were very good; but he unfortunately chose for his final and triumphant illustration (not knowing the second authorship) John Wesley's modernization of Herbert's "Elixir." The original is a fine poem of the quaint antique style; four verses of Wesley's paraphrase make an admirable hymn, fit to be sung at any place and time, and almost under any circumstances. Here are the two:

Herbert, 1632.	Wesley, 1739.
1. Teach me, my God and King, In all things Thee to see; And what I do in anything, To do it as for Thee.	1. The same.
2. Not rudely, as a beast, To run into an action; But still to make Thee prepossest, And give it his perfection.	2. To scorn the senses' sway, While still to thee I tend; In all I do, be Thou the Way; In all, be Thou the End.
4. All may of Thee partake; Nothing can be so mean, Which with this tincture (for thy sake) Will not grow bright and clean.	4. All may of Thee partake; Nothing so small can be, But draws, when acted for Thy sake, Greatness and worth from Thee.
5. A servant with this clause Makes drudgery divine; Who sweeps a room, as for thy laws, Makes that and th' action fine.	5. If done to obey thy laws, Even servile labors shine; Hallowed is toil, if this the cause, The meanest work divine.

We have not Mr. Boyd's essay by us; but he went on somewhat after this fashion: "How besotted, how blasphemous is this! What insane presumption in this anonymous noodle to displace these grand old words with such dishwater doggerel!" A. K. H. B., like some others, would like to put an embargo on all alterations in the text of hymns. In this case, however, he would have erred somewhat. We need only remind our readers that Herbert's verses are read by a few scholars, while Wesley's paraphrase may be sung by tens of thousands.

One minor point may be noticed. When the names of authors are given in a hymn-book, and we think they ought to be, fully and correctly (here is one great disgrace of our current manuals), the letter *a* following such ascription may indicate any change, however slight, from the original text; and in the few cases where a hymn is substantially altered or "re-made," the word *from* may precede the author's name. This is done in the recent book we have above referred to; and it sufficiently avoids any real violation of literary integrity.

We think these considerations worthy of notice. Truth pushed too far will tumble into error on the other side; and a reform advocated by exaggerated views or unadvised zeal accomplishes its own defeat. Look at both sides; weigh all the facts; then we shall do better. B.

The Week.

As the Philadelphia Convention did little more than organize on Tuesday, we cannot at the present writing make any comment on its proceedings. Besides, we intend in our next issue to give a special report, from a trustworthy eye-witness, not of speeches made and resolutions passed, but of the characteristics of an occasion in which a pseudo-Massachusetts and a reconstructed South Carolina lock arms and keep step to the music of a re-united "Democracy." It will be strange if a convention, presided over on the first day by the man who ordered Mumfords to be shot, as Butler had them hanged, and composed largely of ex-Confederates who would gladly subscribe to-day, on Mayor Monroe's recommendation, to erect a monument to Mumford—it will be strange, we say, if such a conglomerate, duly seasoned with Copperheads, office-seekers, and Republican reactionists, do not afford scope for description which shall be either ludicrous or painful, according to the mood of the reader. Meanwhile we do not know who is so obtuse as to be deceived by the withdrawal, or, if you please, exclusion, of Wood and Stephens and Vallandigham from the convention. Out of the convention is not out of the party, and the coming campaign is to be one of parties, of which Congress and the President will be the respective heads. It is not yet apparent whether the name which has won so many victories by its mere prestige is to be dropped or retained by the new political combination. It makes very little difference. We believe there is intelligence enough among loyal people to distinguish between the false title and the true, and virtue enough to maintain at the polls in November the authority of the nation over presidents and rebels.

THE papers teem with speeches, generally tedious in print, from orators, great and small, in all parts of the country. Senator Nye, of Nevada, must be one of the most effective stump-speakers in the United States if the power of his personal presence does anything to confirm the impression which the words of his speeches are calculated to make. After the measureless deserts of talk about reconstruction since those far-away times when the New York *News* looked forward to negro suffrage and the *World* talked of Caligula's horse, it is pleasant to come upon anything so fresh and good as General Nye's little parable addressed to the Union men of Paterson the other night. In the days of his boyhood he learned the "first great lesson of life, that an invitation to ride is no license to drive." Senator Wilson, in his speeches at Boston and Natick, says nothing particularly new on the great topic. He defends himself in very temperate and dignified language from the attack recently made upon him by Mr. Wendell Phillips. He said that the latter was greatly mistaken—and, as Mr. Wilson remarked, Mr. Phillips, "like the rest of us, has sometimes been mistaken"—when he asserted that the Constitutional Amendment was not put forth in good faith by the majority in Congress. The senator was full of confidence in the future of the Union party. Governor Curtin, in Pennsylvania, talks with equal certainty of success, and in very plain defiance of Blair's menaces at Reading. On the other side the speeches have been nearly as numerous, but they are all cast in one mould. The most labored effort is Senator Doolittle's. He goes upon the singular assumption that Congress and President Johnson do not agree because Congress thinks the South was not sufficiently devastated by Sherman's and other Northern armies.

WE call attention to the first of the series of articles on "Webster's Dictionary," by the Hon. George P. Marsh, which we promised at the opening of the present volume. We believe that they will be found the most valuable and entertaining criticism which that work has yet elicited, and we commend them especially for perusal and preservation to the scholars and the whole corps of instructors of the country.

GOV. WELLS is out in an address to the loyal people of Louisiana, and undertakes to explain the remote and immediate causes of the late riots. He recalls the fact that he was first Lieutenant-Governor and then Governor of the few parishes of the State that, in 1864, were within the Union lines. In the spring of 1865 the Confederacy collapsed, and he became Governor of all Louisiana. Then, he says, he resolved to try conciliation, for he was persuaded that the majority of his fellow-citizens had been seduced from their true allegiance by the wiles of demagogues It was, we remember, after he had entered upon this course that it used to be commonly said in Louisiana, "Wells is doing on a small scale what Andy Johnson is doing on a great scale"—betraying the people who had raised him to office, and giving all the power of the State into the hands of people who were still rebellious. It is true that, being thus conciliated, these men re-elected Mr. Wells in the fall of 1865. But he perceived that he alone among Union men was allowed to fill any office of honor or trust. He saw Union men everywhere proscribed, and at last he acknowledged that his policy of conciliation had been a mistaken and disastrous one, as he had been forewarned it would be. "I am convinced," he says, "that they would renew the rebellion to-morrow if they saw a prospect of success." He began to see that the Convention of 1864 must be reconvoked. If he entertained any doubt of its legal right to continue its functions, he yielded to the opinion of abler men—to the opinion of able lawyers, and of Senators and Representatives, among others a distinguished Democratic Senator in Congress. Of the irregular manner of the summons, Governor Wells has nothing to say. The convention having been called together, the enemies of the Government determined that it should be crushed at all risks, and the scenes of the 30th of July were confidently predicted long before. The Governor's account of the riot itself it is not worth while to give; military investigations now in progress will make all that plain. But his conclusion is full of significance, coming as it does from a man who has tried conciliation of rebels even to the hazard of his good name, and who,

a twelvemonth since, it is likely, abhorred the thought of negro suffrage: "The ultimate security both of the Government and Union men of the South depends, in my opinion, on the ratification of the Constitutional Amendment, and the enfranchisement of the loyal black man as he becomes educated and qualified for that important privilege."

THERE is a statement in circulation that "one of the ablest physicians of New York"—we wish his name had been given—affirms that "no native of America is ever attacked with sun-stroke." A more seasonable time than the present might be adopted for refuting this error; but we warn the native American not to trust to so foolish a *dictum* for exemption at the next heated term. A very limited enquiry among the boating-men of our colleges would discover the fact that sun-stroke is a frequent penalty of too much exposure; and that the sun, which shines benignantly upon the just and the unjust alike, is not more a respecter of nationalities in its oppressiveness. Why Germans and Irish are most conspicuous in our lists of the sun-stricken is no mystery. They compose chiefly our poor and laboring population, obliged to work out of doors in all weathers, and are besides imprudent in drinking and eating from ignorance of sanitary rules. It is likely, of course, that their not being acclimated has something to do with their liability to attack.

THE "astounding developments" in an office of the detective police force in this city were to be found in the newspaper headings and nowhere else. In the first place, the developments could astound no one, for the general public has for a long time stood pretty well prepared to hear and believe almost any stories of rascality that could be told in reference to our detective police. In the second place, no developments of any importance seem to have been made. Superintendent Kennedy deposed one inspector and put another in his place, and then made the men a very affecting address, telling them that a thousand rumors were afloat regarding the corruptions said to exist among the detectives as a body; that the thieves and counterfeiters complained that the police "beat" them out of so much of their gains that they really found it impossible to carry on business any longer; and that the great public would certainly come to know of these practices unless they were at once put an end to; but we hear of nothing more that has been done. We are not surprised to learn that "the authorities at police headquarters are exceedingly reticent," but we confess to considerable curiosity as to what it is intended to do with that officer who was arrested in the act of receiving fifty dollars of black-mail from a criminal, and we are more or less astonished to learn that he was allowed "to write his resignation!" An exposure of this kind is, of course, a sad thing, and the policemen are naturally indignant at it; but, on the whole, the public will not be sorry at anything that discourages the present good understanding between burglars, counterfeiters, and guardians of the peace.

COL. STOKES has been telling the people of Nashville that negro suffrage is not only simply a question of time, but of five years' time. "You can't stop," he says, "four millions of loyal, patriotic people from participating in the Government which they help to support and defend. You will have it as an exciting question in every canvass until the negro obtains his rights." A Moses of this sort is worth two of the White House variety, and undoubtedly is listened to by the loyalists of Tennessee with far greater sympathy than was Gov. Johnson when he aped the Jewish deliverer. "Policy," indeed, has already effected, both in that State and in Louisiana, what honest preaching might have been years in accomplishing—the conversion of the Union party to colored enfranchisement, if not yet purely as an act of justice, at least as a prudent alliance against reaction.

THEY have a curious way in St. Louis of demonstrating the superior commercial advantages of that city as compared with Chicago. Some ingenious mathematician of the latter place having amused himself with figuring a train of cars equal in length to the earth's diameter as necessary to transport the Illinois corn crop of 1865, the *Missouri Democrat* triumphantly reckons the small number of steamers and barges which could remove the same bulk of corn, in easy trips, in the space of three months, and concludes that the method which is least bewildering to contemplate is also the most expeditious and the least expensive. This reasoning is directed against the proposed railroad bridge over the Mississippi at St. Louis, and will be adhered to, we imagine, until that bridge is built, and it is seen that there is business enough for boats and cars also; or until the river dries up, as it is said to be doing; or, finally, till Maj.-Gen. Warren, who has been ordered to survey the Upper Mississippi and its tributaries, shall report on "the best means of reconciling the conflicting interests of the railroads and the shipping." Meanwhile, again, it will be in order to disparage the growth and commercial prosperity of Chicago, as the *Democrat* does in another issue, by half-adopting a charge brought against "our neighbor" (a euphemism for "our rival") "of Lake Michigan," which would account for the cholera in New York and Brooklyn by the quantities of rotten wheat she sends to this market. "About this there can be no mistake," says the anonymous accuser: "the bread used is the cause of the sickness." If the Board of Health can only be induced to certify to this, we do not see how Chicago can any longer pretend to be the metropolis of the West.

Two new cotton factories were founded on the 1st of August near West Point, Georgia, on the Chattahoochee River, in close proximity to the railroad. The water power is said to be ample, and we hope it will prove so. The proprietors may have chosen an emancipation anniversary either to celebrate the release of Southern capital from its subjection to slave labor, or Southern independence of Northern manufactures. No matter which; no matter if Sherman and his armies, who made this consummation possible, are still bitterly remembered and spoken of at West Point; spindles, like school-houses, are signs that the revolution will not go backward, and that liberty has a permanent, although a precarious, foothold in the South.

COL. WILLIAM B. THOMAS, who is, or who at any rate has been Collector of the Port of Philadelphia, intends, it is said, to test in a court of law the President's right to remove him from office without the advice and consent of the Senate. It does not hurt a party, as a party, to be seeking office rather than enjoying it, and the majority in Congress were politic as well as wise when they refused to go the length of continuing the session till December for the sake of protecting Unionist office-holders against the Presidential axe. Still we commend Col. Thomas's intention to maintain himself in his collectorship by law, if it can be done, and we say again, as we have said before, we sincerely hope that the attempt may be successful. There cannot be two opinions as to the pernicious influence of our present practice upon the public service and upon politics and public morality generally. No honest man can, so far as we are able to see, be sorry if the law in this matter shall be found to contradict the custom.

ON the 11th of May a French correspondent of THE NATION wrote, on the eve of the German war, and just after Napoleon's expression of detestation for the treaties of 1815: "How can a Prusso-French alliance be reconciled with an attack upon these treaties?" will Bismark and the victorious Prussian army and bureaucracy fall back on the right bank of the Rhine? or, "will the French Emperor be satisfied with Landau, Sarrelouis, and what is called the frontier of 1814? It would be a very trifling price for the blood which must soon be shed, and the most threatening part of the treaties of 1815 would still be maintained, and would even be aggravated by the increase of the Prussian power." The Emperor's declaration in June that he had no design of extending the eastern frontier of France, unless a general grab-game were going on in Europe, has not been forgotten. But it was regarded at the time as simply one of many proofs of Bismark's understanding with Napoleon. This extension was, however, asked for on or about the 8th inst. by the French cabinet, and on Tuesday a telegram from London (of noon of the same day, received here at a quarter of three P.M.!) informed us that the Prussian Government was firm in its refusal to cede the coveted territory. Let us hope that this attitude is ominous of something more than a renewal of battle.

Dr. B. A. Gould, in a paper read before the American Academy of Sciences, gives some interesting facts about the stature of the American soldier. A grain of allowance is evidently to be made for some of the statements; for although army rules require that the height of the recruit be given at the nearest one-fourth of an inch, the doctor found that the persons who measured the men had a tendency to set down round numbers. It is possible that this large way of doing things may have prevailed in the West rather than the East, where people are popularly supposed to keep a sharper look-out for fractions, in any computation, than is common outside of Yankee-land properly so called. It was found that the time of reaching the maximum height is very much later than is generally thought. Men born in America, it appears, increase in height till they are twenty-eight years old. They are shorter at thirty-five than at twenty-nine and thirty, and this Dr. Gould attributes to the consolidation of the cartilages of the backbone. In the case of men from different States, the year of greatest average height was different, the average year for all the States being, as above-mentioned, twenty-eight. The men from Iowa head the list with an average height of 69 inches; next come those from Ohio (68.8), Indiana (68.7), Maine (68.6), Missouri (68.5), Minnesota (68.3), Vermont (68.1). No other soldiers were more than five feet eight inches tall. New Hampshire heads the second group of States, with men 67.9 inches. Then come New York, Pennsylvania, and Michigan, with an average standard of 67.8 inches. Wisconsin has 67.7, and Connecticut and Rhode Island 67.5. Massachusetts has only 67.4 inches. The colored troops of Louisiana are set down at 67.3. Less than 67 inches are the Jersey men—66.7, in a group by themselves; and the average stature of the American soldier, if these returns may be trusted, taking the shorter men of the Atlantic coast with the tall Westerners and Maine men, is five feet and eight inches, a height which the English think quite sufficient for a prize-fighter capable, all things considered, of holding his own with any man.

It is hard to realize that we are admitted by the Cable to a strictly contemporaneous view of European events, and are not, as formerly, ten days in arrears. We are not disposed, when everything is as yet so new and unadjusted, to complain of a want of system in the news despatches from over the water. It is evident, however, that the public ought to have, first, a well-digested summary of foreign intelligence, grouped under appropriate heads, according to the quarter of the world whence the telegram proceeds; and, second, the most careful discrimination of dates. A despatch without a date, or separated from its date, throws us back upon the old indefiniteness; while the introduction of such a word as "yesterday" is simply tantalizing. The daily newspapers, in their efforts to surpass each other in enterprise, have carried their vicious custom of subdivision and display to a most ridiculous and perplexing extent. Thus, on Monday, we had two despatches of Friday, announcing the close of Parliament. To one journal of this city, the first despatch afforded the opportunity of making four distinct paragraphs and as many head-lines. One, headed "The Queen's Speech," contained this line: "The session of Parliament has closed." Another was headed "Domestic Affairs of Great Britain discussed by the Queen," and read thus: "The remainder of the address from the throne relates to home questions." The second despatch is carved into five independent paragraphs, with heads that differ from the foregoing only in a partial mention of the home questions alluded to. Under "Austria," we have the caption "Prague, not Paris, the proper place" for the telegraphic statement: "It is now believed that it is *not Prague, but Paris*, which is the proper place for the peace negotiations between Austria and Italy." Still another newspaper, of the same day, reported that after the Gulf cable had been picked up, "a *speech* was made by Mr. Charlton, and the steamer headed for the shore." Nothing, it turns out, more innocent than a "splice" was made by Mr. Charlton, who, it is fair to suppose, is not an American, and therefore could not possibly have made a speech on so small an occasion. We do not forget the inherent difficulties of typography and night-editing; but we are sure that that journal will be most sought after which arranges its despatches from abroad with the least regard for sensational effect and the most for accuracy and ready understanding.

THE FREEDMEN.

The final report of Gens. Steedman and Fullerton has been made public. Their foregone conclusion is that the Bureau is a nuisance in itself, and is served by unworthy agents; its continuance will be productive of discord and oppression. It is in behalf of the blacks that these commissioners most urgently call for the dissolution of the Bureau. Forgetting the old cry of the slaveholders, that a negro would not work at all except under compulsion—forgetting the outrageous vagrant acts of the past twelve months, to which it was half believed, more than half hoped, and unqualifiedly asserted, the freedmen would soon become amenable—forgetting that the Bureau enforced the making of contracts (whose terms were not prescribed) partly to bridge over the disorganization of labor, partly in deference to the opinion that the freedmen would avoid labor, but chiefly in the interest of the planters themselves and the entire South, that the country and the people might be saved from ruinous impoverishment and even starvation—these Presidential fault-finders accuse the Bureau of re-enslaving the blacks by contracts which impose wages far below those obtainable in open market by competition. The very success of the Bureau in restoring labor, and in enhancing the value of the laborer, is thus turned against it as a crime; and while to-day it is feeding more whites than blacks, and, with what little military support is still allowed it by the President, is doing its best to promote industry, security, good morals, and substantial justice among all classes of the population, it is subjected to these assaults *de haut lieu*, and that, too, after the representatives of the loyal people have decided that it shall live for two years longer, because it is needed. No one less than the friends of the Bureau will object to the most rigid, so it be impartial and disinterested, scrutiny of its agents and its operations; nor is it to be denied that, from the very necessities of the case, as well as through errors of judgment, many incapable and not a few corrupt officers have been taken from the army into places under the Bureau. But, on evidence palpably one-sided and inconclusive, with motives undisguisedly hostile, to denounce the very existence of a legally established institution, resembles nothing else than the President's superfluous message concerning the Constitutional Amendment—that is, both are acts calculated and intended to weaken the popular respect for law, simply because certain enactments are not conformable to the "policy" of the Executive.

A report of Gen. Tillson, from Georgia, which has appeared since the above was written, affords a very exact confirmation of our criticisms:

> "When I assumed charge of the Bureau here in June, 1865, freedmen's wages ranged from $2 to $7 per month, and a general opinion prevailed that at Christmas the lands, mules, etc., would be apportioned off among the negroes; consequently indolence was very prevalent, and the planters were disheartened regarding the Bureau as the champion of the freedmen and unfriendly to them. My first efforts were to correct these mistaken opinions, in which I met with flattering success. Preparations for planting began early in the following February, and wages advanced to $12 and $15 per month. The testimony of the Hon. Alexander H. Stephens before the Reconstruction Committee is proof of the restoration of confidence and organization of labor by the Bureau. . . .
>
> "*Schools have been established*, valuable property gathered up and accounted for, that would have been lost to the Government. Local laws have been secured to the freedmen, protecting his rights and property, but the continuance and agency of the Bureau is still a necessity, as planters depend upon it to obtain labor—the freedmen to receive their wages. The experience of the past year warrants the conclusion that twenty-five per cent. of growing crops would be lost were not the Bureau in force to secure justice."

—According to reports from South Carolina, the freed people on Edisto are in a prosperous condition. All who are able to work will earn sufficient to feed and clothe them comfortably during the present year, until they can make contracts for the ensuing year. Many of them will make from four to eight hundred dollars, if no accident happens to the crops, and about one-half of them will, in addition to their cotton crop, raise sufficient provisions to support their families during the next year. Two plantations on Edisto and one on James Island are held by freedmen under possessory titles, and are worked on their own account. They have large crops in good condition. As a general rule, on these islands, the freed people are working for one-half the cotton crop, though in some instances on more advantageous terms than these. There are about seven thousand freed people on Edisto, and yet during the last four months a dozen cases of petty larceny and trifling assault and battery are the only crimes that have occurred. On Edisto, Wadmelaw, Johns, and James Islands are about three hundred freed people who are unable to support themselves, and who should be cared for by the communities where they live. They are the old, cripples, and orphan children.

Notes.

LITERARY.

A PARAGRAPH appeared in the London *Reader* some weeks ago, to the effect that Mr. Herbert Spencer had been unable to realize anything from the subscriptions taken up in this country in his behalf. The contrary is the case. Mr. Youmans, who went to England not long ago, carried five thousand dollars in money, with hopes of more, and a valuable gold watch, a present from the American Watch Company at Waltham. Messrs. D. Appleton & Co., Mr. Spencer's American publishers, have also paid him considerable sums arising from the sale of his books in this country. Mr. Spencer's works have met with a much better reception, and have been more widely read here than in England. In justice to his American friends, Mr. Spencer addressed a note to the *Reader*, printed in the last number, in which he contradicts the statement of that paper, and says: "From the beginning, and with increasing energy up to the present time, the Americans have given to my undertaking the strongest support, and have done it in the most admirable manner."

—Mr. J. Payne Collier has issued his reprint of Part I. of the fifth of the Poetical Miscellanies, "England's Helicon," which made its original appearance in 1600, and its reappearance in 1614. There are only four copies of the first edition in existence. Mr. Collier complains that his subscribers have fallen off, and that, though he has printed fifty copies and distributed them at the cost price, 10s., he has but twenty-five subscribers, so that he loses heavily. The reprints are exact representations of the earliest editions, are printed in elegant style, both as to type and paper, and are offered at a sum which merely pays the cost of transcript, print, and paper. Mr. Collier intends to print next "Davison's Poetical Rhapsody" of 1602. He fears, however, that he may not have even as many subscribers as he had before. We wonder that he does not give more facilities to subscribers in this country, where he could easily get fifty and more. Indeed he says that he has had a "very handsome offer from the other side of the Atlantic, where my last bibliographical work has been extensively reprinted in four handsome volumes, to enable me to carry it on, not only without risk, but with sure advantage."

—Professor J. Oppert, well known by his researches on the Assyrian cuneiform inscriptions, has published an address to the students attending the Sanskrit class at the Imperial Library of Paris, which contains some new and interesting matter. He controverts the views held by many students of comparative philology concerning certain "Aryan" ideas pervading the whole of the so-called Indo-Germanic races. Such an "*esprit aryen*," he holds, has no more real existence than the much vaunted "*idée sémitique*." Nor do, in his opinion, the Aryan and Semitic races differ from one another in a physiological point of view, nor have they been subject each to different influences of climate or locality. On the other hand, he attributes to Semitic influence a very considerable portion of the elements of which the Greek race more especially is composed. He promises to develop his ideas on this head in a larger work on the origin of the Greek and Latin races.

—"The Fine Arts Quarterly Review," which unfortunately died out, after a brief but meritorious career, has been revived under the editorship of Mr. Woodward, the Queen's librarian. The articles are, as formerly, signed, and cover a broad variety of topics. The writers are now chiefly men who do not belong to the realistic school. The illustrations, which are very profuse, are the best point of the magazine. Those in the first number of the new series are Jehan Foucquet's "Coronation of the Virgin" (in gold and colors); Reynolds's portrait of himself, from the picture in Mr. Stuart's possession; Raphael's cartoons of "Christ's Charge to Peter" and "The Beautiful Gate;" Flandrin's "Christ and St. John," the Pitti "Ecce Homo," Perugino's "Ascension," together with some minor works, initial letters, and the like.

—"Holbein und seine Zeit" (Holbein and his Times) is the title of a new work by Dr. Alfred Woltmann, of which the first volume has been published by E. A. Seemann, of Leipzig. The patient delving of the author has corrected, among other long standing errors, the commonly received dates of the great painter's birth and death, which are here fixed at 1495 and 1543. Unlike Grimm, in his "Life of Michael Angelo," he is not given to inventing hypotheses, and is rigidly critical and not at all poetical in his investigations. Some of his statements cannot be accepted in all their breadth—as when he says that "only from the city of the German renaissance could the painter of the German renaissance arise." Nuremberg is at least as emphatically as Augsburg "the city of the German renaissance," including in that term literature, art, and general culture; while the renaissance impulse which has left such stately monuments in Augsburg proceeded from a time long subsequent to Holbein's day. So Woltmann's repeated assertion, that the ideas of the Reformation were in no way hostile to the pictorial art, can hardly stand. That these ideas were nearly fatal to art is nearer the truth, though, since the choice lay, or seemed to lie, between enjoying a higher and more advanced truth and morality, and renouncing the blessings of art, it is not a reproach to the Reformation. At all events it obliged Holbein to quit the Continent for England. The illustrations of the book consist of thirty-two large wood engravings, reproductions of Holbein's works, and, naturally, least satisfactory when imitating his oils. "Altogether," says a German critic, "we have in this work a labor distinguished by loving devotion to research and charming vivacity of description, the best and in every respect the most satisfactory monograph that has hitherto appeared concerning any of our great German artists." The second volume, containing the concluding epoch of Holbein's life, will mainly relate to his stay in London from the year 1526.

—It is one of the signs of the increase of travel, and the rapidity of intercourse between nations, that a guide-book for China should be published, a region that, four or five years ago, was as inaccessible as the North Pole or the sources of the Nile. The first Chinese "Murray" appears in the shape of a neat pamphlet of about seventy pages, entitled "Notes for Tourists in the North of China, by N. B. Dennys," and is published by Messrs. A. Shortrede & Co. of Hong Kong. The pamphlet contains very full descriptions of Tien-tsin, Pekin, and the surrounding country, with valuable notes on the productions, objects of curiosity, public buildings, etc., of the capital of China, besides itineraries from Pekin to the Mongolian frontier and the passes of the Great Wall. Mr. Dennys has resided for two or three years at Pekin as an officer in the British consular service, and has had the best of opportunities for familiarizing himself with the peculiarities of the Province of Chih-li. His work is a very useful *vade-mecum*, and is illustrated with several serviceable plans of Pekin and of the route between that city and the sea.

—In the estimate of the receipts and expenditures of the Russian Government for the year 1866 we find 167,918 rubles set down as payments to the various journals published by the Government. Every department of the Government and many sub-departments have their own journals, in which are published all the orders and promotions, and also many articles which are either necessary or interesting to the service. The *Russkii Invalid*, published by the war department, gets the largest share, 23,770 rubles; the *Journal of the Ministry of Public Instruction* has 21,588 rubles. The journal published by the naval department also has a large sum. The Minister of Foreign Affairs gives the *Journal de St. Pétersbourg*, a widely read official paper, but not the organ of any branch of the service, 4,000 rubles.

—The Archæological Institute this year resigned the doubtful honor of being lions in a small town, and held their congress in London. They visited the Tower and Westminster Abbey, Lambeth Palace and various churches, and made an excursion to Windsor and Eton. Several very interesting papers were read, which have been reported quite fully in the *Athenæum*. The most important was the address of Sir John Lubbock on primeval antiquities and the present state of archæology, which went into detail with regard to the distinctions and characteristics of the four great periods of early life and their subdivisions. Mr. Hepworth Dixon delivered an address on the "Tower of London;" Dr. Guest one on the "Origin of London;" Mr. J. H. Parker settled various disputed points about Windsor Castle; Mr. Foss discoursed on Westminster Hall; Mr. Cyril Graham lectured on the proceedings of the "Palestine Exploration Fund;" and Mr. Emanuel Deutsch read a very

important paper on "Semitic Palæography and Epigraphy." The papers and addresses are all to be published in book form by Murray.

SCIENTIFIC.

Dissociation of Gases in Blast Furnaces.—That the force of chemical affinity may, at very high temperatures, cease to be an efficient means of holding elements in combination, has long been known. It was clearly shown, years ago, by the experiments of Grove upon the decomposition of water, ammonia, nitrous oxide, and other substances, and has lately been more fully illustrated by a remarkable series of researches by H. Deville, the details of which have been published from time to time during the last eight or ten years.

An interesting contribution to our knowledge of the phenomena of "dissociation"—as Deville has termed this peculiar decomposition, or splitting by heat—has just been made by Cailletet, who has enquired into the condition in which gases exist in the furnaces in which iron is smelted and worked. In order to obtain the gases from the interior of the furnace, they were drawn off, not through porcelain tubes, as in the experiments of previous observers, but through a fine copper tube, kept cool by a stream of water, and connected with an aspirating flask. It had already been demonstrated by Deville, that in collecting the dissociated elements for examination, it is, as a general rule, necessary to cool them very quickly, in order to prevent the recombination which would occur in case the cooling process were gradual. Cailletet, therefore, took care to surround the small copper abduction tube with another larger tube, through which a rapid current of cold water was made to flow, not merely that the copper might be kept from melting, but in order that the gases should be cooled to the temperature of about 50° at the very moment of their exit from the furnace.

The following analyses are of mixtures of gas taken at different times through one of the tuyere-holes of a hot-blast iron furnace fed with charcoal:

	I.	II.
Oxygen,	15.24	15.75
Hydrogen,	1.80	0.00
Carbonic oxide,	2.10	1.30
Carbonic acid,	3.00	2.15
Nitrogen,	77.86	80.80
	100.00	100 00

At the point from which these gases were taken the temperature was so high that both porcelain and platinum readily melted. The gas, as it reached the aspirating flask, had the appearance of thick smoke, owing, as Cailletet supposes, to a little aqueous vapor and some impalpable carbon which is carried along by the gas.

These analyses show that some oxygen can remain free and uncombined in the presence of hydrogen, carbon, and carbonic oxide, when the mixture of these substances is in the midst of a mass of combustible matter, the temperature of which is above the melting point of platinum.

In another set of experiments, the gases were taken from a large reverberatory furnace, used for welding iron, at a point in front of the grate, where porcelain quickly melted, and where the bricks of the furnace were heated to the most intense whiteness, the temperature being so high that the eye was unable to support the glare. The gases here obtained were composed as follows:

	I.	II.
Oxygen,	13.15	12.33
Carbonic oxide,	3.31	2.10
Carbonic acid,	1.04	4.30
Nitrogen,	82.50	81.37
	100.00	100.00

In these trials the mouth of the copper tube, when removed from the furnace, was found to be covered with a coating of lamp-black, precisely in the same way as had been noticed by Deville in his experiments upon the splitting of carbonic oxide into carbon and oxygen. Here again, as in the experiment at the blast furnace, it appears that oxygen, when intensely heated, has little or no action upon carbon. But in this mixture of dissociated gases iron burned readily; that is to say, it took on oxygen and at the same time developed a great amount of heat. By looking through a colored glass it was easy to see that the temperature of the burning iron was far higher than that of the furnace. Proof that iron is here oxidized is furnished also by the abundant slags which form during the process of welding. Even if it be admitted, then, as a probable hypothesis, that all compound bodies can be broken up or dissociated by exposure to sufficiently high temperatures, it will still appear that the dissociation of iron and oxygen is less easily effected than that of the compounds above alluded to. At the temperature here in question, the affinity of oxygen for iron is not destroyed. In fact, in the welding of large masses of iron, the heat developed by the oxidation of this metal is a very important point in the process, deserving, perhaps, as much consideration as the heat from the burning coal.

Other samples of gas were taken out at a point some forty feet or more beyond the grate of the welding furnace; the temperature at this point, estimated as 900°, was insufficient to melt copper, though antimony melted at once upon being exposed to it. Analyses of this gas resulted as follows:

	I.	II.
Oxygen,	8.00	7.30
Carbonic oxide,	2.40	4.02
Carbonic acid,	7.12	7.72
Nitrogen,	82.48	80.96
	100.00	100.00

It here appears that the elements previously dissociated have recombined to a very considerable extent. But this recombination, by cooling, is still more strikingly illustrated by the following experiment, in which the gases, taken at precisely the same point as before, were drawn off through a simple metallic tube instead of the cooled tube employed in all the other experiments. In passing through the plain metallic tube the temperature of the gases slowly fell from redness to that of the air, and the dissociated elements were thus enabled to recombine in great part. For comparison, the mean of the two preceding analyses is here given:

	Gas taken through Plain Tube.	Mean of preceding Analyses.
Oxygen,	1.21	7.65
Carbonic oxide,	1.42	3.21
Carbonic acid,	15.02	7.42
Nitrogen,	82.35	81.72
	100.00	100.00

It will be observed that there is here but little free oxygen, that which was free in the gas previously analyzed having here united with carbonic oxide to form carbonic acid.

Since, even in the apparatus which he has employed for collecting the gases, these cannot be cooled instantaneously, and since there must consequently be a certain amount of recombination during the cooling process, Cailletet urges that the actual amount of dissociation which occurs under the circumstances must be greater than that which appears from his own analyses. In his opinion only very small quantities of the compound gases exist in the hottest parts of blast and puddling furnaces.

If the accuracy of these experiments be admitted—and, connected as they are with the results of Deville, there would appear to be no good reason for calling their accuracy in question—it will be at once apparent to every chemist that a thorough revision of all that has ever been written or taught concerning the gases which coexist, and the reactions which occur in blast furnaces, is imperatively demanded.

NOTES ON THE NEW EDITION OF WEBSTER'S DICTIONARY.

NO. I.—INTRODUCTORY.

I propose to contribute to The Nation, in the form indicated by the above heading, a series of miscellaneous observations on the character, composition, and sources of the English language. I select this dictionary as a basis for my remarks, because its wide circulation has made it accessible to all, and because, as it stands in this edition, its vocabulary is more copious, its etymologies more sound and satisfactory, and its definitions more accurate than those of any other English dictionary known to me.* In all these respects the work is a great improvement upon previous issues of that long familiar to the literary world under the same name, and a scholar who should compare the last edition prepared by Webster himself with the present would scarcely detect any characteristic common to both, except a remarkable fulness of etymological illustration, and certain deviations from the usage of the best and most authoritative English and American writers in the spelling of a few individual words and of some classes of regular

*I take this occasion to say that I am not acquainted with the new edition of Johnson, now in course of publication under the editorial care of the learned Dr. Latham, and, besides, I believe it is not yet sufficiently advanced to be a fair subject of comparison with works already complete.

endings. I do not purpose here to discuss the merits of the Websterian system of orthography—though I think it in more than one point unsound—and I shall, for the present, content myself with observing that, the proper office of a hand-dictionary being to furnish a key to a given language as it is, and within a comparatively recent period has been, such a work is the last place in which arbitrary orthographical changes, right or wrong, should be suffered to appear. The lexicographer is a historian, not a legislator. When, therefore, instead of exhibiting the oral or written forms of a language, which have been sanctioned by the ablest speakers and authors in that language, he assumes to impose new or unusual forms upon the tongue or the pen of those whose breath it is, he is usurping functions which belong to a higher jurisdiction, and the greater the merits of his work may be otherwise, the greater is the sin of his transgression.

In justice it should be added that where the Websterian orthography differs, from that generally regarded as normal in England, the latter is given in brackets and small italics, in the present edition. This is an improvement, certainly, but it would have been much better and fairer to put the spelling adopted by the highest living and recent authorities at least upon an equal footing with that which the editors propose to substitute for it, by assigning to it as conspicuous a place and letter as to the new orthography.

I regret to find myself under the necessity of thus qualifying the praise which this learned and laborious work so abundantly deserves, for I really think that, with this exception, the new edition of Webster is not only the best English Dictionary, but superior to any other existing word-book of a living language *not extending beyond a single volume.* I emphasize the last phrase because many of the published notices of this dictionary are conspicuous not merely for a strain of hyperbole offensive to good taste and calculated to destroy respect for American criticism, but for an equally discreditable ignorance of what modern lexicography has achieved for other tongues, and what it not only may, but certainly soon will, do for our own. That which has been accomplished for some languages, and which is in process of accomplishment for several others—namely, a complete historical and expository lexicon of the speech—so far from having been effected for the English language by Webster and his improvers, was not even attempted by them; nor, though Johnson and Richardson, not to mention some older and some less famous laborers in the same field, had large and liberal ideas upon the possibilities of lexicography, has it ever been seriously undertaken until it was commenced, within the last ten years, by the London Philological Society. Webster himself most expressly disclaimed any such attempt, and the improved edition does not in the least pretend to be what so many of its ill-instructed critics suppose it, a *thesaurus* of the English tongue. It has exceedingly well fulfilled the task it proposed to itself, namely as complete a presentation of the origin and meaning of the words composing the vocabulary of modern English literature, science, and art, as could be comprised within the convenient limits of a single quarto. It has neither aimed at nor accomplished anything more. The history of the vocabulary, except so far as that is implied in the etymology of single words; the times and occasions of the introduction of new words; the deduction and development of successive forms and meanings of individual words; the revolutions of language which have thrown out of use and into oblivion a vast multitude of terms familiar, in different ages, to our literature and our daily speech, sometimes supplying their places by new vocables, sometimes burying them with the dead objects or ideas they stood for—all these philological facts and laws have been necessarily, and therefore wisely, to a great extent excluded from a work designed to serve quite other objects than the philosophical analysis of the English speech. And yet they are, every one of them, absolutely essential elements of a complete lexicographical view of any language, ancient or modern. The learned and judicious editors of Webster would be the last to invite a comparison between their dictionary and the best existing Greek and Latin lexicons, nor would they attach any value to the praise of a critic who should rank it with the German lexicon of the brothers Grimm, or the French of Littré—the former of which is, indisputably, the ablest *linguistic*, the latter the best *philological*, dictionary of a living tongue which modern science has yet given to the world. The one is an admirable philosophical exposition of a vocabulary in its past and its actual phases, the other a complete practical guide to the comprehension and use of a language through its whole literary existence. But Grimms' Wörterbuch will extend to double, Littré's probably to quadruple the bulk of Webster's, Tramater's Italian dictionary fills eight folios, and in Tommaseo's new Italian lexicon—a work of great labor but of no pretensions to linguistic learning, the first three letters of the alphabet alone amount to nearly if not quite twice as much letter-press as the whole of the "Unabridged."

In lexicography we cannot realize the pious old lady's wish—"the smallest-sized Bible with the largest-sized type." A really convenient everyday manual of a language cannot extend beyond a single volume of moderate dimensions, and within that compass only a superficial view of any cultivated dialect can be taken. When, therefore, I say that "Webster's Dictionary" is not to be compared with the great lexicons I have mentioned, I am not speaking of a difference in *degree* but in *kind*. The one is a manual, the others are philological encyclopædias, and it would be unfair to raise a question of relative superiority in degree between works generically distinct.

It is a remarkable fact in the history of modern philology that the European language which most requires a good dictionary should have been among the last to attempt to produce one. As compared with English, all the other great European speeches, perhaps not excepting even the French, are homogeneous, or rather organic wholes, and the element of vital action in obedience to innate law is conspicuous in all of them. The form of the word, in general, implies and indicates the class and the stem, and it grows by development, or passes from one grammatical category to another by simple and uniform processes. There is little clashing and grating between unrelated and fortuitous constituents, no "conflict of laws" between rival nationalities, no struggle for superiority between heterogeneous elements and opposite tendencies. English, on the contrary, is hybrid in its origin, and, besides this, is marked by features not produced by organic development, but acquired by a process of "animal grafting." Hence, to the majority of those who use it, it is eminently an arbitrary and conventional speech, or a congeries of loose material moving in obedience to physical law, not a being animated by vital chemistry and dynamics. And yet, to a scholar who has studied its physiology, it is instinct with a vigorous though wayward life, and its energies are seen to have been intensified, not neutralized, by the reciprocal influence of its elements.

Until, by the labors of Bopp, the brothers Grimm, and other German linguists, order was brought out of the chaos of philology, and the study of language became a science, lexicographers regarded speech not as a semi-organism, but as a purely material engine, and themselves rather as the dismounters of a machine than as the physiologists of speech. They treated words as independent members of a clockwork, each arbitrarily formed, devoted to special determinate functions, and moving only in lines and curves fixed unalterably by its own structure. Hence, in their vocabularies, an isolated word is as powerless as dead, as insignificant as a wheel or a spring which has dropped from an unknown piece of mechanism. True philology considers it a limb developed from a germ, related to other parts of a vital whole, and intelligible only as comprehended in the mutual action and reaction between itself and its fellow-members. But language rises above even organization, for it is animated not only by a vital but by a controlling spiritual element, and its significance is as varied as the passions, the affections, and the conceptions of the soul which inspires it. The whole force of a word cannot be taught by its etymology, because its meanings are not usually all logically deducible from that of its root. Nor, except in the case of names of material objects and processes and of terms arbitrarily framed to denote scientific conceptions, can its various senses be all conveyed by definition. The meanings of words, as determined by context, are susceptible of almost infinite variation. The number of definitions in a dictionary must be limited not only by the necessary conditions of space, but by the inevitable confusion engendered in the mind of the student by a too numerous specification of significations. But there is still another difficulty in the way of all attempts to fix the force of words belonging to the vocabulary of our moral and intellectual nature by description. It is the fact that, with reference to a large proportion of the operations and affections of the human mind and heart, the words which denote them are symbolic, not expressive or even descriptive. These operations and affections are often but dimly conscious even to ourselves, and the words by which we indicate them are necessarily as incapable of analysis as the thing signified. How can we describe that which we cannot distinctly see? How can we explain that which we do not clearly understand? How can we define that whose being, whose action, whose conditions, whose limitations we cannot comprehend? The power of defining the moral and intellectual vocabulary of a language would imply a knowledge of the hidden nature of man to which the wisest has made but a distant approximation; and to insist on the possibility of such definition is as idle as to declare that we can learn as much of the mysterious workings of the human spirit by looking out the words of Mrs. Cowden Clarke's Concordance in a dictionary as by the study of the dramas of Shakespeare.

The higher the culture of a people, the larger will be the proportion of undefinable words in its language, and the signification of this class of its words can be mastered only by the same process by which the infant learns

the meaning of the vocabulary of the nursery, observation, namely, of actual living usage. Hence the dictionary best defines which most fully exemplifies. But wealth of exemplification is impossible within the limits to which a manual, a hand dictionary, of any language must be confined, and, therefore, the author of such a volume who is wise enough to renounce the impracticable, and aim only at what is possible under the prescribed conditions, must content himself with brief description instead of ample illustration. The necessity of formal discriminative definition being admitted, as in the case supposed it must be, it will be found that the attempt has been, in the main, eminently successful in the new edition of Webster.

Under the auspices of the London Philological Society, a number of competent scholars, aided by numerous readers and other subsidiary helpers, have been engaged for several years in the preparation of what aspires to be a truly complete dictionary of the English language through all its chronological range and all its wide variety of nomenclatures. The labors of this learned association are far advanced, and some portion of the results will appear at no very distant day. These results will ultimately embrace what has never been even foreshadowed—except imperfectly by Richardson—the biography of the several words composing the vocabulary of the English tongue. They will serve, not indeed to fix and petrify the flowing current of our speech, but to show whence that current has come, and whither it tends, to measure its volume and its velocity, to determine the laws of its movement and the composition and decomposition of its ingredients. In consequence of the comparison of a much larger number of authorities, the dictionary of the London Philological Society will often give many additional meanings, and doubtless, not unfrequently, greater precision of definition than has been attained by the editors of the work I am reviewing. But the superiority we may reasonably expect this new dictionary to possess over all former English word-books, will lie far less in superior exactness of description than in fulness of vocabulary, in copious illustration of the history of words, and in abundant exemplification of their actual use. For this purpose the whole body of printed English literature, old and new, has been laid under contribution. Not only every author known to fame, but hundreds whose names have scarcely survived themselves, have been, or will be, carefully read, and every first occurrence, every happy use, every forcible example of each word, accepted for introduction into the dictionary. The exemplifications thus collected, together with a laboriously deduced and constructed etymology, will furnish us the means of tracing the genealogy, the relations and the biography, the birth, life, and significance of every English word, native or naturalized, home-born or comeling; and though the great word-book will not supersede less voluminous manuals like Worcester and Webster, it will be appealed to on all, except the simplest, questions of English philology.

It is much to be regretted that American scholars have not more largely participated in the labors of the Philological Society, and thereby entitled themselves to a voice in the determination of the important questions upon which the editorial board of the dictionary must pronounce. But the aid which was courteously asked was churlishly refused. The United States have, indeed, furnished here and there a partial collaborator; but the contributions of America to the Philological Mare Magnum are but rills, not rivers. But though we have thus held ourselves aloof from this great enterprise—an object of greater importance to us than to England, because our libraries do not contain the philological material of which the new dictionary will present the quintessence—the orthography which shall be adopted by the editors of this lexicon will, probably, be universally accepted on our side of the Atlantic as well as on the other. This recognition it will have a right to claim, not because the opinions of its editors will be conclusive as *authority*, but because its vocabulary will have been formed on a comparison of the usage of all the great writers in the language, and as every citation will strictly follow the orthography of its author, it will be the best possible *evidence* of the actual practice of those most competent to judge what must be regarded as the normal spelling of that vocabulary. Nor do I admit that English, simply *as* English, is at all more binding on us than American usage; but I believe it will be found that nearly all our own authors who are possessed of such a degree of philological attainment as to be competent to form an opinion on the subject, employ the same orthography as the best English writers, so far as printers and publishers will allow them to do so. The termination *or, our*, however, is a pretty general exception, and, besides, the cacography of much of our popular literature, and of some of our widely circulated journals, has unconsciously affected the regularity of spelling even among writers who mean to bow only to better authority. Bad spelling, like bad grammar, is sadly contagious. The eye and the ear are very democratic, and, however strong their private convictions may be, they are much inclined to yield at last to the will of the majority. So far as our orthography has been made to deviate from that of England, the change has been effected not by the deliberate practice or the opinion of competent scholars, but by other influences of a character too transitory permanently to determine the American forms of our common English tongue. The great interests of literature will, in the end, prevail over narrower considerations, and our speech and that of England are more likely to become hereafter still more emphatically one, than to be broken up into two diverging dialects.

GEORGE P. MARSH.

FELIX HOLT, THE RADICAL.*

BETTER, perhaps, than any of George Eliot's novels does "Felix Holt" illustrate her closely wedded talent and foibles. Her plots have always been artificial—clumsily artificial—the conduct of her story slow, and her style diffuse. Her conclusions have been signally weak, as the reader will admit who recalls Hetty's reprieve in "Adam Bede," the inundation of the Floss, and, worse than either, the comfortable reconciliation of Romola and Tessa. The plot of "Felix Holt" is essentially made up, and its development is forced. The style is the same lingering, slow-moving, expanding instrument which we already know. The termination is hasty, inconsiderate, and unsatisfactory—is, in fact, almost an anti-climax. It is a good instance of a certain sagacious tendency to compromise which pervades the author's spirit, and to which her novels owe that disproportion between the meagre effect of the whole and the vigorous character of the different parts, which stamp them as the works of a secondary thinker and an incomplete artist. But if such are the faults of "Felix Holt," or some of them, we hasten to add that its merits are immense, and that the critic finds it no easy task to disengage himself from the spell of so much power, so much brilliancy, and so much discretion. In what other writer than George Eliot could we forgive so rusty a plot, and such *langueurs* of exposition, such a disparity of outline and detail? or, we may even say, of outline and outline—of general outline and of particular? so much drawing and so little composition? In compensation for these defects we have the broad array of those rich accomplishments to which we owe "Adam Bede" and "Romola." First in order comes the firm and elaborate delineation of individual character, of which Tito, in "Romola," is a better example than the present work affords us. Then comes that extensive human sympathy, that easy understanding of character at large, that familiarity with man, from which a novelist draws his real inspiration, from which he borrows all his ideal lines and hues, to which he appeals for a blessing on his fictitious process, and to which he owes it that, firm locked in the tissue of the most rigid prose, he is still more or less of a poet. George Eliot's humanity colors all her other gifts—her humor, her morality, and her exquisite rhetoric. Of all her qualities her humor is apparently most generally relished. Its popularity may, perhaps, be partially accounted for by a natural reaction against the dogma, so long maintained, that a woman has no humor. Still, there is no doubt that what passes for such among the admirers of Mrs. Poyser and Mrs. Glegg really rests upon a much broader perception of human incongruities than belongs to many a masculine humorist. As for our author's morality, each of our readers has felt its influence for himself. We hardly know how to qualify it. It is not bold, nor passionate, nor aggressive, nor uncompromising—it is constant, genial, and discreet. It is apparently the fruit of a great deal of culture, experience, and resignation. It carries with it that charm and that authority which will always attend the assertions of a mind enriched by researches, when it declares that wisdom and affection are better than science. We speak of the author's intellectual culture of course only as we see it reflected in her style—a style the secret of whose force is in the union of the tenderest and most abundant sympathies with a body of knowledge so ample and so active as to be absolutely free from pedantry.

As a story "Felix Holt" is singularly inartistic. The promise of the title is only half kept. The history of the hero's opinions is made subordinate to so many other considerations, to so many sketches of secondary figures, to so many discursive amplifications of incidental points, to so much that is clear and brilliant and entertaining, but that, compared with this central object, is not serious, that when the reader finds the book drawing to a close without having, as it were, brought Felix Holt's passions to a head, he feels tempted to pronounce it a failure and a mistake. As a novel with a hero there is no doubt that it *is* a failure. Felix is a fragment. We find him a Radical and we leave him what?—only "utterly married;" which is all very well in its place, but which by itself makes no conclusion. He tells his mistress at the outset that he was "converted by six weeks' debauchery." These very dramatic antecedents demanded somehow a group of consequents

* "Felix Holt, the Radical. By George Eliot." New York: Harper & Brothers. 1866.

equally dramatic. But that quality of discretion which we have mentioned as belonging to the author, that tendency to avoid extreme deductions which has in some way muffled the crisis in each of her novels, and which, reflected in her style, always mitigates the generosity of her eloquence—these things appear to have shackled the freedom of her hand in drawing a figure which she wished and yet feared to make consistently heroic. It is not that Felix acts at variance with his high principles, but that, considering their importance, he and his principles play so brief a part and are so often absent from the scene. He is distinguished for his excellent good sense. He is uncompromising yet moderate, eager yet patient, earnest yet unimpassioned. He is indeed a thorough young Englishman, and, in spite of his sincerity, his integrity, his intelligence, and his broad shoulders, there is nothing in his figure to *thrill* the reader. There is another great novelist who has often dealt with men and women moved by exceptional opinions. Whatever these opinions may be, the reader shares them for the time with the writer; he is thrilled by the contact of her passionate earnestness, and he is borne rapidly along upon the floods of feeling which rush through her pages. The Radicalism of "Felix Holt" is strangely remote from the reader; we do not say as Radicalism, which we may have overtopped or undermined, but simply as a feeling entertained. In fact, after the singular eclipse or extinction which it appears to undergo on the occasion of his marriage, the reader feels tempted to rejoice that he, personally, has not worked himself nearer to it. There is, to our perception, but little genuine *passion* in George Eliot's men and women. With the exception of Maggie Tulliver in "The Mill on the Floss," her heroines are all marked by a singular spiritual tenuity. In two of her novels she has introduced seductions; but in both these cases the heroines—Hetty, in "Adam Bede," and Tessa, in "Romola"—are of so light a character as to reduce to a *minimum* the dramatic interest of the episode. We nevertheless think Hetty the best drawn of her young women. Esther Lyon, the heroine of the present tale, has great merits of intention, but the action subsides without having given her a "chance."

It is as a broad picture of midland country life in England, thirty years ago, that "Felix Holt" is, to our taste, most interesting. On this subject the author writes from a full mind, with a wealth of fancy, of suggestion, of illustration, at the command of no other English writer, bearing you along on the broad and placid rises of her speech, with a kind of retarding persuasiveness which allows her conjured images to sink slowly into your very brain. She has written no pages of this kind of discursive, comprehensive, sympathetic description more powerful or more exquisite than the introductory chapter of the present work. Against the solid and deep-colored background offered by this chapter, in connection with a hundred other passages and touches, she has placed a vast number of rustic figures. We have no space to discriminate them; we can only say that in their aggregate they leave a vivid sense of that multiplicity of eccentricities, and humors, and quaintnesses, and simple *bizzaries*, which appears to belong of right to old English villages. There are particular scenes here—scenes among common people—miners, tinkers, butchers, saddlers, and undertakers—as good as anything that the author has written. Nothing can be better than the scene in which Felix interrupts Johnson's canvass in the tavern, or that of the speech-making at Duffield. In general, we prefer George Eliot's low-life to her high-life. She seems carefully to have studied the one from without, and the other she seems merely to have glanced at from the midst of it. Mrs. Transome seems to us an unnatural, or rather, we should say, a superfluous figure. Her sorrows and trials occupy a space disproportionate to any part that she plays. She is intensely drawn, and yet dramatically she stands idle. She is, nevertheless, made the occasion, like all of her fellow-actors, however shadowy they may be, of a number of deep and brilliant touches. The character of her son, the well-born, cold-blooded, and moneyed Liberal, who divides the heroship with Felix, is delicately and firmly conceived; but like the great Tito even, like Mr. Lyon, the Dissenting preacher in the present work, like Esther Lyon herself, he is too long-drawn, too placid; he lacks dramatic compactness and rapidity. Tito is presented to us with some degree of completeness, only because Romola is very long, and because, for his sake, the reader is very patient.

A great deal of high praise has been given to "Felix Holt," and a great deal more will be given still; a great many strong words will be used about the author. But we think it of considerable importance that these should at least go no further than they have already gone. It is so new a phenomenon for an English novelist to exhibit mental resources which may avail him in other walks of literature; to have powers of thought at all commensurate with his powers of imagination, that when a writer unites these conditions he is likely to receive excessive homage. There is in George Eliot's writings a tone of sagacity, of easy penetration, which leads us to believe that she would be the last to form a false estimate of her works, together with a serious respect for truth which convinces us that she would lament the publication of such an estimate. In our opinion, then, neither "Felix Holt," nor "Adam Bede," nor "Romola," is a master-piece. They have none of the inspiration, the heat, nor the essential simplicity of such a work. They belong to a kind of writing in which the English tongue has the good fortune to abound—that clever, voluble, bright-colored novel of manners which began with the present century under the auspices of Miss Edgeworth and Miss Austen. George Eliot is stronger in degree than either of these writers, but she is not different in kind. She brings to her task a richer mind, but she uses it in very much the same way. With a certain masculine comprehensiveness which they lack, she is eventually a feminine—a delightfully feminine—writer. She has the microscopic observation, not a myriad of whose keen notations are worth a single one of those great synthetic guesses with which a real master attacks the truth, and which, by their occasional occurrence in the stories of Mr. Charles Reade (the much abused "Griffith Gaunt" included), make him, to our mind, the most readable of living English novelists, and prove him a distant kinsman of Shakespeare. George Eliot has the exquisitely good taste on a small scale, the absence of taste on a large (the vulgar plot of "Felix Holt" exemplifies this deficiency), the unbroken current of feeling and, we may add, of expression, which distinguish the feminine mind. That she should be offered a higher place than she has earned, is easily explained by the charm which such gifts as hers in such abundance are sure to exercise.

HOME TRAVEL.*

THERE being undeniable advantages in foreign travel, apart from considerations either of health or pleasure, in a change of scene, the practice of American tourists of traversing Europe before they have begun to explore the beauty of their own land is not to be visited with unmixed reproach. Circumstances, too, may make a man willing or even compel him to see Tivoli before he has seen Niagara; and something might be said for that feeling which in all countries makes those who live nearest to famous sites or monuments the last to visit them because it is always possible to do so. But it is really a pity that people should cross the ocean for *recreation* that might just as well be had at home. Ignorance, of course, is at the bottom of this expatriation, or an unbelief that there are here views as enchanting, air as pure, water as medicinal, novelties as real, as any to be found abroad. Whoever can contribute to the general information on these points is so far a public benefactor. New England has been fortunate in this particular—Thoreau, in his "Week on the Concord and Merrimac Rivers," his "Walden," his "Cape Cod," and "Maine Woods," did much to celebrate her natural features. Bryant, Longfellow, Lowell, Emerson, and especially Whittier, have acquainted the poet-loving world with her inner mysteries of mountain, forest, and flood. The posthumous papers of Theodore Winthrop half-opened the portal of that magnificent region in which lie the six connected lakes that are emptied by the Androscoggin, and whose shores are innocent of any life save the lumberman's, the trapper's, or the trout seeker's. The wonders of the White Mountains were early revealed, but the classical work concerning them is that by the late lamented Starr King, who has left little for gleaners in a field with which he was so thoroughly familiar, and of which he knew how to write so gracefully. What Irving did for the valley of the Hudson need only be remembered in passing. There have been one or two books descriptive of the Adirondacks, but none, to our knowledge, complete and of recent date. Omitting the attractions of the South, which are just now not unalloyed, and making a long skip, we may derive from Mr. Bowles's "Across the Continent" many appetizing glimpses of what royal excursions are in store for us in the good time coming of the Pacific Railroad.

For the rest—and how great the void is!—we must content ourselves with photographic views, with occasional letters to the newspapers, or the diary of a friend; and for convenience in pursuing the travelled routes, we must take what guide-books we can get. In the case of the Connecticut Valley Mr. Burt's is, we believe, the only one yet published, but it is so good that it will be long before the public will complain of Hobson's choice. One reads it with almost the interest of a novel, and quite outstrips the ex-

"Saratoga Springs: Being a complete Guide to the mineral springs, hotels, drives, and all points of interest around and in the immediate vicinity of this celebrated watering-place. By William L. Stone." Views taken on the spot by William Gellatly. New York: T. Nelson & Sons. 1866.

"Miller's New Guide to the Hudson River. Illustrated by T. Addison Richards." New York: James Miller. 1866.

"Miller's Guide to the Central Park. Illustrated. By T. Addison Richards." New York: James Miller. 1866.

press train which speeds him, in hurrying from town to town and from State to State. There is in this guide-book the material for a volume of essays on the New England character as developed under the republican institutions brought over in the *Mayflower*—a rich medley of industrial, agricultural, educational, and social statistics, topography and biography, history and archæology, the number of miles and the number of people, this man's charity and that man's wealth, incidents of the French war and of the Revolution, a battle-monument here, a grave-stone yonder, in short, the most curious information, along with railroad time-tables, choice of routes, the best hotels, and all other practical directions as needed. Mr. Burt, to use a figure appropriate to the broad meadows about Northampton, to which he belongs, cuts a broad swath on either side of his main-track, and will serve also those who prefer to travel by the highway, either in carriages of their own or, still better, on foot. Of the White Mountains he has nothing to tell except the mode of getting to them, and with good judgment.

Mr. Stone's little pamphlet accompanies some dozen or so views, which are tastefully and accurately enough engraved, but which, with all others of the same description, we long to see superseded by the photograph. The origin of the various springs, their mineral composition, their change of ownership, the character and sites of the principal hotels, and a fair number of agreeable drives, are duly recorded from something more than a sense of duty or as if under contract. Mr. Stone thinks the "Jesuit's Relations" have enabled us to settle the real signification of the word "Saratoga"—not "the place of the salt springs," as some would have it, but (Saraght-aga) "the place of herrings." We suppose a compromise on "salt-herring" would be inadmissible.

The anonymous author of the "Guide to the Hudson River" honorably acknowledges his indebtedness to various writers, among whom Mr. Lossing is mentioned most frequently, for the substance of his book. It is a well-written, discursive, not at all formal talk about the sights on right and on left as one sails up from New York to Albany—for the author alludes to the Hudson River Railroad only to upbraid it for niggardliness and short-sighted dealing with the dwellers by the river. He is equally free in his criticisms of the architectural displays—"follies" he terms some of them—that attest the ingenuity of the American man in solving the problem "villa;" and he humorously expresses his preference for Fishkill over Newburgh. As for details of boats and docks, and railway connections and hotels—he has none of them. A map of the river as far as Troy is prefixed to the text.

Mr. Richards's "Guide to the Park" is not a model of art or literature. (The author speaks of cascades and cedars as being pretty little "incidents" of the grounds, and descants on the "physique" of the Croton reservoir.) But those people who would enjoy the Mall or the Ramble more because they know its name—as M. Jourdain was entranced on learning that he had been speaking prose all his lifetime—will gladly pay for the privilege, and the plan at the end at least will be of service to them. But a far better guide in all respects is the "Ninth Annual Report of the Board of Commissioners," with two admirable maps, several lithographic and two photographic illustrations, besides woodcuts, etc., together with a complete list of the works of art, and other donations to the Park, zoölogical, botanical, and antiquarian.

Christine: A Troubadour's Song, and other Poems. Geo. H. Miles. (New York: Lawrence Kehoe.)—There is something not unlike the genuine pleasure of reading original poetry in reading such stuff as this "Christine;" the author so boldly carries us back to the old times when Sir Walter was the god of our idolatry; when in our hearts we plained upon our fate that we also had not been born a Marmion; or, perhaps, that solitary horseman, Algernon Gray—he was an earl really—who fought for the Princess Palatine by the green river Neckar. There are the old mouth-filling verses, the stolid monk, the fair ladye, the splintered lance, the torches twain at head and heel, the goodly tournament, the wizard, the hermit, and—why should we make an inventory?—all the well-remembered stock-in-trade of the mock mediæval poem.

> "Ho, craven, shun'st thou the mêlée?"
>
> "Saint George, but 't was a gallant sight!"
>
> "But the Baron thundered, 'Off with the slave.'"
>
> "Thou hast fasted, God wot, like an anchorite."

It is senseless stuff, we may as well confess, but who is not pleased with it? Like the meaningless spell of the Eastern enchanters, because the wise monarch used it once, it is still potent over all spiritual essences. In the last half of his book, where Mr. Miles imitates Browning, as in "Raphael Sanzio," and some of the smaller pieces, we do not read with the same degree of pleasure; still he has succeeded tolerably in his attempt. As a satirist he is a dead failure. The "fatal facility" of the eight syllable verse, of which he is so fond, has spoiled him for English heroics, in which we have learned to expect condensation and point. But there is not much point in this hit:

> "Why wake the organ wail of Hiawatha,
> When piping Publishers assume the author?"

And the rest of "Aladdin's Palace" is equally poor and unpolished. The pathetic little poem which we copy shows how narrowly Mr. Miles can escape doing well; and reading it one is at a loss to know how its writer could be guilty of about two hundred and fifty of these two hundred and eighty-five pages:

BILL AND I.

I.

The moon had just gone down, sir,
But the stars lit up the sky,
All was still in tent and town, sir,
Not a rebel could we spy;
It was our turn at picket,
So we marched into the thicket,
To the music of the cricket
Chirping nigh.

II.

Oh, we kept a sharp look-out, sir,
But no danger could we spy,
And no rebel being about, sir,
We sat down there by and by;
And we watched the brook a-brawlin',
And counted stars a-fallin',
Old memories overhaulin',
Bill and I.

III.

And says he, "Won't it be glorious,
When we throw our muskets by,
And home again victorious
We hear our sweethearts' cry,
'Welcome back!'"—
A step! "Who goes there?"
A shot—by heaven, the foe 's there!
Bill sat there, all composure,
But not I.

IV.

By the red light of his gun, sir,
I marked the rebel spy,
In an instant it was done, sir,
I had fired and heard a cry.
I sprang across the stream, sir,
Oh, it seems just like a dream, sir,
The dizzy, dying gleam, sir,
Of that eye!

V.

A youth, a very boy, sir,
I saw before me lie;
Some pretty school-girl's toy, sir,
Had ventured here to die.
We had hated one another,
But I heard him murmur "*Mother!*"
So I stooped and whispered "*Brother!*"
No reply.

VI.

I crossed the stream once more, sir,
To see why Bill warn't by;
He was sittin' as before, sir,
But a film was o'er his eye.
I scarce knew what it meant, sir,
Till a wail broke from our tent, sir,
As into camp we went, sir,
Bill and I.

The American Printer: A Manual of Typography, containing complete instructions for beginners, as well as practical directions for managing all departments of a printing office. By Thomas Mackellar. (L. Johnson & Co. Philadelphia, 1866.)—Should the practical printer desire fuller instruction in his calling than can be acquired during an ordinary apprenticeship at the composing desk, he ought certainly to find it in the handsomely printed and illustrated volume before us, which seems to be the result of intelligent research in the best modern works on typography, combined with considerable personal experience. That it can ever wholly supply the place of practical instruction is doubtful, to say the least, and the author, himself a practical printer, probably never intended that it should do so. But as a companion, or ready hand-book of reference for foreman, compositor, pressman, or proof-reader, it will doubtless serve a useful purpose. Its chief merits may be thus summed up:—It describes with commendable clearness, and with the aid of well-executed wood-cuts, the implements or tools of the art, the various processes of composition and imposition, the methods of proof-reading and correcting, the duties of foreman or overseer, the press and its working, and in general explains the whole economy of the printing office. Incidental to this we have an account of the rise and progress of printing, a sketch of the law of copyright, hints on orthography and punctuation, etc. We could wish that the author had noticed more fully the practice, unfortunately too prevalent in this country, of employing incompetent persons as proof-readers. The office, in general a thankless one, is so frequently intrusted to persons whose chief, if not only, recommendation is that they are good compositors and have a quick eye to detect mechanical inaccuracies, that a correctly printed book rarely issues from the American press. The union of thorough typographical instruction with good literary attainments and a knowledge of languages is so rare (and in the nature of things it can scarcely be otherwise) that there are probably not more than three or four persons in this city, where millions of books are annually printed, who can be pronounced *competent* readers. The error lies in not specially instructing persons for the office, and in not attaching to the office such a degree of dignity and importance, and such emolument also, as would induce men of acquirements to train themselves to fill it. The difficulty might perhaps be obviated by employing two classes of readers upon the same proof, one to correct typographical errors, and the other to insure literary correctness. But this would prove but a clumsy expedient, to be dropped just as soon as a system for instructing competent persons is put into practical operation. Not the least valuable portion of Mr. Mackellar's work is that embodying his hints to writers for the press, particularly those of limited experience. By attending to them they would save all departments of a printing office much trouble.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE SILENCE THAT CONDEMNS.

FIFTEEN days have elapsed since Mr. Johnson took the government of Louisiana into his own hands, and allowed it to pass into the charge of a ferocious and bloodthirsty mob. Fifteen days have passed since he learned of the wholesale massacre of unarmed and loyal men, by those to whom he had deputed his authority. When appealed to by pardoned rebels to suppress a peaceful convention and to depose the governor of a State, he lost no time. He could not wait from Saturday to Monday, but hastened upon Sunday to tie the hands of Gen. Baird, and to direct the forces of the United States to be used in support of the "thugs" of New Orleans. The thugs have acted according to their nature. We cannot believe that Mr. Johnson *meant* that they should enact the scenes of diabolism which they did. We cannot suppose that he intended arrests to be made without the shadow of legal warrant, the assassination of defenceless and unresisting prisoners, the deliberate massacre of unconvicted and unresisting men. But the deed has been done. Even some of his own tools are shocked at their work; why cannot the President speak? He was prompt to telegraph messages against the convention; prompt to publish his telegrams. Has he telegraphed any censure of this bloody work to the rebels whom he made rulers of Louisiana? If he has, why does he not publish his telegram? What means this silence over massacre after such ready speech against "usurpation?"

We trust that all our readers have studied the letter of Mr. E. P. Brooks to the President's organ in this city. Calm and clear in its statements, its impartial record is all the more terrible in its effect upon the mind. It relates how the clergyman who offered prayer at the opening of the convention came down to surrender himself to the police, with a white handkerchief on the end of his walking-stick, and "was met, knocked down, trampled upon, kicked and beaten nearly to death while begging for mercy" (he is since dead); how Dr. Dostie was treated in the same manner, besides being stabbed repeatedly; how a detachment of the mob, some hundreds strong, led by six policemen, hunted a single negro, the policemen, as they came up with him, emptying their revolvers into his back; how another negro, falling from a policeman's shot while trying to escape, was surrounded by policemen, who fired their pistols into him as he lay, and then, when he feebly raised his arms to implore for mercy, pounded him with their clubs; how a policeman mounted a cart full of dead men, and thrust his revolver between their bodies to kill two men beneath them who yet gave signs of life. These, be it observed, were the acts of the *police*—the sworn guardians of the public peace into whose hands the city was committed by the express orders of the President. For yet more ghastly scenes among the auxiliary mob, we refer to the same letter, in the New York *Times* of August 8.

These specific details, given voluntarily by an eye-witness who is a supporter of Mr. Johnson's policy, and who has not withheld censure of "Radicalism" at the North, have been public for more than a week, but yet we have not heard a word from Mr. Johnson or his organs. The Saratoga Convention has met and endorsed all the acts of Mr. Johnson. Long speeches were made on the occasion, but we do not notice a single expression of horror over this narrative, which half the members must have read on their way to the place of meeting. They could go out of their way to pledge an affected sympathy for the soldiers of the Union at the North, but could not spare a word for the discharged soldiers who had just been massacred by paroled rebels at the South. The president of the convention declared that he held out his hand to the loyal men of the South, whom he justly called our brothers; but to the blood of these brothers, spilt before his eyes, he was blind; to their cries for help and rescue he was deaf.

The partisans of the Administration in vain endeavor to evade their responsibility for this appalling crime. But for the President's positive orders, Gen. Baird would have protected the convention from violence. The action which Gen. Baird finally took, and which alone stayed the work of death, was contrary to the President's instructions; and it is already announced by one of the President's mouthpieces, that the general's action will cost him his place. If the whole object, end, and aim of the President's policy is not to turn over the loyal men of the South into the hands of such rulers as Mayor Monroe, and such police as those of New Orleans, who can say what it is? Not only does he encourage and aid the rule of such men, but if by accident a man of different mould comes into power, the President either ignores him, as in Tennessee, or threatens him with violent resistance, as in Missouri, or deposes him, as in Louisiana. In short, the man who made such loud professions of loyalty, of hatred of treason, of determination that loyal men should rule, is the man under whom to-day past loyalty is made odious, traitors raised to power, and Union men literally crushed under their feet. There is not a doctrine in his political creed which he has not violated, not a promise which he has not broken, scarcely an act of usurpation *in his power* which he has not committed. But of all his acts, none have been so utterly without palliation as his course in respect to the Louisiana Convention. His readiness to speak when he had no pretence of right to interfere, and his persistent silence when every instinct of manhood should have drawn him to speak, are his crowning, his damning disgrace.

THE REAL SIGNIFICANCE OF THE GERMAN STRUGGLE.

THE theories which almost every German had formed at the beginning of the late war in Europe have been dissipated by the astounding events which have succeeded. The Southern Germans were firm in the conviction that a single battle would destroy the Prussian army, and establish the superiority of Austria in the field. Their only apprehension was lest a too easy victory, on the part of Austria, should make that power too overbearing and haughty, and, consequently, place at her mercy the liberal element of Southern Germany. The Prussians, on the other hand, and with them the majority of the North Germans, hoped and expected that the Berlin arrogance would, in the beginning of the war, see its Bull Run; that the guards and the gentry (*Junker*) would be beaten, and that after their defeat the people would step in to re-establish the Prussian ascendency and superiority over the despised Austrians.

Neither of these theories has been realized. Prussia has beaten Austria more quickly and more thoroughly than the most sanguine wiseacre ever expected. Her successive and decisive victories, together with the cession of Venetia to France, have effected a prodigious change in the mind of the whole nation.

First, in Prussia. It cannot be denied that in the beginning the great majority were against the war. In reading the Prussian papers of April and May, an indifferent observer would have been led to the belief that the whole country had become converted to the faith of Elihu Burritt. With the single exception of the town of Breslau, all the large and small cities, the middle classes, the manufacturing interest, the landowners, the burghers, and the whole liberal opposition, were clamorous for the preservation of peace. Even the army did not dare to demand war, and several officers of high rank refused to sign an appeal for war, addressed to the King by the so-called Berlin Generals' Club. But when Dresden, Hanover, and Cassel had been taken, and the first battle won, the nation went in for the war.

There are two explanations for this sudden change. The Prussian army is emphatically the armed people, and all classes are represented in its ranks. It is well known that every citizen is bound to serve in the army, and that there is no difference between the rich and the poor, the higher and the humbler classes, and that in rank and file the count or prince stands by the side of the peasant or day-laborer. The army is, therefore, simply a part of the people, and interwoven with all its interests. There is not a hut or hamlet in the remotest corner of the kingdom which has not its proud military recollections and associations; there is no family which has not one of its members in the army. As soon, therefore, as the government declared itself ready to carry out the programme of the German liberals, and the army was put in motion, all former differences of opinion about the doubtful character and object

of the war disappeared, and were merged into one common feeling of sympathy and concern for the defenders of the national honor. However wrong and provoking Bismark may have been in the first stages of the complications, the resolution of the Diet of June 14th was felt by the whole people as an insult, which must be answered not by protests on paper but by energetic and efficient action. On the other hand, the opposition, which in its home policy was perfectly right against the encroachments of Bismark's cabinet, yielded to his foreign policy when they saw that he was in earnest. "Prussia," this was substantially their reasoning, "has been too long the subservient tool of Austria, and by her vassalage has injured her best and most vital interests. One day the conflict between the two powers must be fought out, and the sooner the better. The revolutionary or democratic element of the country is not strong enough to unite Germany; that end can only be reached by a powerful Prussia, in the same way as a united Italy has been, or rather will be, created by her greatest military power, Piedmont."

Thus the Prussian people and its prominent leaders, after the first victorious battles, soon agreed in at least not opposing the government in its war schemes, and the victory at Sadowa created quite a *furore* for war in those who, scarcely a month before, cried loudly for peace. In Southern Germany we noticed at the same time but one common feeling, that of hatred, the most intense, of Bismark and Prussia. Old radicals, the Catholic clergy, the democratic beer-drinking masses, government officials, and the high aristocracy surpassed each other in denunciations of Prussia and her policy. Even the noted Elector of Hesse, and Herr Beust, of Waldheim, were venerated as martyrs to the law of the Confederation, and this detested concern was by its worshippers surrounded with the glory of a defender of the faithful. On this point all Southern Germans agreed; it was the only positive plank of their platform; but on all practical questions they differed as widely as Mr. Raymond from Vallandigham or Lee. The Prussians, from the beginning, always knew what they were about; the Southern Germans had no fixed principle, no positive object in view; and this hesitating, vacillating policy explains why the little thrones of the supporters of Austria, detested as they were, or at least regarded with indifference, by their own subjects, fell down so rapidly at the first shock, and why their armies were beaten before they had even entered upon the campaign.

The Southern German democracy has proved itself utterly incapable and weak, it has not shown the least understanding of the duties of the hour. Instead of driving away the little princes, or at least the most obnoxious of them, such as the Duke of Nassau, the King of Würtemberg, the Grand Duke of Hesse-Darmstadt, and all the small fry of their dependents, it formed an alliance with reactionists of all stripes, and worked for the very same princes whom it had for years denounced and handed over to public contempt, and from whom it had never received any concession or consideration. The German democrats have shown that they do not deserve the name of a party, that they only represent a vague sentiment, and that they must first build upon a strongly national basis.

True, after Austria had ceded Venetia to Louis Napoleon they began to see clearer. A foreign enemy was called in, not by Prussia, which has so often been accused of treacherous designs, but by Francis Joseph, the alleged guardian, the archangel of the Confederation. The Würtemberg liberals at once denounced the shameful transaction as high treason against the nation, and threatened withdrawal from the unholy alliance: the citizens of the old Palatinate and of Rhenish Hesse protested strongly against a single inch of German territory being ceded to France; and the Rhenish liberals, who had been rather lukewarm, began, at the prospect of a French invasion, to invoke war against France if she should dare to interfere in German affairs. The reckless act of the Austrian Emperor merely injured his position among his allies, and elevated Bismark in the estimation even of his South German enemies, when he refused to accept Napoleon's good—or, rather, bad—offices.

For what, after all, has the war between Austria and Prussia been carried on? Not in the interest of freedom, but merely for the sake of power and the supremacy of Prussia. This kingdom came out of the Congress of Vienna too small for a great power and too great for a subordinate position among the empires of Europe. Till lately she had to bear all the burdens of the defence of Germany without reaping a single benefit from this obligation. Germany has, during the last fifty years, suffered under an abominable and disgraceful political system; the vigor, energy, and power of a great nation have been eaten up by some three dozen petty princes, with whom the country was saddled for the benefit of foreign powers. Ever since 1815 the national mind has been longing for and striving for unity, and Prussia, in spite of her subserviency to Austria and her reactionary tendencies during the greater part of the last fifty years, was the only German state which could eventually achieve a greater unity. In 1848 the romantic Frederick William IV. refused the imperial crown because it was offered to him by the people. Bismark is wiser. Three years ago he told Austria plainly that she had no business in Germany, and she ought to confine herself to the Lower Danube. Since that time he has overcome the King's repugnance to make war on his old ally, and the war undertaken for the exclusive interest of Prussia in its results will benefit all Germany—at least all Germany north of the Main. Bismark's policy has re-established Germany as one of the great powers of Europe, which is bound to increase from year to year, and to exert a more powerful influence upon the destinies of the Old World. A homogeneous population of thirty millions of souls, industrious and enlightened, well educated and disciplined, frugal and energetic, vigorous and wealthy, physically brave and strong, has all the elements of greatness in itself and will make its weight felt among its neighbors. Even those parts of Southern Germany which are now left to themselves will, by and by, be attracted to the greater centre by its higher economical development, its greater prosperity.

But will not a Germany thus Prussianized jeopardize the liberties of the country? Will it not kill the little that is left of free and parliamentary institutions, and, in the end, be a mere military despotism which knows only rulers and ruled? We believe not. There is no disaster in Germany's being Prussianized. On the contrary, if Prussia extends her influence over Germany, it will be a great blessing. Prussia, with her good schools and freedom of commerce and industry, with her liberty of conscience and the self-government of the towns and villages, with an army established upon a democratic basis, with her developed industrial resources, will confer the benefits of her own institutions upon the German people at large, and will soon make them feel one and the same. Besides, Bismark is too far-seeing a statesman not to understand that he must enlist the sympathy of the people for his schemes, if he would successfully achieve them. Before he broke with Austria he tried to conciliate the liberal opposition, and to obtain an indemnity for his home policy by his bold foreign policy. He made overtures to the leaders of the Second Chamber, but utterly failed. He sent for Baron Roggenbach, the able Baden minister and leading statesman of Southern Germany, and offered him a place in the ministry, but Roggenbach showed him the cold shoulder. He applied to Herr von Bennigsen, the President of the German National Union (National-Verein), and asked his support, but he failed in his endeavors. Since, however, the war has broken out, since the petty princes have been driven away, and since Bismark has proved that he is in earnest, the liberals are beginning to support him. Already, before the lately elected new Chambers, which have increased the strength of the ministerial party by about twenty-five votes, and which opened their sessions on the 6th inst., the King, in his address, has requested indemnity for the past, while acknowledging the right of the Chambers to reject or to pass the budget. The military question, which was at the bottom of the whole conflict, is no longer of practical consequence, since Northern Germany will now contribute its quota to the Prussian army, and the Prussian people may now be relieved of the most pressing burdens of a large standing army. Even the names of some new liberal ministers to be taken into the cabinet are given. It is an important fact that Baron Roggenbach, on July 1st, offered Bismark his services and co-operation, upon the sole condition that the work of the reorganization of Germany should be thoroughly done. "If you are willing," he wrote, "to break down the infamous system which in 1815 was created in the interest of Austria, and to build upon its ruins a German State, strong enough to throw off the rotten and pernicious yoke of the detestable Vienna politics; and if you are willing to persevere in the battle until the object be reached for which the German

people, for the last fifty years, have suffered and fought, you will always find me ready to co-operate with you." Bennigsen was offered the Prussian civil governorship of Hanover, but he declined for the purpose of entering the German parliament.

The question which presents itself to every patriotic mind is this: Austria, from the very nature of her power, must suppress all nationality in order to reign supreme; it is her interest to have Germany divided and weak, in order that she herself be strong. Prussia, on the other hand, whatever she does for herself, will and must do it for Germany too; she is a German power, and it is her interest to curtail the sovereignty of the smaller princes, if not to do away with them entirely. It is her interest to consolidate, to unite Germany. All minor considerations are silenced by this main question. The Germans have long enough felt the shame and the reproach of being a political nonentity; they now claim among the nations of the world the position to which they are entitled by their number, their intellect, and their wealth. There is no danger that Bismark, even if, contrary to the general expectation, he should continue in his old narrow-minded home policy, will be able to subdue the national spirit or to check its progress. The people will come out of this war more elevated, more self-reliant, and more enterprising. The Germans do not fight for "la gloire;" they will enlarge the domain of freedom; and we do not doubt that the wholesome influence of their reconstruction will be felt all over the world. A united Germany will never engage in an offensive war; it has better things to do; it will be the preserver of peace. It is on this account that we rejoice in the downfall of Austria and the success of Prussia.

FACTS NOT TO BE FORGOTTEN.

Gov. Boutwell's report to the House of Representatives, on the complicity of Jefferson Davis in the assassination of Abraham Lincoln and the cruel treatment of Union prisoners, naturally causes the enquiry: How came such a perversion of mind and soul about? How could they, who constantly vaunted their own nobleness of mind and fervor of religion, look each other in the face, when they knew that they sanctioned, or complacently winked at, what we do not hesitate to call the most atrocious public acts of modern history? These are questions belonging to what may be fairly called the psychology of the rebellion—a very instructive, but a very sad and humiliating subject. Uncontrolled and groundless pride, fierce hatred, coupled with stultifying contempt of the North, and the most liberal mendacity, are the main elements, in constant reciprocal action, of that great crime and folly called the rebellion.

From the very beginning of the war the South acted as if freed from all responsibility toward the North in morality or the law of nations; and it was often declared that the *insolence* of the North, in daring to attack the South, subjected the North to the severest acts of vengeance. If we are rightly informed, it was this very fact which induced the author of our General Order, No. 100 (1863) to relate in paragraph 67, what at the time appeared superfluous, that the treatment of prisoners of war does not depend upon their "belonging to a government which the captor may consider as a wanton and unjust assailant." Indeed, there are several paragraphs in that General Order which appear unnecessary. They were put in because our enemy defied all laws of war when it suited him, and he thought he could do so with impunity. Yet there exists a letter of Mr. Seddon, the rebel secretary of war, to Ould, the rebel commissioner for the exchange of prisoners, nearly, if not quite, as long as the code contained in the Order, and charging the latter with cruelty and dishonor, not to speak of the want of law-knowledge which the learned war secretary discovers in the author.

This decried General Order* pronounces itself against all assassination as contrary to the modern law of war among civilized nations (sec. 16 and appendix). The rebel government—Davis, the cabinet, all—entertained offers of assassination and the formation of a *corps of assassins*. We thought we were living in the nineteenth century; but we had to deal with an enemy corrupted and depraved by pride, hatred, and falsehood. If, as was never the case, an offer of assassination had been made to the pure-minded Lincoln or his government, he would doubtless have answered in the spirit in which Admiral Jarvis, Lord St. Vincent, commanding the fleet in the Mediterranean, promptly answered a Frenchman who offered to assassinate Napoleon: "Lord St. Vincent has not words to express the utter abhorrence in which he holds an assassin." Davis and Benjamin, and the other Richmond officials, did not express any abhorrence when the offer was made to assassinate Lincoln, Seward, Stanton, Prentice, Greeley, and other vile enemies whom there was no obligation to abstain from assassinating, inasmuch as they had dared to attack rebels of superhuman excellence.

There were, indeed, people in the South who could not easily reconcile themselves to the treatment of the Union prisoners—treatment, we repeat, unparalleled in history. Prisoners were sold into slavery, were mutilated so as to mark or to incapacitate them for further service. Napoleon ordered, at Jaffa, two thousand Turkish prisoners, the day after the surrender, to be led to the sea-shore and there slaughtered, and that great care should be taken that not one escaped. All this seems but cruel fury compared to the slow murder of our soldiers in the hands of the rebels by starvation, scurvy, pest, and filth in the prison-pens—thousands upon thousands—by the deliberate design of those who prated about their moral and intellectual superiority, and asseverated their superior civilization founded upon a select race.

We find that in their public messages, acts, and articles they exhibited their lawless practice of retaliation, called for, as they pretended, by the following atrocities on our side:

1. The Northerners came to violate their women. Recall the unblushing proclamation of Beauregard, with which he opened the campaign. Nor did Bishop Elliot omit mentioning this intent of ours as a justification of Bishop Polk. Dr. Elliot allows, in his sermon at the grave of General Polk, that a bishop ought not to accept a military commission for the sake of lucre or ambition (a great admission, indeed), but when the question is of protecting our altars or the *purity of our wives and daughters*, it is a different thing, and a bishop, much pressed as Polk was by Davis, had a perfect right to put on the uniform. Even before the war had begun, blatant orators, such as Pillow, told the Southerners that the Northern army was going to invade their country for the purpose of "ravishing their daughters."

2. Lincoln had called upon the slaves to murder their masters, at any rate "to do it in self-defence," and had done all he could to cause a servile war. This required retaliation of the severest kind.

3. We had defied all the laws of war by firing upon cities containing women and children. This came chiefly from that great lecturer on the laws of war, Beauregard, but it was soon adopted all over the South.

4. We treated Confederate prisoners in our hands most shamefully. The more unfounded this charge was, the more boldly it was asserted; and, perhaps, the more readily received.

5. We would not exchange prisoners, therefore they would force us by the suffering of our friends to do so. They did not tell their people that we would not exchange because they had executed our soldiers—colored privates and their white officers—when captured, nor did they tell them that we abstained from all retaliation in this case. Whether they ever executed white officers for commanding negroes we do not know, but they pretended that they did, and justified it—Davis at the head of all of them.

6. We did not spare private property (meaning, chiefly, slaves), yet private property ought to be protected by the modern laws of war.

7. We not only carried on war against soldiers in the field, but against private citizens, by capturing and impressing them.

8. We had no ground for attacking them, who wished to be left alone.

These are the chief arguments by which the rebel government excused their cruelty to themselves. Man is so curiously logical a being that where he finds a link missing in his own justification, he will fill the empty place. We have said before that all these enquiries and statements are humiliating; for who are they that fell so low and are found so loathsomely depraved? They are our brothers—of the same flesh and bone with ourselves. In identical circumstances we, too, might have said, "Slavery is divine, let us worship wrong;" and, having said so, we too should have hated him who refused to say the

* It has been made the basis of a very important work on the law of war, by a distinguished European jurist—Dr. Blantschli, of Heidelberg.

the same. We do not imprecate vengeance upon their heads, but we solemnly protest against passing over their wicked deeds as if they had been peccadilloes; against making them our masters, or even our equals, as long as they remain unchanged, and against sharing in their falsehoods, and prostrating ourselves before their resuscitated arrogance.

OUR AGRICULTURAL COLLEGES.

Four years ago Congress made provisions for the establishment in each State of an institution to be called an agricultural college, though the purpose in view was of a far larger scope than this term would indicate, and really contemplated an educational experiment of a very grand character. Two or three of these institutions have been fairly started, and in several others boards of trustees have been organized and plans debated, but there is generally a timidity and hesitation about the undertaking of practical operations which lead us to fear that the experiment is not likely to be tried under conditions favorable to its success.

Those who are responsible in the matter will do well to consider the experience of the Trustees of Girard College, as related in an interesting paper which will be found in the January number of the "North American Review." In this case it took thirteen years of mismanagement to build an edifice which is at once a monument of the benevolence of its donor and the incapacity of those into whose hands fell the disposition of his munificent gift. And when, to the discomfort of the boys who occupied it and to the ridicule of the men who planned it, the building was finished, sixteen years more failed to give to the college any fixed policy. The delay in opening the college lost it its first most able president, and the counsels of the directors were so vague and confused that the public were left quite in the dark as to what was becoming of the institution. The especial lesson of this experience is that strength lies in the one-man power.

The work of organizing and starting so novel an institution is not to be done piecemeal and at odd hours. It must be the event of the life of him who accomplishes it, not an incident in his career. It must be his study, not his diversion. There is little precedent to follow. Nearly all that can be learned from example is what not to do. There is great want of faith and little enthusiasm in the enterprise. Success is impossible if it is to be entrusted to those who can give it only their spare moments. Let no board of directors think that they can choose an incompetent man and help him out among them. And, having chosen a competent man, let him be endowed with a large and generous discretionary power. It is as fatal to hamper a good man as it is to choose a bad man. Good or bad, he must be let alone. We might as well have a wooden automaton for the leader in a new enterprise as a man with an idea, if he is not allowed full liberty to put his idea into execution. We must judge by results, not by processes. The unity of purpose, the clearly-defined plan of a single head, are far more likely to be successful than the conflicting plans and ever-shifting methods of a dozen heads.

At any rate, let us have something done. An energetic attempt, even if but partially successful, would be more encouraging than the darkness and silence which seem at present to be brooding over the whole scheme. It is a wanton injury to the people; it is scarcely less than a fraud upon our boys and young men especially, to withhold from them for one unnecessary moment the advantages which a beneficent government intended to convey.

THE SCRAMBLE FOR PLACES.

We think that the President is preparing for himself a punishment for his misdeeds which should entitle him to the compassion of his unfriends and even of his enemies. In the cause of his policy this unhappy man is on the point of offering himself as the quarry of the hungry pack of office-seeking hounds who have hunted more than one of his predecessors into their graves. If he knows what awaits him, surely his worst enemies should give him credit for sincerity. It is hardly credible that he is going to be an amateur martyr merely as a matter of taste. When Cranmer thrust his right hand into the flames as the offending member to be the first punished for having signed his recantation, nobody doubted his fidelity to the truth for which he suffered. But he did not tie himself to the stake, nor kindle the fagots with his own hand. But here is a martyr for a faith which many of us esteem a damnable heresy, who is getting ready to bind himself for wheeling, to don the boot and put on the thumb-screw, in order that it may mightily prevail. Cardinal Wolsey may have been in the right when he said the poor man is to be pitied that hangs on princes' favors; but it is certainly as true, as far as our Presidential princes are concerned, that the poor man who is hung upon is at least as truly an object of pity. It may be very fine to have ten thousand offices in one's gift, but it is quite another affair to have twenty times ten thousand ravenous seekers after them setting upon him all at once. The greedy crowd is already collecting about him. The number of conversions to the faith that is in him shows that the days of miracles are not past, and that a political Pentecost is at hand. He will be able to find no refuge from these hordes of office-seeking barbarians. There will be for him no privacy of home and no escape in travel—

> "By land, by water, they renew the charge,
> They stop the chariot and they board the barge."

The White House will become like unto the palace of the impenitent Pharaoh, and be visited with this plague of frogs, not to liken them unto more unmentionable tormentors, that will force themselves into his cabinet and his study, and, for aught we know, into his bed-chamber and his kneading-troughs.

It may be that Vice-presidents have greater powers of endurance than Presidents, for none of them have thus far died under this torture. Mr. Johnson, we should think, was as tough as Major Joe Bagstock himself; but he must have great faith in his constitution when he subjects it to such a strain as it is about to undergo. Poor Genera. Harrison, though a veteran inured to hardships, stood it only one little month, and then sought the repose of the grave. General Taylor, who had spent his life in camps and had withstood the attacks of foreign enemies, yielded up the ghost when assailed by these domestic foes. He was able to survive this disease, endemic at the White House, worse far than the fever and ague, for rather more than a year; but his constitution was so much shattered in the process of acclimatization that it yielded to the access of the omnibus or compromise fever, which attacked him about that time. To be sure, Mr. Johnson has been an office-seeker himself, and has been lucky in finding even more than he reckoned upon, and so he may have a fellow-feeling for the hungry swarms that are gathering around him, warping on the wind, like locusts, from the uttermost corners of the land. And, after all, it is this very power of dispensing office that makes the Greatest Officer of all the object of such ambition. And if he chooses to reopen the canvass for port-officers and tidewaiterships, when it might remain closed at least until the next election shall bring a new party into power, it is his affair, as far as the personal annoyance goes, and the great mass of the people will probably contemplate his self-imposed affliction with the equanimity with which men usually regard the sufferings of their neighbors. But it is a matter that concerns us all that the head of the nation should publicly offer the pay the nation provides for its own service as the price of recruits to a faction of his own creating, and to compel conformity to his confession of faith, on the part of all public servants of his appointment, under penalty of dismissal.

This is an exhibition of the working of our institutions even more discreditable than the one we offer to the world every four years at the recurrence of our Presidential olympiads. The prizes for which the political athletes race and box and wrestle at these quadrennial festivals are not mere paltry wreaths of oak, or ivy, or laurel. It is not the charms of empty praise but the weightier attraction of solid pudding that prompts and stimulates those struggles. Embassies, cabinet appointments, collectorships, post-offices, and so downwards to doorkeeperships and gaugerships, are the palms which urge on to those victories. During the preliminary struggles we hear much of great principles and mighty policies which are at stake, and one would think that sages and patriots sprang from the soil by spontaneous growth, so loud and fierce is the love of public virtue everywhere. But as soon as it is known what king is to reign over us, then these patriots and sages are suddenly transformed into hungry claimants of their share of the public plunder, proportioned according to the services

they rendered in elevating him to the throne. And this without the smallest regard to fitness for the posts of which the booty consists. This doctrine of making the offices of the nation the bribes of political service was first introduced, with great moderation, by Jefferson, on his accession in 1801. Jackson put it in force more sweepingly and most unblushingly. And ever since it has been the rule of faith and practice of all parties, according to the famous *dictum* of Mr. Marcy, that "to the victors belong the spoils." This is a disgraceful sight enough, but not so sorry a one as to see an accidental President turning this enginery for the destruction of the party to whom he owed his chance for power, and the erection of another on its ruins. It degrades the public servants by making them the mere *condottieri* of a soldier of fortune. Whether he will be able to raise enough to control the nation by hiring them with its own money remains to be seen.

Mr. Johnson will find, however, that he cannot be exempt from "the curse of great ones," of which they have had to complain in all times. Like Napoleon, he will have it to say that by every appointment he has made nine enemies and one ingrate. And yet the nine who have missed their end are, nine times out of ten, luckier than the one who has gained it. There can hardly be a worse piece of luck that can befall a man than to be cursed with the granting of his prayers for office. He is scarcely warm in his place before he feels the uncertainty of its tenure, and goes into the next Presidential canvass as for his life. After being mulcted in a large percentage of his salary for electioneering purposes, the odds are that he goes out by the loss of the election, or that, even if his candidate win, he is ground back into his original elements by the millstone of rotation in office. And in such case, as a general rule, he looks back with repining eyes at the fleshpots from which he has been driven, and wastes the rest of his life in vain attempts to get back to them. Many a life has been wasted thus, and many men, capable of honorable success by independent labor, have lived in disappointment and distress, and too often died in vice and misery. It is bad economy of life to spend it in pursuit of the apparent ease of public office, deluded by the treacherous glitter of the public gold, when it might be made safe and happy by the honest pursuit of honest bread by the independent labor of the hands or of the brain. But this should not be so. It cannot be politically impossible to devise a method by which independent men can serve their country in necessary posts without having the sword always hanging over their heads by the single hair of one man's caprice or despotic purpose. And if the country is destined to the great career we all hope and most of us believe to be reserved for her, this vice which has infected our polity must be radically cured. Now that slavery is abolished, this is the next labor that calls for a political Hercules.

FORLORN.

I.

Red roses, in the slender vases burning,
Breathed all upon the air:
The passion, and the tenderness and yearning,
The waiting, and the ennui and despair.

II.

Still with the music of her voice was haunted,
Through all its charmèd rhymes,
The open book of such a one as chanted
The things he dreamed in old, old summer-times.

III.

The silvern chords of the piano trembled
Yet with the music wrung
From them; the silence of the room dissembled
The closes of the songs that she had sung.

IV.

The languor of the crimson shawl's abasement—
Lying without a stir
Upon the floor—the absence at the casement,
The solitude and hush were full of her.

V.

Without, and going from the room, and never
Departing did depart
Her steps, and one that came too late for ever
Felt them go heavy o'er his stricken heart.

VI.

And sitting in the house's desolation
He could not bear the gloom,
The vanishing encounter and evasion
Of things that were and were not in the room.

VII.

Through midnight streets he followed floating visions
Of faces and of forms;
He heard old tendernesses and derisions
Amid the sobs and cries of midnight storms.

VIII.

By midnight lamps, and from the darkness under
That lamps made at their feet,
He saw sweet eyes peer out in innocent wonder,
And sadly follow after him down the street.

IX.

The noonday crowds their restlessness obtruded
Between him and his guest;
At throngèd crossings jostled and eluded,
Against his hand her silken robes were pressed.

X.

Doors closed upon her; out of garret casements
He knew she looked at him;
In splendid mansions and in squalid basements,
Upon the walls he saw her shadow swim.

XI.

From rapid carriages she gleamed upon him,
Whirling away from sight;
From all the hopelessness of search she won him
Back to the dull and lonesome house at night.

XII.

Full early into dark the twilights saddened
Within its closèd doors:
The echoes, with the clock's monotony maddened,
Leaped loud in welcome from the hollow floors;

XIII.

But gusts that blew all day with solemn laughter
From wide-mouthed chimney-places;
And the strange noises between roof and rafter—
The muffled clamor and the scampering races—

XIV.

Were hushèd by his heavy tread ascending
The broad steps one by one,
And toward the solitary chamber tending,
Where the dim phantom of his hope alone

XV.

Rose up to meet him with his growing nearer,
Eager for his embrace,
And moved, and melted into the white mirror,
And stared at him with his own haggard face.

XVI.

But, turning, he was 'ware her looks beheld him
Out of the mirror white,
And at the window yearning arms she held him
Forth from the vague and sombre fold of night.

XVII.

Sometimes she stood beside him, looking over
His shoulder as he read;
Sometimes he felt her shadowy presence hover
Above his dreamful sleep, beside his bed.

XVIII.

And, rising from his sleep, her shadowy presence
Followed his light descent
Of the long stair; her shadowy evanescence
Through all the whispering rooms before him went.

XIX.

Upon the earthy draught of cellars blowing
His shivering lamp-flame blue,
Amid the chill and damp he felt her flowing
Around him from the doors he entered through.

XX.

The spiders wove their webs upon the ceiling,
The bats clung to the wall;
The dry leaves through the open transom stealing
Skated and danced adown the empty hall.

XXI.

About him closed the utter desolation,
About him closed the gloom—
The vanishing encounter and evasion
Of things that were and were not in the room,

XXII.

Vexed him for ever, and his life for ever
Immured and desolate,
Beating itself, with desperate endeavor,
But bruised itself against the hold of fate.

XXIII.

The roses in their slender vases burning
Were quenchèd long before;
A dust was on the rhymes of love and yearning,
The shawl was like a shroud upon the floor.

XXIV.

Her music from the thrilling chords had perished,
The stillness was not moved
With memories of cadences long cherished,
The closes of the songs that she had loved.

XXV.

But not the less he felt her presence never
Out of the room depart—
Over the threshold not the less for ever
He felt her going on his broken heart.

W. D. Howells.

PARIS GOSSIP.

Paris, July 27, 1866.

The acceptance of the armistice has left our much-enduring Sphinx at liberty to exchange the gilded cares and ceilings of the Tuileries for those of St. Cloud, the beautiful suburban residence so greatly beloved of the founder of his house, rendered still more beautiful by its present master, and commanding the most magnificent views of "the metropolis of Europe." One who is in almost daily attendance on his Majesty assures me that the obstacles thrown in the way of his mediation by the three parties mainly concerned in the horrible war of this unlucky summer have tried to the utmost his sagacity, ingenuity, patience, and health. On assuming the part of peacemaker, Napoleon appears to have been filled with sanguine expectations of immediate success. When the Empress, on her return from her visit to the cholera hospitals at Amiens, on that memorable 5th of July, entered the Emperor's cabinet to talk over with him the incidents of her visit, he met her with a beaming face of satisfaction, and the joyful exclamation, "Eugénie, you have done a good day's work, *and so have I!*" The Emperor then informed her of the great news of the cession of Venetia made to him, as a matter of form, and to be by him transferred to Italy; of the Kaiser's desire for his mediation, with a view to peace, and of the request he had just been sending to the Kings of Prussia and Italy, by telegraph, for an armistice. The first reply of both the Kings was favorable, though accompanied by reservations; but, after conferring together, the two allies raised their demands to a height which seemed to render impossible the adhesion of the Kaiser. To bring these three personages to something like a common ground, and thus to create a basis for the armistice which should serve also as the preliminary of peace, without which Prussia flatly refused to consent to an armistice, has really kept the Emperor so hard at work, day and night, up to the present time, that he was getting to look tired, worn, and old, to a degree by no means satisfactory to his medical attendants.

The people of Paris are beginning to see that Prussia, however odious may have been the motives and tactics of her rulers, really represents the future of Germany, while Austria, though less in the wrong than her rival, as far as regards the immediate pretexts of the quarrel, represents the past. The sympathy that has been so generally felt here for Austria is, therefore, somewhat modified, and a reaction seemed probable, when the odious extortions of the Prussians at Frankfort, disgusting even their warmest friends, have thrown fresh unpopularity on their cause. The most popular of the foreign diplomatists resident here are, undoubtedly, the Prince and Princess Metternich; equally in favor at court and in the higher circles of this gay capital. They are highly accomplished, very clever, affable, and good-hearted; and the Princess, who boasts of being "the ugliest woman in Europe, with the prettiest ears," is also one of the liveliest and wittiest women of the day. There is a large and beautiful garden attached to the official residence of the Austrian embassy, and in this garden, under a clump of lofty trees, the pleasure-loving young mistress of the house has had a sort of tent made with the aid of a striped awning—white, black, and yellow—tied by the four corners to the trunks of four trees. A small carpet is laid under this awning, with a table in the centre, and chairs, lounges, and little work-tables scattered about under its shade. Here the lively lady has received her guests daily since the hot weather set in, and here, when the first news of the fight at Sadowa reached Paris—falsely announced as an Austrian victory—the "dear five hundred friends" of the popular pair came rushing in crowds to congratulate them on the joyful intelligence. Great, indeed, was the jubilation under the pretty striped awning, abundant the invectives bestowed upon Prussia, and very delightful seemed the iced sherbets, served to all comers in honor of the brilliant success of the Austrian arms. But the last guests had not departed, the last sherbets had not been swallowed, before the telegraph brought the terrible tidings of the real issue of that frightful struggle. The sounds of rejoicing were exceeded by expressions of regret, and the brilliant mistress of the pleasant tent has received only condolences and continued expressions of regret and consternation from that time to this.

Luxurious dinners have celebrated the definitive close of the "season"—dead and buried the day the Court departed from Paris. The American colony, rapidly becoming one of the most numerous, wealthy, and brilliant of the capital, has had the honor of several of these costly and cosy entertainments, since which many of its most dashing members have left Paris for the various watering-places. Artistic eating has always been held in high esteem in this capital; and the two best cookery books extant are the production of Frenchmen of high rank and great distinction. The Count de Bussac, who draws up the daily "skeleton-dinners" which all Paris so eagerly devours—with its eyes—in the columns of M. Emile de Girardin's newspaper, is a man of large fortune and ancient lineage, as well as being the first gastronomer of the day. M. Fizelière has just published an amusing volume on the "Wines and Eating-houses of the Seventeenth Century," full of curious details of the habits and manners of that time, as shown in the chronicles of its dinners and suppers. Among other famous gastronomers of the period figure conspicuously three or four noblemen, who kept open house, and whose tables were always supplied with delicacies so delicious that all the notabilities of the time disputed the favor of a seat. It so happened that all of these Amphitryons belonged to the order of the "Knights of the Holy Ghost," and consequently wore the broad blue ribbon of that ancient order. The excellence of their tables having become notorious, it came to be the custom in speaking of any specially luxurious repast to say, "It was a blue-ribbon dinner;" later, it became the fashion, in speaking of any very skilful cook, to say, "He (or she) is a blue ribbon." Hence the expression so common here at this day, in speaking of really good cooks, "*C'est un vrai cordon bleu.*"

Apropos of the dinners of the past week, it may be mentioned that, about three years ago, three squadrons—French, Austrian, and Italian—were lying in close proximity in one of the ports of the Levant. The French Admiral T.—being the eldest of the three admirals, and very hospitable withal—assumed the lead in doing the honors of the dinner-table to the officers of the other fleets, and frequently invited Admiral Persano and Admiral Tegetoff to his dinner-parties. The Italian admiral, rather blunt and rough, and a most hearty hater of the "Tedeschi," was not always, it is said, very courteous to his Austrian brother, and lost no opportunity of "chaffing" that unitary on the inferiority of the Austrian fleet. Admiral Tegetoff

appears to have stood these jokes with tolerable patience; but one day he retorted on Persano, and the quarrel became so violent that a duel seemed inevitable. The French admiral, however, contrived to make peace, and gave a grand dinner to celebrate the reconciliation. But Persano, at the dessert, being, perhaps, stimulated by the champagne, began a fresh attack on the Austrian admiral; and the latter, under the same inspiriting influence, retorted angrily, and ended the pleasantry by saying, "This is a question which we will go to the bottom of some of these days!" "In the Adriatic!" cried Persano. "I will give you an opportunity of settling it from your own experience," said the Austrian. "And be sure that I will let no such opportunity escape me," returned the Italian. Warned by this fresh evidence of bitterness, the French admiral took good care never to invite the two other commanders to the same dinner; but the encounter which he so anxiously endeavored to prevent has just taken place off Lissa. In this first naval engagement between the Austrian and Italian fleets, the former was commanded by Tegetoff, the latter by Persano. Both sides claim the victory; but the Italians, though they kept possession of the site of the engagement, have suffered far more severely than the Austrians, their two finest armored ships, the *Re d'Italia* and the *Palestro*, having been destroyed in the combat. The first was literally riddled by the shots from the Austrian frigate opposed to it, and sank like a stone, making in the sea a huge chasm that sucked it in bodily, with all its crew; the other, being penetrated by an explosive shell from the Austrian frigate, blew up, and its fragments were swallowed up by the waves. The crew of the *Palestro* were picked up by the Italian gunboats; but the brave fellows on board the *Re d'Italia* all perished with that ship, but not without sending a parting token among their foes. At the moment when the huge vessel made its swirling plunge into the awful gulf which was drawing it in, the crew discharged their guns into the Austrian frigate, killing forty Austrians and wounding several times that number. The two admirals having escaped unhurt, will doubtless meet again to settle their old quarrel, unless their "friend at the Tuileries" continues, by converting the armistice into a peace, to keep them asunder. The Italians, furious at the loss of the two splendid vessels from which they had hoped so much, are angrily declaring that they were built and armored in England. The papers here, enchanted to get hold of any handle that they can turn against "perfidious Albion," have been repeating this story ever since, delightedly declaiming against English dockyards, and declaring that the only ships whose armor resisted the Austrian fire were built and plated in France. But the fact is that the two unfortunate ships, as we now learn on the best authority, were built in New York; and so badly put together that it was prophesied, by all who saw them before they were plated, that they would fall to pieces at the first shot. These ships were plated at Spezzia; one of them with French plates, the other with Italian ones. No English builder had anything to do with them, and no English iron was used in plating them. Several of the armored vessels engaged in the late fight were of French build; and of these every one was pierced by the Austrian projectiles. One ship only, the *Affondatore*, was of English build, and that ship is the only one which came out of the fight perfectly unscathed, the Austrian balls not making the slightest impression upon her armor.*

The violent competition that has been going on between French and German managers, for the lease of the Folies Dramatiques, which has lately come into the market, has terminated in favor of the latter, Herr Maillot, ex-manager of a theatre at Vienna, having carried the day, after a combat of the most vigorous character, in which the adversaries kept on bidding alternately over one another's heads, until at last the offers of the Viennese took the wind completely out of the sails of their French rivals. The latter, furious at being beaten on their own ground by a foreigner, are spreading a report that the new manager, bent on importing a German troupe for the performance of French plays, will throw in the loan of a German pocket-dictionary with each ticket.

Thérésa has a rival who is fast dividing the empire of favoritism with the popular *diva*. Mlle. Columbat, the new star, sings at the Pavillon des Ambassadeurs, in the Champs Elysées, almost within hearing of her great prototype, and as, besides possessing a "mantle" very similar to that of Thérésa, she is excessively pretty, whereas Thérésa is excessively ugly, the supremacy of the latter is seriously threatened.

It may be interesting to distant readers to know that the judges in the great international competition of religious music that has just come off at Louvain, in Belgium, were as follows: for France, Berlioz, d'Ortigues, Baptiste, Saint-Saens; for Belgium, Fétes, Gevaërt, de Veoye, Soubre; for Germany, Hiller, Damke, Kufferath; for Holland, Verhulot; for England, Maher. The competition was organized by the Chevalier Van Elwick. Seventy-three compositions were contributed by fourteen different nations, and the three prizes were adjudged to Silas, a Dutchman; Reyer, a Viennese; and Habert, also an Austrian. STELLA.

* She has since gone to the bottom in a storm.—ED. NATION.

GONE ASTRAY.

WE doubt if all the cis-Atlantic readers of Matthew Arnold's sarcasm, entitled "My Countrymen," will read with the same undiscriminating relish his last effusion in the same vein, "Geist." His especial target on this occasion is Mr. Goldwin Smith, who, in suggesting a possible alliance of England and United Germany against the Second Empire, has laid himself open to the formidable charge of "Ungeist"—unintelligence, stupidity. The alliance will rather be the other way, says Mr. Arnold, since Prussia and France, like one body, are animated by "Geist," of which England has not a particle, at least as a controlling force; and he concludes his half-contemptuous attack with the recommendation, to the British people and to his fellow-professor, to get "Geist."

We shall not adopt the *Spectator's* short-hand method of disposing of this advice, which substitutes a familiar expletive for "get." We are not concerned in the personal antagonism of two professors of the same university, where the arguments, if hurled respectively from the domain of poetry and of history, belong in Sidney Smith's hopeless category of those which proceed from different premises, and, of course, will never have any conclusion. Neither is it necessary to undermine a house divided against itself, seeing that the latest news by the cable is that "Geist" in Paris and "Geist" in Berlin are at swords' points over the Rhine provinces—which is not exactly the answer Mr. Arnold invoked for his Prussian friend, but which we hope he will in good faith "take care that he hears," as he has promised. Our business is to note Mr. Arnold's unsoundness as a political teacher or crusader, as it was our melancholy task, not long ago, to do the same by Mr. Ruskin, who, after wishing well to the slaveholders' rebellion, at last took Gov. Eyre to his bosom. Mr. Arnold, in the name of democracy and "Geist," adopts Napoleon III. Which of these gentlemen is best qualified for the chair of Poetry at Oxford we shall not pretend to determine; but if the principle of selection is the worst ethics, we should say there is not likely to be further rotation in that professorship.

Mr. Arnold's paper appears, for another reason, at a very inopportune moment. In a recent translation of "May's Constitutional History of England, from the Accession of George III. to the Present Day," by M. Cornelis de Witt, the translator has availed himself of the preface for such liberty of expression as the "Geist" of the Emperor does not commonly tolerate. He says:

"We have never had to hear so much about the history of England as now that an effort is made to prove to us that it contains nothing worth learning. There have never been less pains taken to become acquainted with it than now that it is invoked on every occasion. . . . Those who, in order to free from reproach the régime to which at present our press is subjected, are fond of proving that across the Channel the laws relating to the press were tyrannous in the times of our great-grandmothers, will triumph on obtaining from the lips of an English writer the admission that in the eighteenth century printers were hung and journalists put in the pillory in England. I doubt, however, if, on the whole, this simple exhibition of the progress of the British constitution will leave in the mind of such readers an impression on which they will have greatly to congratulate themselves. . . . I surrender, therefore, the floor at once to Mr. May, reserving to myself for another place and time the explanation *why the English people is to-day, among the great peoples of Europe, the only one whose government cannot make war without consulting it.*"

The reply which our Samson will make to this compliment to his countrymen is easy to anticipate. It will include "Cole's Truss Manufactory" and the "representative industrial man" who is "something in the bottle-way." It will have much to say about Denmark, and the other chances, not a few, for England to embroil herself with the continental powers. It will probably contain a great deal of truth—truth not wholly creditable to the commercial and industrial interests which cried "Peace!" when honor and self-consistency would have accepted war. All this will not remove—we venture even to add, will not tarnish—the glory of England, shared by no other people from the pillars of Hercules to the Caspian, which M. de Witt has so clearly appreciated and declared. When the whole Continent is in arms by the intrigues of two or three cabinets, and by the original consent of barely a single people, who shall be told to "get 'Geist,'" if either liberty or democracy is a means worth attaining? M. de Witt has embodied in an indirect phrase the protest of such leaders of the only democracy France knows to-day, as Thiers, Jules Favre, and Jules Simon, against the infamy of enforced silence in the French Chambers when neighboring nations were all ablaze with revolution. Was it "Geist" or "Ungeist" that, in the session

of the 25th June, on the one hand forbade even an allusion to the state of Europe in a simple discussion of the budget, and on the other resented this gagging?—when the Marquis de Piré, backing the President Walewski, insisted, amid "hilarité générale," "if the Emperor has said what is necessary, there is nothing to add;" and Larrabure rejoins that "in circumstances as solemn as the present, the Chamber has the right to manifest its opinion also;" and Thiers is snubbed for crying out of turn, "The Chamber cannot abdicate its right;" and Berryer, still more warmly, "My right, my duty will not suffer me to admit that the Corps Législatif can adjourn in the present situation without discussing the affairs of Europe."

Mr. Arnold may sneer at the instinct of parties—he is not in sympathy with the spirit of the age when he sides with the arbitrary "Geist" of Bismarks and Napoleons. The world has too much of it already, and does not need to be told to "get" [more. The Empire of the 2d of December—of the *coup d'état*, of exile, and of transportations to Cayenne—has not changed its character in fifteen years. Its hideous policy has been to emasculate the French intellect by proscribing it from all concern in the Government, to demoralize the French people by encouraging the most licentious manners and corrupting pleasures; padlocks in the Assembly, censorship for the press, Thérésas in the *café* and the *salon*, gens d'armes at every corner—the Empire is decay and rottenness. Considering that Napoleon's reign has been a systematic repression of whatever is pure, independent, aspiring, enlightened that threatens the stability of his throne, what juster than to identify him with that Mephistopheles—

"Ich bin der Geist der stets verneint"?

Correspondence.

MR. BERGH, TURTLES, AND THE CANINE RACE.

To the Editor of The Nation:

In your last edition you devote more than a column of handsome letter-press to scolding me for declining to interpose the influence of this Society against the wholesale slaughter of the canine race by the city authorities, and for venturing to entertain a doubt that life, exposed to all the sufferings inherent to the dog's existence, is preferable to speedy dissolution.

"To be or not to be" has been a mooted question ever since the fall of our first parents; but, without going further into this enquiry, permit me to remind you that it does not necessarily follow that there is cruelty in taking animal life—otherwise the butcher exposes himself to this charge, and all who eat flesh are to a certain extent accomplices.

My purpose is, more especially, to correct an error into which you have fallen in relation to the "turtle case," which you seem to regard as being unsuccessfully terminated in so far as the Society is concerned.

On the contrary, the Marine Court has just denied the application of the defendant in this case, who has been indicted by the last Grand Jury, and now awaits trial before the Court of Sessions.

It may yet be made legally apparent, if not otherwise, to the torturers of the poor despised turtle, that the Great Creator, in endowing it with life, gave it feeling and certain rights as well as ourselves.

Feeling assured that such is your belief, I have the honor to be,

Your most obedient servant,

Henry Bergh, President.

Rooms of the American Society for the Prevention of Cruelty to Animals, New York, July 19, 1866.

SEQUENCE AND CONSEQUENCE.

To the Editor of The Nation:

It is sometimes difficult to carry two burdens at the same time. Thus, when Mr. Grant White, in The Nation of last week, endeavors to show that the "New Gospel of Peace" is not the "consequent" though it is the "successor" of the "Chaldee Manuscript," and at the same time to preserve the incognito of the author of the "New Gospel of Peace," he does not quite succeed. He says: "This criticism of The Nation led me to seek for the 'Chaldee Manuscript,' which, until about three weeks ago, I had heard of but never seen." And then he tells us of the difficulty he encountered in finding it, and goes on to draw his inference as follows: "Thus, although the 'Chaldee Manuscript' is half a century older than the 'New Gospel of Peace,' it is, I think, quite impossible that the latter should have been written in imitation of the former, or even because of its precedence."

Now this is quite conclusive if Mr. Grant White is the author of the "New Gospel of Peace," but otherwise I am unable to see its force. I think Mr. White was just then so solicitous about one of his burdens that he forgot the other for the moment and let it tumble to the ground.

GET THE BEST.

WEBSTER'S
Unabridged Dictionary.

NEW ILLUSTRATED EDITION.

Thoroughly Revised and Much Enlarged.

OVER 3,000 FINE ENGRAVINGS.

10,000 WORDS AND MEANINGS NOT FOUND IN OTHER DICTIONARIES.

Over Thirty able American and European Scholars employed upon this Revision, and Thirty Years of labor expended upon it.

"I think it not only a great improvement upon former issues of the same work, but superior, in most respects, to any other English dictionary known to me. The labors of the recent editors and contributors have made it undoubtedly the best general etymologicon we yet possess of the language; its vocabulary is as ample as could well be given in the compass of a single volume; its definitions are, in general, sufficiently exact and discriminating; and its pronunciation is apparently conformable to the best usage."—*Hon. George P. Marsh, Florence, Italy, March 7*, 1866.

"Etymological part remarkably well done. . . . We have had no English dictionary nearly so good in this respect."—*North American Review, January*, 1865.

"Truly a *Magnum Opus*, a monument of industry, research, and erudition, worthy the most cordial recognition and the highest praise of all who write, speak, or study the English language."—*Evangelical Quarterly Review, January*, 1865.

"In its general accuracy, completeness, and practical utility, the work is one which none who can read or write can henceforward afford to dispense with."—*Atlantic Monthly, November*, 1864.

"Viewed as a whole, we are confident that no other living language has a dictionary which so fully and faithfully sets forth its present condition as this last edition of Webster does that of our written and spoken English tongue."—*Harper's Magazine, January*, 1865.

"The New Webster is glorious—it is perfect—it distances and defies competition—it leaves nothing to be desired."—*J. H. Raymond, LL.D., President of Vassar College.*

Springfield, Mass.

Sold by all Booksellers.

NEW BOOKS.

SPARE HOURS. Second Series. By JOHN BROWN, M.D., author of "Rab and his Friends," etc. 1 vol. 16mo. $2.

This series of papers, by one of the first of living essayists, has been collected by the author expressly for this American edition. It contains some of his most striking sketches—"Pet Marjorie," almost unequaled for curious and pathetic interest; a thoroughly appreciative and interesting sketch of John Leech, the distinguished humorous artist; and an admirable criticism of Thackeray.

The volume is embellished with a fine new Portrait of the Author, and several illustrations.

ROYAL TRUTHS. By HENRY WARD BEECHER. 1 vol. 16mo. With excellent new portrait, $1 75.

A book full of those vigorous, striking, and beautiful statements and interpretations of facts and principles for which Mr. Beecher is distinguished. His numerous admirers will find this one of his richest and most suggestive volumes.

*** For Sale by all Booksellers. Sent, post-paid, on receipt of price.

and 63 Bleecker St., New York.

THE TWO SUMMER BOOKS.

THE WHITE HILLS;

THEIR LEGENDS, LANDSCAPE, AND POETRY.

With Sixty Illustrations, engraved by Andrew from drawings by Wheelock.

BY REV. THOMAS STARR KING.

Small quarto. Price $3 50.

"The name of Rev. T. Starr King will attract immediate and general attention to this work. . . . Those who would possess a most graphic and lifelike description of the White Hills of New Hampshire; those who are pleased with exciting narrations of adventures in climbing their steep and craggy summits; those who love to pore over Indian legends and stories of early settlers; those who are delighted with vivid and enthusiastic descriptions of the boldest and grandest scenery in America, will find in this book a gratification far beyond ordinary opportunities of like nature."

Carter's Summer Cruise.

A SUMMER CRUISE ON THE COAST OF NEW ENGLAND.

BY ROBERT CARTER.

16mo. Price $1 25.

"When that royal lunatic Xerxes offered a reward for a new pleasure, he was stupidly at fault not to have anticipated Mr. Carter by a summer cruise among the isles of Greece, instead of bringing himself to grief at Thermopylæ and Salamis."—*Commonwealth.*

"It is written in a most charming manner; close observation, valuable information, and a delightful play of humor combining to produce as felicitous a result as bookmaking in this country can boast of this season."—*N. Y. Evening Post.*

ROMANCE OF MODERN ENTERPRISE!!!

CHARLES SCRIBNER & CO.,

654 BROADWAY, NEW YORK,

Have Just Published

THE HISTORY

OF THE

ATLANTIC TELEGRAPH.

BY

HENRY M. FIELD, D.D.

1 vol. 12mo, 364 pages. Price $1 75.

From the London Times.

"It is a great work—a glory of the age and nations; and they who have achieved it deserve to be honored as benefactors of their race."

From the New York Times.

"It was necessary that a full history of the Atlantic cable, from the inception of the idea to the actual accomplishment of the fact, should be written, and it is certainly most fitting that the task should fall into the hands of Rev. Henry M. Field, D.D., a brother of Cyrus W. Field, to whose indomitable energy the cable is to be, let us hope, a lasting monument."

From the Independent.

"There is a strange fascination in the story of an enterprise so daring in its conception, opposed by the barriers of nature itself, yet carried through by a stout heart and unconquerable will. It reads more like a romance than a history of events that have transpired in our day and at our very doors.

☞ Copies sent by mail, post-paid, on receipt of price.

EVERY CHOIR SHOULD BE SUPPLIED WITH

EMERSON'S NEW BOOK,

THE JUBILATE, the first edition of which, TWENTY THOUSAND COPIES, will soon be sold. ☞ *Remember* that this new work excels in many important features the author's previous work, the "Harp of Judah."

Price $1 38, on receipt of which "THE JUBILATE" will be sent post-paid. Choirs supplied at $12 a dozen.

The Week.

THE President's reply to the address of the Pennsylvania Convention was in great part a repetition of statements of his opinions and feelings with which the public is already familiar. But he went further than he has yet gone in denunciation of Congress, using one phrase which has a somewhat ominous sound. He spoke of Congress as "a body hanging upon the verge of the government, as it were; a body called, and which assumes to be, the Congress of the United States, but is, in fact, a Congress of only part of the States." It would be easy to set this down as an indication that Mr. Johnson is preparing his own mind and that of his followers for the creation of a Congress of his own in December, and for an attempt at the forcible repudiation of the body now in existence. We prefer, however, to believe that he is yet a great distance from any such step, and we call attention to the phrase simply as an illustration of the lengths of absurdity to which his own mental obtuseness and the flattery of his admirers are carrying him. It must be remembered that the Congress now sitting was elected by the loyal States for the purpose of governing the United States in peace or war, weal or woe, for the space of two years. Mr. Johnson, on the other hand, was elected Vice-President as a compliment to himself and his State, and nobody who voted for him had the smallest anticipation that he would ever be called upon to exercise any greater share either in reconstruction or in the general administration of our affairs than falls to the lot of the Speaker of the Senate. In other words, he was to occupy towards the executive the same relation as Hannibal Hamlin occupied towards it. He did not receive a single Southern vote, and was detested through every Southern State with a cordiality unknown in the case of any Northern Radical. He holds the power he now exercises by an accident, and when he speaks of himself as "a department of the government," and calls Congress "a body hanging on the verge of the government," he does no harm, we admit; but he reveals a state of mind, as we have often remarked before, which proves his presence in the White House at such a juncture as the present one to be most calamitous.

MR. JOHNSON has formally declared the war at an end and civil government restored throughout the Union. Mr. Binney's argument in support of the President's right to keep the *habeas corpus* suspended as long as he saw fit, was deemed conclusive, we believe, by the larger portion of the public at the time of its appearance. But there is nothing like experience for throwing light into the dark places, and we suspect a great many people do not now think his doctrine so very sound after all. It is quite plain that whatever the Constitution may mean, it ought never to have bestowed such monstrous powers on any one man as Messrs. Lincoln and Johnson have exercised. Only saints are fit to possess them, and the access of saints to the Presidential chair has long been so difficult, that it may be said that in practice nobody is fit to exercise them.

WHATEVER else the Philadelphia Convention has done, it seems to have impressed upon the minds of the Democrats that the President can no longer, with any propriety, refuse to turn over the offices to them. The President can hardly help gratifying them. The Missouri delegation to the convention, which called on him after the adjournment, informed him of two things, and respectfully recommended that both be changed. One was, that in Missouri the form of government was not republican in character, and the other, that "the offices at the disposal of the Federal Government" in that State might easily be filled by conservative men who support the President's policy. The New Hampshire delegation, which was in great part Democratic, were still more urgent; and the *World* says, with effusion, that the delegations from other States now temporarily in Washington, "all feel desirous of seeing and taking him by the hand, and speaking words of encouragement; and some of them," it unnecessarily adds, "have little matters in relation to office, etc., to arrange." The rumor is louder than ever that the Secretary of War is to be removed, and there is likely to be a clean and speedy sweep, so that the humblest postmaster may as well hold himself in readiness to tell Mr. Randall, by return of mail, whether or not he intends to hold his own or the Philadelphia principles.

IN the poem "Forlorn," published in THE NATION of last week, the word "*floating*" in the first line of the seventh stanza should be *fleeting;* and the word "*guest*" in the second line of the ninth stanza should have been printed *quest.*

THE *Herald* and the *World* are squabbling about the cable news, each accusing the other of all the sins which the conductor of a newspaper can well commit in his professional capacity. The *Herald*, however, appears to get more wonderful stories from the cable than any other paper, and we have little doubt will find the supply inexhaustible. The beauty of a *canard* which comes over the cable is that it costs too much to telegraphically refute it, so that it is sure of acceptance for ten or twelve days, and by that time two-thirds of the public will have forgotten all about it or have absorbed it into their mental fibre.

A RELIGIOUS newspaper of this city argues that Christian men and Christian ministers are morally accountable for their choice of a summer resort. Far be it from us to take an opposite view, or to lay stress on the coincidence that on the same day we read how the Cardinal Andréa had been suspended from certain of his functions because, in the pursuit of health, he had sought the waters of Naples, his native city, we believe. The cardinal has not submitted to the Pope's and the Jesuits' displeasure—for his deposition is the joint affair of both these parties—without a remonstrance addressed, on parting, to his charge. He alleges, with a show of reason, that his offence is one not known to the canons of the Church, and that the gravest misdemeanor would at least entitle him to a solemn trial and an impartial hearing. Of course he understands that his liberal views in politics are at the bottom of his attempted disgrace, but it is on the purely clerical line that he intends

to contest the matter, and we wish him all the success due to a righteous cause. Perhaps, though, the Pope, having given up all hope of restoring his invalid supremacy, is jealous of the refreshment of his subordinates. The French angels who have hitherto troubled the pool of his healing are to take their flight in September.

Most people have seen Gérome's picture, "Les deux Augures," either in the original or in a photograph. It represents two Roman soothsayers having a private and very hearty laugh over their professional labors. We do not think we are passing the limits of fair criticism when we venture on the presumption that a somewhat similar scene must have occurred when the managers of the Philadelphia Convention were arranging that pretty little *coup de théâtre*, the marching in of the Massachusetts and South Carolina delegates arm-in-arm. The walking arm-in-arm into a public meeting of the representatives of South Carolina and Massachusetts would doubtless be a very affecting incident; but the persons who walked into the Philadelphia Convention, in this affectionate manner, did not represent either of those States; and what makes the whole proceeding a joke—but an incomprehensible joke—is that they themselves knew they did not; the audience knew they did not; and when President Johnson wept over the report of the occurrence, he knew they did not. The men, such as Wade Hampton, who most thoroughly represent the spirit and genius of South Carolina, did not attend the convention, and could not be got to attend it. The two men who would, perhaps, most thoroughly represent Massachusetts politically—the one its intellectual strength, and polish, and culture, and learning, and the other its opinions, passions, aspirations, sympathies, and impulses—are Richard H. Dana, Jr., and ex-Governor Andrew. Neither of these gentlemen was at the convention, or could, probably, be got to go within fifty miles of it with friendly intent. The men who appeared for the State at the convention were simply inhabitants of the State, but in no way reflected the opinions of the people. There would, for instance, have been no difficulty at any time during the war, when Massachusetts was seething with fervor, in finding a dozen very respectable gentlemen in Boston to consent to walk arm-in-arm with Jefferson Davis and his cabinet into any assemblage in the world. But what would the spectacle have signified? Who would have blubbered over it? There is in these little shams and humbugs, to which politicians of all parties occasionally resort, something painful as well as absurd, as they reveal the fact that a class whose business it is to study the popular mind entertains for it the most unmitigated contempt.

General Custer, his friends and admirers will be sorry to hear, has taken to politics, and figured at the Philadelphia Convention. There was one lower depth of absurdity left, and into that he has fallen by writing a long letter to Mr. John W. Forney, setting forth his views "on national affairs," and giving the Clerk of the Senate "a piece of his mind" touching his (the Clerk's) own demerits. The letter we shall, from a sincere regard for General Custer, not sum up. The closing sentence, in which he speaks of Mr. Johnson as "the highest authority we recognize on earth," not, be it observed, as a civil ruler, but as a narrator or promulgator of facts, is a singular outburst of puerility. General Custer is evidently about as much in his place talking politics as Viscount Dundee would have been in the Archbishopric of Canterbury, or Murat on the bench of the Court of Cassation. Why can a man who has made a brilliant reputation not let it alone? What brings a *sabreur* like Custer into the company of such white-souled innocents as Thurlow Weed and Dean Richmond? Does he not know that these gentlemen belong to the Honorable Corps of Horse Marines, and have as little in common with land cavalry as foxes with lions?

The Hon. John Hogan, of Missouri, on the 20th inst., introduced a delegation from that State to the President, and the spokesman of the delegation informed Mr. Johnson that "if some demonstration were made, some show of protection by the General Government, some assurance that it will protect our people in all their rights, they would go fearlessly to the polls and cast their votes for the Union"—the Union being, of course, endangered by Congress and upheld by Mr. Johnson's policy. Thousands of Missourians who could conscientiously go to the polls will not go, Mr. King said, unless they are made to feel that the United States troops will protect them. Probably this is perfectly false. Governor Fletcher, whom these men denounce, calls out the militia for the protection of the polls, because thousands of people, disfranchised for the crime of treason, are suspected, on good grounds, of intending armed resistance to the laws and constitution of the State. The President's reply to Mr. King was not an outspoken one: "I think you will find the protection of the Government, as far as practicable, afforded to you." This may mean absolutely nothing, for, properly, it is in no degree practicable for the President of the United States, at the demand of irresponsible persons, to use the army of the United States in subverting a State government. Or it may mean a good deal, for the recent utterances of the President as to the condition of affairs in Missouri and his own rights and duties in the matter have been very alarming. Beyond a doubt, any interference on the part of the Federal troops would be resisted by force of arms, and civil war, at least in Missouri, would instantly follow. Governor Fletcher is firm, his proclamation calling out the militia is issued, and the men who made the Registry Law are determined to maintain it at all costs against those Missourians whom Price led out of their native State, and more than once afterwards led back into it with arms in their hands to wage the cruellest warfare against their former neighbors and fellow-citizens. Excitement runs high in Missouri, and great trouble is anticipated, though Governor Oglesby, of Illinois, in a speech made in St. Louis the other day, takes a comparatively cheerful view of things. "We are not going to have any civil war in Missouri," he says. "But what if they do have civil war in any of the States of this Union? I want you to say you can put Illinois down for 200,000 majority on the side of the loyal men in that war."

The *Round Table* published, some weeks ago, a statement that drunkenness was very common amongst American ladies belonging to "the best circles," that it was not unusual for them to appear drunk on Broadway, and that arrangements existed at the hotels and confectioners by which respectable female tipplers could obtain liquor secretly from the waiters, and have it charged in their bills as "extra lunches," or some other harmless luxury. The story was so very absurd that we believe nobody with much to do took the trouble of either noticing or refuting it. It has, however, been copied in England, and is now going the rounds of the press in that country. It may be readily imagined that it will not contribute much to the comfort of American ladies travelling in Europe, or to the consideration which they will receive in society, and we cannot help regretting that any American journal, laying claim to respectability, should have even, for that darling object of newspaper ambition, the production of "a sensation," put such stuff into circulation. The business of blackening the character of our own wives and sisters is hardly one which a respectable journalist ought to take up. We need scarcely say that no American lady has ever been seen drunk in Broadway or any other street, and that the arrangements by which, according to the *Round Table*, they surreptitiously procure brandy at hotels and restaurants, exist only in the imagination of the moralist who so terribly scourges our corrupt society in the columns of that journal.

Maximilian's blockade of Matamoras and other ports has been "disallowed" by our Government. As that potentate has, however, no navy, and never had a navy, it is not likely that he ever intended to blockade with anything more formidable than paper, so that he will not suffer seriously from our refusal to submit, and will, therefore, probably not notice Mr. Johnson's proclamation.

The miniature ship *Red, White, and Blue*, twenty-three feet long and twenty-one inches deep, has successfully crossed from New-York to London. The distance is not far from thirty-five hundred miles, and the weather during the voyage was severe; but the time required was only thirty-eight days, or less by one-third than is frequently occupied by vessels of large size. The enterprise was not, it seems, such a mere

piece of criminal foolhardiness as might at first thought be supposed. It was performed by men who had the greatest faith in the sea-going qualities of Ingersoll's Metallic Lifeboat, and were willing to prove them in this way. It is certainly a kind of puffery heroic enough to please Mr. Carlyle, who, on general principles, is not, we suppose, favorable to advertising agencies. It is observed by a daily paper that the trip of the *Red, White, and Blue* was being made at the same time with that of the immense vessel which was laying the telegraph cable; and the writer remarks that the one voyage "may fairly and contrastively complement" the other—the one being "massivity made nautically available," while the other is "dwarfish symmetry rendered demonstratively seaworthy." Providence, we presume, will not be tempted again by an endeavor to recross the ocean if the navigators can sell their craft to the Englishmen.

The full text of the peace preliminaries agreed upon between Austria and Prussia has followed the telegraphic synopsis already forwarded. Holstein is absolutely to become a part of Prussia, but Schleswig is to be allowed by a fair vote to decide whether Germany or Denmark shall be her fatherland. Saxony is to remain at present unmutilated in territory, but will be obliged to make a separate treaty of peace with Prussia, and bear some portion of the war expenses. The position of the kingdom in the Northern Confederation is left undetermined.

The terms of a treaty of peace between Prussia and Austria have been arranged. Austria goes out of the Confederation, without other loss of territory than Venetia, but shorn of all prestige and all weight. The loss of her position in Germany makes it very doubtful whether her sway over the other races composing the empire can be much longer maintained, based as it was merely on a system of balancing one against the other. The empire has, in fact, become an anachronism. It was essentially a mediæval machine, and its successful working in our day seems out of the question. The triumph of Prussia and Italy, even if it fail for the present to do much for parliamentary government, is essentially the triumph of education and ideas over brute force, of free thought over priestcraft, of lay over sacerdotal government, of equality over privilege; and we may all of us thank God that we have lived to see it. The failure of the French Emperor to play the part of "arbiter" in the quarrel has been signal. Prussia has forced him to eat humble pie, consigned him to a secondary position, thus depriving him, in one short month, of the fruits of twenty years' scheming, intriguing, and fighting.

The Tory Ministry in England refuses to prosecute Mr. Eyre for the execution of Gordon, although it acknowledges it to be "illegal," on the ground that it was an act of "practical justice." A more shocking and dangerous doctrine has hardly ever been propounded by the government of a free country. The forms of law are intended for the protection of men suspected, and strongly suspected, of crime, and not for that of those against whom nobody makes any charge. "Practical justice" would probably be done if two-thirds of the criminals who come before the courts were sent to jail without a trial; but who would recommend this summary process? An "illegal execution" is a solecism. Execution must be legal, or else it is either murder or manslaughter; and the reluctance which all parties in England show to call Eyre's offence by its right name is, to our minds, clearly the result of that bemuddling influence of the negro on the Anglo-Saxon brain which is so often visible in our own politics. Luckily the Jamaica committee are determined to put the law in force, although the House of Commons, to its shame, refuses even to censure the perpetrators of the atrocities of last summer. The Reform agitation continues, and is bringing out every day into more alarming prominence the class hatreds which lie at the bottom of it, and which give it a social character which the movement of 1830 did not possess. This, combined with a confession from Sir John Pakington that there are no reserves for the fleet—in other words, that a disaster at sea would be for the moment irretrievable—makes the political sky in England very cloudy.

THE FREEDMEN.

Gen. Howard's letter to the Hon. Roswell Hart is an indirect confutation of the Steedman-Fullerton charges against the Bureau. The commissioner reviews the condition of the South at the time the Bureau went into operation, and says:

"It is safe to say that in the so-called insurrectionary States, for six months after the surrender, no law of any kind existed, except that established by officers of this Bureau, and in some cases by other officers of the army. All the protection furnished for life and property of either class of persons was afforded by these officers, acting under instructions from Washington. The restoration of law and order so soon after the surrender of the rebel troops is in a good measure due to the efforts of Bureau officers in every district of the South, laboring to secure this end."

The continuance of the Bureau is justified by the present occupation of its agents. They act as the next friend of the freedmen in all courts recognizing the supremacy of the civil law; they examine all contracts and other legal documents affecting the freedmen, in order to shield them from fraud and oppression; they strengthen the sanctity of the marriage relation against a traditional sentiment in favor of its laxity; they shield the blacks from the evil effects of iniquitous vagrant laws; they are about the only supporters of the civil rights act at the South, and aid materially in extending to the freedmen the benefits of the homestead law; they receive and collect gratis the claims presented by any white or colored soldier; they find employment for freedmen not plantation laborers; and, without them, in numerous localities, the freedmen's schools could not exist a day. For the year ending June 1, 1866, the whites have received 2,901,767 rations; the blacks, 7,141,012. Since September, 1865, the rations for the latter have as steadily decreased as those of the former have increased, and now they receive almost precisely the same amount; so that the monstrous charge that the Bureau is only continued for the sake of indolent blacks—last made by the Hon. B. F. Perry in Philadelphia last week—is utterly disproved.

—The Tennessee Colored State Convention met and organized in Nashville on the 6th inst., and was in session till the following Saturday, when it adjourned to reassemble at Knoxville on the first Monday in September. The subjects for discussion were agriculture, mining, manufactures, and education. The proceedings were highly creditable to the members, and the presentation of statistics relating to the several counties was, if not complete, very satisfactory and business-like. It appears that the freedmen throughout the State are generally working the land for shares of the crop—from a half to two-thirds; comparatively few for wages. Mechanics make a good living. Considerable real estate is owned, but almost wholly in the cities.

Resolutions were passed—to send a memorial to the Legislature asking such annual appropriation of public school funds as will secure the colored children of the State the advantage of a common school education; appointing a committee of statistics on this subject; rejoicing that nearly 300 colored persons are already in the State normal schools and in Northern colleges, fitting themselves for teachers; urging their right to vote and be enrolled in the militia; asking Congress to grant Tennessee a republican form of government.

Just before the adjournment, General Fisk delivered a speech full of plain good sense and good advice to the convention. He exhorted them especially to build up their schools, and he would look after those who burnt them down.

—The following is the estimate of rations for September for the States of Arkansas, Missouri, and the Indian Territory: Whites (refugees), 35,000 rations; freed people, 5,000 rations.

—The last monthly report from Arkansas shows the number of persons to whom rations had been issued, as follows: Whites, 11,287; colored, 1,490. A large portion of the wheat crop in Arkansas has been destroyed by rust. In some districts equal rights are accorded to colored and white, whilst in others the old state of things remains. Indications are favorable for a large cotton and corn crop.

—General Fisk reports, for the quarter ending June 30, 1866, that there are 77 schools in Tennessee, directed by 183 teachers, and having an average attendance of 13,326 scholars, less than 2,000 of whom have not got beyond the alphabet. A first-class graded high school is to be opened in Memphis next month.

Notes.

LITERARY.

A very bold imposition on the public, by which a novel entitled "What is this Mystery?" has appropriated to itself the name and reputation of Miss M. E. Braddon, has just been exposed by a letter from the latter denying the imputed authorship. The "mystery" appears to have been how anybody could have been deceived by the attempted fraud, and still more how any respectable publisher in this country could have become a party to it. Ten thousand copies of the book are reported to have been sold, and it is the only comfort that Miss Braddon can derive from the transaction, since it testifies to her exceeding popularity. It may gratify her to know, too, that the American public will entertain a very just reprobation of such inexcusable pirating.

—A further search among Washington Irving's papers has brought out several unpublished manuscripts on Spanish subjects. These are to be issued soon by Messrs. Hurd & Houghton, in two volumes, under the editorship of Mr. Pierre M. Irving. The unpublished papers are—"The Legend of Don Roderick," "Legend of Count Julian and his Family," "The Legend of Pelayo," "Abdenahman, the Founder of the Dynasty of the Ommiades in Spain," "Chronicle of Fernan Gonzalez, Count of Castile," "Chronicles of Fernando the Saint," and "Spanish Romance." To these are added the "Letters of Jonathan Oldstyle, Gent.," and various biographical sketches and reviews that have not hitherto been collected, but which will be welcome in their present form to all who read and admire Irving.

—Almost at the same time with "The Naturalist in Vancouver's Island" has appeared "The Sportsman and Naturalist in Canada," by Major W. Ross King, which will be read with pleasure by the numerous sportsmen who are now enjoying their summer trip to the Adirondacks and the Maine woods, and also by those who have to stay at home, and find a malicious amusement in reading of the difficulties and disappointments of those who have been able to hunt—though, indeed, in Major King's book there is a deficiency of narratives of personal adventure, he having spent most of his strength in his studies of the habits of various animals. His account of the caribou and the moose is one of the most valuable memoirs of those animals that has appeared. His three years of careful observation have enabled him to correct many errors that have been handed down from one naturalist to another. Where the habits of animals are peculiarly interesting from the variety or perfection of their instincts, their intelligence is usually greatly overrated, and many exaggerated stories are told concerning them. Major King has closely observed the true habits of many animals, and his account refutes many popular errors. We find that the beaver of popular natural history and the beaver as actually living in Canada are quite different animals. Major King denies that they either drive in stakes with their tail or use it for plastering their houses. Their teeth and paws are what they chiefly work with in constructing their dams and habitations.

—The history of a successful piece of literary thievery has been given to the world by M. Léopold Delisle in some "Observations on the Origin of Several Manuscripts in the Collection of M. Barrois." In the famous library at Ashburnham Place, Sussex, is a collection of 702 manuscripts, formed by M. J. Barrois, and purchased by Lord Ashburnham in 1842. M. Barrois died in 1855, and a sketch of his life was printed in the *Bulletin* of the Société de l'Histoire de France for 1856. Ashburnham Place is out of the way and not often visited by literary enquirers. Lately, however, M. Paul Meyer, of the Bibliothèque Impériale, was admitted there and was presented with a copy of the catalogue of the collection. His friend, M. Delisle, borrowed this catalogue, and on reading it over was struck with the similarity of names and subjects to those of a quantity of manuscripts which were stolen from the library, now the Bibliothèque Impériale, about twenty-five or thirty years ago. Pursuing his enquiries he found that thirty-three of the most valuable volumes of which the Bibliothèque was plundered had been picked up by M. Barrois, and were now in the Ashburnham collection. Some of them were in their original condition, but most of them were cut to pieces and rebound by the plunderers, so as to multiply the apparent number of manuscripts. It is a satisfaction to know that many valuable manuscripts are still within the reach of historical enquirers and are in such intelligent keeping as that of Lord Ashburnham, who seems to have deserved no blame in the matter. Libraries should be more on their guard, and publish instead of conceal their losses. If they communicated to each other and to book collectors an account of their marks and sizes, of which they should use plenty, such losses would be less frequent, and the books could not be sold without detection.

—The efforts of the missionaries and the progress of Christianity in the East are inciting various native sects to new and vigorous struggles to retain the supremacy which the old religions have so long enjoyed. In China the Tauists, a sect of Rationalists, are very active in the distribution of tracts and books designed to promote the cultivation of virtue. The founder of the sect, Lautsz or Laukium, was born 604 years before Christ, and 54 years before Confucius; his only work, the "Tau Teh King, or Memoir on Reason and Virtue," is the foundation of the principles of his followers. In India the Brahmo-Samaj, or Church of the One God, has become very prominent. This is an organization founded by one Keshub Chunder Sen, of a good family of the third or Vaidya caste, for the purpose of substituting deism for idolatry. In 1860 he commenced the publication of a series of tracts, all powerful of their kind, and all directed to the same end—to solidify the floating unbeliefs of young Bengal into a definite system of religion, which nearly approaches Unitarianism. Keshub Chunder advocates on the negative side the extinction of idolatry, the abolition of caste, and the destruction of the existing Hindu laws of ceremonial, and on the positive the worship of a single omnipotent God, prayer, and personal holiness of life. On prayer he is very urgent, attributing to it most of the benefits which the old Buddhists expected to derive from what they called *upodhan*. "Prayer makes the weak powerful, the timid heroic, the corrupt righteous, and the ignorant wise." He and his adherents have now founded some fifty churches, and the numbers of the sect are counted by thousands. An interesting account of their religious system and a sketch of their chief has been published by Miss Francis Power Cobbe in the August number of "Fraser's."

—One who had not investigated the subject would not at first think how many proverbs, phrases, and metaphors have originated with music and musical instruments. It would be, perhaps, thought that a magazine article would contain them all. But the elucidation of this subject occupies a small quarto volume of seven hundred closely printed pages by M. Georges Kastner, of the Institute, under the title of "Parémiologie musicale de la Langue française, ou Explication des Proverbes, Locutions Proverbiales, Mots Figurés qui tirent leur Origine de la Musique." From the words *chant* and *chanson* alone nearly three hundred proverbs or proverbial expressions have arisen in French, and the words *danse* and *danser* have furnished as many more. In these proverbs we find a whole epitome of the musical art, and of its history. There is hardly a term which has not its crowd of proverbs. The *piano*, however, so universal an instrument nowadays, has made no mark as yet on language. There is no proverbial expression in French, or, that we can recollect, in English either, which speaks of it. The drum (*tambour*) has furnished far more, many of which are readily brought to mind, and has also been the occasion of at least two remarkably witty reflections; one of Oxenstiern, "Le hâbleur et le tambour semblent également faits pour étourdir;" the other, more subtle, of Joubert, "Le son du tambour dissipe les pensées; c'est par cela même que cet instrument est tout militaire." M. Kastner points out to writers a crowd of proverbs that could be used at need to express or strengthen their thoughts; some of which, under a lively and picturesque form, have a great moral or philosophical meaning. For example: "New god, new flute;" "little bell, great sound;" "when you are in any one's carriage sing his tune;" "when the masters laugh the servants sing;" "a lyre in the hands of a good musician is ornamented enough;" "interior harmony is the only true music;" "one must walk as the fiddler leads;" "the bell is the first and last fiddle of life," etc., etc. In the second part of the work of M. Kastner are the proverbs relating to musicians, to the different dramatic and lyrical forms, to dramatic artists, to dancing and dancers, for to the paremiology of music is joined that of the dance. This part contains

a long series of piquant details on the manners of the artists of the middle ages and of modern times.

—A singular book has been lately published at Paris under the title, "Manifeste du Magnétisme du Globe et de l'Humanité," the author of which, a Captain Bruck, tries to prove that the earth's magnetism influences the destiny of man. As he considers that the zodiacal light, shooting-stars, and other natural phenomena are referable to an effect of magnetism, so great events in human history can be traced to the same cause. For example, the 9th of November is, according to Captain Bruck, the day of least magnetic circulation and of least physical and moral energy, while the 22d of June is the day of most circulation and most energy. The 8th Brumaire (Nov. 9) was a memorable day in the life of the First Consul—the 22d of June saw the end of the empire. Also to magnetism certain great moral movements are due—Teutonism in Prussia, Anglicanism in England, Gallicanism in France, and Catholicism in the Papal States. The Philadelphia Convention, on this theory, is probably due to the showers of falling stars which were visible about the same time.

—On the 2d of August there appeared in Paris a work by M. Capefigue, entitled "Madame de Krudener and the Emperor Alexander I. at the Congress of Vienna." This woman was the first to conceive the idea of the Holy Alliance, and her influence over the Russian Emperor was sufficient to induce him to propose what his allied fellow-sovereigns accepted out of respect for him. With Alexander it was but a momentary whim, as was clearly shown twenty years ago by M. de Stourdza in his work on the origin of the Holy Alliance. Madame de Krudener nevertheless had for a long time been the object of his very high esteem, and in 1815 his praying with her was the means of her accomplishing her political dream. Some years later, by his order, she was removed from St. Petersburg and kept in a sort of exile in the Crimea, where she shortly died. The pretence that her preaching was regarded as dangerous was not borne out by the facts that she did not preach at the capital, and that she never could have affected the populace, because she did not speak Russian.

SCIENTIFIC.

"Modern" Chemistry.—Till within a few years it might have been said that chemical notation and symbolization had been for a generation tolerably uniform among all students of the science, but, since 1860 or thereabouts, every year has seen greater and greater departures from uniformity and consistency—greater discord among chemists on this subject, and nearer and nearer approaches to the existing chaos of opinions and practices. There may be said to be four parties to the dispute: First, there are the advocates of the *equivalents* or *proportional numbers* of Berzelius, numbers which indicate the ratios in which the different substances unite by weight; these write the symbol of water HO, in which the *equivalent* of hydrogen being *one*, that of oxygen is *eight*. Secondly, there are the advocates of *atomic weights*, who believe that the simple gases always contain the same number of atoms in equal volumes, and who maintain that the volumetric, as well as the ponderal, relation between its elements may be expressed in the formula of a compound; these write the symbol of water H_2O, in which the *atomic weight* of hydrogen being *one*, that of oxygen is *sixteen*. Between these two parties all advanced students of chemistry must choose, and then forthwith encounter another difficulty in the further division of chemists into two camps upon a different point. It has long been the prevailing custom to write the formula of many compounds in such a way as to suggest the proximate constituents from which they were prepared, or into which they might readily be resolved; thus oil of vitriol was formulated as HO, SO_3, a formula which suggests that it contains water and a dry, white, silky substance called anhydrous sulphuric acid, from which two bodies oil of vitriol can indubitably be prepared; or, again, caustic potash was represented by the formula KO, HO (k from kalium, the Latin name for potassium), and when oil of vitriol and caustic potash were brought together in due proportions, the product, a white saline substance called sulphate of potash, was represented by the symbol KO, SO^3, a formula which has a dual aspect, inasmuch as it implies that the part of the salt which the potash supplies continues to have within the compound some separate existence from that part which the vitriol furnished. This conventional representation of the intimate constitution of chemical compounds is, in fact, known as *dualistic;* it may be employed by the chemists who use atomic weights almost as well, though not quite as simply, as by those who hold to equivalents, and is to-day the mode of representation used in the great bulk of memoirs, treatises, dictionaries, and text-books on chemistry.

Opposed to this dualistic conception stands the *unitary* system, which, from small beginnings thirty years ago, has grown stronger and stronger, until it threatens to drive out the elder theory and reign in its stead. According to this unitary doctrine, it is impossible to determine in what manner the atoms of the ultimate elements of compounds are grouped together; the construction of dualistic formulæ is wholly unwarranted, and each formula must represent a single molecule of the substance it stands for, without suggesting any division into proximate constituents. Oil of vitriol is HSO_4 for unitary chemists who use equivalents; H_2SO_4 for those who prefer atomic weights; sulphate of potash is KSO_4 or K_2SO_4. So far as the unitary doctrine warns us against dogmatism, against enforcing speculative views with the same positiveness with which we speak of facts experimentally determined, its effect upon chemical philosophy is wholesome; but it has been found too negative in its character to serve as a basis of classification, or as the central doctrine of a school of active, eager, proselyting teachers of a new philosophy. Hence the chemists who have discarded the dualistic view have, with few exceptions, ardently embraced another hypothesis touching the mode in which chemical compounds are built up or moulded—an hypothesis which is, to say the least of it, quite as artificial and gratuitous as the dualistic conception. This new conception of the structure of chemical compounds, which is known as the doctrine of *types*, has for the last five or six years been vigorously contending for the mastery, and has made noteworthy progress towards ousting the elder dualistic hypothesis. According to the *typical* view, all substances are to be conceived of as built upon the model, or formed in the mould, of some one of the four bodies, muriatic acid, water, ammonia, and marsh gas. Chemists of this persuasion write the formula of the substances mentioned above as follows:

Water, ... $\left.\begin{matrix}H\\H\end{matrix}\right\}O$; Oil of Vitriol, . . . $\left.\begin{matrix}SO_2\\H_2\end{matrix}\right\}O_2$;

Caustic Potash, $\left.\begin{matrix}K\\H\end{matrix}\right\}O$; Sulphate of Potash, $\left.\begin{matrix}SO_2\\K_2\end{matrix}\right\}O_2$.

The formula of caustic potash is on the type of one molecule of water; while those of oil of vitriol and sulphate of potash are on the type of the doubled molecule, $\left.\begin{matrix}H_2\\H_2\end{matrix}\right\}O_2$. It will be observed that in the formula of caustic potash K *replaces* H; and that in the formulæ of sulphate of potash and oil of vitriol the group SO_2 *replaces* H_2. The manner in which the various elements and compound radicals replace hydrogen atoms is a chief object of enquiry with chemists who value this conception of four main types of chemical structure. They have invented the word *equivalence* (sometimes written *quantivalence*) to express the atom-replacing power of an element or group of elements. To represent the facts of chemistry in accordance with the typical hypothesis, the atomic notation must be employed, for the notation by equivalents does not lend itself to the effective exhibition of these typical structures.

It is altogether probable that the atomic system of notation will ultimately, and at no very distant day, prevail, inasmuch as it exhibits much better than the system of equivalents the important laws of combination, by volume, of specific heat and of isomorphism; but it is by no means so clear that the typical view of chemical structure is likely to become the dominant, or even a general view. During the last twenty years a large number of very able chemists have almost exclusively devoted themselves to the chemistry of the compounds of the element carbon, and the typical hypothesis applied to the thousands of new compounds of this element has given great scope to the ingenuity and keenness of the investigators in this fresh field. In organic chemistry the theory has been of great use in enabling students to detect analogies, in suggesting methods of research, and in promoting the orderly classification of multitudes of obscure compounds. On the other hand, in inorganic chemistry, which is by far the larger and more comprehensive subdivision of the science, the dualistic theory has been of very great service, while little or nothing seems to be gained by trans-

lating the established formulæ into *typical* forms. The interest which now attaches to the chemistry of carbon is wholly disproportionate, and will certainly be transient, although we may not yet foresee the turn of the tide. When we remember the relation of oxygen to fermentation, respiration, and combustion, its presence and functions in air, water, and the solid crust of the earth, and the part it plays in organic life, we shall be well persuaded that oxygen must continue to be, what it has been since Lavoisier named it, the central element of all chemistry.

The chemistry of minerals and metals, the chemistry which finds application in the useful arts, is, and must be in the main, other than that of the compounds of carbon. It may be said on the other hand that organic chemistry has already created sundry new branches of chemical industry: that the aniline colors are its fruit; that it has made benzine and paraffine, and a crowd of inflammable liquids which may be called naphthas, common substances; that carbolic acid, as an article of commerce, is of its furnishing, and that gas-making, coal-oil distilling, and the manufacture of ethers and chloroform, fall within its legitimate sphere. All this may be granted, and many more such additions to chemical manufactures may be anticipated in the future, and yet it will still be true that rocks, minerals, ores, metals, glass, pottery, and drugs, paints, and chemicals of inorganic nature, like the soda and potash salts, oil of vitriol, bleaching powders, the iron and lead paints, and an endless variety of similar substances, will always constitute the great bulk of the material on which the labor of chemists and manufacturers will be expended. Hence it is obvious that a chemical hypothesis which, like the doctrine of types, has been wholly suggested by and developed from the facts of organic chemistry, of the chemistry of carbon, has but an insecure hold upon the general subject.

The English chemists, counting Dr. Hofmann among them, have pushed the new views with much more unanimity and effect than the chemists of any other nation. The first manuals of chemical analysis, in the unitary notation, were published by Church and Northcote and by Conington; in 1861 came the first part of Dr. Odling's "Manual of Chemtry," which was unitary, but did not present a consistent system of atomic weights, in consequence of which defect it has remained an unfinished fragment. Not long after, the third edition of Prof. Miller's large and admirable work, "The Elements of Chemistry," appeared with both notations inserted for the benefit of both the old and new schools; in 1865 appeared Prof. Williamson's little book, "Chemistry for Students," in which he presented the new views, and the new notation in a compact and simple form for the benefit of beginners, that their minds might never be corrupted by contact with the older hypothesis and nomenclature. In 1866, Dr. Hofmann's very attractive, not to say seductive, little book, "Introduction to Modern Chemistry," gave to the new school the very best proselyting manual which they have yet got. Very lately, anxious to gain over the apothecaries' boys to their side, Prof. Miller, on behalf of the Chemical Society, addressed a letter to the Council of Medical Education, requesting them to introduce the unitary notation into the British pharmacopœia on the occasion of the publication of a new edition, whereupon the Council voted to give two formulæ, the old and the new, for each therapeutic compound. Meanwhile no new text-books of much authority have appeared in England to reinforce the system of equivalents or the dualistic hypothesis. A great "Dictionary of Chemistry" is in course of publication under the supervison of Mr. Watt, the translator of Gmelin, which, though it is not entirely consistent throughout, because of the somewhat different and rapidly changing views of the various contributors, yet in its later volumes lends the whole weight of its influence to the unitary and typical hypothesis, although dualistic formulæ are not unfrequently given.

In France, the matter stands somewhat differently. Würtz and his pupils are pushing the new doctrine with indefatigable energy, but the great majority of eminent French chemists still use the old equivalents and the dualistic formulæ. It has been hard to teach the new doctrines very widely in France because of the lack of text-books written in accordance with them, and in all the chief schools the manuals written with the dualistic notation still have full possession. In 1865, Naquet, a pupil of Würtz, published his "Principes de Chimie, fondés sur les théories modernes;" but in the same year appeared the second edition of Debray's admirable "Cours Elémentaire de Chimie," a book inspired by Deville, Debray's teacher and friend, and written throughout in conformity with the older theories.

In 1866, Richie published a most excellent manual, also written upon the dualistic hypothesis, and using the old equivalents instead of the new atomic weights. In short, the elementary teaching of chemistry in France is still conducted upon the old and established system, in spite of the fact that some of the most earnest advocates of typical hypothesis and the doctrine of equivalence, which has grown out of it, are to be found among the French chemists.

In Germany, again, the weight of authority inclines to the old views, although the most elaborate exposition of the new doctrines yet made is that given in the admirable "Lehrbuch der organischen Chemie" by Kekulé, of Ghent, the publication of which, begun in 1861 and continued in 1863, is not yet finished. Bunsen, Wöhler, Fresenius, Otto, Kolbe, and Strecker, and in fact the great majority of German chemists, still teach and write the old notation.

In this country all the chemical text-books in use are based upon the system of equivalents and the dualistic hypothesis, and this for the reason that most of our manuals have either been translated or compiled from foreign publications more than six years old. It is understood, however, that we have not long to wait for a manual of modern chemistry, arranged on the atomic system of notation, by one whose name will certainly commend the new views to the earnest attention of American teachers. We reserve for another occasion some criticisms on the name applied by its priests and converts to the new doctrine, viz., modern chemistry. We object to both adjective and noun. The spirit in which the English advocates of the new system have taught and urged it, also seems to us open to animadversion.

EDUCATIONAL.

THE recent election at Commencement of eight overseers of Harvard College by the voice of the alumni instead of by the Legislature of Massachusetts is a great revolution in the government of our most ancient university. It inaugurates a policy which, if it works well in Cambridge, is likely to be followed in many other places. The change was effected with but little outside commotion. Only one ticket was publicly advocated, and for that were cast only four hundred and forty-seven votes. The whole number of Harvard College graduates (B.A.) now living, according to the Triennial just published, is 2,779, in addition to whom 183 persons admitted to honorary degrees are entitled to vote. Less than one-sixth, therefore, of the full number of votes was cast.

It is thought that this radical change will free the colleges from unwise interference on the part of the State, and will, besides, enlist more earnest support from the great body of men whom the university has trained. Many of the traditional forms are of course altered by this change of front, including the Commencement Latin. There is one regulation which raises an enquiry in the mind of an outsider. Only graduates in the faculty of arts and those who have received honorary degrees are allowed to vote. Now, if Harvard is a true university, why should not all who have taken degrees there be allowed the same privilege?

—Many of our readers in different parts of the country must remember Rev. James Fraser, an English gentleman who visited our educational institutions last year in behalf of a Royal Commission, having been appointed to enquire into certain characteristics of our public-school system. His report has been eagerly expected. A private letter from England informs us that it is completed and printed, but not yet published. The Commission to whom the report is addressed are not yet ready to present their own views, and properly withhold for the time being the documents addressed to them. Nearly at the same time with Mr. Fraser's visit to this country and Canada, Mr. Matthew Arnold (to whose essay on "A French Eton" we have already called attention) was engaged in the study of the school systems of France, Italy, and Germany, under the auspices of the same Royal Commission. His report is also completed, and there is some reason to hope that it may be distributed, together with Mr. Fraser's, in advance of the complete volume. The ability of these two gentlemen, the importance of their

enquiries, and the authority under which they have acted, give promise of a most valuable contribution to the literature of education.

—Among the places favored by the annual educational conventions during the summer vacation, Indianapolis has been conspicuous. On the 13th was held there the meeting of National Superintendents; on the 14th that of the National Normal School Teachers; and on the 15th–18th those of the National Association of Teachers. At the first-named the leading subject of discussion was the need of better systems of obtaining statistics, for the sake of trustworthy comparisons of the workings of schools. The normal school teachers congratulated themselves on signs of an increased respect for the diplomas of their respective institutions, which were formerly even a hindrance to those seeking employment. They discussed the best methods of securing the general training of teachers, and it was urged that for those who intended to devote their lives to the profession, each State ought to possess a single school apart. Something was also said in favor of a sort of circuit normal school or institute, holding from four weeks' to as many months' sessions in varying localities. The two chief topics of interest with the National Association of Teachers were the relations of the state to education, and the educational condition and needs of the South. A general desire was manifested for a national department of education to collect statistics to aid in forming and assimilating methods of instruction, but with no coercive power over the administration of local authorities. Confidence was expressed rather in the spirit of our institutions than in legal enactments. Gov. Morton said in his address of welcome that a pure education, which should inculcate the fundamental principles of morals and of politics on which our Republic is based, would be a better guaranty of our future safety than any constitutional amendment.

In these meetings the Border States, including Tennessee, were well represented—the latter by one of her loyal legislators. Maryland, West Virginia, and Kentucky gave, through their State Superintendents, encouraging reports of their progress in popular education. The general attendance was diminished by the prevalence of cholera at the West, which deterred many from travelling. The agent of the Massachusetts Board of Education and three ladies from Rhode Island were the only representatives of New England. Especially notable was the presence of Señor D. J. Sarmiento, Minister Plenipotentiary of the Argentine Republic to the United States, and well known as the author of several educational works, including one on the American school system, published in Spanish by the Messrs. Appletons, and of a Life of Abraham Lincoln. He was received with marked attention.

NOTES ON THE NEW EDITION OF WEBSTER'S DICTIONARY.

NUMBER II.—DIFFICULTY OF ASCERTAINING THE TRUE NUMBER OF WORDS IN THE VOCABULARY.

In specifying the points of excellence of the dictionary under review, I first mentioned fulness of vocabulary. The exact numerical computation of the words in our completest dictionaries is interesting, as furnishing an approximate measure of the copiousness of our speech, and it is an important element in estimating the value of a new dictionary as compared with older ones of the same language. For miscellaneous readers—and it is almost exclusively for such, not for professed scholars, still less for specialists in any branch of knowledge, that manual word-books are designed—completeness of vocabulary is more important than exactness of definition; for if the general meanings of a word are correctly stated, the context will, in most cases, indicate the special application with sufficient precision. How far, then, is the claim of superior fulness in behalf of this dictionary justified? If we compare, word by word, any ten pages of Webster with the corresponding pages of any other general English dictionary, we shall find that while the former omits few, if any, words given elsewhere, it adds several which do not occur in other alphabets, and hence a fair presumption of greater completeness is raised in favor of Webster. Again, it might seem that, as between Worcester's, the most copious previously existing English dictionary, and that now under consideration, the superiority of the latter in the point in question was sufficiently established by the statements of the respective editors, which assign 104,000 words to Worcester and upwards of 114,000 to Webster. But a little consideration will suffice to show that these estimates alone, admitting them to be accurate as understood by those who made them, afford no ground whatever for a judgment upon the relative completeness of the two word-lists, because in neither case are we informed upon what principles the enumeration of the words was conducted.

In a lexicon of a dead language the vocabulary of the recorded literature may be absolutely complete, so far as the specification of the words which composed it is concerned; the vocabularies of dictionaries, and especially of manuals, of a living speech must always be very imperfect. Hence, in estimating the real copiousness of a dictionary of a modern language, we must take into the account both weight and value, we must subject it both to quantitative and to qualitative analysis. In a later number of this series I shall give some statistics which will serve to show that the praise bestowed upon Webster, in this respect, is not unmerited. In the meantime, it will not be superfluous to point out some of the difficulties in the way of taking an exact census of any comprehensive word-list.

To those who have not bestowed much thought on the subject, it would seem an easy thing to count the actual words which compose the vocabulary of a given dictionary. But this assumption is quite erroneous, and in practice it would be found that any two scholars, who should attempt to estimate the number of words in Webster, or in any other dictionary, would arrive at very different results. Before commencing an actual enumeration, there are several preliminary questions to be disposed of. For example: 1. Shall we count every word which happens to occur in the alphabet without enquiring into its right to be found there? or shall we confine our number to words which we recognize as, at least in some sense, English? Thus, I find in Webster, *Agul*, a thorny shrub of Persia or Mesopotamia, which affords a kind of melon. This is an Oriental word, the name of a plant which, as well as its products, is unknown to English literature, commerce, and art; *Alwargrim*, a name said by Pennant to be given in the island of Aoland to the spotted plover. This is a suspicious, and probably erroneous orthography, and no such word is to be found in the dictionaries of the Swedish language or of its dialects. If it exists at all, it is a foreign and purely local word for an object which has a proper English name. Now these words, though confessedly not English in origin or in use, do nevertheless occur in some English books of natural history and, perhaps, foreign travel. Shall we count them as constituents of the vocabulary, or shall we reject them?

2. If we agree that only those foreign words are to be counted which have acquired at least a qualified citizenship, a *locus standi*, among us, by what principle are we to be guided in determining whether a given word has attained to that position? The Latin phrase *ad valorem*, according to the value, has come into familiar English use both in adverbial construction and as an adjective, and it is found in most dictionaries. We speak of duties levied *ad valorem*, and of *ad valorem* duties, meaning duties levied on imported goods in proportion to the cost or value of the article. The Latin *nemine contradicente*, no one objecting, usually contracted to *nem. con.*, is used of proposals or resolutions accepted by general consent and without debate. When a meeting adjourns without fixing a time for reassembling, it is said to adjourn *sine die*, without day. The Latin preposition *sine*, without, occurs also in other phraseological combinations commonly used in English books, and Webster introduces it into his alphabet as an independent word, thus: "*Sine*, prep. [Latin] without." In estimating the extent of Webster's vocabulary, as a measure of the richness of our language, shall we count words repugnant to its forms and its grammatical combinations, and which tend rather to prove its native poverty? And in comparing this with other dictionaries, shall we hold it more copious than they because it contains more words which its editors themselves characterize as foreign, not in origin only but in essence? It is evident, however, that a dictionary of a language so eminently composite as English, with a total vocabulary not one-half of which is of indigenous origin, and with a literature normally employing from five to thirty-five per cent. of words from alien sources, can not follow the same rules in this respect as the lexicons of a homogeneous tongue like the German. German general dictionaries usually do, and very properly may, confine their alphabets to words of the Gothic stock, or at least they embrace only such Celtic and other foreign derivatives as had become a part of the speech before the birth of its literature; but there exist general glossaries of terms borrowed from Greek, Latin, French, and other languages, and naturalized or semi-naturalized as German, some of which, though confined chiefly to words in common use and containing few strictly scientific vocables, number more than fifty thousand words. In English, it is very rare to find a page, in some writers even a period, in which several words of foreign stock do not occur, while in German one may easily write whole volumes without introducing any but Gothic radicals and derivatives. Opening at random a German popular novel which happens to lie before me, the "Verlorene Handschrift" of Freytag, I fall upon the tenth chapter of the fourth book, containing about eight thousand words. In this whole chapter, exclusive of proper names and of several repetitions of *Professorin* and

Lakai, designations of two of the characters, and the like, I observe not above fifty non-German words, and nearly half of these occur only in the remarks of a tradesman whose language is not the best. And yet Freytag does not, I believe, make special profession of purism.

3. Words may be the same in form, but radically different in etymology and meaning. Thus Webster gives *pay*, to satisfy or discharge a debt, and *pay*, to smear the bottom of a vessel with tar or pitch, as one and the same word, and erroneously refers both forms to a common root. But *pay*, in the first sense, is immediately from the French *payer;* in the second, from French *poix* (pitch); and the respective derivations and significations are wholly unrelated. Shall *pay* be counted as one word or as two? Again, the verb *to curry*, which the editors derive through the French from the Latin *corium*, means to *dress* leather by scraping, cleansing, beating, etc., to *dress* a horse by combing and smoothing his coat, to *dress* certain dishes by seasoning them with curry-powder. These significations are all grouped by Webster under one title, and, in fact, they have some slight analogy in sense; but though the noun *currier*, a leather-dresser, is very probably derived from *corium*, the verb *to curry*, in the sense of combing a horse, certainly is not from that root, and it is very doubtful whether, even when meaning to dress leather, it is cognate with the latter word. When it signifies to season with *curry-powder*, it is unquestionably from the noun *curry*, which is Oriental. The three significations, then, of *to curry*, though figuratively allied, are logically, and two of them, at least, etymologically, distinct. Is *to curry* one word, or more?

4. Words may be the same in form and in etymology, but so widely different in meaning that neither the derivation nor any one general definition would suggest the various significations. Thus, the verb *pass* means *to have currency, as money*, and *to make a thrust with a sword*. In both senses this word comes from French *pas*, and more remotely from Latin *passus*. Shall it be counted once or twice? Further, words identical in origin and in form, and more or less analogous in signification, may belong to different grammatical classes. The verb *precipitate* means to throw or fall down headlong, the adjective *precipitate*, over-hasty, rash; the noun *precipitate*, a substance which, having been dissolved, is again separated from its solvent, and thrown to the bottom of the vessel, by pouring in another liquor. Now this word, in all its senses, is from Latin *præceps* (headlong), and its different meanings are allied. The editors of Webster make the verb *pass* one word; the verb, adjective, and noun *precipitate*, three. Are they right in both cases or wrong in one, and, if wrong, in which? Again, in the latest previous edition of Webster, the past participle was separated from its verb, and arranged under a different heading. In the present, it is treated as a form of the verb, and has no separate title allotted to it, except in cases where it has become a technical adjective capable of being used without an auxiliary. If we count the words simply as they stand in the columns of the two editions, we shall make the new vocabulary less copious than the old, by the number of titles thus omitted.

5. Words may be the same in etymology and the same in meaning, or at least indistinguishable in definition, but they may be slightly different in form, and the two forms may be contemporaneous or successive. Webster gives *comic* as one word, *comical* as another; but his definitions of the two are not logically distinguishable. Nevertheless there is a certain distinction in the use of them. We say, the *comic* almanac, the *comic* Blackstone, but the actor Foote was a very *comical* fellow. *Magic* and *magical*, on the contrary, are grouped together under one set of definitions, though they are as much distinguished in practice as *comic* and *comical*. There are, however, other words with these two endings which are employed indifferently. There are, further, cases where words, which originally had but one form, have come to have two, one with a Romance, the other with a Gothic termination, as *glebous* and *gleby*, *canonry* and *canonship*, *opacity* and *opaqueness;* cases where words indisputably identical in origin and in meaning have more than one orthography, and, of course, occupy different places in the alphabet; and, finally, there are many instances of technical terms where we use indiscriminately a Greek or a Latin and an English form, as *antispastus* and *antispast* in prosody, *cauliculus* and *cauliele* in botany.

6. In many languages a very large number of radical and derivative words are compounded with a simple privative, or other qualifying particle, the force of which is so uniform and familiar that it seems quite superfluous to give a special negative, or otherwise limited definition, to every possible word containing it. Thus, the most copious Dutch dictionaries catalogue about five thousand words compounded with the prefix *on*, which nearly corresponds to the English inseparable particle *un*, and "Worcester's Dictionary" contains almost as many beginning with the latter. The new edition of Webster explains fully the significance of this prefix, but it wisely, as I think, omits a great number of the words compounded with it, for the reason that to one who knows the meaning of the simple word that of the negative form is self-evident. Shall we say that Webster is really less copious than other dictionaries because it omits compound forms that the most ignorant reader could have no possible occasion to search for?

The opinions of lexicographers in most of these cases differ on the question whether we are to count words in these various categories as one or more, and their practice, in all of them, is probably more discordant than their opinions. We must, therefore, determine the right principle applicable to each case before we begin a numerical comparison between two vocabularies, and follow it scrupulously in computing the extent of each of them. The principles by which we are to be guided in answering these questions are not, in every instance, altogether obvious, and any one who makes the experiment will find consistency in the application of his principles harder still. He must sometimes appeal to etymology, sometimes to form, sometimes to nice points of grammar or of signification, before he can decide whether a particular word is to be treated as a cipher, a unit, or a doublet. In such delicate questions there is usually a subjective and variable, as well as an objective and constant element of uncertainty, and probably a scholar who should twice count the words in Webster would make his second summing up *plus* or *minus* by some thousands as compared with his first. Hence it will be seen that it is not a simple matter to ascertain the number of words in a given alphabet, and that the respective enumerations of the editors of "Worcester" and of "Webster" are quite too vague to furnish us the necessary data for arriving at any conclusions whatever respecting the absolute copiousness of the English language, or the comparative fulness of the two vocabularies.

G. P. M.

DE PROFUNDIS.*

WHATEVER opinion may be entertained of Mr. Gilbert's inventive faculty or literary merits, it will not be questioned that he possesses a knowledge of the habits and haunts of London costermongers, charwomen, thieves, and other denizens of the overcrowded and filthy quarters of the metropolis, to which few writers of fiction can lay claim. And if an almost exclusive use of these as materials for his story, and a morbid satisfaction in what is offensive, or, perhaps we should say, an irresistible tendency to dwell upon the disagreeable phases of social life, for no other reason apparently than because they are disagreeable, can make a man a good novelist, the author of "De Profundis" should take high rank in his profession. From beginning to end of the book he is literally and typically in the "depths," and he takes good care to remain there. If by chance a character of average respectability or a locality of average cleanliness is introduced, he almost apologizes for the intrusion, and seems uncomfortable until he can regain the more congenial atmosphere of the back-slums in which the main incidents of his story take place. Of this we purpose giving a brief sketch.

The hero of the tale is a foundling, deposited in the basket of Mrs. Sparkes, a washerwoman, while she is calling at the house of one of her customers. Both police and parish authorities refuse to take charge of him, each demonstrating, beyond the possibility of doubt, that the other is his legitimate guardian; but Mrs. Sparkes, unwilling to see the child perish in this muddle of red tape and circumlocution, decides, with the consent of her husband, a private in the Scots Fusilier Guards, upon adopting him, and he is christened James Duke, the latter half of his name, which supplies the place of patronymic, being due to Private Sparkes's admiration for the Great Duke, under whom he had served at Waterloo. Under the care of Mrs. Sparkes and her daughter Jemima, an ugly girl, with freckled complexion and red hair, James grows up a sturdy, stupid, but well-disposed boy, and at fourteen years of age becomes a drummer in the regiment of his adoptive father. The latter, who has died early in the tale, is now followed to the grave by his widow, and Jemima, grown into a prodigiously tall woman, with her natural physical imperfections exaggerated by years, enters the world as maid-of-all-work at a boarding-house. James, having a natural repugnance to constituted authorities, soon tires of a military career, and deserts from the service. After leading a vagabond life for some months, he is enabled, by the assistance of Jemima, to obtain employment as an errand boy with a poulterer, and, showing aptitude for his calling, is gradually advanced in position and wages, and, finally, marries Jemima, who is eight years his senior. The couple being now comfortably settled in life, misfortunes thicken around them. James, prostrated by severe illness, is induced, against his earnest remonstrance, to take brandy as a stimulant. Jemima also has an attack of illness, from which she emerges with the loss of one eye and no increase of personal attractions. Meanwhile, husband and

* "De Profundis; a Tale of the Social Deposits." By William Gilbert. Alexander Strahan, publisher, London and New York. 1866.

wife have acquired a taste for ardent spirits previously unknown to them, and, under the influence of unusually deep potations, the former commits an assault upon a policeman, for which he is sent to the house of correction. Upon being released he is summarily dismissed by his employer, the poulterer, and soon after falls into the clutches of a scamp named Meffy, who, taking advantage of the simplicity of Mr. and Mrs. Duke, contrives to plunder them of the few pounds they have laid up in the savings-bank. Reduced to great poverty, they leave their lodgings in the comparatively aristocratic quarter of New Pye street, Westminster, for a squalid back-court, known as "Smith's Rents," where the author lingers lovingly during the rest of his tale. Of the appearance and condition of that locality, and the habits of its inmates, many graphic accounts are given, which, it may be added, are entirely apart from the plot of the story, if plot there be. James now makes a new start in life as a costermonger in the fish line, and succeeds very well until his evil genius, in the shape of Mr. Meffy, again environs him with difficulties. With inconceivable stupidity he is induced by this person to become a vendor of poultry, with which certain of Mr. Meffy's friends kindly supply him on very reasonable terms, and in due time he is again sent to the house of correction as a receiver of stolen goods. Meanwhile, Meffy plots with one Theodore Walters and his son Edward, both residents of "Smith's Rent," to rob the house of a wealthy old bachelor named Mostyn. In the execution of the burglary Mostyn is murdered by young Walters, Meffy, as usual, succeeds in getting out of the way, and the elder Walters, who is entirely innocent of the murder, after assisting his son to escape to America, is arrested as the perpetrator of the crime, which, it seems, was committed on the night preceding Duke's last incarceration. With a view to still further shield his son, and also to extricate himself from difficulty, Walters next endeavors to turn Queen's evidence, and boldly charges Duke with participation in the burglary, and with the commission of the murder. The latter is arraigned, but easily proves an alibi and is acquitted, while Walters is convicted and hung. The heir-at-law of the murdered man now interests himself in Duke, and sends him out to Sydney, New South Wales, where the story leaves him established as "Purveyor of Poultry to his Excellency the Governor."

Such is the main thread of the story, the point or moral significance of which, unless the author has intended merely to produce a series of sketches of the London poor, cannot be readily detected. The hero and his wife, who, in spite of a stupidity which we fancy cannot be characteristic of native Londoners, are an affectionate and worthy, though very commonplace couple, are involved in all kinds of trouble, which certainly are not of their own seeking, which develop in them no remarkable traits of character, and from which they emerge no better able, apparently, than before to combat or avert misfortune. As their first mishap illustrated the evils of over-indulgence in alcoholic drinks, we fancied the story was to be a temperance tale; but there is nothing to show that Duke abolished or greatly abridged his potations in after life, or that he might not have got into just such another scrape again. Both are buffeted by the world without cause, by the pure force of circumstances it would seem; and even the elder Walters, whose efforts to shield his guilty son awaken some commiseration for him, suffers the extreme penalty of the law, while the two principal villains of the tale, Meffy and young Walters, escape scot free. Thus that exemplification of poetic justice which is supposed to be the novelist's aim is defeated; it is the guilty who are favored of fortune and the innocent who are punished.

The constructive ability of the author is very slight. His numerous episodes illustrating low life, though evidently founded on fact and often humorously told, positively detract from the interest of the story. Possibly a third part of the book is devoted to such digressions. As an illustration of the minuteness with which he goes into unimportant details, he devotes in one instance half a page to describing two characters, one of whom, he tells us, is not to appear at all in the story, and the other "only once or twice in very secondary business." Above all, the atmosphere, reeking with squalor and misery, in which the main incidents of the tale are enveloped, oppresses the reader from the first page to the last. We do not complain that Mr. Gilbert has penetrated deeper into the "social deposits" than others—Dickens, for instance—but that he remains there so persistently and so needlessly, introducing no grateful sunlight to relieve the sombreness of his shadows, and pointing no moral from the ugly associations with which he has brought us into contact. That is the glaring error of a work which evinces in many passages a considerable degree of descriptive talent and dramatic feeling. Had the author shown that Duke and his wife, in spite of living in "Smith's Rents," among thieves, prostitutes, and vagabonds, triumphed over misfortune by reason of certain innate virtues, and not through circumstances as purely accidental as those which produced their misfortunes, his aim would have been intelligible. But, failing to do this, his "tale of the social deposits" is simply an offence against good taste and propriety.

English Travellers and Italian Brigands. By W. J. C. Moens. (New York: Harper & Brothers. 1866.)—On May 14, 1865, Mr. Moens and the Rev. J. C. Murray Aynsley, while returning with their wives from an excursion to Pæstum, were stopped by brigands near the village of Battipaglia, about midway between Pæstum and Salerno. The ladies were speedily released and permitted to proceed on their way to Salerno, while their husbands were hurried off by the band to the mountain fastnesses adjoining the coast. Their ransom was fixed at 50,000 ducats, equivalent to £8,500 sterling, and Mr. Murray was selected by lot to go in quest of the money, his companion in misfortune remaining with the brigands as security for its payment. On August 23d the last instalment of the ransom, which had been reduced to 30,000 ducats, was paid, and on the 25th, after a captivity of one hundred and two days, accompanied by ceaseless hardships and danger, Mr. Moens was restored to liberty. In the volume before us he has given a plain and modestly written narrative of whatever of interest came under his observation during his captivity, from which the reader can obtain a good idea of the romance, the perils, and the profits of brigandage. The romantic side of this mode of life, according to the author's experience, is altogether a fiction. The brigands are ignorant, ferocious, and cunning; fierce and determined when brought to bay, but for the most part inclined to avoid a fight, unless the odds are clearly in their favor. Their leaders are not, as is often said, men of superior condition and generous instincts, who have been driven by misfortunes or oppression to outlawry, but in general are as unmitigated brutes as one would wish to encounter, and selected as leaders from superior skill or determination. The traditional picturesque garb, and no less picturesque bivouacs or banquets in mountain caverns, commonly associated with Italian banditti, certainly did not fall to the lot of Gaetano Manzo's band, by whom Mr. Moens was captured. Their clothes were more frequently drenched with rain or plastered with mud than warmed by a bivouac fire; for days at a time they were often without other food than a miserable crust of bread; and the vigilance and activity of the Italian troops stationed among the Southern Apennines compelled them to be constantly on the move. It seems almost incredible that men should endure so much peril and personal discomfort, in view even of the large pecuniary rewards which they sometimes reap from brigandage, except on the supposition that they have committed too many crimes to permit them to reside in civilized, law-abiding communities. This is the true cause of the existence and permanence of the system, and not, as is commonly believed, political disaffection promoted by Bourbon reactionists. Brigandage is a necessity, and a necessity which the peasantry gladly recognize and encourage for two reasons: it rids them of certain dangerous members of society, and it opens to them a profitable trade with the outlaws themselves, who pay for food, clothing, arms, or ornaments from eight to ten times the value of the articles. From the peasants and the *vetturini* they gain all the information and aid they require to carry on a successful career, and, in the opinion of Mr. Moens, it is against these classes that the Italian Government must direct its efforts if it expects to put down brigandage. So long as the *interests* of the country people are concerned in its maintenance, or while their fears of the *vendetta* forbid them taking a hostile attitude against the brigands, it will flourish. The remedy suggested by the author is to open up the country by roads, to levy the sum paid as ransom for any captive upon the district in which he was captured, to punish severely those known to have had dealings with brigands, and to establish an armed rural constabulary, who, knowing the country and being of the country, he thinks, would be far more serviceable than the Piedmontese troops now employed, for whom both proprietors and peasants in Southern Italy at present entertain a marked dislike.

The Lady's and Gentleman's Science of Etiquette, and Guide to Perfect Manners in Society. By Count D'Orsay and Countess De Calabrella. (Philadelphia: T. B. Peterson & Brothers.)—In Barbadoes, they say, a man becomes a gentleman by purchasing and sometimes wearing a pair of shoes and stockings. We dare say an American citizen from Arkansas, though he were barefooted and owned but one negro, would once have maintained his right to the title at the point of the well-known toothpick of his native State. But more than shoes and stockings or likely negroes are demanded by our noble authors. For instance, the count says: "Do not pick your teeth too much, as, however satisfactory a practice to yourself, to witness it is not at all pleasant." "And never," says this foreign aristocrat,—"never use your knife to convey your food to your mouth." As a home-made book of etiquette remarks, we have discarded the worn-out despotism of the Old World so far as our form of government is concerned, why should we not, if we choose, establish an American rule in this matter of eating with our knives? There is more of the argument, as that the knife is just as clean as the fork, that it is really less awkward, that, as for the charge that a man eating with his knife looks as if he would cut himself, the reply is, that reason reassures us no man ever did cut himself except when he was in a very great hurry. But we do not propose to discuss the question. If Count Alfred is severe in his requirements, the countess also sets the standard of gentility high. "It is bad ton," she says, "to keep the cards you have received stuck around the frame of a looking-glass." And again, this is a hard saying: "Ladies should avoid talking too much;" though we are forced to assent when she adds, "It will occasion remarks," which seems undeniable. This is good though; it is addressed to wives: "In all discussions you should watch yourself attentively lest domestic familiarity raise itself by degrees to the pitch of a quarrel."

But a fine moral tone pervades the book, and, on the whole, we see no reason why the Count D'Orsay and the Countess Calabrella, if they are in heaven, have not a right to do what Timothy Titcomb says he intends doing if he should go there—namely, take by the hand such of his readers as he finds, and mildly but firmly, also hopefully, ask them if they were not really benefited by the perusal of his works.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE CONSERVATIVE PLATFORM.

THE resolutions adopted by the reactionary convention at Philadelphia afford another illustration of the hollowness of party platforms. Nine out of the ten resolutions could be accepted by every opponent of the convention with very slight alterations. The whole question at issue turns upon the *interpretation* of the very language used in this platform. Much of it is taken literally from the Constitution of the United States, and is, of course, accepted and insisted upon by both parties. The resolutions make no practical application of these general principles, although it is notorious that the only cause for the assembling of the convention was the difference of opinion which arose in attempting to make that application. No one disputes that every State is entitled to representation by members duly elected to Congress. But is South Carolina an organized State? and if so, have her representatives been *duly* elected? The convention does not say. The State having been once confessedly disorganized and broken up, had the President the exclusive power to dictate the mode of its reorganization, or was this a subject for the control of Congress? The convention does not say. Yet these are the only questions of constitutional law and the cardinal issues of political principle involved in the struggle which this convention was called to initiate.

Of course we all fully understand the real views of the convention upon these points; but they were just as well understood before it met. And if, having assembled with so much parade, to utter a few meaningless platitudes, we are left simply to our previous knowledge of its members from which to infer their views and aims, we are at liberty to put such construction upon the platform as the past history of the great majority of the delegates will warrant. Practically, the resolutions mean that which the party supporting them intend that they shall mean. The great object of the mass of those present was to clothe the rebels with power, to put loyal men under their feet, and to release the white people of the South from all checks and restraints upon their will. Doubtless they purpose to do this within the Union, and we believe that most of them have no ulterior designs against the maintenance of the Union, if it can be preserved upon their terms. But their policy is inconsistent with the very idea of free government, and inevitably hostile in its tendency to the continuance of the Union. We judge them by their general policy, not by specious declarations made under the pressure of necessity and for political purposes.

The address is a little more explicit than the resolutions, though even this is, to a great extent, couched in general and evasive language. We gather from it that ten States are, in the opinion of the convention, unconstitutionally excluded from Congress, that if they are not promptly admitted a new civil war may be expected, and that, by this exclusion, the validity of the Government itself is brought in question. In attempting to recite and confute the arguments by which the action of Congress is justified, the author of the address confined himself to a citation of those arguments which he thought could be most easily answered. The address takes no notice of the fact, assumed as indisputable by Mr. Johnson and all his supporters in 1865, that the events of the war had obliterated all legal civil government from the revolted States, and that it was the duty of the Federal Government to organize those States anew. It evades the main issue before the people, which is not whether conditions shall be imposed—since conditions have been imposed, with the assent of the convention, expressed in its endorsement of Mr. Johnson—but which is merely whether the work of reorganization and the imposition of terms which necessarily belong to it, are within the province of the executive or of the legislative power. Congress claims this work as both its right and its duty. It claims the right to determine how fast the work of reconstruction shall be carried on, and to deliberate upon its methods and means. This takes time, undoubtedly, and meanwhile no representatives can be "duly elected," since the springs of local government cannot be put in motion without the supervision of Congress. But even the President's plan has not avoided all delay, for no members have yet been elected to Congress from Texas, though fifteen months have elapsed since he usurped the task of reconstruction. Time is an element which all free governments must use liberally. Only despots can create new laws and institutions in a day.

Some of the assertions of the address are worthy of note, as entirely inconsistent with the truth. Thus it is said that in every respect, except that they are denied representation, the States once in rebellion are recognized as holding the same position as the other States of the Union. This, it is well known, is not so. Congress has steadily refused to recognize them as reorganized for any purpose, and has never admitted that the governors and legislatures elected at Mr. Johnson's bidding have any right to control even the internal affairs of their States. So it is said that Congress has asserted an absolute right to exclude States from representation at its own discretion, wholly independent of the fact of their rebellion or disorganization. Such a pretension would indeed be monstrous; but we are not aware that it has been advanced by a single member of Congress, and we are quite certain that it has never been put forth by the collective body. An appeal for popular support based on such gross misrepresentations cannot command the respect of any one acquainted with the facts. As for the declaration that there is no section of the country in which the laws meet with more prompt obedience, or where there is less danger or purpose of any future insurrection than in the South, its audacious coolness puts it entirely beyond comment.

Neither the resolutions nor the address explicitly asserts the power of the President to do the things which they applaud him for doing. That is a point upon which the convention wisely refrained from argument; its shrewdest members being well aware that they could not prove the right of Mr. Johnson to reconstruct the Southern States without putting weapons into the hands of Congress. So they endorse his acts generally, without specifying particulars or attempting to reason out their position. The obvious truth is that the majority of the convention were so thankful to Mr. Johnson for not going further, that they were glad to forgive him for going as far as he did.

The platform of the new party being so evasive, so capable of interpretation in different ways, the account which we give elsewhere of the doings of the convention will throw more light upon its aims and spirit than any of its official expressions. Indeed, we all know very well of what material the party is and must be composed. No matter what professions its managers may make, its tendencies are inevitably to sustain oppression, and to substitute peonage for slavery. In this respect it stands in marked opposition to the party of Congress, which, with many grave defects of policy and leadership, has nevertheless always had a better tendency than its platforms indicated, and has always done, or tried to do, more for the cause of liberty than it has promised. We look for plainer, more distinct, and far more generous utterances from the Union conventions this fall, than those of the Philadelphia assemblage. The party of liberty ought not to fear to express itself in language unmistakable as well as just.

WHAT BARON VOM STEIN DID FOR PRUSSIA.

THE extraordinary rapidity with which Prussia has jumped into the position of the first power in Europe—for such she may now undoubtedly be considered; the extraordinary skill which has been displayed in the management of her resources in the recent contest; the great qualities displayed in it, both by the rank and file of the army and by its leaders; and the marked influence which she is likely henceforth to exercise on European politics, have naturally excited general interest in her recent history. Everybody knows something of the wars of the great Frederick, and how much fighting he got out of his unfortunate people; but Prussia in his day was not a state, but a camp. Few people know, however, by what process and whose hand it was raised from the condition of degradation and poverty and weakness in which the battle of Jena left it, into the martial, industrious, wealthy, prosperous, and powerful state which we see to-day.

With the peace of Tilsit, in 1807, the fortunes of Northern Germany reached their lowest ebb. The Prussian monarchy was reduced to the

three provinces of Prussia proper, Brandenburg, and Silesia, with fragments of Pomerania, but with frontiers curtailed on all sides. For many months the virtual administration, even of that portion of these shreds of a country lying west of the Vistula, was in the hands, not of the officers of the King, but of three French *corps d'armée* and the civil commissaries in their train. Immense contributions were in arrears, and the forces of the Emperor Napoleon had no idea of leaving until they were collected. The collection was tardy, because of the enormous amounts required; and the longer it lasted, the longer was the occupation, and the heavier the attendant expenses and the new contributions required to meet them. By arguing in this ingenious circle, Napoleon filled his coffers and rewarded his favorites; but, instead of extending he practically circumscribed his power, by fomenting among the tax-paying orders of the conquered provinces—the very classes on whose inveterate ill-will toward their hereditary rulers he should have relied for support—that universal discontent which, powerless as yet, was destined shortly afterwards to become troublesome in Spain, formidable in Austria, and ultimately overwhelming in Prussia, Russia, and Austria.

The remnants of Prussia were inhabited by about 4,600,000 people, saddled with all the evils which the French had thrown off in their revolution, and which, until now, the Prussians had not only borne, but cherished, as interwoven with the glories of their history. To one who has not visited the eastern shores of the Atlantic, it is almost impossible to convey an adequate idea of the hostile castes into which the peoples of Europe were divided at the close of the eighteenth century. The peasantry were serfs, bound, by the accident of their birth, to render not only agricultural but menial services, and but little better protected against the tyranny, the insolence, and the immorality of their superiors, than the negroes and negresses of the late slave States. Penal laws prevented them from quitting the curtilages which their forefathers had given them to cultivate, and of which their landlords were nevertheless at liberty to dispossess them at pleasure, and incapacitated them, if not from learning trades, at least from exercising them in towns. The peasants on the royal domains had been personally enfranchised in 1702, but without conferring upon them any rights of property to the land they tilled. The townsfolk, though accounted free, were not at liberty to settle in the open country, unless, indeed, they were wealthy enough to purchase a whole estate, with its village of appendant serfs, its seat in the "estates" of the province, its court-leet, its advowson, its chase, and its right of entail, all of which required special letters of license from the crown. The peasant could not obtain these letters, and, of course, could not make such a purchase. The next heir to such an estate, if a commoner, was postponed to a more distant kinsman of noble birth. Even the nobles thus privileged were in their turn prohibited from acquiring town lots or peasants' farms, or from engaging in commerce or handiwork. The army, in which they alone could be commissioned, and the bureaucracy were their only refuge from penury; but the sudden curtailment of the kingdom to hardly a third of its late area, accompanied by the disgraceful collapse and disintegration of the army, filled every corner of the land with displaced office-holders and military men on half-pay. In the province of Posen alone, which Napoleon had transferred from Prussia to Saxony, seven thousand civil functionaries were dismissed by the new government, and driven to Prussia to escape starvation. So high was the price of the necessaries of life that rations of bread had to be issued to the half-pay officers.

Practically, though not legally, the office-holders constituted a fourth estate as widely severed from the rest as the latter from each other. In this category must be comprised the clergy and the men of learning, who labored to console themselves and the educated classes of the people for the want of actual freedom, by constructing doctrines of theoretical liberty. "At such times," says Stein, "the speculative sciences usurp a disproportionate importance, matters of public concern are neglected, and eccentricities and paradoxes engage and abash the mind, which lapses into purposeless reveries instead of irradiating the field of action." Even in the principal cities, elective offices had lost their existence or their importance, and the municipal business was entrusted by the central government to the hands of invalid officers, sergeants, and corporals. Every member of the bureaucracy depended upon the favor of his immediate superior for his chance of preferment, and even of livelihood. The ultimate superiors, the ministers of state, depended, nominally, on the King, but, substantially, on the ebb and flow of their intrigues against each other, and of the other courtiers against them. The ministers were thirteen in number; the heads of departments never assembled for consultation, but communicated with each other in endless diplomatic correspondence.

At the head of this people was King Frederic William III., a monarch whose natural parts never sufficed to give him the command of his mother tongue, and whose leading maxim was to distrust men in exact proportion to the degree of capacity of which they gave token.

In a word, matters had arrived at that desperate pass at which alone reform even may be inaugurated with a prospect of adoption, and, fortunately, the strong hand was not wanting for the work. The reorganization of the army was radically designed and energetically prosecuted; "no one in the world," to use Blücher's phraseology, "was exempted from serving, and no one cut off from the chance of promotion." Gymnastic exercises were prescribed even for the common schools. The renunciation, on the 29th of March, 1808, of the prerogative right of exacting heavy fines for permission to erect mills, was followed by the abolition of the monopolies of the guilds of bakers, butchers, and hucksters. On the 26th of August oral deliberations of the Ministers of State had been inaugurated. On the 19th of November ensued an edict empowering the citizens of every town to elect their own local magistrates. The organization of provincial assemblies, or estates, mooted and discussed about the same time, was effected in 1823, and a representative legislature, formally promised the people in 1809 and 1815, was secured by them in 1848, on which occasion, also, they realized the hope, so long deferred, of a judiciary not appendant to the manor, but appointed by, and responsible to, the state. On the 15th of August, 1808, the King conferred upon some 47,000 families—the peasants of the crown domains in the province of Prussia, the only one then uninfested by French soldiery—the fee-simple of the lands tilled by them, comprising about 4,230,000 acres, valued at seventeen millions of thalers. All these measures, however, were preceded by what may be called the great constitutional amendment, adopted the 28th of October, 1807. It restrained landlords from converting into sheep-walks the farms once leased to a peasant family, without the consent of the tenant and his heir and of the provincial authorities; qualified every Christian subject of the realm to exercise any and every calling; and to take, hold, and convey real estate, and for ever abolished all rights of property in man or in human labor or services. Another, and, as many regard it, the crowning part of the work, was the establishment of the University of Berlin, the focus of a national system of education pervading every order of society, and unfolding every grade of intellect on the fundamental principle of Pestalozzi's method; the evocation of the spontaneity of the mind in contradistinction to the cramming of the memory.

Such were the far-famed reforms of the Baron vom Stein, the practical results of the programme with which, in October, 1807, he had entered upon the administration.

Notwithstanding the authentic exposition of the motives of the scheme, and notwithstanding the pains we have taken to place it in its true light by detailing the grievances and abuses it corrected, we cannot suppress a misgiving that the remark, "Is that all?" will be the first comment of our readers. The "liberal" reforms of the Baron vom Stein would not be dreamed of in the United States at this day as the wildest aspiration of the most reactionary aristocrat. It is as if an American were laboring to explain to Prussians the value of a law forbidding the butchery of negroes for pastime, or preventing the banishment of citizens for having aided in suppressing a rebellion. Yet recent events in the centre of Europe are indications of a national health and vigor for which the needle-gun alone will not suffice to account. Great ends have been attained in a very short time, and at very small expense. That much of this is due to those features of Stein's system which may be regarded as an approximation to American institutions no one will deny; but, in candor, a liberal share of the credit belongs to the two points of the programme which the American reader may have thought least worthy of notice—the principle of universal liability to military service on the one hand, and the guarantee of universal edu-

cation, in every grade, according to the Pestalozzian method, on the other hand. No part of our late military administration underwent less criticism than the bounties paid our volunteers and the commutations allowed our drafted men. No act of the Government was more universally applauded than the instantaneous and total disbandment of our forces. Nothing could have been more fully sanctioned by public opinion than the entire omission to secure a permanent registration and organization of the national forces upon the return of peace. Yet the bounties have done more to demoralize the masses and pile up the national debt than all the efforts of the enemy; the precipitate disarmament, besides throwing away the most splendid opportunities in foreign politics, and leaving the loyal inhabitants of half the country to the tender mercies of defeated but unchecked enemies, has flooded the walks of business and of politics with hosts of enforced adventurers, many of whom, under the pressure of necessity, are laboring socially and politically to injure, debase, and destroy the country which they risked their lives to save, and which, did not hunger forbid, they would gladly serve and sustain; and the absence of a system of national drill and organization makes it certain that the next war will be as long drawn, as corrupting, and as wasteful of blood and treasure as the last. The Prussian soldier of the present day has every title to the name of a citizen; but the army, from the ranks up through every grade of officer to the staff, is pervaded by an amount of military intellect, skill, and discipline such as no "regular" troops have ever attained. The acquirements of the business and professional part of the community is not the mere residuum of each individual's own business experience, but the development of what he has learned in the college or the high school, not to detest as a task and forget as rubbish, but to incorporate with his mental growth and being. There is an appreciation of other standards of excellence besides the accumulation of wealth; and the wealth on hand, vastly inferior in volume to that of maritime nations, has a power of purchasing the means of happiness infinitely superior. A millionaire in New York can accomplish no more in the education of his children, in the enjoyment of cultivated pleasures and of the refinements of life, and in rescuing from the turmoil of business, ambition, and care a reasonable portion of leisure, ease, and self-culture, than a pensioned German officer or retired professor.

ELEANOR.

Only one tongue to speak!
And that his—the betrayer!
Her white lips were still and meek,
And the world did not care!

She was beautiful and young,
As she lay there cold;
Smoothly flowed the guilty tongue;
No one *her* tale told!

Only one tongue to speak
In *this* world! Betrayer!
Does it never blanch thy cheek
To think that Christ *must* care?

THREE DAYS IN PHILADELPHIA.

If an unfriendly observer might, perhaps, for the moment be a little depressed as he looked round upon the benches of the Wigwam and saw the great multitude, twelve or fifteen thousand strong, apparently enthusiastic and unanimous, gathered together there, he might partly reassure himself by turning to the platform, where the chief places were no better filled than by Mr. Randall, Mr. Doolittle, Mr. Edgar Cowan, Mr. Browning, and Mr. Hogan of Missouri. General Dix also sat among these gentlemen during two of the three sessions; so did Senator Carlile; Mr. Raymond was there on the last day; and until the last day Mr. Isaiah Rynders, of New York, was pointed out to the curious.

It was reassuring, too, to notice that this was a great popular rising of the sort which seemed to give its most heartfelt cheers to the name of Vallandigham. And the unanimity—which was so striking a characteristic of the proceedings that one was reminded rather of a machine than of a deliberative assembly, or a meeting of long-separated brethren speaking freely the fulness of their hearts—was a unanimity obtained by certain means that were obvious to the most inexperienced eye. We do not speak of the means by which Vallandigham, Henry Clay Dean, and other delegates of national notoriety were induced to spare the convention the scandal of their attendance, for that business was managed in private rooms, and apparently it was provided in whatever agreement was made that Mr. Vallandigham should not only withdraw, but withdraw in silence, and he made no speech in public before going away from Philadelphia. It may sufficiently account for his silence and for the generally repressive treatment to which he submitted, that his Southern friends condemned him to no more difficult task than they themselves were willing to perform. No Southerner claimed or took a prominent part in the proceedings; not one of them, we believe, opened his mouth in the convention—except to give the chairman the name of some gentleman to be put on committee—after the ex-General Dick Taylor called for three cheers for the temporary president, General Dix. In regard to Mr. Vallandigham and themselves they judiciously decided, and the decision was rigorously carried into effect, as Mr. Stephens, of Georgia, is reported to have decided in his own case, "that peculiar circumstances of an antecedent nature made his non-participation as an active delegate more advisable than otherwise."

"For you see," said a delegate from Georgia, talking to another in a horse car, "what we want is to split off a part of the Black Republicans—enough to change the majority in Congress."

"Well, we'll do it," said the other. "That was a heavy delegation from New York. And after what Mr. Vallandigham has done, we can carry all our districts in Ohio but four. I was not a great friend of Mr. Vallandigham's before, but he's done a big thing for himself. And we never would have forced him to go, sir. He was one of our delegation, and we admitted it."

The Georgian assented, and went on to speak of the address:

"I don't like all that address. It's mighty long, for one thing. Though, far as that goes, it'll be read by everybody. He's an able fellow. And there were some things in the resolutions, too. That one about the Federal soldiers. We saw Federal soldiers in Atlanta. But it ought to give us a hundred thousand votes."

The Ohio man was confident that it would, and much more confident than the Southerner seemed to be that the desired diminution of Black Republicans would take place.

Within the Wigwam Mr. Doolittle was the great promoter of harmony. For example: it had been made a rule for the government of the deliberations, that all resolutions meant for the platform or the address should be referred without debate to the Committee on Resolutions. On the second day an Illinois Democrat, as he announced himself, rose, and, much to the disgust of the managers, moved that the resolutions should be reported in print, and he added, in substance, that he wished the platform thoroughly examined before it was accepted. A keen-faced old man, of the New York delegation, was up in a moment, and asking Mr. Doolittle to make the preposterous ruling that an order of the convention, directing the committee to print their report, was a motion of such a kind that, under the rules, it could not be adopted nor rejected, but, like a resolution, must go to the committee without a vote. Mr. Doolittle, evidently to the satisfaction of Mr. Randall, and somewhat to the amusement of Mr. Cowan, who laughs easily, and probably has learned something of parliamentary law, instantly complied with the New Yorker's request. This is but one instance; the after history of the resolutions and address furnish several others. A Pennsylvania delegate offered an ill-considered resolution referring to Forney, Sumner, and Stevens. What it referred to was not, however, found out by its being read to the convention, for Mr. Doolittle coolly took the responsibility of keeping the slip of paper in his own possession, nor could the delegate afterwards succeed in having the matter brought up. Again, it was generally noticed, when the resolutions were reported, and a gentleman on one of the very foremost benches was endeavoring to catch the President's eye and ear, that he, without the smallest regard to that circumstance, declared the question to be upon the adoption of the report, and, immediately putting that question, it was answered with gratifying unanimity in the affirmative. The address written by Mr. Raymond followed next, and was no sooner adopted in a similar way than the ever-vigilant Mr. Hogan, rising in the interest of harmony—which at the Wigwam seemed to resemble liberty in one respect—was ready with a motion for an adjournment at once and *sine die*.

The studious preparation of this harmony, the cut-and-dried monotony of agreement, were made manifest in many other incidents, as, for instance, in the reading of Mr. Raymond's address. The discouraging quiet with which that paper would be received had been foreseen. The first few sentences contained nothing that would not be acceptable to any body of Americans. The

country was said to have risen with renewed strength after a long civil war, and to have displayed such courage and resources as to command the respect and admiration of the civilized world, and thereupon some matter-of-course applause followed. Mr. Raymond sat down and looked at Mr. Doolittle. Mr. Doolittle gave two or three raps with his gavel and said that gentlemen must know that whenever applause was given some time was consumed; he requested, therefore, that no sign of approbation be made until the end of the reading. Much of what succeeded may be serviceable in Northern political campaigns, but we doubt if any Southerner there present listened without displeasure when the reader went on to mention the late war as an insurrection, when it was said that throughout the rebellion the United States had acted strictly on the defensive, and that the absolute supremacy of the National Government had been established. At any rate, for half an hour or more, all disposition to applaud was perfectly restrained, and there was no stamping or cheering till Mr. Raymond came to the passage where it is said that the Southern people, if they should submit with uncomplaining submissiveness to the humiliations that Congress seeks to impose on them, would be unworthy of their ancestors and themselves. Then there was a great uproar, and, on motion, the words were read over again and were applauded more furiously than before. It is fair to say, however, that it is left open to Mr. Raymond to plead that his statement of what it is that Congress asks of the South was, in many respects, a false one, and that, therefore, the policy which he indirectly advised the Southerners to resist by force is an imaginary policy, which never was and never will be pursued towards them. Again, when the committee reported their ten resolutions, the convention adopted them in rather less than two minutes. Then the president said that, by mistake, one resolution, the seventh, would have to be passed upon by itself. The Secretary read it, and in a moment we had the pleasure of hearing the abolition of slavery ratified with particular ceremony, and of seeing Massachusetts and South Carolina rising together to lead off in cheers for the propositions that the South has no purpose nor desire to re-establish slavery, and that the negro ought to have equal protection with the white man in every right of person and property.

If it seems wrong to allege or to suspect so much finessing, we can only say that from the beginning the sincerity and straightforwardness of the managers were made more than doubtful by continual displays, some of them above-mentioned, of rather unscrupulous and mean adroitness and of cheap stage trickery. A specimen of this latter was given on the first day, when the delegation representing South Carolina, and a delegation which came from Massachusetts, were made to walk down the central aisle arm-in-arm—the South Carolinians, by the way, Governor Orr, Governor Perry, and the rest, having much the advantage in point of appearance; for although both sides seemed to wear an air of being conscious that the performance was rather ridiculous, the Massachusetts men had a half-frightened look of sheepishness and inferiority that made one pity them, and was not pleasant to see. Other instances were when General Custer swung his hat, and led off the applause as the band played "Dixie," and when General Dick Taylor was selected to propose three cheers for General Dix.

But, at any rate, the labor and pains of the managers were exceedingly well rewarded. The discipline of the convention was perfectly maintained, and at no time was its quiet in any danger, except, for a moment, when the president tried the method of peremptory repression which had previously been so successful with Mr. Hays, of Illinois, and attempted to prevent the reading of Vallandigham's letter. Mr. Groesbeck, of Ohio, leaving his seat, walked down to the front row, holding the letter in his hand. He presented it as a communication from Mr. Vallandigham. The applause that followed was instantaneous, beginning in several parts of the hall simultaneously, and needing no prompting. On the platform there were none but grave faces, and in the benches there were many angry faces when Mr. Doolittle replied that without the unanimous consent of the convention the letter could not be read. A gentleman from New York was quick with his dissent, but as he said "I object," there were cries of "No, no," and indications of a storm. Mr. Groesbeck kept standing, and several other members rose amid a stir which can hardly be called confusion, but which was in marked contrast with the ordinary dead calm. Evidently the prearranged programme was spoiled; but Mr. Reverdy Johnson, who, with Mr. Montgomery Blair, was conveniently posted full in the President's eye, came to the relief of Mr. Doolittle's embarrassment, and got a round of applause for moving a suspension of the rules so that the letter might be received. This was carried, and there were more cheers. Then the secretary read the letter, which was vehemently applauded, and all danger was past. The great danger, at all events, was past; for it proved not difficult to get the declaration of principles through without a word of debate, though that, it seemed, was a cause of thankfulness, since when it was done there was plenty of hand-shaking among the managers, and the odd-looking face of Secretary Randall, which, however, is not fitted for the display of the harsher emotions, was perfectly beaming with delight.

Outside of the convention almost everything was equally satisfactory. There was, of course, a great consumption of drinks in the different bar-rooms, but it led to very little disputatious talking, and we saw nothing that approached a breach of the peace, except, perhaps, on Wednesday night, and the talk then came to nothing. "There will be no riot," I heard a city merchant say. "Naturally it makes some of our people mad to see these rebel major-generals walking up and down the streets. There 's Chalmers; he was at Fort Pillow. And there was an impression that John Moseby was here, but I believe it 's his cousin, C. L. I do n't know, I won't say we should n't have had trouble if the papers and the influential men on our side had n't set their faces against it. Indeed we may have trouble yet, but I think not. Our very lowest class of people are not like your lowest class in New York, and Philadelphia is not New Orleans."

These last words were the first I heard in the street on the morning of Tuesday. An old negro leaned on a cane and watched a young one who was scrubbing the sidewalk. He looked after a delegate, unmistakably from the South, a long-haired man in a full suit of black, except that the waistcoat was wanting, and said to the other, "No, Philadelphy a' n't New Orleens."

On Wednesday afternoon a band appeared on Ninth Street, under the balcony of the Continental Hotel, and, beginning to play, soon attracted a crowd which cheered and called for Doolittle and Randall. Neither came out, but regular stump speeches were made by Rogers, of New Jersey, Marshal Gooding, of the District of Columbia, a man with a wonderfully stentorian voice, and George Francis Train, arrayed all in white flannel, who indulged his immedicable hate of Great Britain and love of Ireland, and did not spare the Radical Congress. It was not far from dusk when he ended his amusing farrago, and the crowd had largely increased. By eight o'clock it extended from Chesnut Street to Sansom, and must have consisted of five thousand people. Soon there began to be proposals for three cheers for General Geary, which would be given by about half the persons present. A cheer would then be set up for Heister Clymer. This would be answered by groans for "Shyster" Clymer, and by and by it became impossible for the speakers in the balcony to make themselves heard, except at intervals, and then they were to be heard expostulating with the crowd something in this manner:

"Fellow-citizens of the North, shall I go home—(Yes, yes, go home. Hurrah for Geary)—to my constituents and tell them that in the great city of Philadelphia—(More cheers for Geary. Three more)—in the great city of Philadelphia I was not allowed free speech? (New Orleans, New Orleans. Dostie. Do you allow it in the South? Go home, Johnny. Let yourself down with a rope. Hurrah for Geary.)"

If the speaker showed signs of getting angry he was assailed worse than ever, and his voice was drowned with shouts. If he spoke of "the revolutionary party now controlling the country," the crowd gave cheers for Old Thad, for the Radical Congress, for Charles Sumner, for King Thad, for William D. Kelly, for negro suffrage, and for Thaddeus Stevens. If he spoke of "the country" he was asked, Which? If he declared that the South accepted the situation, some one would say, D—n you, you had to, or Who made you? If he insisted that the South was to-day as loyal as the North, the shouts of New Orleans and Memphis were repeated, and when he mentioned the army, or spoke of "a brave and magnanimous people," the audience cried out "Andersonville," "Salisbury," "Macon," "Libby," "Go get Wirz," and throughout the evening the cheers for Geary were incessant. When a speaker was tired out and went into the hotel, Vallandigham and Jeff Davis were called for, and a favorite cry was "Moseby, Moseby." A little after nine o'clock a strong party of policemen came upon the ground, and, marching down the street, took their position in the heart of the crowd. The delegates, leaning from the windows, clapped their hands, and the speaking was resumed in comparative stillness. The friends of Clymer, who for some time had been pretty quiet, now began to be heard again. But by and by the shouting recommenced, and the meeting fairly passed into the hands of the Geary men, who used all the old cries over again, and added cheers for Forney and patriotic songs, such as "Tramp, Tramp, Tramp," "Rally Round the Flag," and "John Brown's Body."

This scene made some impression on the minds of the Southern delegates inside of the hotel, and had the effect of making them, for the moment, less jubilant. The disgust at the stiffness of the Philadelphia Radicals was great. A New York delegate, however, did what he could to cheer and encourage his friends by informing them that the shouts were not those of Pennsylvanians, Bostonians, or New Yorkers. He recognized them, he said,

as the voices of a hired gang of ruffians from Baltimore who had been brought on by the Radicals for the purpose of beginning a riot.

The general appearance of the convention may be pronounced good enough, unless we say that, considering the work it proposed to do, it should have been specially good. B. F. Perry, of South Carolina, Reverdy Johnson, and Montgomery Blair were the ablest looking men present. Among the other members there were not many very stupid-looking faces. The two prominent types of mankind represented were the Southern and Northern politician and office-holder, and those are classes of people who, if they do not look particularly great and good, generally look sufficiently sharp. The work which really was done, however, was not of a kind that required higher powers than those of an accomplished wire-puller and lobbyist. The platform was ready-made; it only remained to induce Mr. Vallandigham to keep out of sight while it was being put up, and to stand on it quietly afterwards, and to persuade the Southerners to take back seats in the convention. This work was certainly marvellously well done, and everybody was disappointed who thought Presidential patronage had lost its power and Southern politicians their traditional shrewdness, and that the convention would either break up in a quarrel or be given over openly to the detested and despised Copperhead party.

NAPOLEON'S MISCALCULATIONS.

Some one who moves in our high official circles said at the beginning of the present war that the Emperor of the French would astonish the world by his disinterestedness. The astonishment begins after the battle of Sadowa. Napoleon III. offered to victorious Prussia the conditions of vanquished Austria, but these conditions having been rejected, he finds it now equally convenient to recommend to vanquished Austria the conditions of victorious Prussia. This is not yet clearly understood in France. You certainly do not read our provincial papers. I do sometimes, notwithstanding their dulness, in order to see the shadow of coming events; for most of these papers receive their inspirations from our *bureau de l'esprit* in Paris. This is their present language: "To be sure the King of Prussia has obtained a magnificent victory, but the Emperor of the French has obtained a still greater victory, for it has cost the life of nobody." How is it that this language does not satisfy public opinion, and that yesterday the Emperor found himself obliged to suppress the *Courrier du Dimanche*, a paper rendered famous by the collaboration of Prévost-Paradol, but now, alas! extinct? Why is Cæsar getting so nervous after his great pacific victory? I think it can easily be explained. A month ago Cæsar promised us at Auxerre that the treaties of 1815 should be torn to pieces. They are torn, indeed; but the letter only is defaced, the spirit remains stronger, more ardent, and more powerful. The German Confederation had been organized against France in 1815; its sword was Prussia; its frontier was placed against our most vulnerable frontier. This point of the sword is still in the same place; but the sword itself has been made infinitely more powerful. Thanks to the organization of the German Confederation, France has found herself able to accomplish great things since 1815; she was able to make her revolution in 1830, to create the neutral kingdom of Belgium, and, in 1859, to deliver Lombardy. The opposition which these three great changes have met across the Rhine, never was able to gather strength quickly enough to stop our progress. The hostility of Germany was rather defensive than aggressive; now, under the leadership of Prussia, it may become aggressive if it chooses, and German unity, formed by a military despotism, will some day be inclined to try its force against the Imperial despotism of France. Instinct is stronger than reason with nations as well as with individuals. Philanthropists and philosophers will tell us in vain that German unity will be satisfied with its legitimate conquests; that France has nothing to fear from it; that the Germans will be contented with the great works of peace and with the glory of their own regenerated empire. This might, perhaps, be true, if German unity was sister to German liberty; if all over Europe there were free parliaments, free institutions, a free press. But if Europe is divided between a few great potentates, who will only keep sham parliaments; if the military spirit continues everywhere prevalent; if large standing armies and navies continue to absorb the chief attention of all governments, I am afraid that this great era of peace and of fraternity which is promised us is far distant. Deep calleth unto deep. So war calls for war. It is, therefore, not surprising that the French nation should feel some anxiety with regard to Germany.

The French Emperor had hoped that the war between Austria and Prussia would be long, bloody, and uncertain in its results. He would have stepped in, in the end, like *deus ex machinâ*, and his Cæsarian hand would have traced the conditions of the peace. Instead of that, what have we seen? A campaign more rapid than any of the first Napoleon's; a great empire crushed in an instant; the secondary states of Germany giving way everywhere before Prussia. The day after Sadowa, the Austrian Emperor offers Venetia to Napoleon III., and asks his mediation. But Italy refuses to accept Venetia from his hands, and sends her army across the Po. The Prussians do not halt for a day; not one of their columns is arrested. From Bohemia they march into Moravia, and they never stop until their headquarters face Vienna. Austria submits to all the conditions imposed by Bismark; she gives away everything; she unties the knot which for centuries had tied her to Germany; she acknowledges Prussia as the heir of the old German empire.

It is useless to enter into the details of the preliminaries of peace; one word tells the whole story: Prussia is free to do as she likes. The kings and small sovereigns which she will disdain to dethrone will be nothing but hereditary governors of her provinces. Their sovereign rights are lost. Germany will have but one army, one diplomatic system of representation, and this army, this diplomacy, will be directed from Berlin by a king who believes in his divine right and has never yielded before his parliament. For a moment there was some question of the second Germany on the south of the Main, under the hegemony of Bavaria, but the craving for unity is as strong on the south as on the north of the Main; and Bismark is obliged to keep a stick to defend himself against the Bavarian and Würtembergian annexationists. Since national unity could not be procured under the federal form, let it come under the form of a military centralization. Such is the mood of Germany, and, of course, the Germans must know better than we do what is good for them.

It would, however, be unfair to accuse the French of egotism and national jealousy for being unable to witness without some uneasiness the monstrous development of Prussia. This uneasiness is all the more natural as England is entirely converted to the Prussian cause, and hails with an unconcealed joy the creation of a great Protestant military power which will be capable of checking the ambition of France.

A Frenchman.

Paris, Aug. 4, 1866.

PARIS GOSSIP.

Paris, August 3, 1866.

Never were so many sovereigns out of their capitals at the same time, and never, certainly, had so many of them so fair a prospect of never re-entering them. The Sphynx, after a stay of a few days at St. Cloud, has gone to Vichy, his departure for which fountain of health seemed, for a few hours, likely to be deferred by the "narrow escape" incurred by the "hope of France," who, in going through his exercises in the gymnasium fitted up for his little highness in one of the wings of the palace, managed to make a false move, and fell from a considerable height on his head, to the intense horror of his teacher and attendants, who, on picking him up, found him quite insensible. The Emperor and Empress were, of course, sent for in all haste, and the great surgeon, Dr. Nélaton, summoned by telegraph, was speedily on the spot. But a child's bones are, happily for the prospect of the future, rather more elastic than those of their "forbears," and by the time that Dr. Nélaton, conveyed to St. Cloud by a special train as fast as steam could drag him, arrived at the palace, the little prince had come out of his insensibility, and seemed quite ready to resume his gymnastics. The most minute examination failed to detect any injury; and as the child has seemed none the worse for the accident, it is hoped that no bad effects will follow, and the Emperor, who was on the point of setting out for Vichy, was able to leave him, apparently quite well, on the following day. Queen Victoria is at her favorite marine residence of Osborne, in the lovely Isle of Wight; the Queen of Spain is taking baths of mountain air at the stately palace of San Ildefonso, before taking sea-baths at San Sebastian, near the Franco-Spanish frontier, which has just been quietly and peacefully "rectified" by a commission named for that purpose by the two governments. The Emperor of Russia is at the great summer-palace of Czarskoe-Cselo, where Princess Dagmar of Denmark is about to be married to the new heir to the Russian crown. It appears that the young princess, who was sincerely in love with her first betrothed, was, at first, not willing to listen to the proposed transfer of her hand to his brother. But the whole family are extremely fond of her, and especially the Empress, who loves her as though she were her own daughter, and had set her heart on making her the wife of her second son when her eldest born had departed. The new heir, on his side, was passionately attached to his brother, and grieved so deeply and heartily at his loss—and all the more so that his brother's malady was attributable to an injury he received in saving him from a dangerous fall—that he could not bear to hear of his own accession to the rank of heir-apparent. "It seems like a sacrilege for me to take my brother's place!" he kept crying, in

the midst of his sorrows. The influence of time, however, seems to have gradually accustomed the young man to his new dignity, and to have reconciled him to the idea of marrying pretty Princess Dagmar, who, if not bringing to this alliance all the warmth of her first affection, is said to be quite willing to take him. The splendor of the match may well have made her friends desirous to secure it for her; and the great affection of the Empress, who has been the prime mover of the alliance, has at last overcome all the princess's hesitation. The Kings of Denmark, Sweden, and Portugal are all in the country; the King of Prussia is in Bohemia with the corps commanded by the Crown Prince; the King of Italy is at Rovigo; the King of Holland is drinking the waters at a German spa; the King and Queen of Belgium are making a journey through their prosperous little kingdom, received at every point with enthusiastic ovations; the King of Greece is amusing himself at Corfu; and the kings and kinglets dispossessed by Prussia are at Vienna with the Emperor Francis-Joseph, the only potentate of Europe who is now in his capital.

The prospect of peace is sending a ray of delight into the hearts of the hotel-keepers of the fashionable watering-places, who have been hitherto reduced to a very low pitch of despondency. Hombourg, especially, which has been in very low spirits, is now rejoicing. Half a dozen princesses, and a goodly number of marchionesses and baronesses, have just arrived there from Paris, with no end of splendid toilettes; and have partly consoled the people of the town for the nullity of their receipts during the last two months—months usually so fruitful for them. But, oddly enough, a "season" of unusual brilliance had been anticipated by the townspeople, in consequence of the unusually large gathering of lionesses of the demi-monde who had made up their minds to favor the town with their presence, thereby raising the hopes of the Hombourgers to a very high pitch; but hitherto the world of fashion has been represented at Hombourg during the present summer almost entirely by its lady-members; and the dangerous sirens in question, finding themselves deprived of their usual amusement of plucking gulls, have been reduced to the unwonted occupation of playing billiards and *rouge-et-noir* among themselves. What with this costly species of pastime, their extravagant mode of living, and the non-arrival of the purses on whose contents they had speculated so confidently, these interesting personages are said to be thoroughly "cleaned out," kept under sharp surveillance by the hotel-keepers with whom they have been running so deeply into debt, and absolutely unable to get away from the trap in which they have caught themselves. But the tide of fashionable folly, no longer arrested by the dykes of war, will doubtless soon be flowing in its usual channels, and the sirens in question fishing again in its turbid waters with their usual disastrous success.

Meantime, among the many names of *grandes dames* who have recently arrived at Hombourg is that of the mysterious Baron Krudener, whose reputation as necromancer, seer, somnambulist, or "medium," according to the view taken by those about him of his peculiar powers, has so greatly excited the curiosity of the Parisians for the last two or three years. This gentleman's mother was thought to have inherited the mantle of the renowned Mademoiselle Lenormand; and her son is said to be possessed of faculties even more wonderful than her own. Should the baron, however, defer his appearance in Paris much longer, the Parisians will begin to deride his reputation. Paris cannot forgive a celebrity which ventures to grow up without its sanction; and if its owner persists in doing without the stamp of its approbation, soon denies its worth and reality. It has not only never forgiven Jenny Lind her persistent refusal to sing within its borders, but has arrived at the conclusion that she must needs be only a third-rate *artiste*, and accordingly, to bear out this decision, the Paris papers have been declaring that the reappearance of the Swedish Nightingale, who sang, on Monday last, with immense applause, at a concert in London, and was overwhelmed with plaudits, enthusiasm, and bouquets, was a complete *fiasco*. "Her voice, if it ever existed, except in the imagination of her English admirers, has left her. Her audience listened to the broken notes of their former favorite, at first with disappointment, then with unequivocal signs of discontent, and at last drove her from the stage with a storm of hisses."

We have had a few splendid marriages, and are to have a few more, with *trousseaux* that have created some stir among the fashionable *fournisseurs* of the capital, and some interest among that portion of the fashionable public that has not yet quitted Paris. Baron de Cordova, attaché at the Russian Embassy, carries off Princess Bibesco; and no less than three French dukes have raised delighted womankind to the rank of duchess. One of the latter is a niece of the fortunate Hebrew, Fould, who, while so faithfully serving his Imperial master in the difficult and responsible post of Minister of Finance, has not diminished the colossal fortune he had, it is said, previously acquired. Another of these glorified ladies, though her "great expectations" in the pecuniary line have probably not been altogether foreign to the choice of her noble husband, is said to "possess as many charms as millions," and to have inspired her ducal spouse with a very genuine adoration. The third, the spoiled and petted daughter of one of the wealthiest manufacturers of France, has been so inflated by the grandeur to which she has found herself lifted by her betrothal to a duke, that her arrogance and superciliousness since that moment have been something sublime. The duke's mother, a thorough lady, of very old family, and distinguished for the gracious simplicity and kindness of her manner, being greatly annoyed by the young lady's manner, which was fast bringing ridicule upon her, and making enemies of all about her, but who, like most French mothers, would probably have considered it a "tempting of Providence" to try to dissuade her son from espousing a money-bag of such colossal proportions, determined, at least, to give her a hint. Accordingly, after the wedding, the dowager-duchess, having kissed her new daughter in the most approved maternal style, took her aside and said to her, in her sweetest tones, "And now, my love, that *you have become a great lady*, I trust you will remember that courtesy is the truest mark of rank, and that henceforth, having no longer any need to enforce your claims to respect by pretension, you will prove that you appreciate the dignity of your position *by being uniformly polite to all*." How the young duchess received this wise piece of advice from the old one, gossip saith not. Let us hope, however, for the comfort of her new connections, that the young lady will profit by the counsel of her mother-in-law.

The Empress has sent a gold medal, with a charming letter, as a "mark of admiration and sympathy," to Mme. Cornuan, wife of the Prefect of the Somme, who has been devoting herself so heroically, for a month past, to the cholera patients of Amiens. We have still a good deal of cholera in this city, but the disease appears to be on the decline.

WHAT A HYMNAL SHOULD BE.

Our recent review of the action of the committee appointed at the last general convention of the Protestant Episcopal Church, seems, from the communications we have received, to need some further remarks upon the same subject. Having accordingly pointed out the things which the gentlemen of the committee ought not to have done, we propose now to add a few words as to the things which they have left undone.

And first, let it be understood that a church hymnal is not a book of "elegant extracts," nor even a "collection of sacred poetry." Its excellence is literary, but it is not literature; it is a book, but it is one which has no place in the library. Read by many readers, yet depending not upon popularity for circulation; designed for assemblies of men, yet intended to satisfy the conscience and requirements of each; a work built up of intellectual material, yet never meant for intellectual edification, the church hymnal has an object different from that of every other work in literature. Whatever differences may exist as to its contents and form, but little question is ever made as to their main object. All men agree that it is to be used for the purposes of public worship, and that other aims and objects are to be kept subordinate to this chief end. Yet something else is needed — not much, yet still a little. The thousands within the church who have no libraries and centre-tables; no books of sacred poetry or works of religious literature, these require something more. The church hymnal is their little library; their list of poetic writers, their companion, their consolation, and their hope. They will use it before their home-altars, and from it will teach their children as they themselves were taught. It mingles with their earliest and best recollections, and is to mingle with the earliest and best recollections of those who are to follow them. We, therefore, define a church hymnal to be "a selection of sacred lyrics, for the purposes of public worship and of private devotion."

This selection needs not to be large. With all our diversities of taste and education, it is found that the religious mind and the religious heart of different classes and conditions of men centre and unite upon a few great hymns. Thousands of hymns have been written, yet we can hardly number by hundreds those which have succeeded. We pass from sect to sect, from learned to unlearned, from city to village, and from village to country, to find that these few hymns are common to all, and that beside them there is a mass seldom resorted to and comparatively unknown. Clergymen there are who seize on a hymn as on a hammer wherewith to drive down the doctrine of the sermon; and clergymen there are who pick out a hymn by its subject, and approve it because it is sensible and good, and these resort to the unfamiliar hymns; but clergymen whose selections are addressed to the tastes and hearts and sympathies of their people, and especially those clergymen who are men of acknowledged power, travel in a narrow

circuit. Again and again does the same hymn come around, and the favorites of the pastor are generally the favorites of his flock. Seldom do we hear a hymn which we do not know, and to hear a new hymn is, as a general rule, to hear a poor one. The Episcopal Church has the smallest of hymnals, and it may be doubted whether hers is not too large. In every hymnal there are hymns which no one wants. Committees and compilers placed them there to meet, as they say, all tastes—not because they themselves wanted them, but because they supposed that some one else might want them. Were a hundred clergymen, and a hundred laymen, and a hundred mothers of families, called upon to name all the hymns which they themselves actually desire to have placed in a hymnal, the list of each would be small, while the lists of all would commingle and the total number would not be large. Few are the hymns of which any one has said, "I want them."

Our field of English hymns is small, and our brief list of successful hymn-writers almost any one can name. This dearth is so well known and so peculiar that it points the compiler who is worthy of his work to other sources of supply. Behind him is the great field of mediæval hymns, covered for the most part with the rubbish of bigotry and superstition, yet studded with many gems whose reviving rays are yearly added to the modern church. Beside him is the larger and richer field of the German hymns, and, compared with it, our English hymnals sink into insignificance. The selection of Albert Knapp alone numbers three thousand and sixty-six, and to it is appended a list of four hundred authors. "To give," says the accomplished authoress of the "Cotta Family," in her "Christian Life in Song,"—"to give a series of biographies of German hymn-writers would be to write the church history of Germany. The German hymn-book is no mere series of metrical compositions, compiled by a few orthodox divines, nor is it the collection of the religious poems of a few poets. It is the utterance of the heart of the German church."

From the former of these fields our joint committee has taken, with timid hands, a few weak specimens, but has thrown away a great opportunity that was offered to accomplish for the American church what has been long accomplished for the German. The authoress whom we have already quoted well says: "The music and the hymns of the mediæval church were not separated by so definite a barrier from the psalmody of the German Evangelical church as from ours, but floated on into it, the old blending with the new." "The great reformer of the German church was also her first great singer. Luther gave the German people their hymn-book as well as their Bible. He brought over some of the best old hymns into the new worship, not word by word in the ferry-boat of translation, but entire and living, like Israel through the Jordan, when the priests' feet, bearing the ark, swept back the waters."

Into the latter of these fields the joint committee did not venture. It is true that a large part of the German hymns are not adapted in style or sentiment to our Anglo-Saxon taste, and that but a small part has been transferred to our English tongue, yet there is much that is peculiarly English and peculiarly Protestant, and which bears a closer comparison with those of native birth than any taken from a foreign language. Thus, as an example, we may point to that strain of hope written by Louisa Henrietta, Princess of Orange, and wife of the great Elector, Frederick William of Brandenburg, whose clasped hand of faith we think one of the finest figures to be found in any lyric:

"Jesus, my eternal trust,
And my Saviour, ever liveth;
This I know; and deep and just
Is the peace this knowledge giveth,
Though death's lingering night may start
Many a question in my heart.

"Hope's strong chain around me bound
Still shall twine, my Saviour grasping;
And my hand of faith be found
As death left it, Jesus clasping;
No assault the foe can make,
E'er that deathless clasp shall break!

"I am flesh, and therefore duly
Dust and ashes must become,
This I know, but know as truly
He will wake me from the tomb,
That with Him, whate'er betide,
I may evermore abide!"

And we may take also, as an example not likely to come before the general reader, the sister hymn of faith by the great hymn-writer of the German people, Paul Gerhard:

"Father, Thy faithful love,
Thy mercy wise and mild,
Sees what will blessing prove,
Or what will hurt Thy child;
And what Thy wise foreseeing
Doth for Thy children choose,
Thou bringest into being,
Nor sufferest them to lose.

"All means always possessing,
Invincible in might,
Thy doings are all blessing,
Thy goings are all light.
Nothing Thy work suspending,
No foe can make Thee pause,
When Thou, Thine own defending,
Dost undertake their cause.

"Trust Him to govern then!
No king can rule like Him;
How wilt thou wonder, when
Thine eyes no more are dim,
To see these paths which vex thee,
How wise they were and meet;
The works which now perplex thee,
How beautiful, complete.

"Faithful the love Thou sharest,
All, all is well with thee;
The crown from hence thou bearest
With shouts of victory.
In thy right hand to-morrow
Thy God shall place the palms;
To Him who chased thy sorrow
How glad will be the psalms!"

There are also scattered about, in many nooks and corners of our literature, hymns not merely "worthy of being preserved," but worthy of being sung. Thus we clip from the manual of one of our city public schools its "Closing Hymn," whose simple imagery would enrich any hymnal:

"The summer eve is gliding
Serenely down the west,
So, every care subsiding,
My heart would sink to rest.

"The woodland hum is ringing
The daylight's gentle close;
May angels, round me singing,
Thus hymn my night's repose.

"The evening star hath lighted
Her crystal lamp on high;
Thus, when in death benighted,
May hope illume my sky.

"In golden splendor dawning,
The morrow's light will break;
So, on the last dread morning,
May I in glory wake."

There are also hymns too recently written to have attained popularity, yet which may be unhesitatingly received upon the authority of competent judges or upon their unquestionable merits. In the "New Englander" for August, 1860, Dr. Bacon, with praise surely very much exaggerated, pronounces the following "unsurpassed in the English or any other language." It is usually ascribed to the poet, James A. Hillhouse, but, according to Dr. Bacon, it was written by his younger brother, Augustus, who died March, 1859:

"Trembling before Thine awful throne,
O Lord, in dust my sins I own;
Justice and mercy for my life
Contend, oh! smile and heal the strife.

"The Saviour smiles! upon my soul
New tides of hope tumultuous roll;
His voice proclaims my pardon found;
Seraphic transport wings the sound!

"Earth has a joy unknown in heaven—
The new-born peace of sins forgiven!
Tears of such pure and deep delight,
Ye angels, never dimmed your sight!

"Ye saw of old on chaos rise
The beauteous pillars of the skies;
Ye know where morn exulting springs
And evening folds her drooping wings.

"Bright heralds of eternal will,
Abroad His errands ye fulfil;
Or throned in floods of beaming day,
Symphonious in His presence play.

"But I amid your choirs shall shine,
And all your knowledge shall be mine;
Ye on your harps must lean to hear
A secret chord that mine will bear!"

The joint committee of the Protestant Episcopal Church has limited its selections to such hymns as were *forced upon it* by their popularity. Apart from the few taken from "The Seven Great Hymns," and a translation from St. Bernard, and another from Francis Xavier, there is not one which has not become popular through other compilations. The compilers have not turned back to the powerful lines of our older English writers, where their tinkering powers might have developed into necessary corrections. They have hardly turned back to the hymns which have come down to us, and been sung and prized by the whole Christian church for centuries. They have not sought the hymns of other languages, whose translations enrich our literature, if not our hymnals. They have not gathered together the treasures that our own language contains, as a gem among which we would point to the great hymn of Henry Kirke White, "When marshalled on the nightly plain." A majority of the Episcopal Church called for a revision of her hymnal, and the committee has flung to them a small handful of popular hymns torn carelessly from the hymnals of

other churches. This is the length and breadth and measure of the compilers' work.

And now, as some misapprehension exists, we will add a few words concerning the duties of a compiler. And first, it is the right and duty of a compiler to omit. All authors write too much, and few are competent to reject their own less meritorious parts. The erring stanzas are often those which they prize most highly. The verse which touches the general heart is the one that least affects their own. Especially is this duty to be exercised in regard to foreign hymns; for our English standard, more accurately, we think, than that of the German or the Latin, requires that our hymns shall not be sermons in verse, but songs of praise. Thus, in the two selections we have given from the German, we have taken but few of many stanzas; for the reason that these few stanzas form an English hymn, while all form a religious poem, beautiful and good, but nevertheless one which the English hymn-reader inevitably would reject.

And secondly, the compiler has the right, of various readings to select that which time, the standard of taste, has pronounced the best. Thus he would be an offensive purist who, travelling back to authenticity, would change "Glory to Thee, my God, this night" to "All praise to Thee;" or who would restore Watts and reject Wesley, by re-changing "Before Jehovah's awful throne" to the original:

> "Nations attend before His throne
> With solemn fear, with sacred joy."

And, thirdly, the compiler *may correct!* But this is a dangerous doctrine, and must be taken with some limitation.

The compiler may correct, but he should not correct with his own hand. "It becomes no man," saith the maxim of the common law, "to be both the party and the judge." The office of the compiler is to select—his province is to judge. Woe generally follows him if he crosses the limit and drops the scissors for the pen. When the false syntax is to be corrected or the obsolete word exchanged, or the coarse figure or harsh utterance of a former century is to be modernized, or some old theology must be toned down, then the compiler had better call in some literary aid, and, selecting the best correction, remain in every instance a judge.

And the corrections must be of the dead and not of the living. While the author lives, his work is his own. If corrections are to be made, he is the man to make them. It is a petty theft which takes a man's work and alters it without his leave, and no hymnal is the better for a hymn wrested from an author against his will.

The altered hymns must not be well-known pieces or from great authors, for the reader who finds a familiar passage changed despises it as spurious. We cannot paraphrase "Paradise Lost." If Milton or Byron cannot be quoted as they wrote, we must give them up altogether, and pass their works by.

The compiler may correct, but he must not tinker. He may remove his author's defects, but he must not, under that pretext, seek to interpolate his own beauties. He may try to make that good which the general voice pronounces bad, but he must not attempt to make that prettier which is already good. It is true that Toplady altered Wesley, and Montgomery rewrote Cowper. But these were hymn-writers and not mere compilers. They were brother poets, taking a brother's liberty with each other's work. They were not committee-men, selected simply for their ability to select.

And the corrections must be not only as few as possible, but each must be as limited as possible. They must not extend beyond the evil which it is intended to remove. Under the guise of correcting, the compiler must not palm off upon us his own poetry for his author's. To fit for the great end and object of a hymnal a hymn which disinterested judges pronounce defective and unsuitable, is to correct; to rewrite that which other men deem good in the vain experiment of trying whether it will not be made better, is to tinker. We have censured the one, but we have never condemned the other.

Correspondence.

THE BREMEN ROSE-WEIN.

To the Editor of The Nation:

Your Paris correspondent, in his letter of July 20, 1866, which appeared in The Nation of the 9th inst., makes a great mistake in representing the value of the celebrated "rose-wein," kept in the "Bremer Rathskeller," *now* at 600,000,000 rix-dollars, and a slight one when he states it is "only drunk on rare occasions by the municipal fathers, by the sovereigns to whom they sometimes present a bottle, and by the sick citizens of the town, who have a prescriptive right to receive a bottle gratis in case of need," etc., as the following statement will show:

Through an influential citizen of Bremen, who obtained from the authorities six bottles of the "rose-wein," and sent them to the great central fair, held in Philadelphia in June, 1864, "for the relief of the suffering soldier, whether friend or foe, or of whatever nationality," the writer learns that, in 1845, an accountant made a calculation of the value of the 1624 Rüdesheimer Berg, and arrived at the following figures: In the year 1624 the wine cost, per cask, 300 rix-dollars; after a loss by evaporation during 221 years, at ten per cent. per annum compound interest on the outlay and leakage, the value amounted in 1845 to 421,607,100,000 rix-dollars. Each bottle, at the above valuation, was worth 292,782,708.24 rix-dollars; each glass (eight glasses to the bottle), 36,597,838.39 rix-dollars; and each drop (1,000 drops to the glass) 36,597.60 rix-dollars.

EDUCATIONAL.

D. APPLETON & CO.,

NEW YORK,

Publish more than

250 EDUCATIONAL TEXT-BOOKS,

Including the Departments of

ENGLISH, LATIN, GREEK, FRENCH, SPANISH, ITALIAN, HEBREW, AND SYRIAC.

SCHOOLS, SEMINARIES, and COLLEGES desiring TEXT-BOOKS will consult their interest by addressing D. APPLETON & CO., New York, who will be glad to supply their wants on the most favorable terms.

Among their recent publications are the following:

FIRST BOOK IN ENGLISH GRAMMAR. By G. P. QUACKENBOS. Price 50 cents.

AN ENGLISH GRAMMAR. By same Author. Price $1 20.

PRIMARY HISTORY OF THE UNITED STATES. Price $1.

QUACKENBOS'S SCHOOL HISTORY OF THE UNITED STATES. Price $2. *Everything has been brought fully up to date.*

YOUMANS' NEW CHEMISTRY. Entirely re-written and much enlarged, with 310 Engravings. Price $2.

HARKNESS'S LATIN GRAMMAR. Price $1 75. Strongly recommended by our leading scholars as a decided advance on the old Latin Grammars.

HARKNESS'S LATIN READER. A companion to the Grammar, by the same Author. Price $1 50.

A NEW EDITION OF QUINTILIAN. By Prof. H. S. FRIEZE, of University of Michigan. $1 50.

APPLETONS' ARITHMETICAL SERIES: On the basis of the works of GEO. R. PERKINS, LL.D. By G. P. QUACKENBOS, A.M.

No labor has been spared to make this series exactly what is required for the purpose of mental discipline, as well as for practical use in the daily business of life. It is clear, simple, thorough, comprehensive, logically arranged, well graded, is supplied with a great variety of examples, AND TEACHES THE METHODS ACTUALLY USED BY BUSINESS MEN.

The Series consists of a PRIMARY, an ELEMENTARY, a PRACTICAL, a HIGHER, and a MENTAL. The Primary (40 cents), Elementary (60 cents), and Practical (75 cents) are now ready, and the others will speedily follow.

Teachers interested in using the best books are solicited to examine this series, which we claim possesses many advantages over those heretofore published.

Agents wanted in all parts of the United States to introduce these Arithmetics.

ALSO PUBLISHED BY THE UNDERSIGNED.

CORNELL'S GEOGRAPHIES. *Everywhere received with unqualified approval.*

AN INTRODUCTORY LATIN BOOK; intended as an elementary drill-book, on the Inflections and Principles of the Language, and as an introduction to the Author's Grammar, Reader, and Latin Composition. By ALBERT HARKNESS. $1 25.

A GRAMMATICAL ANALYZER; or, The Derivation and Definition of English Words, with their grammatical classification. By W. J. TENNEY. $1 25.

ELEMENTS OF INTELLECTUAL PHILOSOPHY. By Rev. JOSEPH ALDEN, LL.D. 12mo. Price $1 50.

Specimen copies of any of the above works mailed post-paid to teachers and school officers, on receipt of one-half the retail price. The most favorable terms made for introduction.

NEW BOOKS

FOR

TOURISTS, HOME READING, OR THE LIBRARY.

1. A PAINTER'S CAMP. By PHILIP GILBERT HAMERTON. New Edition, Revised, in Three Books—
   Book I.—IN ENGLAND.
   " II.—IN SCOTLAND.
   " III.—IN FRANCE.
   1 vol. crown 8vo, cloth vellum. $3.
2. FIRE PREVENTION AND FIRE EXTINCTION. By JAMES BRAIDWOOD, First Superintendent of the London Fire Brigade. Including Fire-Proof Structures and Safes, Fire Engines, Water Supply, etc., etc. With Illustrations. Memoirs, and Portraits of the Author. 12mo, cloth. $2 75.
3. THE LIVES OF THE SEVEN BISHOPS COMMITTED TO THE TOWER IN 1688. Enriched and Illustrated with Personal Letters, now first published, from the Bodleian Library. By AGNES STRICKLAND, author of "Lives of the Queens of England." Post 8vo, cloth. $5 25.
4. THE RELIQUES OF FATHER PROUT (Rev. Francis Mahony). Illustrated by D. MACLISE, R.A. New edition, revised and largely augmented. 1 large 12mo volume, cloth antique. $2 75.
5. THE MONEY MARKET; WHAT IT IS, WHAT IT DOES, AND HOW IT IS MANAGED. By HENRY NOEL-FEARN, F.R.S. 16mo, cloth boards. 50 cents.
6. THE PROFITS OF PANICS, WITH OTHER REVELATIONS OF A CITY MAN. By the author of "The Bubbles of Finance." 16mo, boards. 50 cents.
7. PRACTICAL GUIDE FOR TOURISTS. 1866.
   1. PRACTICAL CONTINENTAL GUIDE—France, Belgium, Holland, the Rhine, Germany, Tyrol, Switzerland, Savoy, Italy. With Maps. 16mo, flexible paper. $2 50.
   2. PRACTICAL GUIDES FOR PARIS AND THE RHINE COMBINED. The Routes, etc., in full detail. Maps and Plans. 16mo, flexible paper. $1 25.

The above, with all New Foreign Books, for sale by

SCRIBNER, WELFORD & CO.,
654 BROADWAY, NEW YORK.

DISRAELI'S WORKS.

WIDDLETON, Publisher,
17 MERCER STREET (NEAR HOWARD), NEW YORK.
NEW AND ELEGANT LIBRARY EDITIONS.

I.

The Curiosities of Literature.
By ISAAC DISRAELI.
With a View of the Life of the Author, by his Son.
In 4 vols. crown 8vo, cloth, extra (in box), $9.

Amenities of Literature.
CONSISTING OF SKETCHES AND CHARACTERS OF ENGLISH LITERATURE.
By ISAAC DISRAELI.
Edited by his Son, the Right Hon. B. DISRAELI.
In 2 vols. crown 8vo, cloth, extra, $4 50.

These are admitted to be the most beautiful editions of *Disraeli* ever published, and have given a new enthusiasm to his most remarkable works. The varied learning and research of the author are proverbial; and the unique titles convey a good idea of the value and interest of the books.

CHARLES LAMB'S WORKS.
A very beautiful edition, in 5 vols., uniform with Disraeli, $11 25.

BOOKS FOR THE

Study of Foreign Languages,

PUBLISHED BY

LEYPOLDT & HOLT,

The Week.

DISGRACEFUL as it may be, and unpleasant a thing as it is to say, it seems no longer doubtful that some person connected with the White House, and apparently in the confidence of Mr. Johnson, has been guilty of an act, in regard to Sheridan's despatches from New Orleans, which honest men will know how to characterize. In reporting to his superior officer his opinion of the riot, General Sheridan, among other things, says this: "In the meantime official duty called me to Texas, and the mayor of the city, during my absence, suppressed the convention by the use of the police force, and, in so doing, attacked the members of the convention and a party of two hundred negroes, and with fire-arms, clubs, and knives, in a manner so unnecessary and atrocious as to compel me to say that it was murder." The despatch, when it came to him, was turned over by General Grant to the Secretary of War, and by the Secretary it was sent to the White House. From the White House it got into the hands of the correspondent of the New York *Times*, and in that paper it was published with the passage above quoted omitted. The correspondent is acquitted of blame. The attempt at suppression seems so stupid, that it might almost be supposed that the suppressed passage was omitted accidentally. But in the next sentence was the word *thus* referring to the before-mentioned manner of the killing, and that word also was stricken out. Besides, the clamor for the original despatch was suffered to continue a long time before it was produced. The meanness of the act consists in the wilful falsehood and in the endeavor to make Sheridan seem to approve, or to disapprove but slightly, a massacre that shocks and disgusts all civilized communities. The disgrace of it there is no need of enlarging upon. The American people are supposed to look leniently on rather sharp practice in politics, and they allow the great officers of the Government to be partisan politicians; but there are certain limits beyond which not even a politician in a private station can go without earning contempt.

THE accounts previously received of the New Orleans riots, which were most unfavorable to the New Orleans authorities, are more than borne out by the report, which is soon to be made public, of the military commission that has been investigating the cause of the riot and the behavior of the police and the mob. The riot, it appears, was preconcerted. It was a white man who fired the first shot. The negro crowd at the Institute and the negro procession in Canal Street were quiet and peaceable enough. The policemen's way of making arrests may, without extravagance, be termed butchery. Briefly, there was a bloody massacre of negroes and of Union men whose political opinions were distasteful to Monroe, Abell, and Herron. It is not possible—or eight months ago we should have said it was not possible—that some at least of the persons engaged in these murders are not to suffer the penalty of their crimes.

VERMONT, which is sure to give a heavy Union majority, leads off in the fall elections on the first Tuesday in September. On the following day California and Nevada vote. In Maine, which is also sure to vote on the side of Congress, the election is held on the second Monday of September. Thus the Union party will have the not despicable advantage of beginning the campaign with a succession of victories, for Nevada is not a doubtful State, and California was last carried by the Union party. Colorado, which has just elected a Radical delegate to Congress, votes on the first Tuesday in October. On the second Tuesday Pennsylvania undoubtedly elects Gen. Geary for Governor, and probably by a larger majority than has ever been given to any candidate of the Republican party since that party was formed. Representatives in Congress are also chosen on that day, and a Legislature which is to elect a United States senator, the probabilities being in favor of a majority for the other Union candidates as well as for Geary, though his majority over Clymer (a very weak opponent) will be much greater. Upon the same day occur elections in Ohio, Indiana, Iowa, and Minnesota, and the Democrats, uniting with the Johnson men, talk very confidently of making great gains of Congressional districts in the first two and the last of those States, as indeed they do in the case of Pennsylvania. One more State, "the bogus State" of West Virginia, as the *World* calls it, votes in October, on the fourth Thursday; West Virginia has just instructed her senators to attend the Southern Loyalists' Convention. In November, on the first Tuesday, New Jersey, Illinois, and Wisconsin hold their elections; the first-named, it is hardly doubtful, will go against Congress. It is on this day, too, that the New York election takes place, the result of which will be looked for with the greatest interest and which will be preceded by a most vigorous campaign. The chances are in favor of the party which elected Barlow over Slocum by twenty-eight thousand majority. On the first Wednesday Kansas and Maryland range themselves, one on the side of Congress, the other, it is more than likely, on the side of the President. In Massachusetts, Delaware, Michigan, and Missouri, the election day is the Tuesday after the first Monday in November.

THOSE working-men who are in favor of the eight-hour movement have held a "Labor Congress," in which they said a good many wise things—such as that co-operation was the great remedy for the ills of the working-classes; and a good many foolish things—such as their talk of the "alarming encroachments of capital on the rights of the industrial classes." If the capitalists were to refrain from these "encroachments," two-thirds of the working-men in the country would starve. They are much of the same nature as the "encroachments" of his clients on Charles O'Conor or any other leading lawyer. The Congress however made one or two good hits, especially that in which they ask to have immigration from Europe legally checked or prohibited. This is, or ought to be, a plank in every protectionist platform. A protectionist policy which only keeps out foreign goods does the working-man no immediate good, whatever manufacturers may say. If it raises his wages, it also raises, in the same proportion, the price of everything he eats, drinks, and wears. But whatever diminishes or

keeps down the number of laborers raises wages, or, in other words, increases the share of the products of labor and capital falling to each laborer, and there is, in our mind, no more flagrant absurdity than to raise the tariff in the interest of American labor while at the same time moving heaven and earth to flood the country with laborers from Europe. But there is, after all, something deplorable in the ignorance exhibited by working-men of the laws which regulate their relations with their employers throughout this eight-hour agitation, and what makes it all the worse is, that the agitation itself is due to the growing tendency of all classes of the public to believe that remedies for all social ills are to be found in legislation. We think a truer thing was never said than Mr. Atkinson's assertion before the Massachusetts commission, that if the American workman is unfit to make his own bargains with his employer, then democracy is a failure, and our institutions are no better than those of the Old World.

If the New York *Tribune* had not told us, in its issue of August 21, in an article on the Philadelphia Convention, "that it did not like to speak intemperately," we should have, we honestly confess, fallen into the—as we now see—gross error of imagining that it was "intemperate" speaking to call Thurlow Weed, as it does in another column of the same paper, "an infamous old villain," guilty of an "atrocious calumny;" and a little higher up, to comment on "the affection of a liar for his lie, the tenacity with which he clings to it, and fondles it in spite of exposure, and reprobation, and loathing," the "liar" being "T. W.," and "the lie" a statement of his in the *Times*. The *Tribune's* horror of intemperate language seems something like the candor and impartiality of the Englishman who said "that if he knew himself, he had no prejudices, but he *did* hate a Frenchman."

The following named "sneaks and mean whites," to use the language of the New York *World*, have been deputed by the State of Massachusetts to meet the members of the Southern Unionists' Convention in Philadelphia: Ralph Waldo Emerson, James Russell Lowell, John G. Whittier, Charles Sumner and Henry Wilson, John A. Andrew, Josiah Quincy, Samuel Hooper, George S. Boutwell, Amos A. Lawrence, and many more, whose names, if of less fame than these, even the *World* will admit are as honorable as the famous horse of Caligula.

Among the atrocious crimes imputed to the victims of the New Orleans massacre, the list telegraphed to the President by Voorhies and Herron is worth a moment's comment. "A Radical mass meeting, composed mainly of negroes," had ended on the night of the 27th of July "in a riot." The next night the committee of arrangements met, "violent and incendiary speeches [were] made; negroes called to arm themselves; YOU bitterly denounced." It was not the first time that Mr. Johnson had been thus appealed to. In the late campaign in Connecticut it was always—with office-holders about to betray their party—"Is my conduct approved in taking sides against those who denounce YOU and YOUR policy?" Of course Mr. Johnson would be less than mortal if he could make other than one response to such a question. But it is instructive to note that a minister of Napoleon, in recommending the other day the suppression of the *Courrier du Dimanche* for an article by Prévost-Paradol deploring the present helplessness of France, merely characterized the "detestable representation" as at once an outrage on the truth, a calumny on the country, an attack on the honor of the nation, an incitement to revolt, sedition, and the overthrow of existing institutions and of the Government. And yet it would have been as easy and as truthful to say that the article aimed at Napoleon, who is the Government. But there is still enough decency under the Empire not to invoke upon the subject the personal vindictiveness of the sovereign, and the fact that this has now become a common resort with the supporters of the President, is a proof that we have arrived, without a *coup d'état*, at a political condition in which we may learn something even from France.

"The entire city press," says the *Times'* correspondence from New Orleans, "having received the official despatches of Sheridan regarding the riot, is pitching into him hot and heavy, some of the papers going so far as to charge him with untruthfulness." Untruthfulness is a hot and heavy accusation; but out in the country, away from martial law, hotter and heavier charges are made. The *Times* of Union Springs, Alabama, begins an article upon the general's order re-establishing martial law in New Orleans rather mildly by calling him "five feet eight of resolute Finneganism," whom the editor was rather glad to see promoted "even in an army of cravens and thieves;" it was pleasing rather than otherwise to see him "escape the paternal pick and shovel." But his General Order No. 14 proves him to have been "only a vulgar ditcher at heart after all." Humiliating as it may be to confess it—for "we have henceforth to acknowledge these Yankee hybrids as countrymen"—Sheridan has added his name to that list of "outrages upon humanity" which includes Grant, Butler, Sherman, and Thomas, and stands revealed "a slimy tadpole of the latter spawn, the blathering disgrace of an honest father, an everlasting libel upon his Irish blood, the scorn of brave men, and the synonym of infamy." Certainly, the Southern press, whether in Richmond, where it is ablest, or in Union Springs and other such villages, where it is not, contrives to make itself more ridiculous in its wrath or its sublimity than the press of any other known community; and we may add, it is unmatched in any Christian country in its frequent displays of a shameless, sickening brutality—as, for instance, the unquotable remarks of a Mobile journal in reference to Dostie and the New Orleans riots—which make it easy to believe all that is told of Andersonville and Salisbury.

A curious illustration of the effects of office on the mind of the average man has lately been afforded in the case of Mr. Thomas Foss, a respectable citizen of Marblehead, Massachusetts, who has just been appointed chief of police of that town. We are satisfied that he is an excellent man, and will make a capital police officer; but, immediately after receiving his appointment, he had an attack of rhetoric, and broke out into a hand-bill which opens thus:

> "It cannot but be apparent to every intelligent mind that there is no one thing in the arrangement of political economy that can possibly conduce to elevate the public interest to that moral and social standard designed by *those* unalterable laws, human and divine, as the faithful and impartial administration of the Police Laws, based as they are on municipal requirements. The complicated machinery, when properly adjusted, will work harmoniously in all its parts."

After this awful beginning, which might well cheat the young and inexperienced into the belief that Mr. Foss was going to deal with Marblehead as Baron Vom Stein did with Prussia, or Peter the Great did with Russia, he announces that—

> "The undivided attention of the whole Police Force will be specially directed towards the enforcement of the Sunday Law, the Dog Law, and the By-Laws of the town. Standing on the sidewalk or curb-stone, or sitting upon door steps, or entrance to any dwelling-house, store, building, or enclosure on the SABBATH DAY or EVENING, or at any other time contrary to the intent and meaning of the Statute, will be punished to the utmost rigor of the law."

We hope the "dog law" in particular will be rigidly enforced, and, as for the people who sit on door steps "on the Sabbath evening," we hope they also will be so dealt with as to "elevate the public interest" to Mr. Foss's "moral and social standard;" only we trust there will be no capital punishment inflicted. As Mr. G. M. Towle would remark—"A chief of police who, in the nineteenth century, deprives a fellow-creature of the inestimable boon of existence for assuming a sedentary posture on the porch of a residence on a Sabbath evening, must be wanting in all the finer feelings of humanity."

The supporters of the Philadelphia Convention are jubilant over the fact that, about the time the news of the convention reached England, United States securities rose in the English markets. Whether the convention and the rise stand to each other in the relation of cause and effect, it is, of course, difficult to decide, but we think it very likely. The solemn declaration of the only party in the country which was supposed to be hostile to the payment of the public debt, that it will see that the public faith is kept, cannot but be reassuring to the holders of Government bonds, and encouraging to those who buy them. But to argue from this that Government creditors, either at home or abroad, are specially interested in the triumph of the Johnson party, is

absurd. The Radicals have never been suspected of a desire to repudiate; and although we are gratified, as every one else must be, at finding our credit rising in the estimation of the English public, it is almost painful to see a journal of the standing of the New York *Times* using this as an argument in favor either of Mr. Johnson's policy or his principles. There is probably no corner of the civilized world in which a more accurate estimate of American prospects, either political or financial, could not be obtained than the London Stock Exchange. The present confidence in our securities of gentlemen who, during the four years of the war, rated Confederate bonds nearly twenty per cent. higher, cannot be of any great value.

THE treaty of peace between the European belligerents, which we foreshadowed last week, has been signed. About five millions of inhabitants are added by it to the territory of Prussia proper, which is equivalent to an addition of about 60,000 men to her standing army. But it also puts under her absolute control the troops of the whole of North Germany, which will increase her disposable force by about one-third, and render her, it is safe to say, the first power in Europe. But it is impossible to consider the present arrangement a permanent one. It is, clearly, only a step towards the ultimate consolidation of the whole of Germany, and to this Russia and France are clearly alive. Russia is uneasy, in a clumsy, ursine way, but is perhaps too much occupied with the task of extending her empire in the east to give much vent to her feelings. Austria is too much disheartened and demoralized to feel anything but thankfulness at having got off so well. Her army was fast crumbling to pieces when the armistice was made. Her artillery and cavalry stood their ground, but the infantry had actually begun to break up and throw away their arms whenever a Prussian detachment came in sight. Another fortnight of hostilities and the empire would probably have ceased to exist. France is, however, in a rage, which nothing but the iron hand of the police prevents from ending in an explosion. When men like Eugene Forçade pronounce the nation dishonored and endangered by the Prussian success, we may guess how the average Frenchman feels. Louis Napoleon has not simply been foiled in all his schemes, but has been treated by the Prussians with an indifference little short of contempt. Instead of the loose congeries of principalities placed on the French frontier by the "detested treaties of 1815," there is a giant before whose arms the most braggart Frenchman recoils, and the worst of it is that it is well known that the slightest attempt against Prussia on the part of France just now would rouse the whole German people as one man, and Prussia would spring at one stroke into the German empire. Therefore we shall probably have quiet for the next ten years, broken only by gnashing of teeth and the gunsmith's hammer. It will take that time for the various powers to provide themselves with breech-loaders. But the others will not do what Prussia is doing steadily every day, provide the educated soldiers to stand behind the breech-loaders, and this, we are thankful to say, is now known to be the great condition of victory. The empire of the world will hereafter belong not to the country with the biggest battalions, but to that which has most schools and most children in them.

ITALY is the only power which has come out of the fray dissatisfied while securing every material object for which she fought. Venetia is ceded to her directly, so that she is spared the humiliation of receiving it from France; but then she has not won it as she prayed and hoped to win it, as half her people would have died to win it, with her own good sword. Her battle at Custozza was almost a defeat, the naval fight at Lissa was unquestionably a defeat, so that she marches off the field with Venice freed indeed, but without having proved her ability to hold her own as a first-class power on the battle-field. We may imagine how the men who for twelve mortal hours stood up under artillery fire at Custozza feel on thinking over this. But there is this consolation for Italians and their friends, that to feel this noble ambition and this proud mortification as Italians now feel it, is just as good an indication that a healthy national life has begun in Italy as if she had carried the Quadrilateral at the point of the bayonet. Other fields will come, perhaps, soon enough.

THE FREEDMEN.

THE following circular (No. 10) was issued by Gen. Howard on the 22d inst.:

"In accordance with the instructions of the Secretary of War it is ordered that on and after the 1st day of October next the issue of rations be discontinued except to the sick in regularly organized hospitals, and to the orphan asylums for refugees and freedmen already existing, and that the State officials who may be responsible for the care of the poor be carefully notified of this order, so that they may assume the charge of such indigent refugees and freedmen as are not embraced in the above exceptions."

—Gen. Schofield has been ordered to perform the duties of Assistant Commissioner of the Freedmen's Bureau for Virginia, in addition to those of Deputy Commissioner. In Louisiana, Gen. Baird has also been relieved as Assistant Commissioner, and Gen. Sheridan ordered to perform the duties.

—The New Orleans massacre has been followed by the burning of a new M. E. Church, built for the colored people in the suburbs of the city, at an expense of four thousand dollars. The New Orleans *Tribune*, a loyal paper, owned and edited by colored men, has been compelled to suspend publication, owing to the withdrawal of the military guard which alone saved it from destruction in the late excitement. The Marine Hospital is still filled with those who were injured during the riot. The distresses of the freedmen are increased by the raging of the cholera among them, coupled, it is said, with a dread on their part of taking medicine from white men, from apprehensions of being poisoned.

—The month has been prolific in reports, some favorable, but the majority unfavorable, to the welfare of the blacks. An unprovoked, cold-blooded murder of a freedman in Kent County, Delaware, occurred on the 4th. In Virginia, the civil courts in Richmond and at Yorktown afford no justice to the colored people. At Amelia Court House outrages are almost the rule. At Charlottesville, a mutual distrust exists between blacks and whites. At Lynchburg, instances of cruelty have exceeded in number those of any former period since emancipation. Affairs are unsettled in Lunenberg and Bedford Counties. In North Carolina, Gen. Robinson is testing the statement of the Governor that "there now exists, under the laws of this State, no discrimination in the administration of justice to the prejudice of free persons of color."

—A causeless murder was committed on a freedman returning to Abbyville, S. C., after an absence of five years, by a white man named Reuben Olding, who met and shot him on the road. Governor Orr has offered a reward of $250 for Olding's arrest. Certain negroes who stole a bale of cotton from a house among the Santee hills were fortunate enough to be tried and sentenced for simple larceny. A law passed by the present Legislature has made this act a capital felony.

—Major Eldridge, of General Howard's staff, after a tour through Northern Alabama and Georgia, discredits the accounts of destitution in those States which have been made the basis of several charitable appeals to the North. A Bureau surgeon at Jonesboro', Ga., however, reports a sad state of things in that district, which was devastated by the two hostile armies that contended about Atlanta. The wages promised the freedmen have failed with the failure of the crops, and a hospital is urgently needed to care for the sick and friendless wanderers in search of employment. Near Macon, an old negro was attacked at night in his cabin by three ruffians, knocked senseless, and afterwards horribly mutilated with knives. The murderers sought his little savings of $300. In Clinch County, Judge King ordered a colored woman, arrested on the charge of a white woman with whom she had quarrelled, to receive fifty lashes at the hands of the sheriff. The sentence was executed.

—Thirty murders of freedmen are reported to have been perpetrated in the vicinity of Vicksburg within the six weeks ending August 9. In other districts, Commissioner Wood reports a comparatively peaceful state of affairs, and the freedmen working industriously. At Davis Bend, he says, "not a case of even freedmen drunkenness; all very harmonious; the schools all self-supporting. Much of all the property here is held as abandoned, and leased in small lots to the freedmen. Their crops are among the best in the State." There has been a general improvement in Mississippi.

Notes.

LITERARY.

A LITERARY dispute has arisen with regard to the edition of Wheaton's "Commentaries on International Law" of Mr. R. H. Dana. Mr. William Beach Lawrence published an edition of the same book with notes in 1863, which, though they showed a bias toward the South hardly admissible in a professedly impartial work, were yet very valuable. At the suggestion of Mr. Wheaton's daughters and lately deceased widow, Mr. Dana, of Boston, has re-edited the work with new notes, professing to give none of Mr. Lawrence's. Mr. Lawrence, in a communication to an evening paper, accuses Mr. Dana of having, nevertheless, used his labors, and often in the very words which he himself employed. Charges like this are always easy to be made and hard to be refuted, but a cursory examination shows an apparent justice in Mr. Lawrence's statements. The whole matter will probably be decided in a lawsuit with regard to the right of ownership in the book, which Mr. Lawrence is now bringing. Mr. Dana's notes, however, contain much that is confessedly new, and give the latest discussions of laws that are ever varying; they are a necessary supplement to a book regarded as an authority throughout Europe and America, and which, in 1864, was even translated into Chinese, and is now the text-book of Chinese diplomacy.

—In Vol. II., No. 57, of THE NATION, we gave some account of the excommunication of noxious animals by the Catholic Church, according to the book of Léon Ménabréa, of which the title was there set forth. The curious reader will find some civil examples parallel to those there quoted in the recent work of M. Charles Desmaze, counsellor of the Imperial court at Paris, entitled "Histoire des supplices, prisons et grâces en France," from the very origin of French legislation to the present day. This history has been constructed from unedited and authentic documents, and the author everywhere cites the sources which he has consulted. In 1516, an official of Troyes pronounced sentence on the caterpillars of Villenox, at the request of the inhabitants and "parties ouies"—that is, after hearing both sides. Ten days were allowed them in which to decamp, on pain of being "accursed and excommunicated." June 4, 1094, "Jehan Levoirrier, licencié ès lois, maïeur de M. Saint-Martin de Laon," condemns a swine that had devoured the child of Jehan Lenfant, cowherd of the farm of Clermont, near Laon, to be hung and strangled in a forked gibbet.

—By an order of the Emperor Maximilian, the *Diario del Imperio* will publish an edition of the instructions which the Spanish viceroys of Mexico left to their successors. This is greatly to the satisfaction of students of Mexican history, who have hitherto been able to procure MS. copies of only a few of these papers, and that with the greatest difficulty. The *Diario* proposes to publish the instructions of the viceroys that exist in the general archives, including some few that the viceroys received from the court. There are many other valuable instructions and papers that are preserved in various places, some of which have before been published, that might well be added to the documents to be published by the *Diario*.

—In the "Transactions of the Philological Society for 1865" is included, as an appendix, a "Dictionary of Reduplicated Words in the English Language," by Henry B. Wheatley. The author has collected about six hundred such words as found in English literature from the "Promptorium Parvulorum" of about 1440 A.D. down. There must be many more such words than those given in this dictionary, and they must have existed in spoken language at least much earlier than in the books quoted by Mr. Wheatley. Cotgrave, that prince of dictionary-makers, seems to have escaped his researches. Such a collection as this, though of words which are chiefly mere nursery-jingles like

> "Mummery-flummery, ching-wing wum,
> The King of the Cannibal Islands,"

is very curious, and to the defenders of the onomatopoetic theory, very valuable.

—The Asiatic Department of the Russian Ministry of Foreign Affairs has published, for several years, a collection of papers, of which the fourth volume has just appeared, entitled "Labors of the Members of the Russian Religious Mission at Pekin." This publication is now to change its form. Henceforth it will be published by the Holy Synod, and will take the title of "Asiatic Collection." It will contain all the articles which seem to deserve attention written by Eastern officials on the subject of Asia, as well as diplomatic documents on the old relations of Russia with the Asiatic peoples, which no longer have more than an historic and scientific interest.

—The annual meeting of the French *Académie des Inscriptions et Belles-Lettres* took place on the 3d of August, M. Brunet de Presle in the chair, who gave an account of the labors of the Academy during the past year. M. Guigniaut, perpetual secretary, delivered a panegyric on M. Joseph-Victor Le Clerc, the late dean of the Sorbonne, and the author of several historical works. Prizes of 2,000 francs each were decreed to M. François Lenormant, sub-librarian of the institute, for a memoir on the ancient forms of the Phenician alphabet, and to M. Félix Robiou, adjunct professor of history, for a memoir on the forms of public worship among the Romans. Medals were given to M. Hertzog, for his "Description de la Gaule narbonnaise;" to M. Auguste Prost, for his "Etudes sur l'histoire de Metz;" and to M. Mantellier, for his "Mémoire sur les Bronzes antiques de Newry." The first Gobert prize was awarded to M. Gaston Pâris for his "Histoire poétique de Charlemagne," and the second to M. Léon Gautier, for his "Epopées françaises." The other prizes were not given.

—Not long ago a curious list of the pensions of Louis XIV. was published, in which Corneille figures at the side of Chapelain with a smaller sum. It will not be without interest to give a list of the pensions made by Napoleon I., taken from the last volume of his "Correspondence," in which, in like manner, names without fame figure in equal or even superior conditions with names illustrious, or at least known: M. Picard, for example, at 6,000 francs, while Bernardin de Saint-Pierre has only 2,000. Of this list a single one lives yet, M. Lebrun, author of "Marie Stuart:"

"TO THE COMTE DE MONTALIVET, MINISTER OF THE INTERIOR, PARIS.

"Paris, 3rd January, 1810.

"I send you the list of the savants, or literary men, to whom I give pensions on the journals. Let me know those who have been the most distinguished in the last two years in literature and the sciences:

"M. M. Haüy, 6000f.; Bernardin de Saint-Pierre, 2,000f.; Dutheil, 2,000f.; Gosselin, 2,000f.; Coraï, 2,000f.; Monge, 6,000f.; Gianni, 3,000f.; Lebrun, 1,200f.; Legendre, 3,000f.; Barré, 4,000f.; Radet, 4,000f.; Desfontaines, 4,000f.; Monsigny, 2,000f.; Palisot, 3,000f.; Villevieille, 2,000f.; Chênier, 6,000f.; Ducray-Duménil, 3,000f.; Baour-Lormian, 6,000f.; Picard, 6,000f. Debrien, 2,000f.; Luce de Lancival, 6,000f."

—Another French newspaper has been suppressed. *Le Courrier du Dimanche*, after having eight warnings, two suspensions, and a judicial condemnation, has been suppressed by imperial decree. The reasons were, not for publishing the famous protest of the Paris press of 1830, which is a matter of history, but for publishing an article, by Prévost-Paradol, calculated to excite sedition, in which a picture was drawn of a humiliated, powerless, degraded France, which was considered by the authorities to be calumnious and untrue. The worst sentence was, perhaps, this: "France is a court lady, very beautiful, loved by the most gallant men, who runs away to live with a stable-boy. She is despoiled, beaten, stupefied a little more every day; but it is accomplished; she has taken a liking to him, and cannot be torn from this unworthy lover."

—The August number of "Trübner's American and Oriental Literary Record" contains a list of some books published in Greenland, in the Eskimo language. Most of them are translations of parts of the Bible; but among them is one Eskimo periodical. One book is a collection of the popular tales and legends of Greenland, including the traditions of the first descent of the Norsemen in the eighth century. It is worthy the attention of the antiquarian, the ethnologist, and the philologist. It is illustrated with forty wood-cuts and lithographs, all the work of natives, and has an appendix giving the national melodies of the Eskimos with the music. The book, of which the Eskimo title

is "Kaladlit okalluktualliait kalâdlisut kablunâtudlo," has, beside the Eskimo text, a Danish translation.

—The treasurers of the Bopp Memorial Fund have published their financial statement, together with a detailed list of the contributions that have been received. The total amount is nearly eight thousand thalers, of which 4,540 thalers were contributed by Prussia, 794 by France, 565 by England and India, 535 by Saxony, 721 by the rest of Germany, 658 by the other European States, and 165 by America. Subscriptions are still received by the Berlin Committee, and if a few more dollars could be collected in this country for a memorial of a great philological discovery, they should be forwarded to Messrs. Trübner & Co., of London, we suppose by their New York agents, Messrs. Leypoldt & Holt.

THE EDUCATION OF WOMEN.*

In most of the discussions in relation to the improvement of female education, the objectors have shown themselves unable to rise above the utilitarian, or rather the purely material, argument, and have assumed that those who ask a higher intellectual training for woman are as incapable as themselves of regarding the question from a loftier point of view. The range of woman's powers and duties, say they, is confined, by her physical and her mental nature alike, to a narrow and a humble sphere. Of what *use* is it for her to pursue studies or cultivate arts, which for her can have no practical application? Why should she concern herself about the political history, the constitution, or the jurisprudence of her country, seeing that she is deprived of the political franchise, and ineligible to legislative or judicial office? Why should she know anything of theology, except as a body of positive dogmas, inasmuch as she can neither preach nor perform any priestly function? Why should she study the rules of æsthetical criticism, or the fundamental principles of any art, when it is notorious that she can neither invent a character, paint a historical picture, model a group, nor compose an anthem?

Now this reasoning is objectionable, not merely as assuming much that is disputable, much even that this generation has seen dispelled, but because it raises a false issue, while, at the same time, it places a low and degrading estimate on the uses of knowledge, and virtually denies that it is, in and of itself, a good. Our intellectual training, our discernment of good and evil, of the true and the false, of the beautiful and the base—these are as much constituents of that complex entity which we call *self*, as our physical appetites and sensations. Discipline, self-culture, soundness of judgment, positive attainment, all which are implied in *knowledge*, are equally necessary for the discharge of our duties to our Maker, to ourselves, and to our brother. Knowledge, then, helps us alike *to be* and *to do*, and the obscurantists, in refusing a better education to woman, are denying her the choicest of jewels as a possession, the most efficient of instrumentalities as a means of action.

The present question is not, as is perversely insisted, What shall women *do?* Shall they command fleets and armies? Shall they preside in the councils of the nation? Shall they defend criminals at the bar of justice? Shall they expound Scripture and enforce religious and moral obligation in the pulpit? Shall they administer potions and perform capital operations? Shall they be allowed publicly to buy and sell and get gain? But it is: Shall woman be encouraged, or at least permitted freely, to cultivate such humble faculties as she is admitted to enjoy, and develop those intellectual powers which, in common with what grammarians call the "sexus dignior," the worthier sex—though, as a half-reasoning animal, in an inferior degree—she appears to possess; may she receive a mental training which will raise her in her own self-respect, contribute to her rational enjoyment, and render her a more useful and less tiresome companion to the Solomon who is destined to lord it over her?

There are, certainly, persons who propose to put women forthwith upon a footing of absolute, social, civil, legal, and political parity with men, and I suppose the fifteen hundred British maids and matrons who are demanding the exercise of political franchises in England, will have many sympathizers in and out of their own sex, many powerful advocates in Parliament, in society, and in literature. But, after all, we do not know or believe that, as a general rule, women now want, or ever will want, to exercise many of those functions of which generous man reserves to himself the monopoly. Physical reasons, and the appetites and repugnances naturally resulting from the physical constitution of women, will secure man, to a very great extent, from the dangerous competition, the apprehension of which is throwing universal fogydom into such a fever; and the law of supply and demand will, in the long run, when the market is fairly thrown open, bring the custom to the right shop, whether Adam or Eve stand behind the counter. As we have already said, we have no sound experimental knowledge in regard to the capacities and aptitudes of women, but, so far as the evidence goes, it is, as in all cases of the extension of human liberty, entirely favorable to the enlargement of woman's sphere of action. Women, we all know, once voted in New Jersey. The world was then by no means as well prepared for such an anomaly as it now is; but history does not tell us that New Jersey gained very much in wisdom of internal administration, or in respect abroad, by their exclusion from the polls. Had women continued to vote in that State, or rather *station*, we believe New Jersey would have been sooner redeemed from thraldom to the slave-driver; and had she still, for a time, worshipped some Juggernaut as the god of her idolatry, she would have placed him on a nobler chariot than a snorting locomotive, and the lesser divinities of her pantheon would have been something better than deified stokers.

The opponents of the social and intellectual elevation of woman may be divided into two categories—the hierarchies, which fear or rather foresee that their own usurped powers and privileges will be reduced in proportion as rights shall be recovered by classes which have hitherto been deprived of them, and the vast body of men and women who honestly believe that woman is, upon the whole, an inferior creature.

The love of power is the strongest of human passions, and it is a remarkable proof of the intensity of the social feeling in man that aggregate bodies cling more tenaciously than individuals to the exceptional privileges they have become possessed of. Kings have voluntarily abdicated their thrones, but never did an *order* resign its prerogatives except upon compulsion. This is especially true of all hierarchies, lay or ecclesiastical, which, by incorporation or otherwise, have or claim perpetual existence by continuous succession, the transmission of a *virus*, as Dr. Rice called it. Happily the inviolability of corporate rights of all sorts is now becoming matter of frequent question. The reverence with which associate bodies were regarded is greatly diminished. The old Whig superstition of the immaculate conception of the United States Bank is now pretty much exploded, and it is very doubtful whether every point of the judgment in the famous Dartmouth College case would be affirmed upon a rehearing to-day. Although financial, and especially railroad, corporations have been the great springs of pecuniary, and too often of political, corruption in our time, yet their social influence is far less dangerous than that of bodies which rest their claims to power on the higher basis of religion. Ancient oppressions were sanctioned by appeals to vaguely conceived divinities, speaking, as in a great part of Europe they do to this day, only through the priests. In nations which have shaken off some part of their mediæval superstitions—royalty, hereditary aristocracy, consecrated priesthoods—advocates of the slavery of man and the degradation of woman fortify every proposition by quotations from Holy Writ—the joint authority of "Peter and Paul." When it was a penitentiary offence in South Carolina to teach the negro to read, when generous Georgia condemned missionaries to penal servitude for preaching Christianity to the Indians, the pious, the learned, the wise, and even the philanthropists of those enlightened communities had no doubt that the sentences were just. Reason and experience proved the inferiority of the black skin and the red just as logically as they establish the inferiority of woman now, and devout gospellers appealed to Scripture in the former case as triumphantly as they still do in the latter. It was clear from Holy Writ that "Ham's sons was gi'n to us in charge;" slavery was their natural, divinely ordained condition, their earthly school and paradise; and though the "nigger" was a "useful institution" to his owner, yet it was more as a matter of duty than of interest that the magnanimous Southron held him in perpetual bondage. In fact, the Southern States constituted a great Society for the Propagation of the Gospel, the slaveholders and priesthood; and when a religious congregation in Charleston sold a few "communicants" further "down South" to raise money to repair their church, they had the comfortable reflection that they were sending out catechists and missionaries to teach the way of truth to their yet but half-converted brother on the sugar plantations. As to the Indian, his name did not appear in the biblical genealogies—he was not the son of anybody; they "'spected he growed." Of course he inherited no share in the "covenant promises," and the taking of his lands and his goods and appropriating them to better uses was a praiseworthy spoiling of the Egyptians. All this was conscientiously believed five years ago by seven or eight millions of men, women, and children. Does anybody but a Copperhead believe it now?

Is it not possible that the all but universal belief in the inferior nature

* "Essays on the Pursuits of Women. By Frances Power Cobbe." London. 1863. 239 pp. 12mo.

of woman rests on a not less sandy foundation? We look back with astonishment at the solemn decision of Southern judicial tribunals, that, unless restrained by local statute, the master's power over his slave was as unlimited as over his ox; that at common law no indictment would lie against the owner for torturing or even killing his "servant"—that, in short, he had all the rights over his bondman which the volunteer gladiator's oath and the laws of Rome conferred upon the *ludimagister*, "to bind, burn, scourge, slay with the sword, or whatsoever else the master should please." Justice Buller declared that, by the law of England, beating a wife with a stick not thicker than his lordship's thumb was not to be considered as anything more than that "moderate chastisement" which the husband might rightfully administer. Shall we not by and by grow wise enough and humane enough to try to get a mitigation of this judgment and reduce the size of the stick to perhaps the measure of a judge's little finger?

Dr. Johnson, whose strong sense helped him, in spite of the tenacity of his prejudices, to see the hollowness of many of the social shams of his time, said that woman was not made subject to man because she was his inferior, but because, "when two ride on one horse, one of them must ride behind." In our day everybody travels in the East, and the Western world is becoming familiar with the fact that, by the use of a pannier-saddle, which the Orientals call a *kajava*, two persons may travel on one camel and yet ride side by side.

Some time since a European lady expressed to us the regret she felt, in visiting a school which her husband had been instrumental in establishing for the purpose of so far educating peasant girls as to make them useful domestic servants, to find that the girls were not content with the little their instructors were willing to teach them, but that they desired to acquire knowledge enough to qualify them for teachers in higher female schools. When we said that we thought this was a creditable feeling, which ought to be encouraged rather than repressed, she replied, "*Mais, Monsieur, elles aspirent à se déclasser!*" They want to rise above their caste. "Well," said we, "this answer of yours points to a fundamental distinction between your Old-World institutions and those of which we Americans are so proud. The very thing we aim at is to '*déclasser*' our people, to relieve them from the servitude and the tyranny of caste, to 'exalt the humble' majority, even at the cost of 'depressing the proud' minority. True, we strive to lengthen upwards the ladder on which all alike stand, that all may climb higher than the highest has yet ascended, but we do not allow the occupant of the topmost round any possessory right to exclude from a place beside him the aspirant who is rising from the lowest."

The European traditions, which reduce woman to the condition of an inferior caste, are in conflict with the whole tone and purport of American institutions. They constitute what lawyers call a "discrepancy," an irreconcilable discord, in our whole social life. Let us begin with recognizing true and liberal principles, and trust to the logic of society to work out legitimate and beneficent results. Let us not dispute whether women shall, if special vocation call them, walk in hitherto untrodden paths, or still be confined to such rude "small chores" as lofty manhood scorns to stoop to; let us not, like the bee, feed one human larva to be a worker, one a mother, and another a drone; but let us administer to both sexes, in every condition of life, that generous intellectual, moral, and physical nutriment which will enable each to develop most perfectly the powers and faculties of its material and moral organization.

No person has discussed this general question with greater ability, none with more of that sage moderation which is the sure token of an elevated and an enlightened spirit, than the noble woman whose essays we take as the text of this article. We do not know how much her works have yet been read in the United States, but no writer of our time, male or female, better deserves to be listened to by Americans who seek the true solution of the greatest social problem which it remains for Americans to determine.

INSIDE: A CHRONICLE OF SECESSION.*

As a story this novel cannot be said to have much merit, and evidently is the work of a beginner, and quite likely his very first literary attempt. Yet it is most readable, and really valuable, being rather a contribution to contemporary history than a work of fiction. Mr. Arthur, a young clergyman "born and raised," as our Southern brethren say, in the Old Dominion, goes down into one of the cotton States—South Carolina, we should say—and assumes the pastorate of a small church. It is some years before the war, and the minister becomes deservedly popular. He is a Union man, however, and when the rebellion once begins finds many of his parishioners looking askance upon him, and one, in particular, is inexpressibly shocked at his recreancy. This is Mrs. Bowles, relict of the chivalrous Major Bowles, of South Carolina, and mother of the chivalrous Rutledge Bowles, for a short time an undergraduate in the University of South Carolina, afterwards an officer at the glorious siege of Anderson in Sumter. Also, she is the mother of Alice Bowles, who, in her girlhood, is a pupil of Mr. Arthur's, and with whom Mr. Arthur, of course, falls in love. Notwithstanding his political opinions, his suit is finally successful, for the lady he converts from secessionism, the fire-eating Rutledge Bowles gets himself killed in the war, and Mrs. Bowles dies of grief for the loss of her beloved son and the downfall of her beloved Confederacy, which she loves, in the second place, because it is Southern, and, in the first place, because it was founded by the sovereign State of South Carolina. Along with this plot, but not in any way connected with it, is another. In the early days of rebellion a large, handsome, lavish-handed secessionist, an intimate friend of General Beauregard and Mr. Davis, makes his appearance in Somerville, and by his manners and his high-toned sentiments is at once recognized as a perfect type of the Southern gentleman. A good many men in and around Somerville can curse a Yankee or a Union man with copious and forcible profanity; but when Dr. Peel, the new comer, begins to swear, whole bar-rooms are speechless in admiration, and, as he goes on in a foaming torrent of oaths, even hardened blasphemers might be excused for going down on their knees and entreating him to stop. The doctor captivates the heart of Miss Annie Wright, a planter's daughter, and at the very last moment, while Brother Barker is in the house of the bride's father ready to officiate at the wedding, while the prospective father-in-law is drunk in honor of the event, the bridegroom is discovered to have been a Federal spy during the whole war; worse than that—this associate of Southern gentlemen, who has patronized some of the first families in Somerville, and made love to a slaveholder's daughter, turns out to be a colored man! But, as we suppose, the mere story engaged not much of the labor of the writer, and he need care little if it engages not much of the attention of the reader, whose interest is absorbed by the obvious truthfulness and the astonishing vividness of the picture which is here drawn of a Southern community in Confederate days.

Somerville is like hundreds and hundreds of other towns in the limits of the late slave States. It is a dull, remote, languid, decaying village of some two or three thousand black and white inhabitants, situated somewhere near the geometrical centre of the county of which it is the capital, and surrounded by a cotton-raising district. "A level, post-oak, sandy plain is its location; no mountains, no river, and but a scrubby forest." There are three or four churches in it, bare meeting-houses, much in need of paint probably, and each with a most dismal grave-yard near by. There is a hotel, and a post-office, and dry-goods stores "with their red blankets hanging at the doors," and a saddler's shop, and "provision stores sticky with sugar and molasses, and greasy with great piles of bacon." There is also a court-house—

"A square brick building in the centre of the town. But why should one feel the strong aversion I feel for that gloomy building, with its brick-paved floor below, its well-worn and exceedingly dirty stairway, its breezy court-room above, its yellow walls spangled a yard up from the floor with tobacco-juice, its bewhittled benches and hide-bottomed chairs, its doors and posts beplastered with curt sheriffs' notices—half print, half writing—and with notices of cattle lost, written in all possible varieties of spelling and grammar?"

The aversion which the author feels for the court-house he feels because it was there that secession was born, there it rejoiced over its triumphs, and thence it ruled with an iron sceptre those unfortunate men who either avowed their loyalty or were suspected of hating rebellion.

If the birthplace of secession in Somerville was the town-hall, its nursing cradle was the office of the *Somerville Star*, of which the editor-in-chief is Mister, or, if you like, Colonel, or Major, or General, Lamum.

"An undersized man is Lamum. He may be thirty, and he may be fifty years old—you can form no conclusion on the matter merely by looking at him. Excessively lean; very much stooped in the shoulders; face very pale, and never changing color under any possible circumstances; nose long and sharp; thin black hair; of a swift gait in walking; prompt and sharp speech; very shabby in clothing—that is the man.

"Although continually associated with people that do, Lamum never smokes, never drinks, never plays a game—at least of cards. You never catch him in a billiard-room or doggery, unless it is in search of some politician to be found nowhere else. Lamum rarely enters a church—never, in fact, save for some political reason, such as to hear a political prayer or sermon. Yet Lamum swears only when very greatly provoked. No one has ever breathed a syllable against him as a husband. In regard to his various pecuniary transactions his enemies violently assail him; but then his friends as vehemently defend him. As these transactions are enwound

* "Inside: A Chronicle of Secession. Geo. F. Harrington. New York: Harper & Brothers." Pp. 223.

in lawsuits without number, it is impossible to decide upon them in advance of the jury.

"One word expresses Lamum from his earliest manhood upward, heart and soul, body, mind, and spirit, conversation and conduct—in every respect from head to foot. He is a politician. Above politics, beneath politics—if it had any beneath—besides politics he has not a thought or emotion. All his reading is political papers; he holds no conversation, when he can help it, except upon political topics. He knows no ties to any living creature except political ties. As to his wife, he sees her only across the table at meals, or, perchance, asleep in bed when he comes in late at night.

"There is nobody in the world, perhaps his wife excepted—he has no children, he has no time for such nonsense—loves this pale, cold, eager man.

"Like Robespierre, he loves politics not for the office or profit it brings him so much as for the dry sake of politics itself. Something like the intense fondness, not so much of a gambler for his cards as of a chess-player for his mystic game. He has a cold yet infinite zest in the intrigue, the twisting of facts, the magnifying of useful nothings, the diminishing of disagreeable somethings—the downright lying, the flattering, the bullying, the rewarding, the punishing—the wielding of Power, that is it! Robespierre had his guillotine, had he? Every Saturday's *Star* falls like an axe across some man's name if not his neck! Talk about the unscrupulous devotion of a Jesuit to his order!

"Let it suffice to be said, Lamum was, in the most exclusive and intense sense possible to the word, a Politician, not in the sense of a stump speaker. Lamum had a thin, feeble voice—he could not make speeches, never tried. But his pen! Ah, how powerfully he spoke through that! And how he ruled with it hundreds in every county in the State who did mount the stump."

Still better drawn and excellently displayed in action is Brother Barker, the rabid secessionist preacher, who prays bitterly for the Confederacy, denounces Union men from the pulpit, and convinces his hearers by Scripture texts that the South is commanded by the Lord to withdraw itself from a nation of atheists and free-lovers. Then there is Mrs. Warner, the snuff-dipping, lean-faced, fierce wife of the easy-going doctor; there is Tim Lamum, the Confederate provost-marshal, and his young friends who play poker in the office; there is old Colonel Juggins, the illiterate planter, who lives on terms of equality with his negroes in a house no better than one of the shanties "down at the quarters;" there is Colonel Ret Roberts, the aristocratic planter, a furious but high-toned rascal, who is rapidly losing his family negroes, who gives notes of hand he never pays, is free with his claret, ready with his duelling pistols, and unequalled in a speech at the court-house; there is Alonzo Wright, "Mass' Lon," a planter who has been known to kill a negro or two, and who becomes wild when he has made himself drunk with whiskey and takes a fancy to use his revolver; there is Guy Brooks and his brother Paul, the Union men; and Joe Staples, the hotel-keeper, who grows rich, no one knows how, as the Confederacy grows poor; and, besides these, there are a score of other figures, all delineated with painstaking care, so that they appear to be, what we doubt not they are, pictures from life drawn by a careful observer with every opportunity of attaining complete accuracy. We suppose the book to be a perfectly trustworthy, as we know it to be a most interesting, description of the life of Southern loyalists since 1861, and think we speak within bounds when we say that there is no other book which will give the student of Southern history in the last five years a clearer understanding of the way in which the Southern white people were affected by the war. The illustrations by Thomas Nast are in most cases admirable.

MEDICAL ELECTRICITY.*

Two qualifications are pre-eminently necessary for authors—a knowledge of the subject considered and the ability to write in intelligible language. After patiently wading through Dr. Sarratt's ponderous book, we are reluctantly forced to conclude that he is lamentably deficient in clear ideas of the science to which he has evidently given a great deal of labor, and that he has written a book which, for obscurity of diction, viciousness of style, and badness of English, is not excelled by any other volume we have ever read. If it was Dr. Sarratt's aim to make a large book and to fill it with absurd dogmas and speculations, expressed in language which not one man in a thousand of the educated classes can understand, he has met with entire success. If he was desirous of writing a clear, concise, and sensible work on a subject of great importance, he has just as decidedly failed.

There is scarcely a page of the volume under notice which does not contain some glaring error of fact or of grammar. For instance, we are told (page 15) that "some several hundred pages of that portion of the work *is* thrown out." It is stated (page 42) that "ozone acting the part of an acid unites with the potassium in forming potassa." Dr. Sarratt is, therefore, ignorant of the fact that acids do not unite with elementary bodies but only with bases, and that consquently the action of oxygen never can be that of an acid. Speaking of the influence of impure air in giving rise to disease, he says (p. 44), that it will cause "no sort of ague, neuralgia, neuralgic rheumatism, nor other periodic disease, *if not situated in a meteorological*, i.e., *malarial region*." The medical students, for whom the work is ostensibly written, will be rather confounded to find the adjectives meteorological and malarial used as synonymous.

At page 63, the following specimen of Dr. Sarratt's style will be found:

"Another *freak* of lightning is mentioned by M. Arago—that lightning has been known to strike, penetrate, and demolish powder magazines, and there upsetting and scattering the powder in all directions, and yet not set it on fire! This fact, though rare—for the setting it on fire and producing an explosion is by far the most usual result—illustrates *the law of damage to man;* for electricity by friction, as in that case of lightning, never burns, nor even explodes gunpowder if it meets no hindrance; but rather follows an under conductor. In this case it is too quick to fire, burn, or disorganize. It can be demonstrated that electricity or lightning explodes the powder, burns, tears, or disorganizes to destruction only when it encounters in its route a given degree of resistance that actually delays its velocity."

The little germ of fact contained in the foregoing extract could be stated with about one-third the expenditure of words given to it. What "the law of damage to man" is, and why the well-known fact mentioned by M. Arago should serve to illustrate it, are matters far beyond our knowledge. Dr. Sarratt informs his readers (page 64) that "the molecules of the living body *is* naturally bi-polar," and on the next page that long and large sparks made to strike obliquely on the back of a looking-glass "*demonstrates*" the arborescent action of electricity.

Electricity is recommended (p. 984) as a remedy for sea-sickness, and directions are given for its use in this affection. Whether any sea-sick persons were ever cured by the application, or whether it has ever been actually employed or not in this connection, Dr. Sarratt does not inform us. We are also told, with his thorough disregard for the grammar of his mother tongue, that, "on going on board at first, it is prudent to have the stomach and bowels free, eating plainly, and have a daily stool."

At page 841 Dr. Sarratt speaks of "iron *bi-hydrogen*"—evidently supposing that the iron reduced from its protoxide to its metallic form, in very fine powder, by the action of hydrogen, and hence called iron *by hydrogen*, is a definite, chemical compound, consisting of one atom of iron and two of hydrogen. Even upon this supposition he has given it a name which is bad enough to make the authors of the system of chemical nomenclature start from their graves.

To follow Dr. Sarratt through all the devious turnings of his book, would be a task which we spare both ourselves and our readers. We have not read a page of it which is not disfigured by some exhibition of ignorance or disregard for the plainest rules of English composition; and the specimens which we have quoted are not, therefore, isolated examples of his style. Instead of being such a book as was and is needed by the medical profession in this country, it is an *omnium gatherum* of platitudes and cheap scientific facts, with here and there a few valuable statements. These latter, however, are almost entirely taken from the works of Du Bois Reymond, Matteucci, Remak, Duchenne, Bird, Althaus, Mitchell, and others, who have written upon the medical application of electricity. When we come to look for Dr. Sarratt's own contributions to a knowledge of the science in question, we find it to consist of descriptions of American galvanic batteries, and the details of cases (some of them interesting, but by far the greater number valueless) which have occurred in his practice. That such a work should be issued with the imprint of J. B. Lippincott & Co. argues much for the good nature of that highly respectable and generally careful house, but little for its discrimination. We trust it will be long before American medical literature is made to bear the burthen of such another book as Dr. Sarratt's.

* "Medical Electricity: Embracing Electro-Physiology and Electricity as a Therapeutic, with Special Reference to Practical Medicine; showing the most approved Apparatus, Methods, and Rules for the Medical Uses of Electricity in the Treatment of Nervous Diseases. By Alfred C. Sarratt, M.D., etc." Third edition, revised and improved. Philadelphia: J. B. Lippincott & Co. 1866. Pp. 1103.

HALLECK'S INTERNATIONAL LAW.*

As the author assures us on the title-page and in the preface that the present work was prepared as a text-book for schools and colleges, it will be more justly compared with another text-book of similar design than with the larger work of which it is an abridgment, and whose sections and divisions it rigidly preserves. Such a comparison is afforded by President Woolsey's "Introduction to the Study of International Law," of which a second edition was published by Scribner in 1864. For merely school-room pur-

* "Elements of International Law and Laws of War. By H. W. Halleck, LL.D. Prepared for the use of Colleges and Private Students." Philadelphia: J. B. Lippincott & Co. 1866. Pp. 380.

poses, the "Elements" has the advantage in point of shape, but the larger print of the "Introduction" and rather fewer pages of open text would make the contents very nearly equal, were it not for frequent notes in the latter, besides a valuable appendix, both of which are excluded by Gen. Halleck. Neither, again, illustrates its subject from the late rebellion, and one will consult them in vain for the case of the *Alabama*. But while both allude to the *Caroline*, Woolsey alone mentions the *Creole* and the *Amistad*.

On the whole, we fail to perceive that in any important respect the newer work is more valuable than the older, while in many it is certainly inferior. Gen. Halleck's first two chapters contain the substance of President Woolsey's introductory chapter, and these may be taken as samples of each author's style, method, and design. The somewhat pretentious but very meagre and vague historical survey of the origin and growth of international law with which the General sets out, is in striking contrast with Woolsey's full yet condensed summary of the practices of classical antiquity and of mediæval times. In the following passages there is a very evident discrepancy, and, though Gen. Halleck's language is not free from obscurity, he seems plainly to be laboring under a serious misconception:

"What was called the law of nations (*jus gentium*) by the Romans was not any positive system of jurisprudence established by the consent of all, or even the greater part, of the nations of the world, and applicable alike to themselves and others; it was simply a civil law of their own, made for the purpose of regulating their own conduct towards others in the hostile intercourse of war. It was, therefore, contracted in its nature and somewhat illiberal in the character of its provision." (Halleck, p. 19.)

"The law of nations, *jus inter gentes*, is not to be confounded with the *jus gentium* of the Romans. This term denoted the principles and usages of law common to all nations, that is, practically, to all nations known to the Romans, as contrasted with what was peculiar to the *jus civile*, the law of Rome itself. . . [Gaius and Ulpian quoted.] . . These common usages of nations may run through all the fields of law, and so will include some rules of the international code. But the two evidently cover different ground, and the civil law never distinctly contemplates a law of nations in the modern sense." (Woolsey, p. 27.)

A very good instance of the habitual point of view of each is contained in these extracts:

"Some publicists have argued that, as all sovereign states are considered equal in international law, and as they can never be subjects of *criminal law*, they cannot be punished for offences committed. This is probably true in the strict technical sense of the term punish. Nevertheless, as the injured state may, in order to obtain indemnity for the past and security for the future, destroy the property of the offending state, and kill its citizens, it does, to all intents and purposes, inflict *punishment*. (Halleck, p. 35.)

"Grotius held that a state had the right to punish injuries committed not only against itself and its subjects, but also against others over whom it has no guardianship. . . This right he derives from a similar right of individuals in a state of nature, which they gave up to society. He adds that it is more praiseworthy to punish injuries done to others than to ourselves, inasmuch as we are then less likely to be partial.

"Few, if any, we suppose, would now undertake to defend the explanation here given by Grotius of the state's right to punish; and the extent which he gives to the right seems equally objectionable. There must be a certain sphere for each state, certain bounds within which its functions are intended to act, for otherwise the territorial divisions of the earth would have no meaning. In regard to the right of *punishing in any case* outside of the bounds of the state, there may be rational doubts. Admitting, as we are very ready to do, that this is one of the powers of the state over its subjects, we can by no means infer that the state may punish those who are not its subjects but its equals. And yet, practically, it is impossible to separate that moral indignation which expresses itself in punishment from the spirit of self-redress for wrongs. As for a state's having the vocation to go forth beating down wickedness, like Hercules, all over the world, it is enough to say that such a principle, if carried out, would destroy the independence of states, justify the nations in taking sides in regard to all national acts, and lead to universal war. And yet extreme cases of outrage may be conceived of, where a burning desire to help the weak abroad, or to punish the oppressor, ought hardly to be disobeyed." (Woolsey, pp. 34, 35.)

Halleck's definition of international law is, perhaps, preferable to the two proposed by Woolsey: "The rules of conduct regulating the intercourse of states," as compared with "the expression of the jural and moral relations of states to one another;" or, "the aggregate of the rules which Christian states acknowledge as obligatory in their relations to each other, and to each other's subjects." But again we discover the aim of the General to be simply to lay down the actual condition of international law, while President Woolsey strives to make the record subserve the higher development of the law. Hence the one has written a dry and juiceless statement, hinting at discussions without going into them, and doing little to elevate the mind of the student, or even to direct him to the noblest sources of enquiry. The other has written less for the memory than for the understanding, and displays, with at least an equal amount of learning and research, a thorough sympathy with the spirit of the age, a perfect consciousness of the crudities and imperfections of a code which shows the fraternity of nations to be far behind that of the individuals which compose them, and a hearty desire to bring about a closer conformity in all human dealings to the divine teachings. On all moral questions, therefore, President Woolsey's remarks are more copious, and, we venture to say, more enlightened, than Gen. Halleck's. His citation of authorities is constant, and his historical illustrations are generally more complete, more definite, and more interesting. His rhetoric is always more laudable. In logical order there is little to choose. The index of Woolsey is superior, and is of names as well as of things; and in connection with an appendix of works and documents bearing on international law, and another of the most important treaties since the Reformation, with a brief statement of their provisions, renders the "Introduction" a much more permanently useful manual than the "Elements." Except for those who do not read easy Latin, if even for them, we know of no special class with which Halleck would supersede Woolsey, and none whatever with which it should.

MAGAZINES FOR SEPTEMBER.

THE Balaam Box was the name which Christopher North gave—on the *lucus a non lucendo* principle, we suppose—to the receptacle of a vast mass of dubious contributions which went to his editorial room, intending, doubtless, to bless, and remaining to curse him. Too good, or written by too good authors, to make it just the thing to burn them, and not quite good enough to go into print, even the robust-minded Berserker of "Blackwood" was embarrassed by them. The "Atlantic" has evidently succumbed for the moment to the common fate of magazines, and this month publishes "The Surgeon's Assistant," "The Voice," "A Distinguished Character," "The Bobolinks," "Incidents of the Portland Fire," "My Little Boy," "An Italian Rain Storm," "Lake Champlain," "Yesterday," "Woman's Work in the Middle Ages," and "The Chimney Corner for 1866," articles all of which, of course, can be read, and no one of which any human being need care to read. "University Reform" is the words of a favorite son of Harvard, delivered at the great college festival, listened to not without approval by a great many alumni of Harvard, and yet pronouncing in favor of a remodelling of the method of teaching in vogue there, and, to a certain extent, condemning the system of education now maintained. Except in this aspect of it, the essay, which is naturally rather rhetorical or oratorical in tone, is of no great interest or importance. "The Johnson Party" is a model of those slashing articles in which the writer at any rate slashes, whether anybody is effectually slashed or not. It is Sir Philip Francis, we suppose, who being dead yet speaketh in sentences of the style of these: "The will of ordinary men is addressed through their understanding and conscience. Mr. Johnson's understanding and conscience can be addressed only through his will. . . . . The President of the United States has so singular a combination of defects for the office of a constitutional magistrate that he could have obtained the opportunity to misrule the nation only by a visitation of Providence." The sonnet by Longfellow, "On Translating the Divina Commedia," is the third of a series, in which he celebrates the close of his task and rests from his labors. "Griffith Gaunt" is doled out artfully as usual. It is broken off in this number at a point where the reader is supposed to be intensely interested, for the heroine is in the middle of a trial for her life, and just about to show her undoubted abilities in the cross-examination and confounding of witnesses. Hawthorne speaks of Thoreau with just appreciation, and of September and October so inimitably, that those passages from his note-book will even add a charm to the New England autumn weather.

"Our Young Folks," in the September number, gives the first of its promised full-page illustrations—a pathetic little picture by W. J. Hennessy, which the engraver has pretty thoroughly spoiled. When an "Infant's Magazine," which is projected, we believe, shall get fairly under way, we hope "Our Young Folks" will feel at liberty to give up those highly poetical allegories, such as "The Pond of the Dollys," which compose so much of each number. All the boys of our acquaintance scoff at them, except occasionally, when Mrs. Stowe makes one, and it is a good deal better than they usually are.

In "Harper" the illustrated papers are—"Army Life on the Border," which is a review of Colonel Marcy's very entertaining book; "Heroic Deeds of Heroic Men," which relates to the operations of the Federal and rebel forces in Texas, and is written by John S. C. Abbott in his inimitable and too well known manner; and "Porte Crayon's" "Personal Recollections of the War," which is the most readable article in this number till one comes to the "Editor's Easy Chair," with its agreeable talk about Gladstone and Canning, Austria and poor Benedek,

"Now from the book of honor razèd quite;"

Felix Holt, Rachel and Ristori, a graceful little essay of a kind in which Mr. Curtis has no equal in this country, and William T. Sherman, a Dartmouth doctor of laws. It must be this "Easy Chair" which keeps for "Harper's" the best class of its readers. General Strother bears testimony to the warm, admiring respect Mr. Lincoln compelled, even from prejudiced persons and enemies, if once they met him face to face. He gives us also camp pictures true to the life, and glimpses of Lander, raging because his Massachusetts regiments were cut to pieces at Ball's Bluff; of Stone, who lost that battle; of Banks, who, he seems to think, ought to have had vengeance for it before McClellan got down from Washington, and of this latter himself, the commander-in-chief whose attitudes reminded his observer of Napoleon, and whom he describes as a heavy-limbed little man, "his head large and rather square, complexion florid, and light-red beard." A late Confederate officer writes pleasantly about "Wilmington during the Blockade," and there is the regular allowance of tales of love, written mostly by young women.

"Hours at Home" for September is much as usual. The editor, if it is the editor who writes "Books of the Month," has his little jeer at Miss Evans, who, however, as an author, seems to enjoy a good deal of his approbation. Donald G. Mitchell, who apparently belongs to the party which has no reason to like Congressional commissions of enquiry, imitates the mode of investigation which elicited the truth from unwilling witnesses at Memphis and New Orleans, and proves that his old enemy, the gentleman-farmer, may be a gentleman, but has no right to the other name. The chief literary article is upon Froude's "History of England," and a comparison is drawn between Froude and Lord Macaulay, to the disadvantage of the latter. But the critic appears to be a person so intensely susceptible, that perhaps he is hardly to be trusted in these matters. In judging a poet it may be well enough to be "now and then made to spring from our seats by the startling effect of some bold thought," etc.; but history belongs rather to the literature of knowledge than the literature of power. Perhaps, however, the professor does not mean that he did really jump from his chair when Froude described Queen Mary to him, but only has an inexact and violent way of expressing himself. Mr. Towle talks loftily of those benighted German students, and the superiority of the undergraduates "in our own well-disciplined colleges." He gives us a very tolerable description of duelling as practised at Heidelberg, and justly, and with his usual force of thought, remarks that "men who live in the nineteenth century are behind the age, indeed, if they cling to the doctrine of 'ordeal by battle,'—if they believe in the doctrine that God awards strength and skill in the use of the sword to test right and wrong"—a confusion of two quite distinct institutions.

Of nineteen articles in the "Catholic World" five are original, the best of them being an able examination of two answers which the Church of England gives to the question, Is Episcopal Ordination a *sine qua non* to constitute a valid Ministry? . The writer vindicates the correctness of the answer given by the Low Church party, which allows equal validity to the ordination by presbyters. Of the selections, a translation from the French, entitled "Three Women of our Time," will be found amusing reading in the part which speaks of Charlotte Brontë and English life. The other selections are a little out of the line of ordinary magazine readers.

Our handsome contemporary, "The Galaxy," though as yet there is some little uncertainty about it, seems to have pretty well decided on the field which it will occupy. It will not be so good as the "Atlantic," for the "Atlantic" has at its command a better class of contributors in prose and poetry than any yet employed by the "Galaxy." It will be a magazine for young people rather than for thoughtful people; and for young men we should say rather than for young women. These latter, if they like it, will like it for its serial stories, which are very good as serial stories go. This is a feature that, no matter how unaccountable the fact may be, one must concede to be popular. Our own opinion is that its popularity must be attributed to the preponderance of female names on the subscription lists. We should select the paper published in this last number, entitled "Literary Frondeurs," as a fair sample of the spirit which will pervade the Galaxy, and as a rather favorable sample of its ability.

Footprints of a Letter Carrier. By James Rees, Clerk in the Philadelphia Post-office. (Philadelphia: J. B. Lippincott & Co. 1866.)—It was said of the late Dr. Whewell that "science was his forte, omniscience his foible." Though unable to speak of the scientific proclivities of Mr. Rees, we can safely assert that in his desire to grasp universal knowledge he closely resembles the distinguished Master of Trinity. His "footprints" may be found in many provinces of the great domain of knowledge, and, to judge from their wide divergence, he must have been provided during his travels with means of getting over the ground quickly, compared with which the seven-league boots of the fairy tale were of little account. In a duodecimo volume of rather more than four hundred pages, which is ostensibly devoted to what is called "postal history," we have essays on language, the origin of writing, the confusion of tongues, and the pastoral life; notices of Chinese art and science, ancient Rome, modern architecture, the Declaration of Independence, the Kaffirs, the pyramids of Egypt, Yankee Doodle and the Star-Spangled Banner, the American stage, railroads, the abolition of slavery, and the late civil war (on both which subjects the writer's opinions, we are happy to say, are very sound), Merlin's prophecies, Sir Walter Scott, Abraham Lincoln, etc.; biographical accounts of Cyrus, Penn, Franklin, and other worthies, ancient and modern; historical sketches of Philadelphia, Pennsylvania, the American Revolution, etc.; lists of Congresses, Presidents, and Vice-Presidents, and Governors of Pennsylvania, and a variety of other discursive matter, which space will not permit us to recapitulate. It is true these subjects have no conceivable relation to the post-office, but to the volatile genius and active pen of the author that is a matter of little consequence; and as the postal system penetrates into every quarter of the civilized globe, so in a treatise upon that system it is permissible, he evidently thinks, to offer to the reader as many and as various facts, fancies, and opinions as can be crammed into four hundred-odd pages.

Mr. Rees is apparently a post-office clerk of long standing and considerable experience, and those portions of his work relating to the post-office itself, though loosely constructed and incomplete, are, in the main, interesting. With the exception of Great Britain, he has little or nothing to say of the postal systems of Europe; but, as some compensation for this omission, he tells us how letters are delivered on the West Coast of Africa. The anecdotes, constituting what may be called the "romance of the post-office," are not comparable with those contained in Holbrook's "Ten Years Among the Mail Bags," published some years ago. The statement that the New York post-office was, in 1844, established in a new building in Nassau Street, erected expressly for that purpose, will be news to the majority of our readers. But they will doubtless concur in the author's opinion that the structure in question reflects little credit upon the city, and in his conclusions on the subject of American post-offices in general, architecturally considered. To these unfortunate edifices he attaches the severe, but perhaps not unmerited, stigma, that they are inferior in appearance to many lager-beer establishments.

Some remarks on style occur in the preface. The author sets his face resolutely against foreign and learned words, avows himself in favor of "the American language in its plainest style," and states that he has written his book "in a manner which he flatters himself will be received favorably by the masses." In this expectation we trust he will not be deceived; but he certainly gives some odd examples of that severe simplicity which he would associate with the use of "the American language." Thus, wishing to say that on a certain occasion he was about to distribute letters, he tells us that he prepared to "distribute the thoughts, the opinions, the love, the hatred, the wisdom, and the follies of mankind, through the medium of letters," which, though a very fine sentence, is not nearly so comprehensive or exact as if he had omitted everything between the first word and the last. We suspect he has unconsciously exhibited some qualities of "the American language" not altogether reconcilable with plainness of style.

Poems. By Sarah E. Carmichael. (San Francisco: Towne & Bacon. 1866.)—Miss Carmichael is, we believe, the first poetess of Great Salt Lake City. She was brought up a disciple of the Mormon faith, but has abjured it. Some of her Gentile friends, with her permission, have published this thin little volume of her poems, hoping that the proceeds of its sale may enable her to fulfil her desire of coming East and completing an imperfect education. She is not a person upon whom education would be wasted. Indeed, we are inclined to think that she might easily take a very good rank among our living American poetesses. It would not be true to say that she has any great measure of the poetical faculty; but, on the other hand, she has some negative merits. She is not an imitator, or if she is, it has at any rate happened to her to live away in the Land of the Honey Bee, with thousands of leagues of land and water between her and Locksley Hall. She is not affected, she is not misanthropical, she is not without the power to think, and when she does think she is not instantly at work thinking, What is my thought like? Her metres are the old ones, tolerably well used, and occasionally there is quite a noticeable felicity of rhythm, as in the last of these verses from "President Lincoln's Funeral:"

> "He was weary-worn with watching,
> His life crown of power hath pressed
> Oft on temples sadly aching—
> He was weary, let him rest.
>
> "Toll, bells at the capital!
> Bells of the land, toll!
> Sob out your grief with brazen lungs,
> Toll! Toll! Toll!"

Papers from Overlook House. (Philadelphia: J. B. Lippincott & Co. 1866.)—"The hall has rung with laughter," so the author says, "as some of these papers were read;" and "some have shed tears over the 'Ghost of Ford's Inn,' and said, 'It is too sad'"—which indeed it is, considered as poetry:

> "There was a small church in the little town
> Of Bristol, some miles distant, over which
> A loving pastor ruled with watchful care.
> He came from England."

The prose is worse than the verse, and the whole book is really supernaturally flat. It might have been written for the "Banner of Light" by the spirit of Martin Farquhar Tupper, or communicated by the same personage in a spiritualist circle at which Titcomb was medium. We know of no other branch of literature to which it can be compared for the most perfectly pithless twaddle, and why any one should write it is the most difficult problem in the world except why any one should publish it.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE POLITICAL FUTURE.

It is easy for persons of a sanguine temperament to prophesy results and to foresee certain victory. But it is not so easy for those who, of a more calm and less buoyant disposition, are accustomed to survey the ground with caution, to calculate chances, and to indulge in no vague and unwarranted hopes. Mr. Seward drew upon the future at ninety days in 1861, but Mr. Lincoln, when within thirty days of final and overwhelming victory, carefully abstained from all predictions.

Just so it is in politics. The man who knows least about statistics, and is least acquainted with the popular drift, is, generally, the most confident of success. The man who is most familiar with these things knows well that there are so many conflicting influences at work as often to overthrow the most sagacious calculations. For example, the general election of 1864 developed such singular results in various places as to baffle entirely all attempts to explain them, at any rate upon any facts which have yet become generally known. Why should Connecticut and New Hampshire have given such meagre majorities for Lincoln—smaller by far than they gave in the spring of the same year, or in 1860 and 1856—while Maine gave a full majority, and Massachusetts and Vermont larger majorities than they ever gave to any man in their history? Why did Western New York and Pennsylvania fall so much below what was expected of them? Why did Indiana, Illinois, and Iowa show such magnificent gains upon their home vote, when the adjoining States of Wisconsin and Michigan did so poorly?

Even if these questions could be answered, how can we account for the diminished vote in 1864, as compared with 1860, in the warmly-contested States of New Hampshire and Wisconsin, while in the States of Vermont and Iowa, immediately adjoining, the vote was the heaviest ever polled, although the minority could have had no hope of success?

How many elections, moreover, are decided by changes unlooked for, and almost unaccountable. Connecticut has twice, in 1860 and in 1866, been carried by gains in counties at the eastern part of the State, such as no one anticipated, and which were not heard of until after the State was supposed by every one to have gone the other way. The same thing has just happened in Colorado, to the great mortification of Senator Doolittle, whose congratulatory announcement at Philadelphia has been made ridiculous by later advices.

Illustrations might be multiplied to show the difficulty of the subject; but we have given enough. There is, however, a broader field for prophetic vision than is afforded by the political struggles of a year or two. It is not nearly so difficult to foretell the issue of a great conflict of principles extending over a course of years, as it is to foresee the popular verdict at an election immediately approaching. And it may be well for those whose faith is shaken by passing events to study the prospects of the future from the indications of the past. The result of one or two elections is of small importance compared with the long range of the future. Indeed, a few temporary reverses are often the very roads which lead to final victory. It was the overwhelming triumph of slavery in 1852 which directly brought about those events which made it possible to elect Abraham Lincoln in 1860. It was Bull Run which secured the abolition of slavery. It was the Democratic victories of 1862 which, by leading the party to show its real *animus*, reaching its height in the riots of 1863, secured the Union triumph of 1864. But for the odious manifestations of treachery and disloyalty in the Illinois and Indiana legislatures of 1863, it may well be doubted whether those States could have been carried for Mr. Lincoln after the military disasters of 1864.

If, therefore, contrary to our full expectation, the policy of Mr. Johnson should be ratified by the people this fall, we should nevertheless lose no confidence in the eventual victory of justice and equal rights. Either by the wisdom or by the madness of the South, our government will be made truly republican. If Mr. Johnson is defeated this year, the peaceable solution of the problem will be easier; but, if he is successful, the party to which he has now committed himself will go to such lengths as will ensure its final destruction. It is in the very nature of evil to work out its own ruin. And under such a form of government as ours, as the growth of evil is more rapid than in other countries, so its cure is more prompt. Government is in its nature conservative, whether for good or evil; and in despotic administrations this tendency to conservatism is unchecked. In republican countries the energy and will of the people impress themselves more directly upon the ruling powers; and whatever may be the popular tendency at an election, it is fully borne out by the elect. Thus it is that in an aristocratic country like Great Britain the government is always somewhat behind the sentiments of its supporters, while in America it is apt to be controlled by the most advanced section of its party. A Liberal government in England has always been more conservative than the mass of the Liberals, and has never fully carried out the idea and expectation of the party; while Conservative governments have been forced to adopt Liberal measures in order to hold power for a month. It was found more practicable to pass a reform bill under a Derby administration than under the *régime* of Palmerston and Russell; and the admission of Jews into Parliament was actually effected under Tory auspices, after Liberals had struggled vainly to accomplish it. But in this country almost every administration has carried out the most radical ideas of its supporters. Gen. Jackson did not expect to destroy the United States Bank when he came into power, and thousands voted for him, even in 1832, who were not opposed to the idea of a national bank. The Sub-Treasury scheme of Mr. Van Buren was devised by the most radical of his party, who were at first only a small minority of it. The free trade tariff of 1846, the renewal of the Sub-Treasury, and the annexation of Texas, were all measures supported by the most ultra party men among Mr. Polk's supporters. Gen. Taylor's administration was paralyzed by a hostile Congress, and Mr. Fillmore's was nullified by his betrayal of Northern principles before his accession to the Presidency, so that no argument can be drawn from them. But the administration of Mr. Pierce, having an overwhelming majority in Congress during its first two years, was entirely under the influence of the radical pro-slavery section of its party, and did *more*, not less, than was expected of it by the South when Mr. Pierce was elected. The same is true of Mr. Buchanan's administration, though its power for evil was greatly restricted by its defeat in the first session of Congress. Mr. Lincoln afforded a still more remarkable example of the progressiveness of American governments. Elected without a shadow of expectation that he would do more than prevent the *extension* of slavery, and fully intending to confine himself to the most moderate action, he nevertheless was led by the advanced sentiment of his party to the total abolition of slavery, first, in the District of Columbia, and finally throughout the whole land.

We have dwelt upon this characteristic of American government, because both in its good and evil aspects it gives an assurance of healthy progress. Evil that is sufficiently restrained to avoid violent excess, is like those fatal diseases which give no pain until they are incurable. Judicious and moderate wickedness is far more demoralizing than open outrage. If we must sometimes have wicked rulers, we do not regret that they carry their malice to great lengths. But for their excesses it would be difficult, if not impossible, to arouse the people to a sense of their danger. Mr. Johnson would have been just what he is, and his policy just as injurious to the nation, even if there had been no massacre under his auspices. Slavery was just as monstrous and corrupting when it was peaceful, and allowed a few men to talk about its evils without resistance, as it was when it rose in rebellion and sought to destroy the Government. But it would have lasted two hundred years longer, if it had not shown its ferocity and demoniac spirit on so broad a scale. It was in vain, however, that its servile apologists and allies sought to impress this fact upon the Southern mind. And now that they have succeeded in mesmerizing the tiger for a few hours' meek performance at Philadelphia, their exultation is boundless. But it will be short-lived. The tigerish spirit will again blaze from the eyes, and inspire the acts, of the devotees of slavery; and the first important success which they achieve will carry in it the seeds of their destruction. On the other hand, we care little for the platform or professions of the party of liberty. If only it puts forward

men of integrity, whose hearts are true to the cause, we rest assured that they will do more than their professions require, and not less. Partly under the inspiration of their friends, and partly from the folly of their enemies, they will be led, step by step, to do more for the good cause than they ever promised or supposed that they would.

Moreover, on a clear and unembarrassed issue, we have great faith in a people educated like ours. It is no slight task to convince a whole nation of great moral principles, but it is a labor that promises, in the long run, a certain reward. An intelligent Christian people have never yet failed to respond to appeals based upon honor and justice, and we believe that they never will. Even nations whose education has been grossly defective, or who have grown up in total ignorance, have shown their capacity to appreciate noble and unselfish sentiments. The resurrection of half-educated Italy, the noble patience of Lancashire workmen, the steadfast loyalty of East Tennessee, have shown that even among men destitute of the advantages which are secured to every child at the North, a lofty principle may be fully comprehended and heroically maintained. How much more should we expect from the children of free schools and Protestant churches, than from a people who have for centuries been kept in the religious and intellectual darkness of Southern and even Central Italy?

We look, therefore, with absolute confidence to the political future of this country. We grieve over temporary disasters, for the sake of those who now suffer; not because we fear that they will have any permanent influence for evil. We believe in a Divine Power which not only counteracts the wickedness of evil men, but which makes it the very means of effecting good. We have faith in the indefinite progress of the human race, wherever the benign influence of Christianity is once accepted; and we maintain our confidence in the future of man, unshaken by occasional reactions or apparent defeats.

THE PHILADELPHIA ADDRESS.

It is safe to say that had either the suppression of the rebellion or the organization of the Union depended on the general agreement of the people of the North on some theory of the relations of the States in rebellion to the General Government, the rebellion would never have been suppressed and the Union would never have been restored. Our salvation has lain in the fact that, though nearly every county in the loyal States had a theory of its own as to what the Government could or could not do, all acted, except the extreme Copperheads, on the theory that it could do anything which any belligerent might do; that the Confederacy was enemy's soil, and its inhabitants were alien enemies, and all territory wrung from it conquered territory. So that the disquisitions with which the free States rang during the war on the rights of States, the powers of the General Government, the lawfulness of emancipation, happily for us and for mankind, served no better and no worse purpose than to sharpen the wits of those who took part in them. The armies marched and fought and conquered, just as if Davis was the Emperor of Morocco and derived his title from the Koran.

It is, in fact, only lately that even Mr. Johnson acknowledged that he cared a straw about theories. His first messages to the revolted States, after their overthrow, were those of an intensely practical man who means to do whatever the case calls for. There can hardly be a doubt that had he, after Lee's surrender, propounded the doctrines touching the rights of the vanquished to readmission which have emanated from him within the last six months, they would not have agreed to abolish slavery. Why should they? What could *he*, on his theory of their rights and his own duties, have done, if they had refused to acknowledge the validity of the emancipation proclamation? He could not have held them by military force, for that would have been treating them as a conquered people, which he says they are not and cannot be. He could not claim for the proclamation the powers of an act of legislation. It owes all its force to the fact that it is the order of a victorious general; and nothing is more certain than that, had Mr. Johnson, in June, 1865, assumed the position he now holds, no State would have consented to liberate the negroes, and he would have been bound to support their readmission to Congress in spite of that refusal. At that time, however, he still retained some sparks of the common sense or anti-aristocratic prejudices which led him to refuse to join in the rebellion, and accordingly gave the vanquished to understand that, no matter what lawyers or politicians might say, the plain truth of the matter was that they were beaten in war, and that they would have to submit to whatever conditions the victor chose to impose, and, first of all, to the surrender of their slave property. All the claptrap which he now deals out to deputations as sound constitutional law has been compounded by him since then.

The address of the Philadelphia Convention is, in reality, a long and elaborate statement of the things which Mr. Johnson, in order to be consistent, should have thought of when he succeeded Mr. Lincoln, but which he luckily did not think of, as at that time the country would have displayed very little of its present patience with his performances. It enumerates the various arguments used, or supposed to be used, by the majority in Congress against the immediate admission of the South to its old place, and then proceeds to refute them with arguments which, if good for anything, prove the emancipation of the negroes to have been accomplished by a discreditable trick. "It is alleged," says the author of the address—

> "*First*, That these States [the States lately in insurrection], by the act of rebellion, and by voluntarily withdrawing themselves their members from Congress, forfeited their right of representation, and that they can only receive it again at the hands of the supreme legislative authority of the Government on its own terms and at its own discretion."

Now, as a matter of fact, this was the ground taken by Mr. Johnson before Congress met or had opened its lips, so that it is not really on this point that the issue between him and it is raised. The real question between the President and the majority, disentangled from his own rant and the rant of some of his prominent supporters, is not whether conditions of readmission may be imposed on the South, but whose right and duty it is to impose them. This question whether any conditions may be imposed is a question which he, by his own acts, is now estopped from raising. The statement of the Radical position on this point, as made by Mr. Raymond, may be one which some Radicals will accept as correct; but it is not by any means the strongest ground they might take, nor yet the ground which the more acute and reflecting members of the party do take.

It is quite true, as the Philadelphia Conventionists assert, that representation in Congress never having been held by the South as a privilege or favor, it cannot be withdrawn as a punishment. It may be admitted further, that the States could never "forfeit" their representation—they could not "forfeit" anything whatever; and the reason is that they are what they are by the possession of certain sovereign powers, or supreme powers, if anybody likes the word better—as Mr. Marsh probably would. They never have been sovereign—that is, have never possessed the sum total of sovereignty. But the powers held by the States in severalty ("the reserved powers," as they are called) and those held by the States in unity—that is, the powers of the General Government—are co-ordinately equally supreme or independent powers. They hold them as absolute monarchs hold power the world over, not being responsible for the exercise of them to anybody. Now a sovereign cannot *forfeit*. If the cases like that of Charles I. be cited, we reply that royalty is one thing and sovereignty another. Regal power may be held under conditions, sovereign power cannot be. The States could not *forfeit* either their reserved powers or those held in common with other States. In maintaining that they could and have done so, the Radicals gave the Johnsonites an advantage which the latter have not been slow to use, and which—let us be frank in the matter—is telling with some force in the minds of great numbers against Congress. Sovereign powers, though they cannot be forfeited, may, however, be voluntarily relinquished, resigned, abdicated, or abandoned, and, when abandoned, they must immediately pass over to some one else. Sovereignty cannot lie in abeyance. Secession, in the sense of a withdrawal from an association, is a nullity. But the State, as a political body, may relinquish any sovereign powers belonging to it.

In the address it is further said that "representation is, under the Constitution, not only expressly recognized as a right, but it is imposed as a duty, and it is essential in both aspects to the existence of the Government and to the maintenance of its authority."

The Constitution does nothing of the kind. Representation in Con-

gress is only the instrument through which States exercise their share in the common sovereignty. This sovereignty was not given to the States by the Constitution, as the idea of "duty" implies. These very sovereign powers are the source of the Constitution; they uphold it now, as at the time of its adoption. It has imposed on nobody the duty of exercising national sovereign powers, for the simple reason that it is never necessary, and never has been necessary, to make the exercise of such powers obligatory. All the writers on public law may be searched in vain for any such doctrine as that the possessors of sovereign powers are under a moral or legal obligation to exercise them. The public law of the world is founded on the idea that sovereign powers will never go a-begging. The appetite for dominion is too widely diffused for the exercise of dominion ever to have risen into a duty. We see this illustrated in the case of the elective franchise. It has never occurred to anybody to make it obligatory on men to vote at elections, although each vote only exercises an infinitesimal influence on the government. But even here the parallel will not hold. Individuals hold these rights *under law*, and to every such right there is a corresponding obligation attached; but States do not hold their powers under law. A State may abandon or relinquish a portion or the whole of its sovereign powers while in the Union, just as it did to get into the Union. From the nation of which they form a part, its people cannot escape; but it may relinquish its right to share in the common government, and this we hold the Southern States to have done. If anybody set up the plea that their surrender of this right was not complete, as it was only effected by a minority, we refer him for an answer to the Southern people themselves. Who dares to doubt in any Southern assemblage out of Tennessee the completeness of the act by which the people of each State severed their connection with the Union?

The address is specious and clever, but it has the capital defect of being mainly devoted to proving what nobody denies, and of passing over in silence the only questions on which the public wants to be enlightened. If the revolt of those States has in no way affected the relations of the Southern States to the General Government, of course they are entitled to representation. But to assume this, as the author of the address does in every line, is to beg the question. The sapient argument that the Constitution makes no provision for governing them as dependent provinces is adduced by people who forget that the Constitution makes no provision for the conquest or purchase of foreign territory, and yet both have taken place under it. And there is in the argument the utterly baseless assumption that Congress seeks to govern them as conquered territories. It does nothing of the kind. It desires to admit them to the Union, as every State except the original thirteen have been admitted, on conditions framed by the legislature of the United States; and the conditions which we seek to impose on them are that they shall not profit politically by their crime, and that there shall be nothing in their laws and constitution which shall deny to any human being any right or immunity which his fellows enjoy. If that be tyranny, make the most of it.

THE LATEST VERSION OF THE NEW ORLEANS AFFAIR.

The official correspondence relating to the New Orleans riot has been published, and it reveals the unpleasant fact that the following most important passage was omitted in the version of General Sheridan's despatch, first published in the New York *Times*, and drawn, we presume, by that journal from official sources:

> "In the meantime, official duty called me to Texas, and the Mayor of the city, during my absence, suppressed the convention by the use of their police force, and in so doing attacked the members of the convention and a party of two hundred negroes, and with fire-arms, clubs, and knives, in a manner so unnecessary and atrocious as to compel me to say that it was murder."

The *Tribune* at once pronounced the despatch either "garbled or forged," an imputation which the *Times* resented with great warmth, but the result has shown that the *Tribune* was right. A controversy is still raging between the two journals, and carried on in the usual abusive style. The *Tribune* will have it that the *Times* was a party to the fraud, and the *Times* will have it that the editor of the *Tribune* is a habitual inventor of calumnies and distorter of news. The truth probably is that the despatch was "cleaned and dressed" in some official bureau—a decent respect for the "constituted authorities" prevents us from speaking out our mind more freely on this point—and was then furnished to the Washington correspondent of the *Times*, who forwarded it in good faith. The vigorous defence of its correctness and authenticity in which the *Times* subsequently indulged was, doubtless, perfectly honest, in the newspaper sense. Party tactics require a journal which serves its party according to rule to certify all party documents, and canonize all party leaders.

Somebody has unquestionably been guilty of a piece of great knavery in the matter; but since the fraud has been exposed, the question of where the guilt lies becomes of secondary importance. Nothing can be sounder in law or in sense than both General Baird's and General Sheridan's statement of their own duty, and that of the civil authorities, in dealing with the convention. Sheridan had clearly a very unfavorable opinion of the leaders of the movement, and of their aims; but both he and his subordinate proclaimed it in unmistakable terms to be their duty, and that of the city officials, to abstain from interference until an overt act of crime was committed. It seems passing strange that cavalry officers should, at such a crisis as this, remember what Mr. Johnson—that great "constitutional lawyer," as one of his admirers recently called him—and his advisers in Washington, as well as the civil functionaries in New Orleans, had forgotten, but what we hope the American people will never forget, that there is not and cannot be in the United States such a thing as an "illegal assembly" for the purpose of discussion. No spoken words will justify any authority, civil or military, in breaking up an orderly meeting; and Mr. Johnson has probably never in his life made a greater display of his unfitness for his present office than in his despatch denouncing the New Orleans convention.

The meeting of the convention—or, if it were not a legal convention, the meeting of the radicals—was announced for the 30th of July. If, as Mayor Monroe and his friends maintain, its object was to overturn the State government, as long as it sought to compass this end simply by passing resolutions and "ordinances," it was as innocent and as harmless as if it had met to dethrone the Queen of Great Britain. It appears, however, according to General Baird, that the city authorities had made up their minds on the 25th, *five days* before the convention met, that it would be unlawful, and that "they *knew*," according to the New York *Times*, that it would be made "an occasion for addressing inflammatory harangues to negro crowds, and for advising negroes to arm themselves," and therefore determined to break it up, and positively asked General Baird not to interfere, or whether he would interfere with their action. Better justification of General Sheridan's assertion that the attack on the convention was "premeditated" there could not be. They decided that Dostie would make an inflammatory speech, and would deserve to be shot and stabbed, nearly a week before he opened his mouth. We venture to say that there has never been a French prefect or an Austrian "Platz Commandant" who would dare to lay before the world such an account of his own proceedings in a riot as these New Orleans worthies have communicated to the Government of the United States, and without eliciting from it one word of reprobation.

We hold the whole affair to be most serious and important, not so much because some dozens of American citizens have been massacred on a platform at a public meeting at the instigation and with the assistance of the sworn guardians of the public peace—though this is an awful occurrence—but because it has revealed clearly what are the ideas of the President and of his followers as to the status and rights of those persons at the South who happen to differ from the majority touching either the condition of the blacks or the relations of the States to the Government. Mr. Johnson, we now know, does not think them entitled to any more freedom of speech or protection for life and property than the majority in each locality are willing to accord them. In the South, as we all know, the courts are nothing and the police are nothing; the local majority is absolute. And it is not an educated, enlightened, mild-mannered majority, accustomed to respect individual rights and the forms of law. It is a majority trained for a century in the use of violence for the suppression of a particular set of political opinions; for the prevention of all attempts to change, by speech or

writing, a particular kind of political institutions; and, in short, for the rooting out of all individual peculiarities either mental or social. It was the supremacy of this mob law which most distinguished the South from the North and from all other civilized communities before the war, and which made its society so un-American, and its political union with the North so precarious. The grand result which we all looked for from the war—the result without which the war, we have no hesitation in saying, may be pronounced almost fruitless—was the putting an end to this tyranny, the placing of individual rights under the protection of the law as administered by the courts, and the utter effacing of all distinction between a man's liberties as enjoyed at New York and as enjoyed at New Orleans. Mr. Johnson and his followers, it now appears, are willing that, as far as they are concerned, this distinction shall be kept up; that for one reason or another rights which are secured to every American citizen by the Constitution in Massachusetts need not be recognized in Louisiana. The New York *Times* says that although "the meeting of a score of Wendell Phillipses in New York would be a harmless affair," in New Orleans it would "be pregnant with mischief." We say, on the other hand, that we have no real Union, we have no real Government, we have no real Constitution, the rebellion has not been really suppressed, order has not been really restored at the South, as long as the meeting of ten-score of Wendell Phillipses in any part of the South can be attended with any outward consequences which would not attend it here. We hope the country will keep this point before it. We have fought through the war not simply to restore the appointment of Southern postmasters and tide-waiters to the President, but to make the great constitutional guarantees for the life, liberty, and happiness of every American citizen as strong and valid in the South as in the North; to provide even for the fanatical and foolish and ignorant and discontented that freedom of speech which it is, we say deliberately, our greatest boast and glory that they enjoy here. Mr. Johnson makes light of the disorders now witnessed at the South on the ground that they are temporary, the natural consequence of the recent termination of the war. They are not temporary; they are not of recent origin; they are not bequeathed to us by the war. They were witnessed long before the war broke out; every Southern boy was bred in them; every Southern man is used to them. Mayor Monroe and his "thugs" only put into practice lessons learnt by the whole of Southern society long before Mr. Johnson was born.

THE CORNER IN THE GOLD ROOM.

For the first time since the suspension of specie payments, gold was worth last week one per cent. for immediate delivery. The phenomenon is easily explained. All the floating gold in the city—amounting to some $12,000,000, only $7,000,000 of which is in the banks—has been bought up by a few wealthy speculators, and they, failing in their attempt to put up the price, have endeavored to indemnify themselves by refusing to lend gold. This presses with severity upon merchants who want gold to pay customs duties, and upon speculators for the fall, who have sold gold short, and are forced to borrow it at the exorbitant rates of the day. So far as this latter class of persons is concerned, the public are not interested in their losses. If a man chooses to sell that which he has not got, in the hope that he may be able at a subsequent period to buy it for delivery at a lower price, he takes the chances of the market, and cannot fairly complain if speculators on the opposite side combine to make him pay more instead of less than he got for the property he sold. These are the fortunes of trade, and no fair trader has a right to complain when they make against him. But the "corner" in gold is inflicting no little suffering upon merchants who require gold for legitimate business purposes, and who find that they cannot get it because Messrs. A, B & C have bought up all the floating gold in the city, and will not lend or sell it except at exorbitant rates.

The grievance is not new. It has recurred at intervals during the past three years. On a dozen occasions a few bold operators, commanding large amounts of capital, have been enabled to corner the gold market, to embarrass commercial operations, and occasionally to impair the credit of the Government. And it is in vain that a remedy has been sought. Mr. Thaddeus Stevens tried to cure the evil by making it penal to demand a premium on gold; but such puerilities only excited contempt. Other loyal men have thought to discredit the gold room and its operations altogether; but, though the room is supposed to be controlled and officered by men of doubtful politics, and Jeff Davis may, perhaps, be quite as popular in that institution as the late Abraham Lincoln, it is none the less clear that, so long as our currency remains at a discount, a gold exchange will be a necessity of the times, and the present one, with all its faults, is probably as good as any new one could be. It is unfortunate, perhaps, for the gold room that quasi-rebels and Copperheads have found admission within its walls. But the outbreak of the war drove nearly one-half of the smart merchants of the South to New York in search of employment for their brains, and that employment they found, for the most part, in the gold room. You shall find there ex-traders from Louisiana, planters from Georgia, merchants from Tennessee, clergymen from the Carolinas—a varied assortment, in short, of Southerners, all differing in their origin and aptitude, but generally agreeing in Southern proclivities. That this class of persons should be in the gold room is, perhaps, unfortunate; that, by combining, they should have the power of raising the price of gold, and so raising the cost of all imported articles, is also unfortunate; but to abuse the room in consequence is, to say the least, hardly logical.

It is the legitimate privilege of every man to buy gold, if he be so minded and can pay for it. The public have no right to say to him: Your purchase of gold is going to add 10 per cent. to the cost of my tea, coffee, spices, claret, and blankets. With that he has nothing to do. He has the same right to buy $100,000 gold as the public have to buy a pound of tea or a pair of blankets. And there is no law, custom, or comity which prevents him combining with twenty other speculators to buy up all the gold in market. If he does so buy, and so combine, we can only "grin and bear it." It is hard that a party of gamesters should by their speculations enhance the cost of every cup of tea drunk by the poor throughout the United States. But there is no remedy, save the inexorable operation of the laws of trade, which are sure to come into play sooner or later.

An effort, it is said, will be made at the next session of the Legislature to punish the gold room for its interference with values. It will probably take the shape of a tax upon gold-brokers' licenses and sales of gold. A tax of $1,000 a year on each license, and of one-tenth of one per cent. on each sale of gold would add a considerable amount to the State revenue, and might be constitutionally levied. But no such vindictive legislation would cure the evil.

The main reliance of merchants whose business is disturbed by the constantly recurring corners in gold must be upon the fundamental laws of trade. If gold be forced above its fair relative value by the speculations of the gold room, it is certain as any mathematical truth that it must react. If gold be made worth one per cent. a day by the cornering operations of bull speculators, specie will flow hither from all parts of the world for employment in so lucrative a business. Already the telegraph, which announced to Europe our embarrassed condition, has notified us that $500,000 are coming here in the *Alemannia* and $600,000 in the *Scotia*, besides $3,000,000 just received in the California steamer. At this rate the bulls in the gold room will have their hands full within the next fortnight. They may undertake to corner the New York market, but they can hardly expect to carry all the bullion of the civilized world.

Pressure has been brought to bear upon the Secretary of the Treasury with a view to induce him to sell more gold. A *pronunciamiento* in this sense, signed by leading bankers, was published in the papers a few days since. The Secretary has experience enough to distrust any collective petition of bankers or merchants. Such petitions are too often prompted by individual interest. If we are ever to get back to specie payments, the corner-stone upon which the new edifice will be built must be the specie reserve in the United States Treasury. Resumption will take place when that reserve becomes so large that the Secretary of the Treasury can afford to say to the holders of legal tenders: "Gentlemen, we are prepared to pay off your paper dollars in gold." On that instant the banks will either resume or fail, and the era of paper money in this country will come to an end. But if the Secretary is to go on selling his gold as fast as he gets it, how will he

ever be able to redeem, or proclaim his readiness to redeem, his legal tenders?

The gold market is in a very dangerous position. There is no reason why gold should be higher now than in March last, when it sold at 124. The present premium is artificially maintained, and, as the laws of trade vindicate themselves, a fall of ten to twenty per cent. would not be an extraordinary event.

THE PRESENT CONDITION OF SMALL-ARMS AMONG THE LEADING POWERS OF BOTH HEMISPHERES.

It is one of the curious facts in the history of arms that improvements upon established forms and systems of construction have always been very cautiously received, and a long time has invariably elapsed before they have superseded those which have previously been in use. The enormous expense involved in changing the arms of a nation may account for the reluctance with which the work is undertaken; but the vital importance of the questions at issue constitute the chief motive for delay, and at the same time the necessity for prompt action when the superiority of the improvement is clearly proved.

More than a century elapsed after the invention of gunpowder before the bow was superseded by the musket in England. It was nearly as long after the invention of the flint-lock before it took the place of the match-lock, and, to come down to a period within our own recollection, the percussion-lock was long regarded as an invention of doubtful value, and, even after it was universally used by sportsmen, the idea of its ever being adopted in military service was regarded as preposterous.

The civilized world is now in the midst of a revolution of this kind which many persons suppose to be the result of recent and previously unthought-of discoveries. In truth, however, the history of the introduction of breech-loading fire-arms serves but to confirm the fact we have stated. More than one hundred years ago Benjamin Robins (a man whose researches into the principles of gunnery have never been surpassed in sagacious elucidation), after describing a clumsy contrivance for loading a rifle at the breech, goes on to say, "Somewhat of this kind, though not in the manner now practised, would be, of all others, the most perfect method of constructing this sort of barrels."

An awkward and unwieldy breech-loader, known as Hall's, was tried to some extent in our service some thirty years ago, and since that time many different patterns have been tested to a greater or less extent. All of these, however, till within a few years, have been adapted to the use of a paper cartridge, except Maynard's, the ammunition for which was contained in a brass cartridge having a vent in the base, through which the fire from the cap communicated with the powder. This form of ammunition, which was patented in 1856, and is in extensive use by sportsmen, is exceedingly simple and ingenious in its construction and mode of loading, the cartridges being used over and over for an indefinite length of time, and loaded by the sportsman for his own use by a contrivance which ensures a perfectly true entry and delivery of the bullet, and a degree of accuracy which no other breech-loader has so invariably attained.

The demand created by our recent war for arms of the greatest possible destructive power led to the speedy production of a great variety of breech-loaders, and the copper cartridge having the fulminate in its base, which was introduced at an early stage of the war, was found to possess such obvious advantages in its being water-proof, and in doing away with the necessity of capping, that all recent inventions of breech-loaders have been adapted to its use. The most successful arm of this description, and the one which has been most extensively used in our service, is the Spencer repeating-rifle. This weapon has a magazine in the stock capable of containing seven cartridges, which may be discharged in very rapid succession, and by a recent improvement, patented by Edward Stabler, of Maryland, the gun may be used as a single loader, and the cartridges in the magazine reserved for the critical moment when it may be most desirable to pour in a continuous fire.

The Henry repeating-rifle is another and entirely different form of the same kind of gun, the magazine being under the barrel, and capable of containing fifteen cartridges. This gun has some decided points of superiority over the Spencer, and some objectionable features, which existed in the form in which it was at first constructed, have been obviated. In its present form it is, probably, unsurpassed in simplicity and efficiency by any repeating-gun yet produced. The Henry and Spencer repeaters, and several patterns of single-loading breech-loaders, have been used to a greater or less extent during our recent war, and the testimony of officers and men has invariably been, that no opponents armed with muzzle-loaders could stand before them. The incalculable value of breech-loaders on the field of battle, and the absurdity of postponing their introduction, has been urged by able writers with all the force of argument based upon self-evident theory and backed by repeated experience. The same facts and the same experience have been brought forward and urged with equal energy, by equally able advocates in England, and yet it was not till the Prussian army, equipped throughout with breech-loaders, had swept the troops of Austria before it, as if they were a band of savages armed with bows and lances, that the world seemed to awake to the fact that the weapons we had heretofore relied upon were henceforth to be of no avail.

Prussia had shown her sagacity in being the first to adopt breech-loaders throughout all branches of her service, and she has reaped the benefit of her decision, and stands to-day among the first-class powers of Europe. Fifty years hence the needle-gun, which has secured for her this position, will be found only in museums, and the wonder will be that such results could ever have been achieved with so clumsy a weapon. We have a dozen breech-loaders as far superior to the needle-gun as the needle-gun is to the Austrian musket. It was brought here for trial years ago and was not deemed worthy even of serious criticism. It is said to be a cheap gun, and this is certainly a merit; but our people will not be likely to look with respect or apprehension upon a breech-loader which leaks so badly that it has to be cleaned after fifty or sixty rounds—which boasts of 800 yards as its greatest range—must be set at full cock in order to load it, and kept so till the time of firing, uses paper cartridges, the fragments of which are blown back into a chamber provided for their reception, and is heavier than the Springfield musket. Such a gun would be dear as a gift. Yet nothing superior to this has yet been seen here, the production of Continental Europe!

In England there seems to be some just appreciation beginning to be felt of the metallic cartridge which is used in the several modifications of the solid-hinged breech-block system of Snider, Berdan, and a host of others, all of which are covered in their vital parts by patents obtained in the United States, England, and elsewhere in 1860, by Edward Maynard. On the Continent, however, the military authorities seem to be groping in that ignorance of mechanical science which was so long the impediment here to any advance beyond the old paper-cartridge arms. Even within a few weeks we received information of the revival, as a new and great invention, of the first revolver shown at Washington, that of Cochran, which, after creating a great newspaper sensation, died ignominiously some thirty years ago.

What France is doing is of course unknown, for Napoleon keeps his own secrets in such matters; but the fact that he has recently purchased a large quantity of gun machinery in this country indicates (if any one needed such evidence) that he is not asleep. Russia, and even Turkey, have sent to us within a year for samples of our breech-loaders. The officers of the Russian frigates which visited us two years since searched our gunshops for new inventions in this line, and finding in one of them a sample of the Peabody rifle (great improvements in which have since been effected) pronounced it the best specimen of a military arm they had seen, and invited the inventor on board to exhibit it to the admiral.

The Snider alteration of the Enfield rifle seems to be the best form yet reached in England, as it is pronounced to be not only the best mode of altering the old style of guns, but superior to any new pattern of breech-loaders. It consists simply of a solid breech-block turning sideways in front of the hammer, and then sliding back on its hinge to withdraw the empty cartridge. The ammunition is contained in a metallic cartridge, resembling Maynard's, except that the cap is placed upon the cartridge itself, and fired by a sliding pin which is struck by the hammer. One hundred thousand Enfield rifles are now in process of alteration on this principle in the English armories.

In fact, however, the whole civilized world is at this moment in a state of doubt and uncertainty, convinced only of the absolute necessity of a speedy change, and not a little perplexed to decide what it shall be. A board of officers have for a year past been examining arms for the purpose of selecting the best for our own service, but as yet no decision has been arrived at conclusively. The multitude of apparently trifling details which have to be considered individually and relatively render the task exceedingly difficult, and the vast importance of the question forbids a hasty solution. New inventions also are continually appearing, and no one can say that the best weapon of to-day may not be surpassed by a better to-morrow.

From information which we have recently obtained we have reason to believe that a rifle will soon be produced in this country which will be even cheaper than the needle-gun is claimed to be, yet as a military arm will be in advance, especially in its ammunition, of anything yet known. The am-

munition we have examined and can pronounce upon with confidence. Of the gun we have only seen drawings, but these give such assurance of simplicity, strength, and economy as to warrant a prediction of its success. At all events, a comparison of American inventions in this line with the best that have appeared abroad, is sufficient to relieve us of any apprehension of being left in the background, and if, as some have confidently predicted, the tendency of improvements in the destructive power of arms is to put a stop to all wars by making manifest the absurdity of resorting to such arbitrament, it would seem as if that much-to-be-desired day could not be far distant.

EX-POST-FACTO PROPHECIES.

SEVERAL years ago we heard a sermon in the South on the exclusive topic that railways were plainly prophesied in the Old Testament; and now we have in the papers of the day an article, by another clergyman, in which the author thinks he proves that the Atlantic Cable, or all submarine telegraphs, are prophesied in the same portion of the Bible.

The supposed prophecies of modern events form a very extensive chapter of the long history of misapplications of the Bible, which have caused to our species immeasurable contest and woe; and every man earnestly devoted to religion must deplore this trifling with the sacred Book, however sincerely these discoverers of prophecies after the fact may be wedded to their extravagances. They seem to consider a prophet of the Old Testament nothing more than what the ancients believed their presaging oracles to be—mere foretellers of events. He who believes in a God, omniscient as well as almighty, need not be told that God could have given foreknowledge of historic or other events, if His wisdom had ordained it thus; but the whole course of history also tells us that Providence has abstained from giving to man information of threatening errors outside of the sphere of religion. All the great errors which have swept like plagues over the earth—the witch trials, the fearful errors in medicine, in navigation, in economy, in criminal trials, in government, in philosophy, indeed, in every sphere of action—might have been prevented, or certainly mitigated, had Providence seen fit to give man a distinct warning or distinct prohibition. And here we find men who, in the full honesty of their heart, think they can show us that thousands of years ago an event now taking place, and which appears to them exceedingly wonderful, simply because novel, was prophesied; but prophesied how?—in language which no one understood, or could understand, to mean the particular event, and which could not, therefore, have any influence, either moral or mental, upon mankind. It is a prophecy which is discovered after the event predicted has taken place. Harsh as it may sound, it is nevertheless true that these puerilities reduce the Maker, and Knower, and Guider of all things to a being who says, when something is done which appears to puny man very great, Did I not tell you so?

The object of these persons surely cannot be to prove the inspired character of the Bible from these supposed foretellings. There are more remarkable cases on record than the prayer of Habakkuk applied to the under-sea telegraph, which nevertheless have induced no one, as far as we know, to consider the author of the prophecy to have been inspired.

What prediction was there ever heralded a great event more clearly than the passages in the "Medea" of Seneca foretelling the discovery of a great western land? Columbus entered it in his manuscript, "Libro de las Profecias," in which he collected all passages which seemed to him to indicate that there was in the west an Atlantis, and that, by sailing westward, he might reach the eastern end of Asia. This remarkable book of prophecies is given in "Navarrete's Collection," Vol. II., No. 114, p. 272. Columbus, though a devout Roman Catholic, made this collection in spite of the fact that some of the fathers of the Church had declared it impious to believe in an Atlantis or western continent, because, said they, the Bible does not mention anything regarding it—a very striking illustration of that kind of Biblical argument which we might call *argumentum a non monito*—in other words, founded on the non-mention in the Bible; as indeed one of the arguments in favor of slavery by an American bishop was that the Bible denounces slavery nowhere as a sin, although it existed everywhere when Christianity was founded. So did torture exist everywhere, so did gladiatorial brutalities, so did suicide exist in the Roman empire everywhere; but there is no passage in the whole Bible, from beginning to end, directly forbidding any one of them.

Seneca makes the Chorus in Act II. of his "Medea" say the following words, which, we frankly confess, amaze us anew every time we bring them back to our mind:

> "Venient annis saecula seris
> Quibus Oceanus vincula rerum
> Laxet, et ingens pateat tellus,
> Tethysque novos detegat orbes,
> Nec sit terris ultima Thule."

This may be rendered somewhat in this way:

> "In the late years shall come at length an age
> In which Oceanus shall close us in
> No more, but a vast land shall be revealed
> And Tethys shall a continent unveil,
> Nor Thule longer be our utmost bound."

How did Seneca come to write these lines? There may be hundreds of causes, but all will agree that they do not prove any inspiration; for if, indeed, Seneca was inspired in writing this passage of his "Medea," then it would prove that books were inspired which nevertheless are of no ethical or religious value to us.

The simple truth is, that if you choose you may interpret anything whatever from an ancient and mysterious book. There would probably be little difficulty to prove the foretelling of the rebels being beaten, and rising again nigh a year after, from the "Veda" or any other Sanscrit lore.

Manly truthfulness is the first ethical requisite of all interpretation. Neither ingenuity nor worship of some favorite theory can stand in lieu of rectitude of mind, of devout reverence, of truth, or of common sense.

PARIS GOSSIP.

PARIS, August 10, 1866.

THE rain and wind of this disagreeable month are cheating us both of our fruit and our summer. The unhappy mortals condemned to remain during the season of *villeggiatura* within the noisy precincts of the "metropolis of Europe" have found what the Parisians call their "*pique-niques*" sadly interfered with by the unpropitious state of the atmosphere, while the visitors to the fashionable spas and the favorite points of the coast are loud in their lamentations over the loss of their accustomed pleasures. The rain came down so persistently at Vichy from the time the Emperor arrived there that his Majesty, tired out by the hopeless soaking, suddenly gave the order to depart; and, leaving the imperial villa by an early train, had quitted the town and returned to St. Cloud before any one out of the villa knew that he was going. Great was the consternation of that spoiled minion of imperial favor. The *maire* had been planning no end of splendors for the coming fête-day of the Napoleons; the *curé* had been negotiating with his episcopal superior for a grand *Te Deum* on that glorious 15th. The *impresario* who presides over things theatrical and operatic had engaged several of the first *artistes* of Paris, in view of the imperial presence; various balls were being got up at the Salle du Prince Imperial; Alberti, the great conjuror, was getting ready all his most notable wonders for the especial delectation of his little highness, who, fully recovered from the effects of his fall, was looking forward to this display with a full share of boyish eagerness, but who has been whisked away with his "august" papa; M. de Caston, whose feats of calculation and divination so far surpass all that the most skilful conjurors have hitherto attempted, was to have done his utmost in the Emperor's presence on the evening of the day on which he departed; and M. Lemercier de Neuville was to have given a grand show-off of his wonderful marionettes at the Villa Napoléon on the following day. Everybody is "desolated" at this downfall of the programme of amusements, based on the presence of the Emperor and his household, even to the wives and daughters of prefects, senators, etc., who had brought with them a stock of their best smiles and toilettes, whose brilliance they are now forced to expend on less illustrious optics.

Every little detail in the life and doings of the Emperor being gravely discussed by the public, a controversy has been going on between two of the most popular journals of this city, as to whether, when the Emperor takes his daily bath at Vichy, anybody is present in the imperial cabinet save the imperial personage himself and his valet? One of the journals in question affirmed that, on these occasions, a physician was always present, the other declared the presence of the doctor to be a creation of the imagination of its respectable *confrère*. Happily for the peace of mind of those who seek for the "truth of facts" in its minuter developments, the declaration of the physician whose co-operation in the imperial rejuvenation was thus alternately asserted and denied, has authoritatively settled the question in the affirmative, and the world is now informed that whenever the Emperor takes his bath, Monsieur le Docteur Alquié, inspector of the waters of Vichy, and physician to his Majesty when the latter is at Vichy, remains in the imperial bathroom from the time his imperial patient enters his bath until he quits it.

The numerous educational establishments of Paris have been busy with the annual competitions which bring so many medals, "purses," and other rewards to the lucky "firsts." The colleges, lyceums, etc., in the dependence of the university have seen the appropriate distinctions bestowed on their

various ranks of laureates. The schools of music, eloquence, declamation, painting, etc., have rejoiced with their most promising "subjects" in the various gains of the latter. The "first prize" at the Beaux Arts will go to Rome and live there for five years in clover, at the cost of the state, in the beautiful Villa Medici, bought by the French Government, with its noble halls, its delicious gardens, and its lovely views, expressly as the home of this class of laureates. There they will continue their studies with the aid of all the artistic stimulus that can be furnished by the Immortal City, whose people are just now in a frame of mind as jubilant as that of their rulers is the reverse. The prince of modern French composers, M. Auber, now near the eightieth year of his green old age, flattered by younger artists, and petted at court, where he is both Chapel-master and intendant of music in general, is at the head of the Conservatory, and is said to be radiant with the satisfaction caused him by the flourishing state of the musical department of that unrivalled school; whereas the fine gentlemen, all tragic authors of some repute, are currently reported to have been wearing crape on their hats for the last week, there not having been a single prize adjudged to any aspirant in the branch of dramatic composition over which they preside. Since the schools have got through with their examinations, the barristers have been hard at work canvassing for their favorite candidates at the annual elections of members of their council in place of those who are about to retire, and also for the annual election of the president of their order, who is called the *bâtonnier*, an honor eagerly coveted by all its members, and generally, but not always, bestowed according to seniority.

The principals in the war, of which we are still dubious as to whether we should qualify it as "late" or "future," are said to have been somewhat embarrassed, as well as aided, in their diplomatic chatterings at the court of the Sphynx, by the terms of affectionate intimacy on which their representatives have come to find themselves with the exalted personages to whom they are accredited. The Prussian envoy is greatly liked at the French court; the Austrian ambassador and his brilliant wife are prime favorites both with the Emperor and the Empress, Princess Metternich being, in fact, one of the most admired and fêted of the great ladies of the day, and doing more with her wit, liveliness, and manifold accomplishments to keep the court atmosphere from stagnating, than all the other members of that charmed circle put together. The Chevalier Nigra, handsome, accomplished, supple, clever, and charming, writing the most elegant Italian verses in honor of the Empress, or *apropos* of any incident in regard to which the couplets of a polished and courtly muse can be supposed to be acceptable, possessing, among his other agreeable social talents, a skill in the higher branches of cookery almost equal to those of "The Great Alexander," especially excelling in the preparation of the fried delicacies so much in vogue in Italy, and occasionally treating his imperial hosts to the most exquisite things in this line, cooked in their august presence, with the aid of an Italian *brasero* and a silver frying-pan, is fully as great a favorite as the Metternichs. This amicability of *rapport* between potentate and diplomats is most useful and agreeable in ordinary times; but its possible inconvenience, when a stand-up fight is to be fought with the aid of diplomatic fisticuffs, is apparent. It is rumored that the three sovereigns whose conflicting claims have been giving their imperial go-between such a world of trouble, have often been compelled to exercise rather a strong pressure on their respective representatives, whose reluctance to deliver themselves of unpalatable communications led at times to a fear lest they might even compromise their principals through their unwillingness to speak out plainly when charged to make some unwelcome declaration. The success which has crowned the Emperor's efforts to put an end to this horrible war would seem, however, to show that the personal likings in question have not, on the whole, been unfavorable; though, fair as appears to be the promise of the diplomatic heaven, the public here is not altogether reassured in regard to the speedy termination of hostilities.

Anecdotes of the actors in the stirring events of the campaign of this summer are not wanting; kings, emperors, generals, and statesmen passing rapidly through the eye of the magic-lantern of Paris gossip. King William, though he has not done any actual fighting, has exposed himself both on the field and in taking reconnoissances, with an utter indifference to danger for which few would have given him credit beforehand; while Victor Emanuel has performed deeds of daring in the thick of the combats in which he has taken part, which will entitle him to the appellation of "lion-hearted" so generally given to him by his people. Of the statesmen involved in the quarrel, Bismark is naturally the most conspicuous; of an iron resolution, and as autocratic as though all other men were shadows, yet homely, jolly, epicurean, in private life, of great simplicity of manner, and cracking his joke with high and low; an utter contrast to those two French fossils, Thiers and Guizot, who agree on nothing but in hating the Emperor, and who being both at their country seats, and near to one another, have been interchanging dinners at which they might well, like the soothsayers of old Rome, have laughed together at their own pretensions, were it not that they are both, like most Frenchmen who consider themselves "superior," far too deeply impressed with the sense of their own greatness to indulge in anything so undignified as a smile.

THE COUNTRY OF THE HOOK.

HOCHHEIM, June 12.

IN walking from Frankfort to Mayence, on the right bank of the Main, about half an hour's walk from the latter, one passes this little village, made famous by its wines. I left Frankfort yesterday at noon, and walked down the wide and pleasant valley of the Main, stopping at a little village over night, and reached here at noon. The Main valley is far wider than I thought, from ten to fourteen miles, beautifully variegated with sandy plains and wide low bottoms, all gradually sloping upward to the distant hills, that look to-day, in the smoke, like a chiselled basement of the heavens, only of a little darker blue. It is a fertile valley, with fields of generous rye and potatoes, and on every sunny side of a hillock is a vineyard giving promise of plenty of wine.

The factory has been established here several years, and has meantime made a reputation beyond its merits—great as they are—and in part by dishonorable practices. For many years it was carried on by the firm of Burgeff & Co., who did not hesitate to sell their wines under the best known French brands, as the Clicquot, etc., and there was then no redress in the hands of the Frenchmen who were injured. On the 1st of June, 1865, however, there was concluded and put into operation between France and Germany a sort of reciprocity treaty (*Handels Antrag*), by which French wines were allowed to be imported into Germany at a lower duty than formerly, while, on the other hand, the Germans were forbidden to use French brands. Not long after this there was a festival of some sort at Frankfort, to which the Hochheimer manufacturers sent as a present twenty dozen of their best, labelled Mumm, one of the best champagnes of Rheims. One of the guests, a Mumm by name and a relative of the Rheims factors, upon tasting the wine discovered that it was not French, made affidavit to that effect, and caused Messrs. Burgeff & Co. to be heavily fined. Since then there has been no German wine sent out with French or other brands.

It was not necessary. The German wines are good; they are admirable; for their own uses they are better than the French; and such false use of brands as above mentioned has only clouded their reputation and postponed their future.

There are made here three different brands—the genuine Hochheimer, the sparkling Hock, and the sparkling Moselle. Of these the Hochheimer is by far the best, and I need scarcely say that very little, if any, of it is ever seen in America. It is not properly a champagne or *Schaumwein*, that "moveth itself in the cup," but it is still, soft, smooth, and of a most charming *bouquet*. I can conceive nothing finer among wines. The most admirable champagnes, tasted after Hochheimer, seem superficial, evanescent, and poor. It has a deep and quiet richness, a mellow and soothing flow, and an absence of vapidness that are inimitable.

The proprietors were chary of their answers in everything that looked too closely into the operations of the factory, but I made myself sufficiently certain, from various indirect questions, that no Hochheimer goes to America; very little, if any at all, goes to England. The Germans themselves have a quiet way of enjoying good wines, which they well know how to select, and they take good care of most of the Hochheimer. It is only the sparkling Hock and the Moselle that find their way across the Atlantic, in any quantities at least. The average cost per flask, of a quart capacity, of the wine sent from this factory to America is one florin, or forty cents! So one of the proprietors told me, to my great astonishment. That is at the rate of $1.60 per gallon, while the Hochheimer often sells for $7 and $8 per gallon, and it was only a few days ago that 144 gallons of Steinberger (a still wine) sold at the rate of $9.75 per gallon on the spot where it is made. From these figures it may be judged what sorts of wine are kept at home by the Germans and what sorts are sent over to us Americans.

The process of wine-making is more simple than I had supposed, but requires considerable time. The factory was in full operation when I was there, employing between eighty and ninety laborers.

When the grapes are picked in the fall they must be pressed at once, else there is a slight fermentation, and they are useless for the finest wines. If red grapes are pressed the same day they are picked, a white wine can be made of them; but if they lie a week the juice ferments very slightly, and receives the color of the skin of the grape, and red wine is the result. The

Hochheim factory has presses scattered over the country, to which are sent the best workmen in the factory, and in this manner a better juice is secured than if it were purchased of the growers. The grapes are bought of the latter by the pound, thirty-five pounds making, ordinarily, fifteen quarts of wine. When the juice is pressed out it is put into large vats, and allowed to ferment till spring. In the spring a small portion (the factors only know how much) of white sugar is mixed with the juice, and it is put in bottles in the "hot-room," to wit, up-stairs. The bottles remain here on their sides eight or ten days, when they are carried below into a first, then a second cellar, where they lie at first horizontal, but finally inclined at an angle of about thirty degrees. In this last position they are turned over every day to allow the sediment to accumulate on the cork. If less than one-sixth per cent. of them are broken by fermentation the workmen are dissatisfied. In the fulness of time they are brought up-stairs to be "disgorged," the operator carefully keeping the bottle upside down, so as not to disturb and remix the deposit that has accumulated during the six, eight, or twelve months that it has lain in the cellar. The operation of "disgorging" is one of delicacy, and requires considerable skill. The operator holds the bottle still a little inclined and pointed from him, while with one hand he cuts the strings, and gradually loosens the cork, which presently flies out suddenly, and is followed by the gas and a few spoonfuls of wine, which completely carry away the sediment. All this happens before the workman can arrest it with his thumb, and he must be quick, or he loses too much wine. He then passes the bottle to the next workman, who fills the remaining space with *liqueur*, to wit: a mixture of melted white sugar, a little very old wine, and some Cognac. The proportion in which these three are mixed was withheld from me as a secret of the trade; the amount put in each bottle varies very slightly, though it is generally over a gill. The bottle is then ready to be recorked, wired, labelled, and packed. That which is to be sent to India is fastened and packed with the greatest care. Every box of bottles is weighed and numbered, so that, should a bottle be taken out between here and Calcutta, it can be discovered on investigation.

I have said nothing about the various mixings that take place in the casks before the juice is put in bottles, since that is kept secret. In the vicinity are grown many qualities of grapes, some good, some indifferent, and, for the manufacture of even champagne, some must be "mixed up," and others "mixed down." All this is done while it is in the casks by an ingenious system of pumps and hose. I will not say that nothing else is added besides what I have mentioned above; one of the proprietors gave me his assurance that the admixture, first, of white sugar before bottling, second, of white sugar, old wine, and Cognac at the end of the process, completed the whole list.

The grape from which the Hochheimer itself is made is a white grape, called the Riesling; the other varieties are made from red grapes, called the Earl of Burgundy and the Klibroth.

But the king of German wines is the Steinberger. I have above given the price at which a quantity of it was lately sold. It is grown near Biebrich, on the Rhine, in a vineyard of one hundred acres in extent, owned by the Duke of Nassau. The vineyard stands on the summit of a gentle hill, about two miles back from the Rhine, on the right bank. It is naturally a very favorable locality, and the duke has brought it to perfection by the greatest care and attention through many years. The Steinberger wine is the pure juice of the grape, unmixed with any other article whatsoever. There is, of course, but little of it in circulation, and all that is offered is eagerly bought at great prices. It would be fatal to one's reputation for sanity to offer such wines in the American market. Our people could not understand the prices that it would be necessary to demand, and any one who imported such wines they would regard with pity as a sheer lunatic.

MUSKINGUM.

Correspondence.

THE "NEW GOSPEL OF PEACE" ONCE MORE.

TO THE EDITOR OF THE NATION

I see that a correspondent of THE NATION, Mr. "N. H.," is not disposed to let the question of the authorship of the "New Gospel of Peace" rest where the author and Mr. Grant White have left it. Now I am reluctant to "put in my oar," but I must say that, in my opinion, Mr. "N. H." has shown himself a good deal stronger than a yoke of oxen at drawing an inference. He says that Mr. Grant White "tells us of the difficulty *he* encountered in finding the 'Chaldee Manuscript,'" and that he thence concludes "that it is quite impossible that the 'New Gospel of Peace' should have been written in imitation of that 'Manuscript.'" If this were a correct statement of the case, Mr. Grant White would be a much duller man than he has the credit of being if he did not see a clear conclusion against him. What he does say is, that because the "Chaldee Manuscript" was suppressed, and to obtain a sight of it even on the other side of the Atlantic has been so difficult that Dr. Shelton Mackenzie, although he searched high and low in both countries, found but one copy of the magazine containing it—because of this suppression, and the fact that the "Manuscript" was produced "fifty years ago," Mr. White concludes, and, I think, very reasonably, that the "New Gospel of Peace" was not written in imitation of the "Chaldee Manuscript." Very plainly, it was from the *general ignorance* of that "Manuscript," not from his own special ignorance (although he mentions that), that Mr. White drew his inference. This general ignorance, I am quite sure, is much greater than either you or your correspondent seems to suppose. For instance, I, though not a literary person, am very fond of books, and read more than ninety-nine in a hundred even among educated people; I see literary people, and I have access to a good library in which a copy of the "Noctes Ambrosianæ" has stared me in the face for five or six years, and yet I not only never saw the Chaldee Manuscript, but I never even heard of it until this discussion arose. Since then I have read it, and I must say that I find it a somewhat stupid and altogether an incomprehensible performance. You may be sure that the "Chaldee Manuscript" will owe a great deal more in the way of readers at least to the "New Gospel of Peace" than the "New Gospel of Peace" can owe in any way to the "Chaldee Manuscript."

In addition, I will venture to ask if these attempts to worm out the authorship of this book are not something more than superfluous? The public has decided that the book is one that it likes; the author, whoever he is, chooses to withhold his name from the public. Why cannot we enjoy the book and let the matter rest? The authorship of the book does not affect its merits or our enjoyment. Is it quite the proper thing for us to be enquiring into a matter in which we have no other interest than mere curiosity, and which the person most interested plainly wishes to keep to himself? Is it not a little like trying to worm out the authorship of a letter which is submitted to one's perusal on condition that he shall not look at the signature? If any man thinks he has been slandered in this book, he can bring suit against the publishers—and a very nice time he would have of it; but, in my judgment, whoever may be the author, it is hardly decent to attempt to extort from him that which, for some reason best known to himself, and quite sufficient if it satisfies him, he prefers to withhold.

The Week.

THE leading event of the past week has been the President's tour through the North. We have commented so fully elsewhere on his sayings and doings that we have but little to add in this column. He appears to be in the hands of wretched advisers, or else to be himself very unmanageable. It was a gross political mistake, in the present condition of the public mind, for him to take the field as a stump-speaker, as it converts the campaign, so far as he is concerned, rather into a contest of persons than of principles, brings out his personal defects into unhappy prominence, and causes them to tell terribly against the cause he advocates. So far as he has gone he has hardly opened his lips without damaging his "policy." Had he confined himself in his speeches to simple, good-humored commonplaces, such as great men usually address to crowds, avoiding polemics; or had he stated his own position calmly, and either refrained from all allusion to his opponents, or spoken of them with studied courtesy, there is little doubt he would have made a favorable impression, and rallied many moderate or neutral men to his side. But he seems incapable of any such delicate stroke of discretion as this. His speeches have been vulgar, egotistical, and occasionally profane, and full of coarse abuse of his enemies and coarser glorification of himself—such speeches, in fact, as are delivered by third-rate Southern politicians to the wild crowds of the Southwest. Mr. Johnson does not know the North, or any other highly civilized community, and consequently does not know, perhaps, to this hour, what a hideous blunder he has been making; but what is wonderful is, that no attempt seems to have been made by his advisers to check him. Even Mr. Seward, who ought to be his counsellor on points of this sort, seems to have himself forgotten, or got rid of, the prejudices and usages of our society, and seems to vie with the President in rant and indecency. These are hard words; but any careful reader of the newspapers will pardon us for using them. The history of the week, in fact, seems like an evil dream.

THE reception of the Presidential party in New York was as good as could be expected. The procession was in some ways rather an odd affair, but only in minor details. For instance, the presidential carriage was drawn by express horses, driven by an expressman of comfortable proportions, and of a free and independent appearance. We feel sure there were plenty of private gentlemen in New York to have lent a carriage and horses for the occasion. If any seeker after pure truth should ask us why the President should not be conveyed through New York by an express team, we answer, for the same reason that he should not ride through it in a grocer's wagon—because it is not becoming, and there 's an end on 't. Questions of dignity and propriety will not admit of mathematical demonstration. A notable feature of the procession was a carriage-load of reporters in gorgeous brown linen "dusters," and looking their very best. There was a good deal of cheering, but as Grant and Farragut were immediately behind the presidential carriage it was at least doubtful for whom it was intended. The dinner at Delmonico's was a costly and elegant affair, but the list of guests, as published in the *Times*, was funny. In it were the names of Mr. Manton Marble, the editor of the *World*, as well as that of Mr. Horace Greeley. Mr. Marble's sketch of Mr. Johnson's manners and appearance a year ago, in the *World*, was such that the meeting between the two gentlemen at the social board must have been a singularly affecting scene. The reporters were not admitted to the banquet, but were kept waiting in an anteroom until the eating was over, when they were offered what they termed "broken victuals," which called out from them an indignant protest in the *Times*, in which they stated, or somebody for them, that they were "as good company" as any that were at the dinner, or as could be got together at Delmonico's or anywhere else in New York. These disputes about comparative gentility are, however, always unprofitable, and we recommend respectfully to both parties that the enquiry be not pursued any farther.

MR. BEECHER's letter, on which we have commented elsewhere, has called forth a reply from Horace Greeley, in which the points of difference and points of resemblance between the two men are well illustrated. During the war Mr. Greeley occupied a position very analogous to that now occupied by Mr. Beecher; that is, he made himself the exponent of very unpopular views, which, if adopted by the Government, would have worked even greater mischief than could possibly result from carrying out Mr. Beecher's. But, curiously enough, Mr. Greeley does not see the analogy; and in the very article in which he attacks Mr. Beecher, glories in having once stood in a similar relation towards the majority, and charges him with causing gratification by his letter "to every blackleg, duellist, negro-killer, and rowdy from the St. John to the Rio Grande." This is exactly what Mr. Greeley did by his advocacy of peace. When this argument was urged against himself, however, he laughed at it, and rightly, and it is a singular illustration of the extent to which politics are a matter of feeling with him that he should resort to it against Mr. Beecher. To call it an argument is, in fact, doing it too much honor. It is a miserable appeal to prejudice. When a man advocates the abolition of capital punishment, all the murderers rejoice; but what of it? If Satan himself were to rejoice over Mr. Beecher's letter, it would make his doctrines neither better nor worse, but it would probably cover them with much of the odium which hangs round all Satan's tastes and opinions. The fact seems to be that an atmosphere of conciliation and compromise produces on Mr. Beecher much the same effect that an atmosphere of war does on Mr. Greeley. Amidst the clang of arms the latter blows a little pipe of peace; but as soon as the swords are sheathed and the talking begins, he breathes out threatenings and slaughter, while Mr. Beecher roars as gently as any sucking dove.

THERE have been two meetings, each a portion of the National Union Committee, of which Mr. Raymond is chairman, one in Phila-

delphia and one in New York—the former Johnsonite, the latter Congressional. Mr. Raymond insists that he is the regular chairman, and will not resign; the others insist that he has deserted the party and is, therefore, *de jure*, out of office, and that they are the regulars, he a bolter. There is no way, we believe, of deciding the matter that will satisfy all parties, but common sense seems to prescribe that the readiest way of getting rid of Mr. Raymond would be to meet at his call, and then turn him out if he will not go. He seems disposed to abide by any technically regular action of the committee. Mr. Sperry, the secretary, the New Haven postmaster, is, however, less scrupulous and patient, and wanted to proceed to business with only eight out of thirty-nine members present, but the others had the decency to refuse. There is nothing in times like these that carries people through difficulties like the enthusiasm inspired by an office. Mr. Johnson has now, or soon will have, in every post-office in the land a heart that beats for him alone.

The President and his party have passed through Baltimore, Philadelphia, Newark, Wilmington, New York, West Point, Albany, Buffalo, on to Monroe, Michigan, Mr. Johnson making speeches, or, rather, making one speech, continually. No President ever before encountered so much disrespect and so much cold respect as President Johnson on his present tour, and the country will have reason to congratulate itself when its highest officials retire to the comparative obscurity of Washington. "The performance at the Delavan House on Thursday evening," says the Albany *Express*, "has been the subject of much public as well as private comment. . . . The feeling which must have overwhelmed every thoughtful man present was not so much one of anger as of unfeigned sorrow." To understand this language it is only necessary to read the report of the President's speech, even after it had been measurably put in order by the reporters, and of Mr Seward's remarks in reference to Admiral Farragut.

There is some talk as we write, we are sorry to hear, of a riot at Chicago when the President is there, both Radicals and Conservatives threatening very freely "to take care of themselves." We hope there is enough good sense and decency left on both sides to prevent anything so shocking, though it is right to add, at the same time, that according to the law of responsibility laid down by the New York *Times* and other Administration papers, the Radicals of Chicago, if in a majority, would be half justified in massacring the whole presidential party. According to the Administration moralists, if a man whose opinions are obnoxious attempts to set them forth on a platform, and the mob of the locality, being irritated thereby, should set upon him and kill him, their conduct is indeed criminal; but their victim shares their guilt in about an equal degree. Mayor Monroe and his police, for instance, were guilty of a great atrocity in killing Dostie; but Dostie was guilty in about the same degree for provoking Monroe and the police. Thus Dostie was half responsible, at least, for his own murder, or, as the *Times* expresses it, "paid the penalty of his violence." One of the beauties of this code of morals, if extended all over the country, would be, that in each locality we should only have one set of opinions, which would save a great deal of thinking and talking. We hope Mr. Johnson will, therefore, be true to his own principles and not irritate the Radicals of the West. They are violent and designing men, and his presence is obnoxious to them, so that his duty is clear: back he must go to Washington.

We have had another gigantic bank swindle, the paying-teller of the Nassau Bank in this city having lost about $60,000 of the funds of the institution. He has confessed his guilt in the regular way, and is, probably, filled with remorse. Should all go well, he will probably be sent to the state prison in due course. It will then be the duty of our leading merchants and doctors of divinity to get up a petition for his pardon—showing that he must have been mad when he committed the crime; that he had everything in the world to make him happy before he took to gambling; that he is very sorry and will never do it again; and that if he is let out of jail he will probably prove a useful and respectable citizen, etc., etc. This, as nearly as we can recollect, is the line of argument pursued in such cases.

The *World* and the *Herald*, actuated either by that spirit of contempt for labor which was the ruin of the old South and the cause of the war, or else willing to pretend a contempt for labor because labor is still despised by their Southern friends, give but bad accounts of the "bogus" convention of "sneaks and mean whites" now in session at Philadelphia. In fact, however, the delegates from the South and the North seem to have been received with great enthusiasm by the people of the city, and they are apparently full of courage and fully decided as to what they want. Contrary to general expectation, but in accordance with the dictates of good judgment, the Southern and Northern men met separately. Each body will probably present to the country an address and a series of resolutions, and there is little doubt that the platform of principles laid down by the Southern Unionists will be of the most radical description. The Union men of the Border States, such as Tennessee and Virginia, must have the aid of negroes as voters, or these States will be ruled by people who are still rebels in wish and will. This is of no great consequence, Mr. Beecher would say; and he may be right in thinking that it will last only a year or two. Durant, Hamilton and Brownlow, however, know that a Border State man's neighbors can do a good deal of shooting in the course of a year or two. A demand for negro suffrage made by these men would have great weight with the country, and, no doubt, the Union majority will feel considerably strengthened in its present position, or indeed may be bold to advance further, after it shall have heard what these Southerners have to say to it.

By a popular majority of about two thousand the State of North Carolina has refused to ratify the constitution framed by the Reconstruction Convention of the fall of 1865 and the spring of 1866. That convention, it was urged, was the creature of a military dictator, and was not the people of the State acting in the character of makers of fundamental law. Its acts are utterly invalid. The later arguments of President Johnson were conclusively quoted against his inconsistent action in forcing upon the State the Constitutional Amendment abolishing slavery and the repudiation of the rebel debt. North Carolina may be said to have declared it as her opinion that she has lost nothing by the war but her property in slaves, and that she lost that not by law but by the fortune of war. As Mr. Giles Mebane said in the convention, "One Mr. Grant and one Mr. Sherman did that." Let North Carolina's view of the situation once be adopted by the people of the United States, and North Carolina negroes would probably soon find that their white fellow-citizens had met with no more than a nominal loss. While this is the sentiment of the State at large, we hear of meetings of Union men in Guildford and Randolph Counties urging Congress, for the sake of the Unionists of the State, not to loose its military grasp upon the South, and affirming their willingness to remain out of the Union for any reasonable length of time, so that reconstruction, when it does come, shall not be such as to leave them defenceless in the hands of their oppressive enemies.

Governor Wm. G. Brownlow says that the rebel papers and orators of the country think that he displayed a great want of dignity in sending a private despatch to the Clerk of the Senate, in which he gave his respects to the "dead dog of the White House." The very same persons and papers thus horrified went almost wild with glee, however, when the President called the Secretary of the Senate a "dead duck." "And the President," the governor goes on, using the figure of speech called irony, "displayed his profound regard for the courtesies of life, not to say *dignity*, in denouncing me to members of the Tennessee Legislature and others visiting Washington, with curses and bitterness for fifteen months past. He increased his stock of dignity when he caused to be written various letters to Nashville to procure the defeat of the constitutional amendments by reducing the House below a quorum. He went for dignity on inauguration day," etc., etc. All of which, whatever it does for Governor Brownlow, seems to make a pretty good case against Mr. Johnson. It is to be hoped, however, that the few thousands of other men whose names Mr. Johnson covers with abuse may not feel moved to adopt the governor's method of retaliation.

THERE was a brutal assault made in Maryland last week by a gang of rowdies upon some colored people assembled at a camp-meeting, many of them being shot and bludgeoned when engaged in the religious exercises. Their tents and furniture were at last burnt, and the meeting broken up. Our readers will be pleased to hear that the police have gone to work, and that some of the colored men have been arrested for "riotous conduct" at the meeting. The white rioters are, in the meantime, enjoying their well-won repose. We need hardly say that the outrage is entirely due to the irritation caused by the conduct of Congress during the last session, and the attempts of the Radicals to "classify" the freedmen, as Mr. Beecher says. Had the South been admitted to its place in the Capitol immediately after Lee's surrender, not only might the negroes pray unmolested, but white rowdies would be found leading in the singing.

THERE has been of late, and is still, so much talk of hanging people, and of people as deserving to be hanged—in many cases "to be hanged as high as Haman," which appears to be a peculiarly degrading or painful form of this punishment—that when we say General Forrest, late of the Confederate army, ought to have been hanged, we shall probably seem to be guilty of violent language, and meet with no attention. And yet there is no question that, for the massacre of Fort Pillow, he really and literally deserved summary execution, both according to municipal law and the law of war. We will go further, and say that there is no other country in the world in which this man would, if he fell into the victor's hands under the same circumstances as those under which he fell into ours, have escaped condign and immediate punishment. Yet he is to-day a free man; and actually presided, two or three days ago, at a meeting at Memphis, called to ratify the Philadelphia platform, and had General Stoneman—our Stoneman—seated beside him. If, two years ago, a foreigner had asked ninety-nine out of every hundred men of the free States whether this thing could ever be, the question would have been resented as an insult.

MATTERS are apparently fast reaching a crisis in Mexico. The Empress has gone to Europe to solicit more money and a continuance of the French occupation, both of which Napoleon will doubtless refuse. At the same time Maximilian's abdication would be a formal and solemn announcement of the failure of the Mexican expedition, and of that grand plan for the "rehabilitation" of the "Latin race" which was promulgated with such a flourish of trumpets four years ago, and this coming immediately after the check in Germany would seriously shake the French faith in Bonapartism. Perhaps one of the most singular and mysterious incidents of the crisis is the Christian resignation with which the Emperor accepts his defeats and disappointments.

MR. FOX and the rest of the American embassy to Russia have reached Novgorod, and have invitations even from the cities on the Caspian Sea. They have declined, however, to go so far. At Moscow, on the 30th, a delegation of Russian peasants called on the Secretary and delivered an address of welcome, receiving in return from him an American flag. The peasant orator promised that in case of necessity the flag of Russia should float beside it. On the 31st the Emperor gave a great banquet at St. Petersburg and toasted "the prosperity and consolidation of the United States"—a sentiment which Copperheads and stiff State-rights advocates like Henry B. Dawson, who thinks even the use of the term "national" shocking, will duly deplore.

THE peace settlement in Europe has been effected with great rapidity. The final treaty was almost identical in its terms with the preliminary conditions. Austria has paid Prussia the stipulated indemnity, and has begun to reduce her army to a peace footing. The Emperor is retrenching by cutting down his court expenses one-third. He exacts no compensation from Italy for the defences in Venetia, and was to have withdrawn his troops from Venice and the Quadrilateral yesterday. Bavaria has ratified the peace, but rejected union with Prussia. From France the resignation of Drouyn de Lhuys is the only news of importance.

THE FREEDMEN.

GEN. C. B. FISK has been mustered out of service, to date August 31. The order for Gen. Davis Tillson's muster out has been suspended, and he has returned to Georgia. Gen. W. E. Strong, inspector of Freedmen's Bureau, has been mustered out of service. Gen. Gregory has been appointed assistant-commissioner for Maryland, vice Gen. Fessenden, mustered out of his volunteer rank. Gen. F. D. Sewall, inspector, has been ordered to make a thorough inspection of freedmen's affairs in Kentucky and Tennessee. Gen. C. H. Howard has returned to Washington and re-entered upon his duties as assistant-commissioner for the District of Columbia.

—The Legislature of Kentucky, at its last session, passed a law taxing every male negro or mulatto over eighteen years of age the sum of one dollar for the education of colored children, but no provision has yet been made for this purpose by the State authorities. Gen. Grant's order for the arrest of those who maltreat freedmen, or show disrespect to the Bureau officers, has had a good effect. The average pay to laborers is twelve dollars per month, with rations. The State authorities still refuse to care for colored paupers.

—The reports from Alabama show that the crops in that State are likely to be short. Drought, disease, and worms have been and are still making sad havoc with both cereals and cotton. Some planters have lost half their crop by the ravages of the boll-worm and caterpillar.

—In view of the fact that, as the crops are becoming gathered, some of the planters show a disposition to turn off their laborers without paying them, Gen. T. J. Wood, assistant-commissioner and department commander in Mississippi, has issued an order forbidding anything of the kind in his department, and stating that troops will be stationed throughout the State to prevent it.

—At the State Convention in Nashville of the colored people of Tennessee, some opposition was made to a resolution providing for the observance of the first of January as the anniversary of freedom to the race, on the ground that Mr. Lincoln had omitted Tennessee, and that the 22d of February was the real date for her emancipation. A member replied that "had it not been for the miserable trickster who held by appointment from Lincoln the office of military governor of Tennessee, this State would have been included in the proclamation."

—In spite of a peculiarly bad season for cotton-raising, General Kiddoo reports that the crop in Texas promises, if unharmed by worms, to be the largest in ten years, excepting 1860. In Fort Bend, Colorado, and Wharton Counties, the freedmen are working under favorable contracts for a part of the crops. In the State at large, "murder and outrage are largely on the increase," but the Bureau is powerless for protection. Superintendent Wheelock reports for June one hundred freedmen's schools, of which 47 are day-schools, 24 night-schools, and 29 Sunday-schools, with an enrolled attendance of 4,447. The teachers number 65, and were mostly natives of Louisiana, or regularly acclimated, and so have been peculiarly exempt from disease. "These schools have been organized and sustained without aid from Northern charity, and without cost to Government, the entire expense being defrayed by a monthly tuition fee of one dollar and a half paid to the teacher by each scholar. This is paid with general promptness, and suffices to support the teacher." The Houston *Telegraph* boasts that "the colored schools of Texas are the most prosperous of those established in the Southern States."

—General Jefferson C. Davis reports for the Bureau inspector in Kentucky that about 95 per cent. of the freedmen are industriously employed, the rest seeming to prefer a life of idleness. The resistance to efforts for their elevation and instruction comes mainly from the southern and western parts of the State. At Glasgow, Bowling Green, Paducah, and Mount Sterling, a band of "regulators" have broken up many schools and expelled the teachers. There is a feeling of intense bitterness against blacks and whites who were Unionists during the war.

—The cotton crop of Georgia is looking well, but the caterpillars have begun to hatch in large quantities, and portend disaster.

Notes.

LITERARY.

It is not often that the offer of a prize will draw out any very remarkable work. The prizes are generally small, and good writers refuse to compete unless they are paid for their trouble if unsuccessful. The disappointed writer, however, can always publish his book, and, by appealing to the judgment of the public, can in some measure make up for the want of partiality shown him by the giver of the prize. The Peruvian Government are so much in want of a history of their country that they have offered $20,000 for one. The terms of the competition have not reached us. If any young American historian desires to gain fame and money, he should apply to the Peruvian authorities and ascertain the terms, and whether there is any chance of the next revolutionary government confirming the acts of their predecessors in this matter. Peru would get a much better history if she should select some promising writer as her historian without a competition and pay him well on the completion of his work.

—The power of the critical press has lately received a signal illustration in the withdrawal from circulation of Mr. Swinburne's "Poems and Ballads." The unequivocally, and sometimes unjustly, expressed disgust with which the literary papers received it, has had its effect. We are curious to see whether the American edition, now nearly out, will be suppressed also.

—The Oxford University press is now printing a new school and class book, "English Philology," by the Rev. J. Earle, editor of the "Saxon Chronicle," and late professor of Anglo-Saxon at Oxford. "Cleasby's Icelandic Dictionary" is also soon to be issued at the same establishment. This book has been long anxiously expected, as Dr. Dasent has had it in hand for seven years, but has preferred *Times* leaders to finishing it. It has been completed by the Icelandic scholar, Mr. Guthbrandt Vigfusson, to whose hands Dr. Dasent committed it about two years ago.

—The hymnology of all churches has lost a valuable worker in the person of John Mason Neale, D.D. He was for many successive years the winner of the Seatonian prize for English poetry at Oxford, and owing to a thoroughly poetic mind and enormous capabilities of versification, he exercised a very powerful influence on the hymnology of the century. Thoroughly acquainted with the liturgies and hymns of the early churches, he enriched the store of English religious poetry by elegant and carefully executed translations of most of the hymns in the various breviaries. The difficulties he had to surmount in rendering into English the various metres were very great. How well they were overcome can be seen in the translation of that famous and difficult rhythm of the Cluniac, the "Hora Novissima," especially in the verses commencing "Brief life is here our portion" and "Jerusalem the golden."

—In a country where crosses and decorations are unknown, we can hardly realize the passion that exists in France for the possession of the red ribbon of the Legion of Honor. Literary men will toil and work night after night that by the research and industry displayed in their publications they may be brought to the notice of the authorities and receive the reward of merit. Soldiers are braver, teachers in schools are more vigorous, all government officials are more honest and industrious that they may gain this visible distinction, and that all who meet them may see that they have deserved well of their country. Experience has shown that this order has been of very great service in all departments of the administration. French officials, apart from their native sense of method and order, are more prompt and more untiring than those of any other country. They know that if they deserve reward they will not be overlooked. They will be promoted in office, and, if they have been signally meritorious, they will receive the cross, which is esteemed by them a more than sufficient reward for any amount of exertion. The annual distribution of honors at the Fête Napoléon has just taken place. Among literary men thus rewarded we notice several prominent names. M. Philarète-Chasles, of the Institute, was made commander; M. Gounod, the composer, and M. Amedée Achard, a novelist of genius, were made officers. The rank of chevalier was bestowed on M. Taine, the historian of English literature and the professor in the school of the fine arts (a nomination which should have come earlier); MM. Edouard Plouvier, Ferdinand Langlé, Fournier, and Raymond-Deslandes, dramatists; MM. Merle and Schlesinger, painters; MM. Flaubert, the author of "Madame Bovary" and "Salammbô," Ponson du Terrail, and Monselet, journalists; and Galignani, the director of the well-known paper bearing his name. While speaking of distinctions conferred on eminent men, we should notice that the Queen of England has conferred the dignity of knighthood on Mr. Baker, the explorer of the Albert-N'yanza, and that of Commander of the Bath on Capt. Grant, the fellow-traveller of Capt. Speke.

—One of the chief characteristics of the present age is curiosity—curiosity about the details not only of politics and history, but of private life, as well of living personages of any distinction as of those long dead. To this curiosity is doubtless due the immense number of biographies and personal histories which are continually being issued, the reprinting of old tracts which revive ancient scandals, and the publication of memoirs, diaries, and journals kept by eminent persons, or containing accounts of remarkable contemporary events. Our own press is not much behind that of other countries in such matters, and we have here numerous book-clubs whose publications do not so much serve to clear up disputed points as to bring again into dispute events and characters about which opinion seemed settled. The French press, however, fairly swarms with publications of this kind, partly because the stock of memoirs and family papers seems almost inexhaustible, and partly because such publications are in fashion. Some of these are little interesting, and of such kind are the "Mémoires de Buzot et de Barbaroux," which, though telling much that is pleasant and interesting of the early life of the leader of the Marseillois, in the shape of letters to his mother, do not contain much else before unpublished. The "Mémoires inédites de Pétion," with introduction and notes by M. A. Dauban, are somewhat better. This diary begins at that 31st of May when all legality was overthrown, all objections stifled, and which was the fall of the Gironde. Nothing more than this was needed, if even this were necessary, to show the incredible arrogance of the vain and ridiculous Pétion, the once all-powerful mayor of Paris. It is the story of the life of the fugitive Girondists, pursued into the provinces, tracked everywhere, until they died one by one. Here, mingled with the most amusing and pitiable personal details, is the history of the insurrection of Normandy, of the rapidly vanishing prestige of the proscribed deputies. If Pétion sometimes writes more enthusiastically than the facts warranted, he says enough to show the utter powerlessness of his party, and to justify the historians of the Gironde. In "Notre Dame de Thermidor," a name gratefully given to her by the many whom she saved from death, M. Arsène Houssaye has painted the portrait of Madame Tallien. This queen of the society of the Directory had more than beauty and grace. She had courage and clemency. Bordeaux blessed her in the Reign of Terror. She had the energy of chivalric devotion the day when she saved the noble families, parliamentarists and royalists, who were on the point of taking ship, but were about to fall again into the hands of the populace, in default of the 3,000 francs that the captain of the vessel exacted from the emigrants. It was a prey snatched from the *sans-culottes*. The people rushed on Madame Fontenay (as she then was), tearing her Spanish mantilla in their efforts to get the list of those whom she had just saved. "I shall not give you this list," cried the indignant young woman. "If you wish to take it from me, kill me;" and she bit and tore up with her teeth the list of fugitives. It was Madame Tallien who overthrew Robespierre and the terrorism. If she does, indeed, recall the days of the Directory, grateful voices have absolved her from blame. There should remain of her only the remembrance of the good she did. She is Madame Fontenay and the Princesse de Chimay. Thus M. Arsène Houssaye has painted her, and these are the happiest pages of his book.

The life of another woman possesses no common interest to readers of French history. In the times when the kings' mistresses sat on higher thrones than the queens of France, one, Diana de Poitiers, used her position for no ignoble ends. The cause of France and of good

government was advanced by her influence over Henry II. She kept on good terms with the queen and retired with honors, and after the king's death was even called upon by Catherine de Medicis for assistance in matters where her skill had failed. The Diana of reality is somewhat different from the legendary Diana of Victor Hugo, and from the historical Diana of Brantôme or even Michelet. Her true character can be better discovered in the edition of her correspondence just published, with copious notes, by M. Georges Guiffrey, under the title of "Lettres inédites de Diane de Poitiers."

SCIENTIFIC.

Shrinkage.—Most men are familiar with the fact that a rope, upon being wetted, will contract in length and become materially shorter, and that a rope made fast at both extremities and hauled taut when wet, will slacken and hang loose upon drying. Few women are unacquainted with the shrinkage of woollen goods in the process of washing. Every mechanic, and many a householder, is familiar with the shrinking and swelling of unpainted or unseasoned lumber.

In spite of the familiarity of these and a multitude of kindred facts, it would not be easy to find persons able to offer an explanation of the appearances in question, or conscious even of ever having thought about their rationale. Singular as it may seem, it is a fact that scarcely anything has ever been written upon the subject of shrinkage. Most of the books on similar subjects may be searched in vain for information concerning it. Here is a new subject for the makers of encyclopædias. The chief difficulty in treating the subject probably lies not in any intricacy properly inherent therein, but in its exceeding multifariousness. Upon careful scrutiny, it will appear that the members of almost every one of the various arts and trades have their own peculiar conceptions and sets of facts regarding shrinkage, and that the term has a meaning and application by no means identical in the different trades, but, on the contrary, more or less various and dissimilar.

In a general way, the term shrinkage is frequently used as synonymous with contraction, to denote any reduction of size in any substance. Thus, when a hot bar of iron or any other metal contracts as it becomes cold, it is said to shrink. So, too, when a bit of moist animal cartilage becomes dry, the diminution of size—the shrivelling caused by loss of water—is often called shrinkage. For the sake of clearness, it is much to be wished that the term shrinkage could be restricted to the peculiar contractions which are exhibited by some vegetable and animal fibres, and by various textile fibres, when these are subjected to the action of water or of other liquids and chemicals. It is desirable that the term should not be used with reference to changes of bulk caused solely by change of temperature or simply by desiccation. Expansion and contraction with heat and cold depend upon the unending contest between the force of cohesion always drawing the particles of matter together, and the force of heat as incessantly driving them apart. When a bit of dry muscle swells through absorption of water, and then shrivels again upon desiccation, the increase of bulk, which is simply due to the added water, is lost when the water is subtracted.

Shrinkage, properly so called, may depend upon several causes. It may result from the imbibition of fluid by twisted fibres, or from the twisting or "felting" together of fibres of wool or hair, as in the operation called "fulling;" or, finally, from chemical action upon the fibre, as when cotton goods are soaked in a lye of caustic soda or potash. A simple case of shrinkage falling under the first-mentioned of these headings, and a fair type of this category, is presented by the well-known shortening of dry ropes when they become wet. This contraction depends entirely upon the twisted condition of the fibres which constitute the rope, and is, in fact, a result of the swelling or expansion of these fibres. If, instead of the finished twisted rope, mere straight, unspun fibres of flax, hemp, or the like, were soaked in water, these fibres, which are in reality hollow tubes, would suck up a quantity of the water by force of capillary attraction, so that each particular fibre would be surcharged and distended with the liquid. The swollen wet fibres would now be not only much larger and thicker than before, but it is conceivable that they might even be a trifle longer than they were when dry, just as a sponge when charged with water is larger, in all senses, than when the moisture has been expressed from it. But when the vegetable fibres become wet and swell up after they have been twisted into a cord, each strand of this cord necessarily becomes larger and thicker in accordance with the swelling of the fibres of which it is composed, and the other strands in going around it are compelled to traverse a larger space than before, the core, as it were, around which each strand is twisted being larger than it was originally. The longitudinal expansion of the fibres, if any there be, is meanwhile vastly less in proportion than the lateral swelling, and is altogether insufficient to compensate for the increase in diameter. Hence it happens that each portion of the rope is pushed outwards from the centre toward the circumference, and the strain thus brought about goes to shorten the rope, which is, of course, drawn in from the two extremities towards its middle. The wet rope shortens as it becomes thicker—loses in longitudinal extension as it gains in circumference.

The swelling of wood upon being wetted has this much in common with the case just cited, in that the wood swells laterally, *i. e.*, across the grain. It is here as with the loose flax: the pores of the wood become distended and swollen with water; but as the fibres are not twisted in the wood, as in the rope, there is here no force to bring about any contraction in either direction. As the wet wood dries it simply shrivels from loss of moisture.

The operation called fulling, alluded to above, is employed for the purpose of "thickening up"—of rendering more compact loose and open cloths, or those composed of short wool. In the fulling-mill the cloth, immersed in water in a vessel of a peculiar shape, is continually turned over and compressed by the falling of large wooden beaters, in such manner that the position of the cloth is constantly undergoing change, and that the fibres of which the cloth is composed are made to "felt" together, and to enter into more intimate combination than before. In the course of this operation a very considerable amount of shrinkage occurs, the cloth being reduced as to its linear dimensions at the same time that the thickness and stability of the texture are improved. Wool and some other kinds of hair or fur may be thus thickened by fulling, but the process has no value as applied to cotton or flax. The efficacy of the process depends mainly upon the fact that the surfaces of the fibres of wool are covered with imbricated scales in such manner that the fibres are endowed with a peculiar roughness which permits or even solicits them to twine around one another. By repeatedly rolling, beating, and changing the position of the cloth, the fibres of the wool are at last rolled up or felted together in the desired way, the cloth shrinking meanwhile because of the more intimate union and coalescence of its constituent parts.

The tendency of fibres of wool to felt together is, in any event, so great that special precautions must always be taken to prevent the shrinkage of woollen cloth while in the process of manufacture. In the operations of spinning and weaving wool must be oiled, in order to prevent it from felting. For the same reason, woollen cloths are always kept tightly stretched upon rollers during the various processes of cleaning and coloring at the mill. The value of the common household formulas for washing flannels and other woollen goods will doubtless be found to be great precisely in proportion to the smallness of the opportunity afforded for the fibres of the cloth to felt together. In the washing of woollen goods, perhaps the best instructions for an intelligent operative would be given by describing accurately the system of fulling as practised in the finishing of cloth, and then enjoining the adoption of a course diametrically opposed to this. As it is, the empirical methods of washing appear to agree among themselves, and with theory, in advising celerity, the use of hot water (all changes of temperature, as from warm to cold water, being carefully avoided), and care that the goods shall be rinsed, rubbed, twisted, or stirred as little as possible.

It is noticed that different samples of woollen goods shrink to very different extents upon being washed, though to all outward appearance the goods are identical in texture. One piece of cloth will cease to shrink appreciably after having been washed a few times, while another will continue to contract through numerous washings. This probably depends upon a difference in the length of the fibres of the wool of which the two samples of cloth have been manufactured. As a rule,

cloth made of short wool will shrink much more readily than that in which the fibres are long.

Shrinkage by chemical means, in so far as animal fibres are concerned, is intimately connected with that brought about by fulling. In both cases the result depends upon the felting together of the fibres of the cloth, the chief difference between the two systems being as to the manner in which this felting is brought about. The power of felting, which is so highly developed in the fibres of wool, is far less strongly marked in many kinds of fur. But it has been found that, by appropriate chemical treatment, almost any kind of hair or fur may be made to pass into a certain harsh, roughened, crisped, curled, and twisted condition, and so rendered susceptible of being felted. A practical application of this occurs in the process known as *sécrétage* in the manufacture of hats from fur, where the fur is treated with a solution of nitrate of mercury. As a general rule, animal fibres, such as wool, silk, and hair, are liable to shrink upon being treated with weak alkalies or with solutions of the metallic salts, the natural felting power of the fibres being increased by the action of these chemicals. It is remarkable, however, that acids have less action upon wool than most other chemical substances.

Cotton and flax, when taken by themselves, are not liable to shrink, their fibres possessing none of the peculiar roughness to which wool owes its felting power. But both cotton and flax can be made to shrink by chemical treatment. When cotton or linen cloth is dipped for a moment into concentrated nitric acid, and then copiously washed with water, very decided shrinkage occurs, and the cloth becomes stronger than before. In this case, however, there is actual chemical combination. The cloth now contains one of the constituents of the nitric acid. It has, in fact, been transformed into a sort of gun-cotton. Shrinkage of the vegetable fibres occurs also under the influence of sulphuric acid which has been somewhat diluted, though in this case the ultimate chemical composition of the fibre remains unchanged. A solution of chloride of zinc will produce similar effects. But perhaps the most remarkable instance of shrinkage produced by chemicals is seen in the action of a solution of caustic soda, applied as recommended by Mercer some years since. Upon immersing cotton cloth in cold soda-lye the cotton shrinks at once to a very considerable extent, and remains shrunken after all the soda has been washed out. Cloth which originally showed sixteen threads to the quarter inch, when examined with a lens, can by this treatment readily be made to exhibit eighteen, twenty, or even twenty-two. At the same time that it shrinks, as regards length and breadth, the cloth becomes thicker, even to the extent of a fifth or a third of its original thickness. The strength of the cloth is also increased; a square yard of it weighs more than before, and its power of absorbing and retaining coloring matters is distinctly greater than before. Concerning this sort of shrinkage, however, we know only the empirical facts; no rational explanation of it has yet been offered.

New cotton and linen cloth will shrink, to a certain extent, when washed for the first time—a fact from which it would be natural to infer that these cloths shrink, like woollen goods, by felting; but, in reality, this shrinking appears to depend entirely upon the removal of matter extraneous to the cloth, added to it at the mills during the process called finishing. This foreign matter once removed, as it is by the first washing to which the cloth is subjected, neither cotton nor linen is subject to further shrinkage.

NOTES ON THE NEW EDITION OF WEBSTER'S DICTIONARY.

NO. III.—NECESSARY LIMITATIONS OF VOCABULARY.

As I have remarked in a former number of this series, a dictionary of a living language cannot embrace all the words and meanings of words used by speakers and writers in that language. Literature is some time behind actual speech in the acceptance of new forms and vocables, and the collection of lexical material cannot keep pace even with literature. Language is so rapidly changeable that words unknown when letter A of a voluminous lexicon is put to press will come into established use long before letter Z reaches the hands of the compositor. We shall see, further, that by introducing the special nomenclatures of all knowledges which may be treated of in a given language, we should swell the bulk of our dictionary to quite inadmissible dimensions, and should make it not a word-book but an encyclopædia. The vocabulary must, therefore, be eclectic; and the manual which, without regard to mere numerical extent of word-list, contains the widest and most judicious selection of those words concerning which miscellaneous readers may be supposed to need information, is to be regarded as the most complete. The number of such English words is sufficient to fill a volume of the largest manageable size, and consequently a superfluous word or meaning can be introduced into the vocabulary only by sacrificing a necessary one. Accordingly, in comparing different dictionaries, the character of their vocabularies is as important as the absolute number of their words. What, then, are the tests by which we are to determine whether the lexicographer has judged rightly in admitting or rejecting a given candidate admitted to be, or at least to have been, an English word?

The information which miscellaneous readers seek in lexicons is of various sorts. Probably hand-dictionaries of living languages are oftenest consulted to solve doubts on these points: First, as to the meaning of words; secondly, as to their orthography; thirdly, as to their etymology; and fourthly, whether a supposed word has a lawful recognized existence, so that one may be justified in using it in writing or in speech.

I have already expressed my opinions in regard to the orthography of the dictionary I am reviewing, and I shall hereafter examine how far it satisfies the reasonable demands of criticism in the other points just enumerated. For the present, I confine myself to the principles of selection of words for the vocabulary.

Some important lexicographical works—the great Italian vocabulary Della Crusca, for instance—have excluded from their alphabet all words not sanctioned by the usage of writers admitted to be of classic authority. Others have attempted partially to accomplish the same end by marking, with an asterisk or otherwise, such words as the compiler of the dictionary holds not admissible in literary composition or in oral use. This, however, though better than the exclusion of these words, is unadvisable, because no scholar will ever regard the opinion of a lexicographer as at all conclusive on such a point, unless, indeed, the lexicographer, by successful authorship in a wide range of literary effort, has, like Johnson, entitled himself to say to an objector: "Sir, I am an authority myself." We may, therefore, assume that the author of a manual lexicon cannot reject words simply upon the principle of classical purism, and it is evident that the meaning of a term, not sanctioned by good authority, is often just as important to the reader as if it were consecrated by the general usage of the very best writers. It is impossible to lay down any precise rule on this subject. A dictionary would not be improved by the insertion of every word to be found in the ephemeral slang of the periodical press, of popular oratory, or of conversation; but, on the other hand, it would not be justified in excluding such terms if, though only for a time, they have found their way into the phraseology of important political, social, or commercial discussion. For example, in the University of Oxford, a certain preliminary examination is familiarly called the *little go;* and a student who has failed to pass his examination is said to have been *plucked.* These are certainly not elegant words, nor are they the proper technical terms used in the records of the university itself. Very likely they will become obsolete in less than a generation. Nay, Mr. Charles Reade informs us, in "Hard Cash," that they are already getting to be regarded as "vulgar," and that *smalls* is now the classical word for *little go, ploughed* for *plucked.* But, nevertheless, they have been and are employed in magazine articles, and in works designed for permanent existence, by writers like Thackeray and Miss Cobbe, and, therefore, a dictionary which should reject them might well be called defective.

The next question for the lexicographer and his critics is: Ought he to exclude words obsolete in daily speech and in recent or contemporaneous literature, or should he make his dictionary a glossary for some of our great old authors, by introducing words employed by them, but now, by common consent, dismissed from service? and if he adopts the latter course, shall he go back far enough to include the whole vocabularies of Clarendon, Milton, Fuller, Shakespeare, Spenser, Sir Thomas More, Lord Berners, Sir Thomas Mallory, Chaucer, Wycliffe? A quarter of a century ago these questions would have been generally answered, even by good English scholars, in the negative, so far, at least, as authors older than Shakespeare are concerned. But, at the present day, the great writers I have just named, as well as others of the same periods, enter into the ordinary reading of every man who can justly pretend to have a fair acquaintance with English literature. It would, indeed, be impossible to introduce into a general hand-lexicon not only all the obsolete words used by the writers in question, but all the various orthographical forms in which they occur; and it would be superfluous to do so, because variations in orthography present no real difficulty to an intelligent reader, with a few days' practice. The number of obsolete English words is smaller than is popularly supposed, and I think all such as

were ever in authorized use should form a part of the vocabulary of every dictionary which aspires to completeness as a guide to the literature of our tongue. It must be recollected, also, that recent English writers of the very highest rank have revived, or attempted to revive, many of the half-forgotten words of our older poets. You cannot read Mrs. Browning or Tennyson without meeting old words which, till waked by them, have slumbered for centuries. The rapidly increasing interest in early English literature will bring back still more of the ancient veterans that have lagged behind the swift march of modern speech, and our current vocabulary will grow almost as fast by revival as by new coinage. What I have said of words applies also to obsolete meanings of words still employed in other significations. I am no advocate for multiplying definitions, especially where a given unusual sense is readily suggested by etymology; but a lexicographer professing fulness in this respect departs from principle if he omits the meaning *insinuation* applied by Lord Clarendon to *infusion*, or if he fails to point out that the beauty of Milton's

——"yet from those flames
No light, but rather darkness *visible*
Served only to discover sights of woe,"

is heightened by his rare, if not unique, employment of the adjective *visible* in an active instead of the usual passive signification.

The case of words avowedly newly coined or introduced raises a more difficult question. I do not refer to mere slang terms which carry the gallows-mark on their foreheads, and are obviously as ephemeral as they are vulgar, but to words which seem to meet a want, and therefore to have a *raison d'être*, a right to live. When the metaphysical Puritan first condemned the *selfish* man as his own tempter, and *selfishness* as the source of most of our sins, every Englishman gifted with linguistic sense and with conscience must have felt at once that an imperishable word, a new and precise formulation of what had been before but a vaguely expressed notion, was born into the family of his moral and his household speech; and, though both Trench and the editors of Webster have wrongly, or, at least, imperfectly, defined *solidarity*, by describing it as a union, a consolidation of interests, responsibilities, honors, and the like, omitting the precise legal conception involved in it which is adjectively expressed by the technical phrase, *joint and several*—yet, when Kossuth imported the word for us he was universally allowed to have supplied to our vocabulary a term which it really needed. With regard to the admission of such words into a dictionary, no formal rules can be laid down. The lexicographer must trust to his philological instincts, and when a new recruit is brought forward to fill a real vacancy, he should look to the qualifications rather than to the credentials of the candidate, and not priggishly reject him simply as an old deserter or as a raw volunteer.

The facility of swelling the word-list by borrowing whole armies of technical terms from scientific treatises and special glossaries, tempts lexicographers to introduce numbers of words which not only have not passed into the common verbal patrimony of educated persons, but which have no right to burden human tongue or pen with the utterance or recording of them. The grossest vulgarisms—for even vulgarisms exist by virtue of *some*, usually unconscious, law—are less offensive to a truly cultivated ear than the barbarisms which, with a heathenish disregard of the rules of linguistic civilization, professors of the *ologies* are disfiguring their text-books. Rogers complained, a few years ago, that so small a thing as the then recent change of accent from the second syllable to the first in *balcony* "made him sick." What would have been his sensations had he lived to witness such "flat burglaries" as *aldehyde*, criminally compounded, or rather confounded, out of the *dejecta membra* of *al*cohol *dehyd*rogenatus, or *Asagræa*, a genus of plants named in honor of the learned Professor Asa Gray? When a classical captain christened the basin of the primal spring of our Mississippi Lake *Itasca*, *veritas caput*, which appears to be camp-Latin for *true head*, he might be forgiven as having invented a name musical enough to pass very well for Indian, and *paraffine*, *parum affinis*, is soothing enough to the ear to hope for mercy on a similar plea; but no human charity is broad enough to cover the multitude of philological sins with which modern science has afflicted the world. The immense number of new objects and conceptions demanding a name and place in the nomenclature of knowledge undoubtedly renders it very difficult to find designations for them all, and naturalists have been as much embarrassed as the pioneers of our colonization are in hunting up names for our embryo cities and nascent post-offices. Van Helmont and Paracelsus courageously made words out of nothing, in which they did better than their successors, whose descriptive nomenclature is almost always founded on false theory or mistaken analogy. Van Helmont's *gas* is universally accepted, though his *blas* failed to secure recognition; while the *colcothar*, *opodeldoc*, and other verbal inventions of Paracelsus are likely to outlast the more recent barbarisms of etymological philosophers.

As for our geographical names, it must be admitted that Rome, Palmyra, Athens, and the like, are sadly out of place. We might, perhaps, have borrowed more largely from the indigenous nomenclature, though a person of delicate nerves could hardly sleep comfortably in a town called *Oshkosh*, *Oconomemuc*, or *Sheboygan*.

Above 250,000 species of animals and plants have been ascertained, classified, and, unhappily, named by the naturalists who have described them. If we add to this nomenclature the technical terms of geology, mineralogy, chemistry, physics, astronomy, mathematics, the less familiar arts, and other special knowledges, we shall have a scientific vocabulary of not less than 300,000 words, or probably three times as many as the general speech of any nation, ancient or modern, ever possessed. It is evident that this vast multitude of names cannot be admitted into the fullest lexicons, still less into hand-dictionaries of any language. The principles upon which a selection should be made out of these nomenclatures are obvious enough, though, as in many other cases, the practical application of these principles may not be free from difficulty. The most general rules of admission seem to be these:

1. When a word, originally appropriated to a scientific conception, has passed into the common speech in an untechnical or figurative sense; as, for example, the astronomical terms *apogee*, *zenith*.

2. Where it is an important word of art in the special vocabulary of those branches of knowledge which enter more or less into the education of all cultivated persons, as *ecliptic*, *cataclysm*, *catenary* curve, *homologous*.

3. Where the object named has a commercial or industrial importance, as *holothuria*, *cryolite*; or where it has excited attention from rare and curious structure or properties, as *ornithorhynchus*.

4. Where classic and popular writers have employed scientific terms in poetical or rhetorical illustration, as *cynosure* in Milton's "L'Allegro" and "Comus," or *heliacal rising* in the preface to T. Moore's "Epicurean," and elsewhere.

Other cases may, no doubt, be supposed in which words belonging to the special vocabulary of science ought to find a place in general dictionaries; but I believe these are both the most important and the most comprehensive in application.

G. P. M.

MORE POETRY OF THE WAR.*

It is only the great poet who is fitly inspired by great events. It is he alone who can express them worthily. But the same storm that piles up the waves of the sea sets all the duck-ponds in ineffectual commotion. The literary productiveness and facility of America display themselves just now in what is called poetry of the war; but most of what is thus designated is as ephemeral as the newspaper in which it usually appears. Our war has produced, at the outside, not more than half-a-dozen lyrics that deserve a place in literature, and has inspired but one truly great and lasting poem. Lowell's "Commemoration Ode" takes its place securely, not only among the finest works of our generation, but among the noblest poems of all time. It is happy for us that the spirit of the war found a poet capable alike of receiving and expressing its full inspiration. No one who has felt the power of the master in this poem but must sometimes feel a little impatience and weariness with the common handiwork of the journeymen and apprentices, however much he may approve their industry or sympathize with the emotion which, in their degree, they experienced and attempt to express.

But the grandeur of the war—alike in its principles and its events—must be the measure of the poetry of the war. It is only the highest art that can illustrate the highest deeds. The severest literary criticism on this poetry is not so hard as the criticism of the facts themselves. Unless the poet is as great as his theme, he must submit to be crushed by it, and the literary critic has little to do but to confront the verse and its subject.

If measured by this standard, Mr. Melville must take his place with the herd of recent versifiers. But his literary reputation gives his volume special claims to notice, and the abilities which he has shown in some of his other works entitle whatever he produces to respectful consideration. It is impossible, in view of what Mr. Melville has done and of his intention in his present book, not to read his "Battle Pieces" with a certain melancholy. Nature did not make him a poet. His pages contain at best little more than the rough ore of poetry. Here and there gleams of imaginative power shine out like the grains of gold in a mass of quartz. But, accustomed as we have been of late, in certain works professing to be poetry, to astonishing crudity and formlessness, we yet cannot refrain from expressing surprise that a man of

* "Battle Piece and Aspects of the War. By Herman Melville." New York: Harper & Brothers. 1866. 12mo, pp. 272.
"The Old Sergeant. By Forceythe Willson." J. Porteus, Bible House, New York

Mr. Melville's literary experience and cultivation should have mistaken some of these compositions for poetry, or even for verse. There are some of them in which it is difficult to discover rhythm, measure, or consonance of rhyme. The thought is often involved and obscure. The sentiment is weakened by incongruous imagery. We quote the first piece in the volume lest our criticism be thought too severe:

THE PORTENT.

(1859.)

Hanging from the beam,
Slowly swaying (such the law)
Gaunt the shadow on your green,
Shenandoah!
The cut is on the crown
(Lo, John Brown),
And the stabs shall heal no more.

Hidden in the cap
Is the anguish none can draw;
So your future veils its face,
Shenandoah!
But the streaming beard is shown
(Weird John Brown),
The meteor of the war.

It would seem that only a writing medium could mistake such stuff as this for poetry. And, alas! there is more of it, and our regret is the keener when we find such simple and feeling verses as the following:

BALL'S BLUFF.

A REVERIE.

(October, 1861.)

One noonday, at my window in the town,
I saw a sight—saddest that eyes can see—
Young soldiers marching lustily
Unto the wars
With fifes, and flags, and mottoed pageantry;
While all the porches, walks, and doors
Were rich with ladies cheering royally.

They moved like June morning on the wave,
Their hearts were fresh as clover in its prime
(It was the breezy summer time),
Life throbbed so strong;
How should they dream that death in a rosy clime
Would come to thin their shining throng?
Youth feels immortal, like the gods sublime.

Weeks passed; and at my window, leaving bed,
By night I mused, of easeful sleep bereft,
On those brave boys (ah! war, thy theft);
Some marching feet
Found pause at last by cliffs Potomac cleft;
Wakeful I mused, while in the street
Far footfalls died away till none were left.

There are very few pieces in the volume so direct in expression and so natural in thought as this; but there are single lines, couplets, or quatrains in which genuine power is shown as well as genuine feeling. Take, for instance, the two following lines at the end of "Misgivings," the second piece in the volume:

"And storms are formed behind the storm we feel;
The hemlock shakes in the rafter, the oak in the driving keel."

Here is another good couplet from a later poem:

"All wars are boyish, and are fought by boys,
The champions and enthusiasts of the state;"

and the following line from "A Utilitarian View of the Monitor's Fight,"

"The clangor of that blacksmith's fray,"

is not without a touch of imagination.

But these brief citations only serve to show how much better a very small part of the book is than the whole.

It is a misfortune that the special events which have moved Mr. Melville to write are the same, in several instances, which have already been put into verse by other writers, and that these earlier poems, already more or less familiar to the public, are necessarily brought into comparison with his. Thus his brief verses entitled "Shiloh: a Requiem" almost inevitably suggest, by contrast, the very striking poem of Mr. Forceythe Willson's, of which a great part of the scene is laid on the battle-field of Shiloh, called "The Old Sergeant." The author of this poem has not as yet won the position in literature which may be predicted for him if he be really master of the qualities of which this poem gives evidence. We doubt if the war has inspired a narrative poem more imaginatively conceived, or more vigorously told. It is the work of an imaginative realist, and its power and pathos lie in the straightforward truthfulness of the poet in dealing alike with the spiritual and the material elements of the story. The narrative is conducted with great simplicity; it is entirely free from "padding" or "rhetoric," and it is of so much interest that the defects which exist in it as a work of art may readily be overlooked. It first appeared, in 1863 (?), in the *Louisville Journal*, and has since been widely copied; and we are glad now to read it again in a form better suited to its merits.

RELIGION AND POLITICS.*

No thoughtful man can now read Burke's writings—the works of certainly the most brilliant and imaginative political genius of the last century—without remarking the change that has come over the treatment of political topics since his time. The change is not so much one of method as of point of view. With Burke politics is not a science with laws derived from the nature of man in society, and his constitution as an individual being, so much as a compilation of rules drawn from experience, and a study of institutions handed down from the past and invested with the authority of antiquity and long existence. His reasonings are mainly of the *à posteriori* sort. He rarely trusts himself to the guidance of original principles. He treats society and government as matters of pure convention; he has little regard for abstract rights, and no words are too bitter for him to use in regard to what he calls "the delusive plausibilities of moral politicians." He has nothing but scorn for the assertors of the doctrine of the rights of man as against established prerogatives. It is the rule of safety with him, *stare super antiquas vias*. This manner of considering political questions was due in part to his native temperament, in part to the reaction caused in his reverential, pure, and tender nature by the excesses and atrocities of the French Revolution, against those principles and dogmas which were misemployed by the revolutionists as the motive and excuse of their crimes.

But the character of his political opinions, when compared with that of the theories now held by the most thoughtful men, marks distinctly the greatness of the change which has been wrought in political speculations during the present century. This change is in part one of the results of the operation of ideas generated by the French Revolution; but is due in greater measure to the continued existence and prosperity of our American system, a system more novel and unexampled in history than is yet fully recognized, and which has given proof of the possibility of bringing into effective operation, for the advantage of a community, truths which had previously been relegated to the domain of theory and fancy, the very truths which Burke classed with the delusive plausibilities of moral politicians.

Until the establishment and development of our American system the dependence of politics upon ethics had been treated as mainly speculative. The empirical science of practical politics was divorced in fact from the moral law. The relation between one and the other was acknowledged only in vague terms, as in the assertion, to cite the words of Washington in his Farewell Address, that, "of all the dispositions and habits that lead to political prosperity, religion and morality are indispensable supports." But the development and progress of our commonwealth have shown that religion and morality are something more than indispensable supports, they are the only source of those principles which, applied to politics, give to our system its distinguishing features and essential character.

Our political system, being one of rights, rests necessarily on a moral foundation. All abstract political propositions in America are equally and primarily moral propositions. The theory on which our government is made is a moral theory brought into practical relation with the needs of society by a number of ingenious devices. The mere political forms—the political machinery of our system—contain little with which past ages have not been acquainted, but its novelty lies in the motive power of its machinery, in the ideas which vivify its forms. The whole authority of our political governmental institutions is derived from their being directed to a moral end; and it is to their fitness for this end that they appeal for validity. They are in this respect absolutely original. All other existing governments derive from force, prerogative, or convention. Ours alone starts with the proposition that morals and politics are inseparable, and that the principle and end of government are both alike of a purely moral nature. As morals furnish the rule for individual conduct, so, in America, where the nation is regarded as simply an aggregate of individuals, they are appealed to as the rule for national guidance.

The immediate conclusion from this fact is that unless the community in its individual members acknowledges the supremacy of the moral law, and lives in accordance with it, the political system of which the government is a part cannot be maintained. The proper discharge of political and patriotic duties in a community such as that formed by the people of the United States must then, it is evident, be regarded as a matter of religious concern. It depends on the same considerations as the discharge of duties of a strictly personal nature. The virtue of a political system may in truth be tested by this rule. A system is good absolutely only so far as it appeals to the highest sanctions and evokes the highest motives of action in the members of society. The support of a political system based upon morals depends immediately upon the religious character of the individuals for

* "The Works of the Right Hon. Edmund Burke. Revised Edition." Vols. I.-VIII. (XII.) Boston: Little, Brown & Co.

whose benefit it is framed. The same motives that induce men to the practice of virtue in domestic and social affairs apply to their conduct as members of a political organization. There is no power in abstract principles to save a nation; it must be saved by the application of principles to the life of its members. Patriotism, then, here in America, takes on a wide meaning, and embraces the whole field of action. It is not confined to great exigencies, to unexpected occasions, or to those

> "Awful moments to which heaven has join'd
> Great issues, good or bad, for human kind;"

but it is expressed in the common course and humble functions of ordinary life, and is the inspiration of daily action as well as of the rare deeds of noblest self-sacrifice. The view of the duty of a citizen which would limit it to the performance of merely civil functions—to the casting of a ballot, or the taking part in meetings for the selection of candidates, or the discussion of policy—is wholly false and dangerous. An American's duty to his country is discharged only by the full performance of all those acts which may in any degree promote the interest of the community of which he is a part; and only by him who recognizes that obedience to the law to love his neighbor as himself as the standard of patriotism and the first of political obligations. Religion and politics in a community like ours become one. It is impossible to divorce them without imperilling the efficacy of the religious spirit in all the relations of life, and destroying the essential elements of our political system. Politics cannot be kept out of the pulpit if true religion is found in it. They must be treated as of religious interest. Christianity is bound to politics not by the ties of a state church or ecclesiastical authority, but by an indissoluble union of principle and end.

"If the end and the key of history," says Goldwin Smith, "is the formation of character by effort, the end and key of history are the same with the end and key of human life." The truth of this hypothetical assertion is manifest in American society. The end and key of the life of the nation and of the individual are the same. The life of the nation is dependent on the character of the individual. The object of our political system is to form a genuine community which shall secure to its members whatever is requisite for the best development of each and for the formation of a constantly advancing type of character. It has no other legitimate end. All its machinery, all its detail, however obscurely and remotely connected with this end, are nevertheless ideally directed towards it. The complication of its working gear, the apparent absence of any moral element in many necessary political arrangements and in many necessary laws, the large part which immoral men play in civil and political affairs, the apparent confusion of interests, the possible conflict of rights, the obscuring of principles by the passions and selfishness of men—these, and many other similar things, are apt to lead the thoughts of men astray in regard to the permanent and essential elements in our system which underlie these shifting and perplexing circumstances. But it should be considered that many of these things are evils only in appearance, and that of the real evils most are the results of inherent qualities in human nature, the action of which is not to be prevented at once or otherwise than by very slow degrees. The imperfections in our system are indications of the imperfect stage of Christian civilization which mankind has reached. It may be that our system will break down, that the hopes of the lovers of mankind are destined in our fate to a new and bitterer disappointment than ever before befell them; but should this be the case, it will prove not that the principles from which our system draws its life are wrong or false, not that our faith in them was misplaced, but only that mankind has not yet reached through effort to that height of character which was required for the successful maintenance of a Christian commonwealth and the existence of a true brotherhood. The fault will have been in the men, not in the principles. *They* will stand pure, firm, unshaken, the solid basis upon which the future of mankind is to rise, in perfecter proportions, to the fulfilment of hope and of desire.

VENETIAN LIFE.*

This is a delightful and excellent book. Indeed, no better book about Venice has been written since Beckford's sketches of the city, just before the French Revolution. The contrast between the pictures drawn by the two authors is eminently interesting, not only in regard to Venice itself, but also in respect of the tone and spirit of their works. The one is of the Old World, the other of the New; the one imbued with the qualities characteristic of the aristocratic society of the past, the other with those of the democratic civilization of the present. There is a curious fortuitous point of resemblance between the two, in the fact that while Beckford describes the ancient condition of things just before the fall of the Republic, Mr. Howells, in like manner, tells us of the life of the Venetians and the aspect of their city under conditions which have suddenly been brought to a close even while his volume was passing through the press. His work has thus an historical value which he scarcely anticipated for it; but no one, not native to the place, will rejoice more heartily than he that his pages relate to the past, and not to the actual present, of the city which has long been as forlorn as she is beautiful. There is fair promise now for a happier Venetian life than any that has been known for centuries. It will be no loss to Venice to add her historical glories and pride to the common stock of Italian memories, and to merge her individual claims to distinction in the broad, national titles of a free and united Italy. The sea will once more revisit her canals with gladness, and her beauty will revive in fresh splendor as she throws off the chains and the sackcloth in which she has so long sat mourning.

Alike to him who has visited Venice, and to him who has not, this book may be recommended; for Mr. Howells has not only the best qualities of a pleasant travelling companion, but those also which are most desirable in the traveller who recounts his story. To have lived in and loved another country, while still true to one's own, is in itself a liberal education. Travels are almost like autobiographies in their revelations of the character of their authors, and this book shows that its writer possesses the sympathetic imagination and cultivated intelligence which are the first requisites in one who undertakes to describe foreign life. These make his observation fruitful, and free his perceptions and feelings from that bondage of habit, custom, and use which controls most men as with the authority of an absolute law of nature. The conceit of travellers with their own country is a trait as old as travelling itself, and we Americans have much to answer for in this respect. Travellers are still, for the most part, little better than ignorant barbarians, with little power and less disposition to comprehend sympathetically and understand intelligently the lives of a foreign race. But Mr. Howells possesses, besides the good qualities we have already mentioned, the penetrative insight of a poetic temperament, together with good common sense and sound moral feeling. His book reminds the reader of Hawthorne's "Our Old Home," for, in its degree, it does for Venice what that delightful work of the rarest genius accomplished for England—presents a picture of it as it appears to an American of the present day, whose nature is receptive of true impressions of the external and material aspects of life, and not less of their internal and spiritual significance. America is beginning, in such books as these, to judge the Old World; to measure it by her new standard, and to mark its slow progress toward that future on which she has already entered. "Thank God!" exclaims Mr. Howells, at the end of one of the sad, picturesque chapters of his book, "thank God! that the good old times are gone and going! One learns in these old lands to hate and execrate the past."

One charm of Mr. Howells's book consists in the genial humor with which it abounds. The play of his fancy is graceful and original, and he has such keen appreciation of beauty and excellence, and his descriptive powers are so good, that his pages partake of the pleasantness of his experience and reproduce the very charm of the scenes he has beheld. In his three years at Venice he learned much that most foreigners remain ignorant of, and if at the end of his stay he felt that he had still much to learn of the more intimate spirit of the people, he but shared in the feeling of every sensitive man who dwells, however long, as a stranger in a foreign land. The native instinct can never be supplied. Mr. Howells had learned enough, however, to make a good book. For, in truth, we want to have the American view of Venice and not the Venetian, and through our author's eyes we see things as we might see them through our own if we too had the good fortune to live in an apartment on the Grand Canal. The book, besides, shows that Mr. Howells has made himself familiar with the history of Venice, and though there is no display of antiquarian or historical learning in it, the reader may discover frequent evidence of the results of learning unobtrusively worked into the texture of the narrative with the conscientious honesty of a scholar and the skill of an accomplished writer. Mr. Howells's style has a pleasant flavor of individuality, and is at times remarkable for its beauty and finish. He knows how to write gaily without levity, and seriously without solemnity.

Such a book is not fairly judged by extracts from it. It must be read through; and it is a rare pleasure to be able to recommend it unreservedly to those of our readers who have any disposition to visit or revisit the unique picturesqueness, the unrivalled beauty, the strange grandeur of Venice, and to review or first acquire associations with the city that stands alone in the "lake of the heart," as she stands solitary in the waters of her own lagoons.

OFFICIAL DECORUM.

WE should much prefer to speak in terms of entire respect of the President of the United States, and to avoid making any issue personal to him, while opposing the policy which he advocates. It has not generally been difficult for men of fair and candid minds to do this. There was nothing in the demeanor of the earlier presidents which afforded any ground for personal criticism, although such attacks were freely made upon them by reckless and overheated men. Gen. Jackson's rough military manners trenched somewhat upon the traditional dignity of civic office; but even his enemies could not fail to respect his manliness, however much they might detest his acts. Presidents Van Buren, Tyler, Polk, Fillmore, Pierce, and Buchanan were all gentlemanly in their manners, and the four first-named dignified in their conduct of affairs. So indeed, as a rule, were the two others, although their tortuous policy compelled them occasionally to humiliate themselves before the world, and Mr. Buchanan began the bad practice of stump-speaking. Gen. Taylor was a man of unaffected simplicity, which gave to his manners a kindly dignity more attractive even than the formal polish of cultivated men. Mr. Lincoln, also, though awkward and ungainly in appearance, had a genuine manly nature, a forgetfulness of self, and a tenderness of feeling which the country valued more than external manners, and which deserved universal respect.

But Mr. Johnson, who began no lower in the scale of life than Mr. Lincoln, and who has had far more opportunity for cultivation, seems unable to rise above his early position. Better acquainted with the forms of social life than Mr. Lincoln, Gen. Taylor, and Gen. Jackson were, he lacks the native dignity which made them superior to their manners. He has, indeed, no other dignity than such as may be learned from a dancing-master. He knows how to enter a room; and is not so troubled to dispose of his hands and feet as was his simple-hearted predecessor; but where in him shall we find the largeness of view, the patience with adversaries, the temperance of speech, the forgetfulness of self, that self-restraint which is the first and greatest quality of a gentleman, which so uniformly characterized Abraham Lincoln?

Mr. Johnson is devoured by an egotism of which he is painfully conscious, but which it is impossible for him to repress. Accordingly, he compromises the matter by doubling the number of his allusions to himself, first reminding his audience of his own heroism, his sacrifices, his sufferings, his patriotism, his fidelity to his friends, his long services, his devotion to the cause of the masses, and so forth, until, suddenly checked by a just suspicion that his auditors are getting satiated, he seeks to restore their equanimity, and to regain their respect, by recurring to his humble origin, his "plebeian birth," his general unworthiness, and by assurances that "the humble individual who now addresses you" is conscious that he is but a servant of the dear people, a representative of the "toiling masses," a mere citizen—nothing, in spite of his unparalleled sacrifices and services, but a man.

> "I am well aware that I am the 'umblest person going," said Uriah Heap, modestly, "let the other be where he may. My mother is likewise a very 'umble person. We live in an 'umble abode, Master Copperfield, but have much to be thankful for. My father's former calling was 'umble. He was a sexton."

The frequency of Mr. Johnson's references to his "'umble calling" in early life is too great for sincerity. Like a boy whistling down ghosts, the vehemence with which he boasts of his plebeian origin shows that is a sore spot with him, and the pains which he takes to remind us that he was a tailor only prove that he is constantly haunted by that unwelcome fact, and tormented by the conviction that everybody is thinking about it. His address to the tailors of Philadelphia was an almost ludicrous illustration of his discomfort. Such elaborate assurances that he felt their particular visit to be an honor, such painful efforts to show that he was proud of associations of which every word showed that he was at heart bitterly ashamed, make most ridiculous and painful passages. Nobody but Thackeray can do justice to such a magnificent contribution to his "Book of Snobs."

The delicate touches of the 22d of February speech, that "triumphant" effort, as Mr. Seward termed it (taking just then, we imagine, a prodigious pinch of snuff), will not be forgotten. The satisfied ambition which, having led up from alderman to president, had no more to ask; the presidential back and stomach, which, we were assured, were content with being respectively well clothed and bountifully filled; the sufferings of the past, the proffered martyrdom (always with a well-filled stomach, for is not the fattest ox best for the slaughter?) for the future; and, finally, the tears which the orator promised to shed "about that place (*i. e.*, in that neighborhood) provided the American people would gather around to see"—who is sufficient for these things?

The more recent speeches of the President have been mainly extracts from this great oration put into language but slightly differing from the original. Their egotism is something very interesting. Some one who took the trouble to count, states that the last speech at Washington used the pronoun in the first person singular one hundred and forty times in one column, and we have ascertained the number of allusions to the speaker himself in the half-column speech at Philadelphia to exceed forty. These speeches are also full of the same boastings over the past, and the same hollow affectation of pride in a low origin, which have already excited our comment.

This is a painful spectacle for all clear-sighted and proud-spirited Americans. *We* were not ashamed or afraid of Mr. Johnson's humble position in early life. We voted for him knowing perfectly well that he had been a village tailor. But we all supposed that he accepted his lot, both in the past and in the present, with quiet dignity. Had it been foreseen for a moment that he would humiliate himself and his constituents by thus wriggling under a matter-of-course truth, he would never have been thus honored.

It is possible that in this mortified vanity may be found the key to Mr. Johnson's extraordinary inconsistencies, and especially to his complete change of tone towards his Southern brethren within the last two years. He has always writhed under the sense of his plebeianism, and under the contempt with which he knew himself to be regarded by the Southern gentlemen whom he affected to despise, but whom he secretly envied. On his accession to power, his first impulse was to avenge himself upon this class, and with this idea he excluded them from the general amnesty, and bitterly, we had almost said brutally, insulted them when, *as a class*, they sought to obtain an extension of pardon to themselves. But to a person of this temper it was the sweetest triumph of his life when these men, as *individuals*, gathered around him crushed, humiliated, abject, waiting eagerly for his smile, echoing every sentiment that fell from his lips, pouring delicious flattery into his ear, and imploring from him personal favors. Then, for the first time in his life, Andrew Johnson felt himself recognized not merely as an equal, but as a superior, by the men who were his only ideal of chivalry and aristocracy, and a raging envy of whom had gnawed his heart for forty years. The temptation to mould his policy so as to secure the continuance of this delightful adulation was irresistible. All obligations of fidelity, consistency, and honor melted away before the sweet vision of becoming a recognized Southern gentleman.

We comment on these things with extreme reluctance. Of course, nothing can be said about them that will not seem intensely personal, and we have, therefore, refrained, up to the present, from criticizing anything in Mr. Johnson's career beyond his public acts. We condemned in strong terms the earlier imputations cast on him personally by his opponents, and said what we could to soften the effects even of the speech of the 22d of February. We have been sincerely anxious all along, not for his sake, but for the sake of the great country which he represents, to have whatever either in his character or manners seemed to render him unfit for the position he fills, passed over either unnoticed, or with as little notice as possible. He has, however, by the tour which he has undertaken, and into which he has been led against the dictates, we believe, of his own earlier judgment, so completely thrown off official restraint, and displayed so much contempt not simply for the peculiar political opinions of the great mass of the Northern people, but for the ordinary decorum of

civilized life, that it will not do to leave foreign nations or posterity in ignorance of what the Christian public of this country and this age think and feel about his sayings and doings. Some of his jokes and allusions, as well as those of Mr. Seward, have been of such a nature as to render it impossible for us any longer to be silent and let the world suppose that these two gentlemen are fair representatives either of our civilization or of our religion. We do trust that such a rebuke will be administered to them at the coming elections as will secure us a long term of official decorum. This is a most painful and nauseous subject, and we willingly take leave of it.

THE PRESIDENT'S BROOM.

The President is making a vigorous use of the opportunity afforded him by the recess of the Senate to sweep the public service clean of all persons who do not approve of "his policy," and put in their places those who do. His friends justify him on the ground that he is exercising a power conferred on him by the Constitution and sanctioned by usage; and that, even if it were admitted that holders of the minor offices of government ought to be exempt from dismissal on account of their political opinions, those who claim the benefit of this exemption must show that they have themselves been impartial and have refrained from active displays of political partisanship and of hostility to their official chief.

The strongest technical argument put forward against his present course is that based upon the clause in the Constitution which gives him power "to fill all vacancies that may *happen* during the recess of the Senate;" the inference being that he has not power to fill vacancies which he has himself created, inasmuch as the word "happen" contains the idea of chance and excludes the idea of design or premeditation. There is very little doubt that the framers of the Constitution so understood it. We know that Alexander Hamilton so understood it; and there is just as little doubt that the word has retained this sense down to our own day. The *World* endeavored a week or two ago, with the usual accompaniment of abuse, to make out that "happen" was simply a synonym for "occur," and that, as used in the Constitution, the "happening" of a vacancy meant the "occurrence" of a vacancy, however created. Philological discussions carried on half in slang and half in billingsgate by red-hot political partisans are generally amusing rather than profitable, and the discussions we have had about the meaning of this word furnish no exception to the rule. The truth, as it is understood by those to whom the great object of existence is not to prove Andrew Johnson a saint, is that the root sense of "happen" is "to come to pass by accident," or "without being foreseen or designed;" and that it is quite true that "happen" is synonymous with "occur," but only when "occur" means "to occur accidentally," which it very often does; and that "happen" is never used, and never has been used, to designate the coming to pass or taking place of things which have been deliberately planned or willed and put into execution. The hanging of a criminal does not "happen" as regards either the government or the judge. Nothing "happens" to a man which he foresees and brings about. If a general orders an attack to be made on a certain position on a certain day, he cannot say that the attack "happened." If we deliberately went to Boston last Monday, we cannot say we "happened" to go to Boston; if we there threw ourselves designedly off the State House, we cannot say that we "happened" to fall off, though we might say that our fall "occurred." We think it may be safely said that no authority can be discovered for any use of the word which will exclude the idea of accident; and this, at any rate, may be said, that if in some senses of the word the idea of accident is contained in it only by implication, the idea of design is certainly never contained in it. When the President dismisses a man from his office, it cannot be said that a vacancy has "happened," though it may be said that a vacancy has occurred. And, in fact, if the Constitution meant by vacancies "happening" during the recess of the Senate all vacancies which he might be pleased to create, the clause immediately preceding, making "the advice and consent of the Senate" necessary to all his appointments, would have been a mockery. It would, in fact, deprive the consent of the Senate of all importance whatever, unless it sat every working day in the year, and would virtually lodge the uncontrolled power of appointment in the President's hands. And this is in reality the power which his supporters now claim for him, and which he is now exercising. Every Federal office in the United States will probably, or will if the President chooses, under his own theory of his prerogative, be filled a month hence by persons about whose appointment the Senate has not even been consulted, and may be held by them, whether the Senate pleases or not, one year from this date. Can any honest man whom politics has not driven clean daft suppose for one moment that the framers of the Constitution meant to provide for such a result as this in the use of the word "happen," or that they did not mean simply to provide that such scattering vacancies as death or resignation might bring about during the recess should be filled in an exceptional way, so that the public service should not suffer?

There is another and very important consideration which has been entirely overlooked in this discussion as to the meaning of the Constitution. It is entirely forgotten, apparently, that when the Constitution was framed it probably never entered into the head of any human being that all public servants, from the highest to the lowest, would be dismissed from office whenever they happened to differ in political opinions from the President. It was, we believe, never even suggested in the debates of the period that any president would be likely to be guilty of so gross an abuse of power. Nothing like it had then been seen or heard of. In monarchical countries, it is true, open opposition to the sovereign would not be tolerated even in a tide-waiter; but then the sovereign has personal claims on his allegiance which were never claimed for the President. On the European continent the public servant is and always has been, in theory as well as in practice, the personal servant of the monarch. But in the worst days of Tory rule in England an underling was never dismissed from office openly and avowedly because he differed politically from the prime minister. When men who have votes are turned out of office there for not using them for the support of the ministry, great care is taken to conceal the act or provide another reason for it before the public; and this, be it remembered, in a country where the votes of dependents have always been regarded as more or less the perquisite of the landlord or employer. The theory of the American Constitution has always been that a man who takes office under the government is the servant of the people, and that by doing so he loses none of his political independence and incurs no responsibility to anybody for his political opinions. We have even departed so widely from the European nations as to proclaim that even on becoming a soldier a man does not cease to be a citizen, and to concede to men whom a commanding officer may at any moment, through sheer caprice, tie up by the thumbs, or buck and gag, the right of voting without fear or favor at the national elections. But to the civil servants of the Government President Johnson and his followers deny even the poor right of thinking as they please. They are not satisfied with their votes; they insist that they shall think favorably of the President and his acts, or be deprived of their livelihood. Does anybody suppose that even Louis XIV. in his worst days did what this "man of the people" of ours, this fortunate and meritorious tailor, as he is fond of boasting himself, is now doing—send round circulars to poor devils of clerks and messengers, either to extort from them hypocritical expressions of approval of his acts and of attachment to his person, or to force them to sacrifice their bread to their consciences?

We are told that the President has constitutionally the power of dismissal; and we are informed that Daniel Webster, and other great authorities, confessed that it would be absurd to make the President responsible without giving him full liberty to get rid of his subordinates whenever he saw fit. This is very true. If a man is saddled with the performance of a certain duty, he must be allowed to select and to punish those who are to act under him in the discharge of it. But this is one of the numerous cases in which fine words are made to cover up fallacies. For what is the President responsible? For the faithful execution of the laws, the proper and due administration of the public service. Is it necessary that every man he employs to assist him in this should hold his opinions on the question of reconstruction? Does it not, on the contrary, indicate the grossest indifference to the interests of the service to turn out everybody in it, and who has any experience of its duties, and fill the places with men many of

whom have distinguished themselves, during the past four years, by the assistance and countenance they have given to the enemies of the Government? The responsibility which the framers of the Constitution sought to fasten on the Executive was responsibility for the due discharge of the duties assigned him, and not for the framing of lines of policy, and for the unanimity of the civil service in support of them. The grand mistake which lies at the bottom of Mr. Johnson's unfortunate course is, that he has something to do with the legislation of the United States, and may, on great occasions like the present, even take it out of the hands of Congress. But everything that could be done was done by the framers of the Constitution to guard against this error. They strictly defined the President's duties, and made them strictly executive. A proposition was even made in the convention to deny him, in express terms, the exercise of any power "legislative or judicial in its nature," and was only abandoned on Mr. Pinckney's representation that the restriction thus sought to be placed on him was contained in the clause empowering him "to carry into effect the national laws." Forty years elapsed from the foundation of this Government before any President thought of dismissing men from office for anything but misconduct, and yet in that interval the country had passed through many exciting political contests, in which the President was the butt of much abuse and opposition. It was Andrew Jackson who first got hold of the idea that not only may a President of the United States have opinions and bring them to the attention of the legislature, but he may frame a "policy," and use all the power his office places in his hands to carry it out in spite of Congress, and to fill all public offices with his creatures; and we shall only say that Mr. Johnson follows his bad example without having the excuses that Jackson had, that the people elected him for the office he filled, and had done so with full knowledge of his temper and capacity.

We admit that it is the political parties, and not the President for the time being, who are fairly chargeable with the perpetuation of the abuse which Jackson originated, and they have all shown in their manner of executing this newly-discovered power about equal indifference to the public interests. We admit, too, that the present Congress does not by any means come into court with clean hands in this matter, and that, whenever the opportunity has offered itself, it has shown itself as ready as the President to enforce adhesion to its views by the penalty of dismissal, as in its ridiculous crusade against Mr. Harvey. But these political parties and Congress have excuses which Mr. Johnson has not. As long as the President remains the head of the party which elected him, he may be fairly called the representative of the majority—in other words, of the leading power of the country. Its will is, for the time being, the will of the country, and, although we hold the dismissal of minor officials who are not of its way of thinking to be a mischievous and corrupting practice, yet it may be said, with a good deal of plausibility, that a President so situated is, in dismissing political opponents, only providing himself with the means of more effectually carrying out the wishes of those who elected him. So, also, when Congress dismisses a clerk or stops an ambassador's salary, it may fairly say, We are the legislature; our will is the law; it is this man's business to see that our will, legally expressed, is executed. If he disagrees with us, reviles us, and has no respect for us, he is not likely to fulfil his duty; therefore he ought to make room for some one in whom we have confidence.

But Mr. Johnson has cut loose from the party which elected him; he refuses to be any longer the exponent of its will, and declares he will go a way of his own. He has been performing legislative acts of the very highest importance, and denies the right of Congress to alter his work or to add anything to it. He therefore may be said, for the present, to stand alone. It may be that the country has come to agree with him; but this can only be ascertained by the elections, and for the elections he has not waited. So that the changes he is making in the public service he is making in his own personal interest, and for the purpose of giving greater force and effect to a policy of his own devising, and which the national legislature has declared marked by illegality, by danger, and by usurpation. In short, the traffic in government offices, even when carried on by parties, we hold to be mischievous and debasing; it is doubly so when carried on by a single man; and if we did not hope that the abuse of power which Mr. Johnson is now committing would hasten the application of a remedy to this crying evil, we should look on him as one of the most dangerous persons who was ever placed at the head of a free country.

MR. BEECHER'S MAGNANIMITY.

Henry Ward Beecher has written a letter to the committee of the Soldiers' and Sailors' Convention, about to meet at Cleveland, giving his reasons for desiring the immediate admission of the Southern States to their place in Congress. The letter is attracting a good deal of attention, as perhaps the most taking and specious statement yet made of the Johnson position—a statement such as it would be well for Mr. Johnson if Mr. Seward could supply or he himself could utter.

Now, the fault of the letter is not that its statements are not true, or that its arguments are fallacious, but that nearly every line of it *suggests* false inferences, and this it is, added to the character of the author, which makes it likely that it will do a good deal of mischief. Mr. Beecher does not set forth the arguments which he combats, or describe the policy which he condemns. He simply states certain general truths, perfectly harmless in themselves, considered apart from all the circumstances of the case, but which, published at this particular juncture, and addressed to a political convention, are calculated to create a most erroneous impression of the aims of the Union party.

There is no dispute between President and Congress as to whether there is any place in our system of government for a State except in the Union. Nobody, except Thaddeus Stevens and one or two others, has ever proposed to exclude the Southern States *permanently* from the Union. No party has ever recommended any such course. One hundred men, we venture to assert, cannot be found in the Republican ranks who do not believe, as Mr. Beecher believes, that the early restoration of all States to their Federal relations is necessary to our political safety and prosperity. But all parties are agreed that, after all that has occurred, justice and sound policy require the imposition of certain conditions on the revolted States before they can be readmitted. Mr. Johnson admits this, Mr. Seward admits it, Mr. Beecher admits it; everybody except the extreme Copperheads admits it. Up to this point all went merry as a marriage bell in the ranks of the Union party. But here arose the two grand causes of division; both of them of tremendous moment; both of them as weighty and grave as ever nation sat down to consider. The convention of soldiers and sailors which is to meet at Cleveland, and to which Mr. Beecher addresses his letter, will meet to discuss these two points, if they meet to discuss anything at all. There is nothing else to discuss. It is about these that the country is agitated as it has hardly ever been in its history; it is on these that the coming elections are to turn; it is on these that the public needs all the light it can get from its ablest moralists, lawyers, and politicians. And yet neither of these does Mr. Beecher's letter fairly meet. Of course he is at perfect liberty to choose his own topics and his own manner of discussion; but when his letter is used, as it is, as a campaign document, and lauded in the Administration papers as a complete solution of the great problem of the day, we feel bound to call the attention of his readers to the fact that it is simply a string of half truths tricked out in that marvellous style of his which renders it almost impossible for him to touch anything without adorning it.

What are these two issues which divide the country? They are simply these:

1. It being agreed that the Southern States were not entitled on laying down their arms to immediate admission to their old powers without condition, whose duty is it, under the Constitution and according to the jurisprudence of the United States, to fix what the conditions of readmission shall be? This is a constitutional question, as important as was ever submitted to a civilized community, inasmuch as its decision will form an important precedent, and may influence the course and tendencies of our Government for ages to come. Mr. Beecher passes it over in complete silence.

2. Supposing it to be Congress, the legislature of the United States, which is rightfully charged with the duty of fixing these conditions, are the conditions which it has proposed just, reasonable, politic, and humane? This is a question partly political and partly moral. Mr. Beecher says there can be no danger of Southern predominance in our

Government hereafter owing to the purification which the war has worked in our political life, and to the great poverty, abasement, and ignorance of the South. Granted that this is true, it would still remain manifestly unjust and inexpedient for us to allow the South to gain in political power *as a result* of the rebellion. We are not in favor of punishing them for their great crime, but we are utterly opposed to rewarding them for it. They have taken, in most of the States, elaborate legislative precautions to secure the permanent ignorance and degradation of the black race. Mr. Beecher, however, urges us not only to allow them to send white men to represent in Congress this large class of the population whom they exclude from all share in their political life, but to do it as the direct consequence of their having tried to overturn the government, and having killed 200,000 of us in the attempt. This is pushing the duty of forgiveness a little too far for practical purposes. It may be incumbent on Christian men to forgive those who rob them; but it is not incumbent on a Christian state to settle annuities on its repentant thieves and rioters. There are in politics certain limits to magnanimity, and there is such a thing as sham magnanimity. The unenfranchised millions of the South are, before God and man, entitled to as much consideration in the eyes of those whose duty it is to arrange terms with its white men as the white men; not more we will concede, but at least as much; and we hold it would not only be inexpedient but immoral for us, having the power to refuse, to permit their enemies and oppressors to vote for them in our legislature as if they were citizens while treating them at home as if they were serfs.

When Mr. Beecher calls on us "to dismiss from our minds the idea that the freedmen can be classified and separated from the white population and nursed and defended by themselves," he is guilty of something very like a sophism. One great cause of the present trouble is that the South insists, in spite of the warning of history, in "classifying the freedmen," and bases its classification on the absurd distinction of color. Mr. Beecher and those who agree with him insist on our concurring in the arrangement. It is just because we are determined that the freedmen shall not be classified that Mr. Beecher has found it necessary to write his letter, and that the Civil Rights bill was passed, and the Freedmen's Bureau is in existence. We, too, are in favor of having the negro work out his own salvation. We would have him tread the thorny path to civilization as other races have trodden it: with bleeding feet, if he cannot procure himself shoes; with naked back, if he cannot buy clothes; with much stumbling, if God has not given him good eyesight. Every disability of brain or muscle which the Creator has inflicted on him, we are content that he should bear; but we insist that when he enters the lists to strive for knowledge or fortune or fame men shall not weight him in the race; that Southern constables shall not rush up and fill his pockets with lead and throw pepper in his eyes in the shape of acts of the legislature forbidding him to buy or lease land, to open schools, to prosecute or defend freely in the courts, to learn or pursue certain kinds of industry, to carry arms for his defence, to debate publicly with his fellows upon the means of bettering his condition. Congress has not asked the suffrage for him. It has refrained, many think wisely, from trying to force the South into bestowing political rights upon him, because it is still a matter of dispute, though God knows it ought not to be so in America, whether a man needs political rights to secure him in the pursuit of life, liberty, and happiness; and because it is doubted, and with better excuse, whether the negro is yet sufficiently trained to use the franchise even for his own benefit or that of his neighbor. But it is no longer a question in any civilized country whether a man is fit for civil rights—whether any human being can be too mean or too poor or too stupid to have the policeman stand guard at his door, the judge listen to his plaint, and all honest callings and honest dealings open to such energy or talent or ambition as God may have bestowed on him. Congress has, therefore, asked for him those common human rights; and since the history of the South, of Jamaica, as well as the history of all other countries, has shown the difficulty of getting masters whose slaves have been liberated by force to admit them to the full enjoyment of the rights which freedom *ought* to bring with it, it insists on preventing classification by Federal legislation until the South agree to prevent it by State legislation. And yet Mr. Beecher gravely asks *us* to give up the attempt to "classify" the freedmen. He says:

"Churches in the North crown every hill, and schools swarm in every neighborhood; while the South has but scattered lights, at long distances, like light-houses twinkling along the edge of a continent of darkness. In the presence of such a contrast, how mean and craven is the fear that the South will rule the policy of the land!"

We believe this multiplicity of churches at the North as compared with the South is no new thing. The disparity was as great fifty years ago as now, and yet we believe the "slave power" grew very steadily during the whole of that period, and would have ruled us to this hour, in spite of all the preachers and schoolmasters in the North, if it had only had a little more patience and moderation. It is not unnatural for the pastor of Plymouth Church to believe in the power of the pulpit, but we hope we may be pardoned for asking, if churches and schools are such a tremendous political force as against the benighted and ignorant, what is the use of the Constitution or the laws?

Mr. Beecher has preached much and nobly and wisely against slavery, but neither he nor all the preaching in the North could have wrought its destruction. Unfortunately for his arguments, and unfortunately for his country, the moral and religious influence of the North had to be backed up by a million of men in arms, and cemented by torrents of blood, before a single slave was really free.

NOLI ME TANGERE.

ENGLISH ANAPESTS.

Luscious and sorrowful, bird o' the roses,
To the vexed March winds prematurely singing,
Would that in warm hands I could have held thee,
Kept from a withering chill thy timid heart.

Now have I terrified, now have I pained thee,
Now with stiffening blood have I tangled
All thy bosom's tremulous plumage,
For a thorn, for a thorn was against it.

C. B. C.

PARIS GOSSIP.

Paris, August 17, 1866.

The Empress of Mexico has been staying very quietly at the Hotel du Louvre, which establishment, from the elegance of its appointments and its proximity to the Tuileries, has come to be the usual stopping-place of majesties, royal and serene highnesses, and members of other exalted classes of humanity who may chance to visit Paris *incog.* Her Mexican Majesty is believed to have come over to Europe for the purpose of managing important negotiations with "the Sphinx," the Emperor Maximilian having his hands too full to be able to come in person, and not caring to entrust to any subordinate envoy the delicate task confided to his wife. It appears that berths were taken on board the French packet that brought over the "illustrious lady" for "the Empress of Mexico and her maid, six attendants and eight servants;" that the passage-money paid for the party amounted to 37,000 francs; and that the Empress, in token of her satisfaction with the accommodations provided, left with the captain a sum of 6,000 francs for distribution among the crew. The Empress Eugénie visited the Empress Charlotte immediately on her arrival, and the latter next day drove over to St. Cloud in an open carriage, with outriders, sent in for her by the former. Her Mexican Majesty was received at the gate of the garden by the Prince Imperial, and by the Empress Eugénie at the door of the palace. The Emperor met his "august" visitor at the door of the reception room, and escorted her to his sanctum, where she had a private talk of an hour with him, only the Empress Eugénie being present at the interview. She is to remain here about ten days, and will then make a short visit to her family at Brussels, after which she will embark at St. Nazaire for Vera Cruz. It is said that the Empress, who possesses great energy of will, surprised her husband one day lately in the act of writing a formal act of abdication; that she seized the pen from his hand and tore up the paper, promising him at the same time that she would go to Paris and make a last attempt to procure from Napoleon the aid which should enable the new empire to maintain its ground against the anarchists. She is reported to demand of the Emperor to delay the departure of Marshal Bazaine and his army, and to guarantee a loan. The feeling of the French people is not favorable to the Mexican Empire, but it is thought that the fair negotiator will obtain a part of her demand.

Whatever may have been the motive of the Emperor's sudden return from Vichy, one person, at least, has cause to remember with pleasure the short stay made there by his Imperial master. The Emperor's kindness for those who have been much about his person is one of the most prominent traits of his strongly marked character; and among those of his habitual attendants for whom he has the most regard is M. Léon, a trusted servant of Queen Hortense, one of those who, having shared her prosperity, remained faithful to her in adversity, and who was by her attached to the service of the present master of France when the latter was scarcely out of his cradle. Since that moment M. Léon has scarcely been absent from the Emperor's service, but has stuck to him, in storm and in sunshine, with an affectionate fidelity that is warmly appreciated by his master. On arriving at the elegant villa which he occupies at Vichy, the Emperor, wishing to make a fixed provision for him, placed in the old valet's hands a roll of paper which proved to be the title-deeds of the villa, of which the servant thus became the owner.

"As you are now my landlord, Léon," said his Majesty, with a smile at the old man's face of surprise, "I hope you will not refuse to keep me on as your tenant at a rent of 20,000 francs a year."

Monsieur Léon is not the only person just now in the enjoyment of that pleasant state of mind created by the descent of an unexpected windfall.

That important organ of one of the great branches of French production, the *Moniteur Vinicole*, so eagerly studied by all the wine-growers of the country, has just come out with the following curious paragraph, which may possibly not be uninteresting to those who, in the New World, are trying to rival the Bordeaux, Burgundys, Champagnes, and Sauternes of the Old: "As we foretold, the cultivation of the vine—demanding, perhaps, more careful handiwork than any other—has been, for two months past, completely neglected on the other side of the Rhine. The props are not erected, the branches are allowed to drag on the ground like the stalks of the pumpkin, the buds are not pared. The flower has been drenched by the rain, the juice is thin and scanty, and, whatever may now be done, no remedy is possible. This is a great misfortune, if looked at from a humanitary point of view; but, as the mishap is irremediable, we must, as men, make up our minds on the subject, and, as Frenchmen and wine-growers, we must, if not rejoice, at least congratulate ourselves on being the heirs who will profit by this disaster. A man does not always shed tears over the will of a deceased uncle. Let us, therefore, abstain from sentimentality, and profit by the inheritance which thus accrues to us."

Speaking of champagne reminds me that Madame Clicquot, widow of the world-renowned grower of that favorite wine, has just departed this life, rich in honors as in purse, at the ripe old age of ninety-one. Madame Clicquot might, after her husband's death, have adopted the well-known mortuary announcement which, after summing up the various virtues of one who was stated to have been a model of husbands and of grocers, wound up with the intimation that "the business is continued by his disconsolate widow;" for that lady, when she had dried her tears, took in hand the vast affairs left by her husband, and has fully kept up the fame of his vineyards and vats until the present time. So partial was the late King of Prussia to the sparkling beverage over whose manufacture Madame Clicquot has presided with so much skill and success, that it is at the door of her wine-cellars that the responsibility of his habitual fuddledness must be laid, the royal tippler being so constant in his devotion to the widow's brand that he earned and kept, through the last years of his life, the *sobriquet* of "Clicquot."

Clever and keen as was the great wine-grower's widow, she was as generous as befits the mistress of a princely fortune. One day her nephew, who lived with her and aided her in the management of the business, having occasion to visit Paris, left his pocket-book, containing a sum of 40,000 francs, besides various papers of importance, in the railway carriage. On discovering his loss the young man returned in haste to the station, where he was accosted by one of the servants of the company, who asked him if he were seeking for anything.

"Yes, indeed," replied the youth, "I am in search of a pocket-book which I must have left in the carriage I have just quitted, and which contains 40,000 francs."

"Here is your pocket-book," returned the man; "I found it a moment ago in sweeping out one of the carriages." And so saying, the honest fellow placed the missing pocket-book, with the bank notes intact, in the hands of the delighted youth.

When the latter returned home he lost no time in relating the incident to his aunt.

"And what reward did you give to the *brave garçon?*" demanded the lady.

"*Ma foi*, my dear aunt," replied the nephew, "I am ashamed to say that I was so possessed with joy at finding my pocket-book that I never thought of the man, but rushed out of the station without remembering to offer him any reward!"

"My dear nephew," said Madame Clicquot, "you will go back to Paris by the next train; you will find out the honest fellow who has behaved so well, and you will give him one-half of the sum he restored to you, with 10,000 francs in addition which I will give you for him, and which you will hand to him as a present from me."

All of which was done as the lady desired; the nephew easily succeeding in tracing out the servant who had given so signal a proof of his probity, and who, thus unexpectedly enriched by the liberalities of the wealthy widow, left the service of the railway company, bought a grazing farm, and has been literally "living in clover" from that day to this.

Frenchwomen are proverbially "sharp" in matters of business, and are often the "soul" of the shop, agency, or manufacture carried on ostensibly by their husbands. No one can have lived long in this city without observing how important a part is played, in all the business avocations of Parisian existence, by the neat-fingered, neatly-dressed, keen-eyed, keener-tongued, wide-awake members of the "gentler" sex, who sit so steadily at desk or counter, figuring up their ledgers with such ready arithmetic, keeping a tight rein over the satellites who revolve within their orbits, and impressing you—you can't say how, but you are quite sure that you are not mistaken—with the firm conviction that they could never, by any possibility, be caught napping; and that, if any difference of opinion unhappily arose between them and yourself in relation to any matter of business, they would infallibly carry their point against you! The peculiar sharpening of temper incident to shop-keeping seems often to produce upon woman's more delicate organization an effect even more hardening and deteriorating than in the case of men; but no such evil effect seems to follow the participation of women in industrial operations conducted on a larger scale Madame Erard, for instance, who has carried on for so many years the vast manufacture of pianos and harps so admirably organized by her late husband, is one of the best and most generous of women, beloved and revered by all the employees in her immense establishment, the "providence" of poor artists struggling slowly into fame, and using her great fortune, so honorably acquired, in most beneficent style.

One of the most magnificent residences in the Avenue de l'Impératrice has been built by a soap-boiler's widow who, whatever may be her other moral qualifications—a point in regard to which your correspondent is profoundly ignorant—has, at least, nothing petty in her ideas of money. Being asked the other day why, since she did not reside in this beautiful and palace-like dwelling (it has been standing unoccupied ever since its completion, about five years ago), she did not let it, she replied, "There is no use in taking any trouble about so small a matter." Being pressed to say what, if she consented to let it, would be the rent of the house in question, she replied, "Really, I hardly know; a mere trifle; perhaps about forty thousand francs a year." And forty thousand francs a year being a "bagatelle" too insignificant to be worth securing, the rich widow continues to leave the beautiful residence unoccupied.

One of the most brilliant and admired of the royal visitors who last winter shared the hospitalities of the Tuileries, the young Prince Charles, of Hohenzollern, has just died of a wound in the leg received in the Prussian ranks at Koniggrätz. It had been found necessary to amputate the leg; and Charrière, of this city, made for the prince a silver leg, most ingeniously articulated. But this triumph of mechanical skill was not destined to be worn. Gangrene set in and carried off the patient, after several days of terrible agony, at the early age of 25. Heart-rending incidents are reported from the military hospitals and from the desolated homes from which the light of many hearts has been put out for ever. And yet the so-called "civilized world," after eighteen hundred years of the organized murder of war, still persists in calling itself "Christian!"

George Sand's new play, "A Village Don Juan," has proved a complete *fiasco*. It contains many beautiful passages and some striking hits; but its plan is defective, its dialogue heavy, and, though its purpose is moral, and vice and virtue are properly rewarded in the end, many of its "situations" are pronounced "improper" by the not very squeamish Areopagus of Paris.

The long and unedifying lawsuit brought by the family of the late dissipated young Duke of Grammont-Caderousse against Dr. Déclat, to whom the duke, who died recently of consumption, left the whole of his fortune, in order to revenge himself on his relations for their endeavors to arrest his prodigalities, has been terminated by the quashing of the will, on the ground that neither the legal nor the medical adviser of a testator can legally inherit from those whom they attend in their professional capacity; the law, with

a view to guarding against the exercise of any undue influence by such advisers on the minds to whom they have access in moments of difficulty and weakness, being explicit on this point.

A nice little "difficulty" has sprung up between two well-known political writers here, M. de Riancey, of the Catholico-legitimist *Union*, and M. Paulin Limayrac, of the semi-official *Constitutionnel*. The former having "chaffed" the writer of the *Constitutionnel* for its airs of authority, and declared that its statements had frequently been disavowed by the Government, the latter replied by offering to pay to M. de Riancey the sum of 100,000 francs if he could point out any case in which its utterances have been officially denied. M. de Riancey thereupon published a second article instancing two cases in which the *Constitutionnel* was undeniably "snubbed" by the powers that be, and calling upon M. de Limayrac to pay down the sum offered. M. Paulin Limayrac replied to that article by another declaring the "instances" cited by M. de Riancey to prove nothing but the fertility of that gentleman's imagination. On this, M. Louis Jourdan, of the *Siècle*, publishes an article in that paper calling on M. de Riancey to observe that the *Constitutionnel* denies the existence of the paragraphs cited by him, and urging him to return to the charge, and especially to force M. Paulin Limayrac to pay up the 100,000 francs, which may, he suggests, be then given to the poor. As M. Limayrac has no such sum at his command, and certainly would not part with it if he had, the public is delightedly waiting to see what will be M. de Riancey's next move. STELLA.

ART-STUDY ABROAD.

PARIS, August 1, 1866.

WHY do we foreigneering fellows persist in hustling each other with our eternal blouses and mahl-sticks at a moment when patronage and professors are springing up in lusty crops where we came from? It is true we have left a plaster-of-Paris antiquity behind us. The Venus of Milo and the Torso are familiar enough to those accustomed to American academies; and human models, though shy as starlings, are perhaps as accessible at home as they were in the palmy days of the Italian school to Raphael and Leonardo. But here, in Paris, art receives a thousand pressures—from the presence of the masters, from government recognition, nay, from the porters who discuss at the shop-windows the latest photographs from Merle and Bouguereau. How precious to the poor toiler in the world of ideas is the complete popular recognition of the idea he himself best knows. It will be long, I think, before the tide of study ceases to accumulate in Paris; and my notes, with no other value, will be taken while the tide is high and rising, and with some of the freshness of recent impressions.

It is not so many days—though days fly off like squibs in Paris—since I dined and wined my new friend, César Y——, in my little balcony commanding the garden of the Tuileries. We became very comfortable and harmonious by the time we reached the stage of strawberries dipped in Burgundy, after having disposed, with great urbanity, of the famous pictures and artists of France, and I observed, in precarious Parisian, that the Government Ecole was the asylum of the world. It was then that César, detecting his chance and pinning it, sallied gallantly out with a blazon of rhetoric which he has since polished and used in more than one assembly. He was in the first, best stage of French acquaintanceship; our introduction was yet warm, he pleased, was pleased, and gave, to get, esteem; he had put on his last Scotch suit for me (which still, to the American eye, seemed to hang a little bunglingly), and he sat with his compact Latin head relieved against my roses, and said:

"That Paris was the America of art. For diplomacy, for the public idea, we fly to you; but for the toleration of taste, for the painter's dream, even America emigrates. She reverses the procession of empire (said César, with quite a Berkeleyan turn), and comes to study of France the principles of liberty. You, monsieur, arrive for improvement in art. A proud chair awaits you. (There followed a superabundance of this.) *Voilà*, you choose and take. Our salon knows no prejudice. Courbet, the purist, hangs on the eye-line with Lambinet, whose pictures are simply perspirations. This, if I do not mistake, is civilization. Gérome, who is detestable because his surface imitates the bellies of frogs, is a professor in the imperial school, with the patronage of Plon-Plon and an immense party. Accordingly as you are inclined, I will find you a master who paints with currant jelly; a master who hammers, and is called the boiler-maker; a master who tickles the panel with two fibres of sable, a master who paints with his thumbs. For subject, it is in France alone that subject is illimitable. You get your backgrounds and interiors from the Hotel Cluny, from the Prince's Pompeian house, from the villages of the departments. For models, do but open your eyes—are you not in Paris? There goes an Algerian across the Champs, whose white blanket drops in one fold from his head to his feet. You paint somewhat warmly, perhaps? I will show you a precious child, not yet sixteen, who can sleep more enchantingly than Laïs in the presence of a whole atelier. Ah, no, you are religious? That is fortunate. There applied to me only yesterday a deserving Creole Christ, and my friend F—— resides with an unapproachable Virgin. I shall be charmed to assist you in finding costumes, as I am acquainted with laces, and possess the only bit of embroidered border ever found *in Herculaneum*—"

"Pardon, monsieur—*doucement*," I stammered; "I have yet to conquer the rudiments of the schools, and you would assist me in the criticism of laces!"

"Ah, you have reason. I am a cow. Very well, you should first reconnoitre your ground. May I show you the Ecole and some of the ateliers?"

That was my introduction to the schools of France. According to an appointment, I met my kind Y—— at the fountain of St. Michel the very next day. Our tryst was to have been at 7 A.M., for at that time the students are expected to assemble; but though I had done my best and dislocated myself from my bed at some absurd hour when all the birds of the Champs Elysées were blowing in full chorus, I was forty minutes late. Yet there, visible from the bridge, was my monsieur humming in the sun, panoplied in that impenetrable patience which makes a Frenchman waiting for anything one of the most elevated moral spectacles in the world. He bounded from his stone bench while I was yet a great way off, and hauled me by both hands in the direction of the National School. My guide was as fresh as the sparrows. It was simply delightful the way he tacked towards his subjects, and he looked very gay; for though his collar was a little toned since yesterday, the handkerchief had been tastefully knotted by the fingers of his own Aurore, and accented by a pin, a clever imitation in oxidized silver of the paper chickens our little ones make from their copy-books.

It is not needful to particularize the arrangements of a life-school, which must be pretty much the same thing all the world over. There was abundance of shameful drawing, and the rawest tyro from America might have plenty to keep him in countenance. I observed that the greatest attention was paid, in the outline stage, to placing the figure firm on its legs and observing how the action carried itself out harmoniously in every feature. This care was shown in the oft-repeated efforts of the best draughtsmen present, who never cared how much they blotted and muddied, if they could only make the outline look alive. But the individuality of the school, after all, consisted in the contrast between some of these attentive students, serenely pursuing their work in front of this petrified old gray-beard of a model on his rostrum, and the flights of their wilder comrades, who were doing the maddest feats upon a temporary gymnastic apparatus in the same room. The visit of the professor was not to be expected at any such hour as this, and the place was a buzzing chaos; and all the while the Abdiels kept faithful to their muse, and worked with tranquil Gallic assiduity.

"But there is a guard!" I exclaimed, in astonishment. "Why does he not protect these tormented students?"

"Ah, heaven! and what could he do against so many?" said my conductor, while the officer, sensible that he was being talked about, looked round with an air of deprecation and suffering, ameliorated by the national panacea, a shrug. "Let him once complain, and his place, and any future place, would be purgatory for him. No, he will not report; he will sleep."

A sudden, balmy silence seemed to have fallen as the door closed behind us, and César, being in the mood, sat down upon the steps and told sad stories of the deeds of students—of their painting the young Englishman Prussian-blue; of the tufts preserved in Gleyre's Academy from the arm-pits of youths who had recalcitrated when asked for drink-money beyond the limit of generosity; and one dark tale of a victim done to death, which had been the closing up of an atelier famous all over France.

"Do you know Pickerson?"

I made it a point to have heard of Pickerson.

"He worked at Delaroche's. There was an *émeute*. A little English gentleman flew to him for advice: 'They are painting me.' 'And will you let them?' 'But what am I among them all?' So Pickerson and the Anglais stood back to back, and Pickerson could box. (A Frenchman's gestures in imitation of the manly science are better than anything in Rabelais.) An attentive German working near presently rose, and decided for the Gothic races; he covered them to the door. Bloody and tattered, they rushed in a cab to Delaroche with their story. Old Vernet was there, the ancient campaigner, and laughed till he was purple. Not so Delaroche, who hurried himself back in the cab to the studio, which he found all quietness and labor. 'An apology, or I close this place to-morrow.' The Englishman received formal apologies, but he found that he could better appre-

ciate the style of Couture, and completed his education with the painter of the 'Décadence.'"

Rising, we proceeded to inspect, by courtesy, the classes of the other professors; viewed the "Hemicyle" of Delaroche, so noble in design, so disappointing in color; passed out through the court, studded with architectural bits from cathedrals and châteaux; and finally emerged by the gate, between the busts of Puget and Poussin, lights of France. As I passed near, and almost brushed with my own the flowing hair of the latter, how I wished to feel some emanation from that noble head, the head of a poet—a true Virgilian soul of these latter days!

We finished the morning at the atelier of M. Suisse, in the Cité, whither many of the more persevering students of the Ecole are in the habit of adjourning for an extra hour or two of quiet study. It is in a small, cheerless chamber, where the crowding mass of students almost pushes the model out into the hall. Some of these rooms are singularly public, and at M. Suisse's the study is often interrupted by the penetration of an estray in search of some other room, or of an old woman with brushes to sell, who will contemplate the model, and the model her, with the naïve complacency hardly to be found out of Paris.

There is no scarcity here of these public studios for painting from the human figure. Some are maintained by *ci-devant* models, who, having a business faculty, embrace an easier profession in which their acquaintance with the fraternity can be turned to account. Many others, again, belong to artists of the first reputation; as those of old M. Gleyre, M. Couture (now closed), M. Lambinet. These professors, who are expected to extend some assistance to the pupils, have generally the reputation among young men of giving the least possible exchange for the money, and of being actuated by a very virgin feeling for frugality. One honorable exception should be made in the person of M. Hébert, a painter of figures of high celebrity, whose studio on Montmartre is open to all who will share the bare expense of maintaining it. In this gentleman, as well as in the excellent M. Suisse, I recognize another class—the bookworms of art, men of the academic mind, who connect themselves with a school because to know, rather than to do, is their object. Like many an old German professor who has died unknown without having written a book, the scholarship of this class is great; and with them scholarship is not a means but an end. "Soul-hydroptic with a sacred thirst," they suck at the flagon with a noble disease of learning. M. Suisse exhibits nothing. M. Hébert exhibits portraits—another name for studies. The American art-emigrant who is wise will not lose sight of this class of preceptors. The attractions of the public Ecole are two: first, the fame of its professors, though their implied attendance is a pretty broad farce; and second, the fact of its being gratuitous, a term which the freshman will best understand when receiving the demands, consecrated to use and wont, of the rapacious crowd of French students. He will not do amiss, as a primary security, to apply for admission, which is controlled by the favor of the professors, and is made difficult to foreigners; but his disappointment on rejection will be a pleasantly-mixed feeling as he settles to his delightful labor in some cheap, serviceable, and orderly private atelier.

E. S.

Correspondence.

THE DANA EDITION OF WHEATON.

To the Editor of The Nation:

Dear Sir: The paragraph on my brother's edition of Wheaton, in to-day's Nation, although expressly but the indication of a first impression, is likely, from the general character of your paper, to have more effect on the minds of impartial readers than the many assertions of Mr. Lawrence himself, unsupported as they have been by a particle of proof.

As several professional gentlemen, in common with myself, have come to an entirely different result, after collating the two sets of notes as far as the 700th page, this could hardly be but from a difference of the test applied in judging of the accusation of plagiarism and wholesale appropriation of his notes brought by Mr. Lawrence. We assumed, as a matter of course, indeed of necessity, that there would be a considerable degree of similarity or even community of topics annotated and discussed in the notes; that there would be some corresponding degree of community of reference to authors who have previously discussed the same questions, and that the historical events entering into or giving rise to the legal discussions would be substantially the same in both. Professional men do not need to be told, and the general reader will recognize upon its being stated, that this must be so.

For plagiarism we looked to see whether, under an appearance of originality, the same views, the same or similar courses of reasoning in their support, were to be found in the two series of annotations; we looked to what was the work proper to the two editors themselves—that is, what of additional reasoning and argument, or what new point of view either has contributed to the already existing material, which is, of course, known to be open to the use of all experts in this somewhat limited and peculiar branch of jurisprudence.

The course pursued in publishing this edition, as I understand, was first carefully to strike out Mr. Lawrence's notes—not, as Mr. L. assumes, out of discourtesy, but because they are, in a literary sense at least, his property—and then to reprint the text and notes of Wheaton, adding Mr. Dana's MS.; and I have thus far observed but a single "appropriation" of Mr. L.'s notes. Owing, as I am told, to an "office-error," No. 63 of Lawrence's notes, consisting of a quotation of four lines from "Blackstone" (Stephens's ed.), reappears as note 52 of Dana; but this is to be rectified. It is to be remembered that there are 547 notes in the two editions.

To avoid any misunderstanding, I add that it is, of course, a part of the general duty of an editor to have by him for consultation at first hand, if requisite, those authorities whom he quotes and discusses. Mr. Dana, apart from his own knowledge of the chief foreign publicists, had especial opportunity for being informed as to Continental jurists. I *know* that the proper works were at hand and used during the preparation of his notes.

It is but just to the writer of the paragraph in your paper to recall that he characterizes his examination as "cursory," and it is precisely the necessary resemblances that I have referred to of topic and authority that lie upon the surface; but such is the difference in substance and results that I doubt if an editor of a similarly professional text-book was ever less indebted to a predecessor than are the notes of Mr. Dana to those of Mr. Lawrence.

I have thought myself entitled to publish this much in vindication of my brother's editorship during his absence, but in the brief interval before his return, knowing his indisposition to a newspaper discussion of what really belongs to a professional forum, I shall not feel at liberty to commit him at all to such a discussion. The law-journals or the courts are the proper tribunals for an adequate investigation, and I believe newspaper readers come very soon to that opinion. *I*, certainly, shall not tax their patience.

Yours, etc.,

Edm. T. Dana.

Boston, Aug. 30.

THE STATESMANSHIP OF BARON STEIN.

To the Editor of The Nation:

In your recent article on the reforms of Baron vom Stein you dwelt very properly on his reorganization of the Prussian army, of which the results are just now so conspicuous. I think it is not without interest to add, with your permission, that the beginning of this reform was the abolition of corporal punishment at a time when Russia, Austria, and England considered it, as they do still, indispensable to military discipline. When the question was first agitated and the change foreshadowed in Prussia, the liveliest apprehensions were excited, and men asked, "How can you keep an unbridled soldiery in order? It will be impossible to walk the streets except at the risk of being attacked and even assassinated by soldiers." Fortunately the Government had the firmness to disregard these clamors.

It is not, I think, generally known that the idea of the Zollverein was original with Vom Stein, of whom it has been said that "he was the author and promoter of everything, in the way of new institutions, that does honor to the Prussian people and Government;" and, still more broadly:

"There have been statesmen who have accomplished some useful reforms, others who have succeeded in indicating or preparing them; but I seek in vain, in the history of modern states, a statesman who has undertaken, accomplished, or prepared for the future by rendering them almost inevitable, reforms so fundamental, so usefully fruitful in their immediate as in their remote results, as those which had for their author the most remarkable man that Germany has produced since Luther and Frederick II."

The writer whose words are here quoted, and whose name appears on your list of contributors during the past year, Monsieur N. Tourgueneff, spoke from an intimate acquaintance with the great Prussian during the final campaigns against Napoleon, to whose success "le nommé Stein," as the irate emperor contemptuously called him in proscribing him, probably contributed as much as any one man. Some very entertaining details of these last days of the First Empire, from the allied point of view, together with a monograph concerning Vom Stein, and numerous incidental allusions may be found in the three volumes of M. Tourgueneff that appeared in Paris in 1847, and were entitled "La Russie et les Russes." Of the author himself

I should like to say much more that would not be relevant to my present purpose, and I will only call attention to the singular historical "situation" in Europe at the present moment. Nobody doubts that Prussia and Italy undertook the late war with the perfect willingness, at least, of Napoleon III., who saw in it the *coup de grace* of the treaties of 1815. His disappointment at the issue is the immediate legacy of Vom Stein, the most formidable opponent of the *idées Napoléoniennes* and a central figure in the "detested treaties." R. P.

Catalogues and specimen-books, at reduced price, furnished on application. A liberal deduction made on orders from schools.

THE NATION.

For the guidance of those who may feel disposed to assist us with their contributions, we may mention that the contents of The Nation will fall nearly under four divisions—or that, at all events, these divisions would have to be kept in mind by anybody writing for it as a volunteer.

1. References to, and concise comments on, the news of the day, with the view of fixing the degree of its importance, and suggesting its bearings upon and relation to the main current of contemporary history.

2. Reviews or comments, whether in the shape of letters or articles upon important events, and upon the utterances of those who are, or are trying to be, leaders of public opinion.

3. Accounts more or less detailed, or discussions of such occurrences in the social, literary, artistic, or scientific world as are likely to interest men or women of education and intelligence. Under this head we do not include mere gossip about nobodies, or advertising chronicles of the sayings and doings of quacks, daubs, penny-a-liners, dilettanti.

4. Critiques of publications or works of art of sufficient merit to make it desirable that the public should ever hear anything about them.

TERMS—$5 per annum; 6 months, $3.

When delivered by Carriers in New York or Brooklyn, 50c. additional.

Valuable School-Books,

PUBLISHED BY

IVISON, PHINNEY, BLAKEMAN & CO.,

NEW YORK.

The large and increasing sale of these BOOKS—the emphatic commendations of hundreds of the best teachers of the country who have TESTED them in the CLASS-ROOM, and KNOW whereof they affirm, amply attest their REAL MERITS, and fully commend them to general favor, and to the confidence and patronage of every thorough and practical Teacher.

SANDERS'S READERS AND SPELLERS, conforming in Orthography and Orthoepy to the latest editions of Webster's Dictionary.

THE UNION SERIES OF READERS AND SPELLERS, entirely new in matter and illustrations, and received with great favor by the best teachers in the country.

ROBINSON'S SERIES OF MATHEMATICS, including Arithmetics, Algebras, Geometries, Surveying, etc., highly commended by all who have tested them in the class-room.

KERL'S NEW SERIES OF GRAMMARS—For simplicity and clearness, for comprehensive research and minute analysis, for freshness, scientific method, and practical utility, this series of English Grammars is unrivalled by any others yet published.

SPENCERIAN PENMANSHIP, simple, practical, and beautiful. Newly engraved and improved.

SPENCERIAN DOUBLE ELASTIC STEEL PENS, the best Pens manufactured.

BRYANT, STRATTON & PACKARD'S BOOK-KEEPING SERIES, beautifully printed in colors.

WELLS'S NATURAL SCIENCE, including Philosophy, Chemistry, Geology, and Science of Common Things.

COLTON'S SERIES OF GEOGRAPHIES. The New Quarto Geography, just published and added to this series, surpasses anything of the kind before the public.

☞ Teachers and School Officers are invited to correspond with us freely, and to send for our Descriptive Catalogue and Circular, which will be promptly sent upon application.

☞ Liberal terms given on Books furnished for examination or introduction.

"Mr. Howells deserves a place in the first rank of American travellers."—*Pall Mall Gazette.*

VENETIAN LIFE,

Including Commercial, Social, Historical, and Artistic Notices of the Place.

BY WILLIAM D. HOWELLS.

1 vol. crown 8vo. $2 50.

"It is the very model of what a light book of travels ought to be. The author can instruct without prosing, and describe without boring. But, moreover, he is a genuine poet, with a loving eye for the beautiful, and the keenest sense of humor. The writing is positively creative. Every object is seized from the point of view of a gifted painter."—*The Contemporary Review.*

"There is hardly a feature of Venetian life that escapes his sympathetic observation."—*Westminster Review.*

NEW FEATURES—NEW TABLES,

By which all Policies are NON-FORFEITING and ENDOWMENT, payable at about the same cost as ordinary Life and Ten-Payment Policies payable at death only. We call special attention to these Tables as exceedingly attractive and ORIGINAL with the UNION. In case payments are discontinued, after two premiums have been paid, the Company contract to pay, AT DEATH or the SPECIFIED AGE, an amount in proportion to the number of premiums paid.

The Percentage system of Dividends used by this Company affords greater protection to the family than any other plan, as in event of an early death the amount of policy paid is twice that paid by all cash Companies with the same cash outlay of premiums.

The greatest possible liberality in assisting parties to keep their Policies in force.

Liberality and promptitude in the settlement of claims.

We refer to the Massachusetts and New York Insurance Commissioners' Reports for 1864 and 1865 as an evidence of the Safety, Reliability, and Unparalleled Success of the Union Mutual.

Five Dollars per annum, in advance; Six months, Three Dollars. When delivered by Carrier in New York or Brooklyn, Fifty Cents additional.

E. L. GODKIN & CO., PUBLISHERS, 130 NASSAU STREET, N. Y.

The Week.

THE President has, during the past week, continued his melancholy tour through the country, and has engaged in various bouts of recrimination with the crowd, which have furnished subject for sorrow or merriment to millions of readers. His performances at Cleveland were only equalled by his performances at St. Louis. If "the man, woman, or child who can lay a finger on anything he has done," etc., for whom he is incessantly calling, will only step forward and communicate with him, without further notice, he or she will confer a favor on an afflicted community and save Mr. Johnson much speaking. If any one knows, also, "what pledge he has violated," and will impart the desired information either to himself or Secretary Seward, he will doubtless be suitably rewarded. At all events, he will earn the gratitude of the public.

MR. BEECHER has received a grave and well-written remonstrance from his congregation upon his political course, and has replied in a long letter. The question between him and many of his critics now seems to be, not whether he is not mistaken in believing that the freedmen may be safely left to look for protection to Southern legislation, but whether his holding, or at least propounding, this opinion does not indicate gross inconsistency with his former teachings, and even a certain moral deterioration. Horace Greeley, with his usual delicacy, assumed, in his otherwise ably-written reply to him, that Mr. Beecher, in writing his letter to the Cleveland Convention, was really guilty of a base act; informed him that many clergymen who had once honored him would sooner have been murdered by a mob, like Mr. Horton, than have written such a letter as his; and that his congregation felt they had made a mistake in loving him, and much other matter of the same sort, utterly coarse and even brutal, as we hold it to be. Mr. Beecher's course is, no doubt, well calculated to give pain to all his fellow-laborers, if for no other reason, because of the encouragement it gives to the enemy. He is mistaken—and grossly mistaken, as we believe—but it is a mistake which a good and honest and pure man may make; and there is something monstrous in the readiness of many of his friends to see in it an excuse for their forgetting his thirty years of labor in the anti-slavery cause, and the vast, and as we believe unequalled, influence for good which he has exerted upon the country. There is no other man amongst us to whom all good causes owe more, and there is, therefore, no other to whom more may be forgiven; and we hope to see the day in America when men of his standing and services may be guilty of even worse aberrations than his without forfeiting the respect of their neighbors for their character and motives, whatever may be thought of their judgment, and without exposing themselves to gross personal abuse. If anybody wants to know why it is that our purest and most high-minded and most sensitive men are reluctant to take office, or take an active part in politics, they may find the reason in the language used towards Mr. Beecher and the imputations cast upon him by many of the radical newspapers. There is a vague notion prevailing amongst many good people that if you are in earnest in a good cause, you can help it without swearing at everybody whom you believe to be its enemy, and calling him foul names. If this were true, however, all the great reformers and martyrs of the world, from Socrates down, would have been masters of Billingsgate, and the New Testament in particular would be a great storehouse of vituperation.

MR. BEECHER'S letter, however, in conceding Mr. Johnson's "obstinacy," "fierceness," his disposition to "mistake the intensity of his convictions for strength of evidence," and in stigmatizing his share in the New Orleans affair as "shocking," really gives up most of the ground in the dispute between the President and Congress. Mr. Johnson, as his own supporters even now describe him, and as his speeches reveal him, is clearly a man who is not to be trusted with so difficult and delicate a task as reconstruction, and whose political opinions at such a crisis are really almost worthless. With the knowledge which Congress has possessed of his temper for the last six months, at least, it would have been almost criminal in them to accept his views of the situation at the South as a basis for their action, much more to accept from him and adopt a plan of reconstruction of his own making. And the public is not to blame, as Mr. Beecher and the *Evening Post* seem to think, if the mere fact of his opposing a measure drives the rest of the world into advocacy of it. The whole conservative plan really rests on Mr. Johnson's personal sagacity and perspicacity. The policy he recommends is emphatically "*his* policy"—as he is never tired of mentioning—and he is himself profoundly conscious that this policy really owes whatever value it has to his having concocted or brought it forth, for his speeches in its defence consist mainly in expositions of the excellence of his own character, his consistency, his fidelity, his courage, his farsightedness and honesty. He says very little of its merits.

THE Democratic Convention at Albany is in full operation as we write. It embraces the old members of the body and the deserters from the Republican organization, such as Mr. Thurlow Weed. The platform, it is said, is being prepared by Mr. Samuel J. Tilden and Mr. Marble, of the *World*, so that the nature of the document may be guessed beforehand, as the political opinions of one of these gentlemen are no secret. Mr. Tilden, we believe, has always held that slavery was a divine institution; that any State had a right to secede, and that, whether it had or not, that nobody had a right to prevent it; that Jefferson Davis was a gentleman of talent, Abraham Lincoln a poor, silly rail-splitter, and that the war was a gigantic crime and all engaged in it either knaves or fools. Of Mr. Marble's opinions we are not so certain, as he has at various periods exercised his inalienable right of changing them, and circumstances have prevented us following closely such modifications in them as he deemed necessary.

WHAT they can seriously hope to gain by it is not easy to see, but there is little doubt that the Fenian leaders are ordering their followers to vote the Union ticket in the fall elections, and that, to a certain

extent, their orders are being obeyed. News comes from Maine that, "whatever the explanation, it is certain that quite a number of Democratic Irish have voted this year with the Radicals." This may be only one of the excuses for being beaten which a badly beaten party is apt to make. The Union party in Maine has won a victory quite unexampled. Maine is a State of small cities and small towns and intelligent citizens, and the Presidential policy is repudiated by an overwhelming popular vote. Ex-Vice-President Hamlin took a course in regard to the Federal office which he was holding in Boston that, doubtless, had a favorable effect on the prospects of the Union men, and the Democrats were affected unfavorably by the inopportune occurrence of the New Orleans riots and Mr. Johnson's trip to Chicago. On the two questions before the country, Shall the return of the South to the Union be conditional or unconditional? which is a political question; and, Shall legislative functions be usurped by the President? a most important constitutional question, Maine, at any rate, and Vermont, have given in unmistakable language the right answer. And they will help Pennsylvania and New York to be as overwhelmingly right next month and the month after.

THE *Evening Post*, of New York, the Springfield *Republican*, and some other journals that are popularly supposed to be in favor of the immediate representation of the South in Congress on no other condition than that they revise their present delegations and send reasonably loyal men, are talking as seriously as if they really believed what they say on the propriety of sending prominent Northern Union men on a lecturing tour through the late Confederacy. The *World*, with ill-concealed eagerness, applauds this project. Imagine Major-General B. F. Butler, after his arrival had been promised for ten days in large placards, going to the Mechanics' Institute in New Orleans to make a speech; or suppose Mr. Beecher to be advertised to speak on the 30th inst. in Okolona, where his Cleveland letter will not be heard of or generally understood for some months to come, and where nothing is known of him except that he wrote "Uncle Tom's Cabin" and sent negroes with Sharp's rifles to Kansas; or fancy Wendell Phillips making the tour of Anderson District, South Carolina, the home of Mr. Orr. Mr. Phillips is a propagandist, but he is not so much in love with death as to attempt public speaking in any Southern State. If any of these men, or any other Northern man, were to go through the late Confederacy speaking for Congress, the people would kill him long before he got to New Orleans. This may be no argument against the President's policy of reconstruction, but it is a view of the case that has long prevented, and will long prevent, any Radical—or Disunionist, as the *World* would say—from uttering his real opinions in the Southern country. He might count himself extremely fortunate if, instead of murdering him, a committee of the first citizens of some town or other waited upon him with an address of farewell like this to General Miles from the Richmond *Examiner*. General Miles is guilty of having been the officer commanding at Fortress Monroe, where the "stern statesman" of Mississippi, who does not like him, languishes in confinement:

> "When you die, may your carrion be thrown to the dogs, and may they, loathing your vile flesh, leave it to the unfastidious buzzard. You have polluted our air and soil too long. Go! Relieve us of your insufferable presence. Relieve us of an offensive object that provokes us to blasphemy. As we revere and love Jefferson Davis, so do we detest and contemn thee, hateful kite—obscenest of birds. Go!"

A BRIEF and very readable correspondence has recently taken place between Semmes, formerly a great part of the Confederate States navy, and now a probate judge in Mobile, and Major-General Wager Swayne, a young man, but one of the ablest of General Howard's assistant commissioners. Semmes cites the President's last proclamation, and desires to know if he is to be interfered with in case he opens his court-room and proceeds to exercise his functions. He invites Gen. Swayne to telegraph for further instructions, apparently thinking that, "in the changed circumstances of the times," his claims to the honors and emoluments of civil office would be more kindly looked upon in Washington than they were a few months ago. Gen. Swayne replies that the orders received some time since were explicit, and he sees no reason for applying for further instructions; and he takes occasion to clear the mind of Semmes of a misconception into which he seems to have fallen, by drawing his attention to the fact that "the order above cited points to the arrest not so much of the probate judge of Mobile County as of an individual who, for acts defined by the laws for the punishment of treason, and for other acts, is liable at any time to be taken into custody." The pirates we read of who used to keep chaplains aboard their *Alabamas* must have felt a little oddly at times, but not more so, we should say, than a rebel and public enemy when he discovers among his correspondents so luminous and unimpassioned a legal adviser as Gen. Swayne.

THE drawers of resolutions of mourning, rejoicing, indignation, and so forth, have been lately getting into the way of using the term "great commoner," originally applied in England to Pitt, to designate anybody of humble origin who happens to distinguish himself. For instance, the New York Democratic State Central Committee has just been "resolving" over the death of Dean Richmond, in very foggy English, and talks of his career as the career of "this great commoner." To call a man a "great commoner," or a "commoner" of any kind, in America, is, however, ridiculous. There are no "commoners" where there are no peers, just as there are no tenants where there are no landlords. "Commoner" is a relative term, and marks a class distinction. It would have been just as sensible to call Dean Richmond this "illustrious nobleman."

THE *World* quotes the act of Congress of 1862, fixing the number of the representatives in Congress, and the debates on the case of Mr. Upton, as showing that Congress has decided that the Southern States are all in the Union, and that, therefore, Mr. Johnson is only doing his duty as an executive officer in treating them as being in it. What we should like to know now is, what act of Congress it was which authorized him to displace the State governments when the war was over, and appoint provisional governors, and call conventions, and prescribe terms of admission, and in what act the terms which he prescribed are fixed for his guidance. If Congress did really arrange his plan of reconstruction, and Congress be, as the *World* acknowledges, the only legislative power of the Union, of course there is not a word more to be said, after we have seen the act, ordinance, or resolution.

THERE is not a single daily paper in the country—Mr. Parton to the contrary, notwithstanding—which makes a real business of purveying the news of the day, and reporting what occurs as it happens, not as the editor would like it to have happened. The usual course pursued with regard to public meetings during an exciting campaign is to send a reporter to attend it, with instructions, direct or implied, either to represent them as "glorious demonstrations," boiling over with enthusiasm and overwhelming in point of numbers, or else to caricature and ridicule them, crack small jokes on them, and hold them up to contempt as mere gatherings of half-witted people or hungry adventurers. The sole aim of the reporter, in fact, seems to be, in most cases, to make his reports support the opinions and prophecies uttered in the editorial columns. The result is, that if we were dependent for our knowledge of the value of the Loyalist Convention at Philadelphia upon the New York press, we should really know very little about it, although we should have no difficulty in extracting from the admissions of the *Times* reporter that it was at least largely attended and very enthusiastic. The testimony of the local press, however, and of all who attended it, is unanimous as to the extraordinary fervor which it called out, and the immense gathering of the best men from all parts of the country which it created. The failure of the Southerners to agree in demanding negro suffrage is nothing wonderful. The wonder would have been if they had agreed on it, considering the education and the prejudices of the delegates. Nor is the argument used by the New York *Times* to depreciate the convention, that "it did not represent the South," a very brilliant or telling one. If it really represented the South, the South would be loyal and peaceable, and all our present troubles would cease. It is to the fact that it did not represent the South, and did not pretend to represent it, that its importance is mainly due. What it did represent was that portion of the Southern population whose fidelity to us during the war has given them claims of the strongest kind upon our protection.

The New York *Times* was, it appears, mistaken in supposing that it was "Federal" and not "rebel" bonds which rose in the London market on the receipt of the news of the Philadelphia Convention, No. 1. The general impression in Europe undoubtedly is that a successful coalition between the Northern Democrats and the South will lead once more to Southern ascendency in the Federal Government, and thus to a repeal of all restrictions on the repayment of the rebel debt. To be sure the rise has not been very great, and the English holders of the Confederate bonds are not very wise, but then there is nothing like strict accuracy.

The recurrence of the Roman question ensures to Italy continued prominence in European politics. The September convention will begin to go into effect in a few days, and the completed withdrawal of the French troops, it is universally believed, will be the signal for revolt against the Papacy. His Holiness seems to be taking little thought of a refuge, and has even got to deploring the loss to the church of Orsini, who, he says, before turning assassin, had seriously proposed to himself to become a priest. But the hitherto devoted adherents of Francis II. and the old *régime* are inclining to unite with the rest of their countrymen. The patricians congregated at Portici have added their names to the subscription for a monument to the dead at Lissa, and those who are nearer the person of their sovereign have manifested a desire to quit the society of brigands and return to Naples as honest citizens. There will probably be few obstacles to such restoration, if their good intentions are made clear to the Government.

The Upper House of the Prussian Parliament has passed a bill of indemnity for the illegal acts of the King and Bismark during the disputes preceding the war, when they took the liberty of levying taxes without the consent of the legislature, so that there is a strong probability that complete harmony will reign for awhile. We say for awhile, because the King's ideas of constitutional government are still primitive in the extreme, and there is no knowing how long he can abide its restraints. He gave recently, in replying to an address of a deputation of Brandenburgers, a curious illustration of his state of mind, by saying that he had "forgiven the behavior of the Parliament, but he never could forget it;" evidently considering himself its victim. He has issued a proclamation annexing Hanover and the other pieces of territory which Bismark has decided on "absorbing," though not without many qualms of conscience and much opposition from "the ladies of his family." The chances are that there will be no real tranquillity in Prussia as long as he lives. His head is filled with mediæval delusions, and he is old and obstinate. Bismark says, if he had made him, he would have made him differently; but in the meantime the people have to "grin and bear" him, and wait for the accession of the Crown Prince, who has the reputation of being a modest and sensible man.

But Europe is by no means settled, for "France is not satisfied," and, in the opinion of most Frenchmen, unless she is satisfied, peace is not possible. All parties in that country unite in preaching against Prussia, and in groaning over her aggrandizement as a menace and danger to France which ought not to have been permitted. The liberals are, perhaps, more violent than anybody else. A very good exposition of their feelings and opinions will be found in another column from our correspondent, "A Frenchman," who is himself a distinguished member of the party. They say they would not object to the work of German consolidation, if it were done by a free people; but done by a military despot like Bismark, they will not submit to it. Much of the grumbling which appears in the opposition press in Paris is doubtless intended to reflect on Louis Napoleon, just as many people here pretend to sympathize with the Fenians out of hostility to President Johnson. What the Emperor's policy really is, it is impossible to say. All the speculation it has hitherto called forth seems well-nigh worthless. With his inaction ill-health has probably something to do. In England there is little of importance to record beyond the commencement of a reform agitation which, apparently, is likely to exceed in vigor and earnestness that of 1832. Mr. Bright has opened it by an oration which surpassed all his former efforts.

THE FREEDMEN.

The week has been unusually barren of reports from the freedmen. The political excitement attending the President's tour and the fall elections has, perhaps, engrossed the attention of the North, and may even have affected the behavior of the people of the South, who assuredly will not be deceived by appearances which the President has all along assumed as the national verdict upon the difference between himself and Congress. The best protection for the blacks, it cannot be doubted, lies in such overwhelming victories as those of Maine and Vermont.

—The Governor of South Carolina, in his message of the 5th inst. to the Legislature, meeting in extra session, urges the modification of the negro code so as to extend the jurisdiction of the civil courts over all classes of citizens. He also recommended the admission of negro evidence in all cases, as being both just and prudent. He declared the present stay-law to be unwise and unconstitutional, and advised the abolition of imprisonment for debt, together with an extension of the bankruptcy law. The impoverished condition of a large part of the population, owing to short crops, calls for some provision by the State, and a sale of the State bonds for that purpose was suggested.

—On the 18th of the present month is to be held at Nashville the annual meeting of the National Equal Rights League, of which John M. Langston is president. The aim of this society is sufficiently indicated by its title. It is, to use the language of the call, "to secure to every colored American complete equality before the law, and the cultivation among us of all those things which pertain to a well-ordered and dignified life." The league "makes no distinction of color or sex," and invites the co-operation of all kindred associations. The question before the convention will be: Where do the colored people stand? What is their station, legally and politically, under American law since the rebellion? Representatives will be admitted from all State and other auxiliary leagues, which meantime (to judge from the constitution of one) are sending out lecturers, calling meetings, publishing documents, and in the usual way educating the people to receive their ideas. There is no doubt, so far as Tennessee is concerned, that the prospect of perfect equality is much fairer now for the blacks than at any other time. An alliance between the loyal whites and the freedmen was first foreshadowed there by Gov. Brownlow and others—perhaps, but our recollection is not clear on this point, by Mr. Johnson himself. It is now a resort for which nearly all the loyalists of the reconstructed States are prepared.

—Large numbers of white women and children in North Carolina, says Assistant Commissioner Robinson, are without clothing and assistance, and an appeal for them is made to the benevolence of the North.

—Brig.-Gen. Chas. H. Howard is erecting a new school-house for the freedmen in Washington and another in Bladensburg, Md. Two more will be built in Alexandria by the colored people, as soon as they can purchase ground for them.

—The sanitary precautions taken by the Bureau in the District of Columbia are to be credited with the present excellent health of the freed people there, and the entire absence of cholera from the midst of them. Large numbers of men and women are continually being sent to good homes in the North.

—In York County, Virginia, there are about 6,000 freedmen located on farms originally established by Government, but to be delivered over on Jan. 1, 1867, to their former owners.

—An improved condition of affairs is reported in South Carolina. Outrages are fewer, and the crimes most prevalent are traceable to the poorest of the people. In the Darlington district large numbers of the blacks are preparing to emigrate to the public land in Florida. At Lawtonville the cotton crop is reported to be stunted, with a prospect of yielding fairly in case of speedy rain.

—The aggregate number of sick refugees and freedmen that are now inmates of hospitals and asylums in the several districts of the Bureau is as follows: Virginia, 569; District of Columbia, 226; South Carolina, 221; North Carolina, 215; Alabama, 287; Georgia, 274; Mississippi, 100; Florida, 38; Louisiana, 418; Arkansas, 128; Kentucky, 87. Total number, 2,763.

Notes.

LITERARY.

Charles Scribner & Co. announce for publication in the course of this month a volume from the pen of Judge John A. Jameson, of the Superior Court of Chicago, upon the "Nature and Powers of the Constitutional Convention." Of the proper functions and precise powers of these bodies, though they are well known to American history, and especially within the last four or five years have filled a prominent place in the public view, too little is known either by our jurists or the people at large. Indeed, Judge Jameson's book, when issued, will fill a complete vacancy in our legal literature, there being now in existence no authority whatever upon that subject. Its appearance is particularly opportune just at this juncture, when the fundamental principles of which it treats are so vaguely understood by ninety-nine in every hundred of those Americans who may possibly at any day find themselves fighting on one side or the other of a civil war resting on those very principles. It is a book that will be gladly received by every intelligent student of the law and every citizen who thinks.

—The annual fall trade-sale of books commenced last Thursday at the rooms of Messrs. Leavitt, Strebeigh & Co. There was a large attendance of members of the book-trade at the sale, and a large number of books were catalogued by one hundred and twenty-five publishers, nearly all standard works, and but little that is new. The Southern and Western houses were well represented. The prices realized were very fair, though lower than in the spring, owing chiefly to the remission of internal revenue taxes on books and book material. We do not see the exact utility of these sales, which are generally used as means of forcing unsalable stock on country houses. Communication is now so easy between the different parts of the country that booksellers are able to make their own selections from the publishing houses, and order the books that the tastes of their customers demand. Occasionally, but rarely, by these sales, books that otherwise might not be read are brought to the notice of the country public.

—We may have been slightly in error last week in speaking of the withdrawal from circulation of Mr. Swinburne's "Poems and Ballads." The act was one for which his publishers, Messrs. Moxon & Co., were alone responsible, and is probably the effect of a change of publishers. The book, it is said, will be issued again by another firm.

—An interesting report upon the documents in the public libraries of Venice has just appeared in England. It is printed in the form of a letter from Mr. T. Duffus Hardy, the deputy-keeper of the public records, to the Master of the Rolls. It contains, among other matters, a list of documents relating to the divorce of Henry VIII., a list of letters relating to Cardinal Pole, and a list of letters relating to James Stuart. "During his residence in Jersey, about the year 1646," says Mr. Hardy, "it seems that Prince Charles (afterwards Charles II.) engaged the affections of a young lady whose name does not appear. She is said to have belonged to the family of the noble house of Mar." By her he had a son, as he says, "plutost par fragilité de nostre première jeunesse que par malice." This son is the James Stuart to whom the letters refer. Mr. Hardy prints the will of this Giacomo Stuardo in an appendix. It is a curious document, endorsed, "The last will of the late impostor at Naples, who at first pretended himselfe to be a naturall sonne of the King of England, 1669."

—Among the other luxuries which *L'Evénement* offers to tickle the palate of its readers is a supplement to the *Spectator*, the spirit of Addison having been evoked from the grave to address a few letters to M. Villemessant on the social anomalies, the abuses, and the follies of the day. The modern Monsieur Addison is in some ways as genial and as pleasantly satirical as when, a hundred years ago, he wrote his papers for the London tea-tables. But, in being resuscitated, he has dropped all marks of his English nationality, and has become thoroughly Parisian. Before commencing his new work he treats M. Villemessant's readers with a sketch of his autobiography, and his surprise and gratification at finding the tone of society so changed and improved. He doubts whether he and his friends corrected public morals, but he thinks that they "suppressed many abuses, and at any rate solved the difficult problem of amusing honest folk." M. Addison then promises a new *Spectator*, to be composed, he says, "alas! without the help of that good and *spirituel* Richard Steele." He declares war against the "*grotesques* and *malfaisans* who at the present time abound in French society and French literature;" and he devotes a paper to severe but good-natured comments on periodical literature and the puffery of publishers.

—The British Association opened its annual meeting at Nottingham, on the 22d of August, with an inaugural address delivered by the president, Mr. W. R. Grove, Q. C. The address is published at length in the *Athenæum* and the *Reader*, and well deserves to be read on account of its eloquence, its thoughtfulness, and the general clearness of its reasoning. The subject is the "continuity" of nature, which view he first applied to astronomy, saying that the idea of vast empty spaces in the universe had been overthrown, and that as the zone between Mars and Jupiter was known to be filled with asteroids, and other spaces with meteorites, so it is not improbable that the "whole space of the solar system is filled up with planetary bodies, varying in size from Jupiter, 1,240 times larger than the earth, to that of a cannon ball or even a pistol bullet." He then went on to the discussion of forces—light, heat, and electricity—which he considered modifications of each other. Matter he also thought to be the same in varying forms, and geology the history of continuous slow changes, the doctrine of catastrophes being a *Deus ex machinâ* brought to help the defects of knowledge. He favored, in its fullest extent, the Darwinian theory of creation, and even applied the idea of continuity to the history of man, which he thought amenable to the same general laws of progress that govern the physical history of the globe.

—If we may judge by the numerous editions and by the eagerness with which volumes of anecdotes or reminiscences of his life are bought, Charles Lamb is more popular here than in England. His influence on his own time was very slight, but on those of the present generation has been much greater, both as to their lives and on their habits of thought. If the power which the "gentle Elia" has exerted is passing away, as some have thought, the characteristics of that wonderful humorist will be brought again to mind by Mr. Procter's "Memoir." "Barry Cornwall" was one of Charles Lamb's intimate friends, and as he tells the story of that life of sacrifice and tenderness, we lose sight altogether of the writer and find ourselves face to face with that kindly man, sad yet always happy with his friends over a comforting glass of wine. Mr. Procter's book is a view of the man and of his habits, rather than an analysis of his character or a collection of his sayings. Some few of the stories about him are either new or else forgotten, two of which we repeat: "Mrs. K., after expressing her love for young children, added tenderly, 'and how do *you* like babies, Mr. Lamb?' His answer, immediate, almost precipitate, was 'Boi-boi-boiled, ma'am!'" "Of a Scotchman: 'His understanding is always at its meridian. Between the affirmative and the negative there is no border-land with him. *You cannot hover with him on the confines of truth.*'"

—Mr. W. W. Skeat is preparing a new edition of "Piers Plowman." He has examined nearly thirty MSS., and thinks there are *three* distinct types of the poem. He proposes to publish one of each in order, with various readings and notes, beginning with the earliest and shortest. He asks all scholars who have made notes of any kind—historical, philological, or theological—on points connected with the poem to assist him by their communications.

—Mr. John Grote, the younger brother of the historian, is dead. He was the professor of moral philosophy in the University of Cambridge, and senior fellow of Trinity College, and had not long ago issued the first part of a critical work called "Exploratio Philosophica."

—Señor de la Barrera, it is said, is about to offer a sequel to his former work to the coming competition for the annual prize at the National Library of Madrid. This prize was established to encourage bibliographical studies. To the successful author a money premium is given, and the work is printed at the expense of the state. Señor de la Barrera gained this prize at the competition of 1860 with his excellent and

very thorough work, the "Catálogo Bibliográfico y Biográfico del Teatro Antiguo Español." The supplement will correct the errors which were unavoidable in the previous work, containing as it did such a mass of scattered details brought together with difficulty from various sources. Besides this, it will make many additions to the work, among which is an entirely new biography of Lope de Vega, founded on documents that have been recently discovered, and especially on a valuable series of autograph letters, extending over a period of his greatest brilliancy, which were lately found in the archives of the Conde de Altamira. The personal history of Lope, previously a mere blank, is now filled up with details from his own hand. It seems, however, that there is some difficulty about the publication of this discovery on religious grounds. Many of these letters reveal the fact that even after assuming the tonsure, Lope did not entirely abandon the follies of the world, and that his priestly life was marked by many frailties. Some of the ultra-Catholic party at court think that such a reflection on the impeccability of the priesthood is a scandal too great to be divulged. But as every one knows that Lope de Vega published over one thousand plays after he took orders, the subjects of which turn on love, it would hardly be thought that the main story of his life would do much harm among a pious people like the Spaniards.

SCIENTIFIC.

Nitro-glycerine.—M. Emile Kopp, a very good authority, reports to the French Academy the successful use of nitro-glycerine in some sandstone quarries near Saverne. The peculiarity of the case is that the nitro-glycerine is all made upon the spot just before it is wanted for use. The very dangerous transportation of this fulminating material is wholly avoided. The materials from which it is made are not dangerous, though somewhat inconvenient to transport. M. Kopp recommends the following method of preparation, which he considers simple enough to be executed by an ordinary workman under any temporary shelter in the quarry itself. In a large earthenware pot or basin, placed in cold water, the workman mixes a quantity of fuming nitric acid (50° Baumé) with twice its weight of the most concentrated sulphuric acid. In another pot he evaporates some commercial glycerine until it becomes sirupy and marks 30° to 31° Baumé. When both these liquids have become perfectly cold, the workman places 3·3 litres (5·8 pints) of the mixed acids in a glass globe or earthenware pot, which must be kept cool by immersion in cold water. He then pours into the acids 0·5 litre (0·88 pint) of the concentrated glycerine in a fine stream, with constant stirring. It is important to avoid any sensible heating of the mixture. After waiting ten minutes, the workman turns the mixture into five or six times its volume of cold water. The nitro-glycerine falls to the bottom as a heavy oil. Washed once more with a little water, it is ready for use. It is still slightly acid and watery, but these impurities do not hinder its effectual working. The oil is employed for blasting in open quarries in the following manner: Let the object be to detach a considerable mass of stone from a ledge. At 8 to 10 feet from the edge a hole 2 inches in diameter is sunk to a depth of 7 to 10 feet, and well cleaned out. Three to four pounds of nitro-glycerine are then poured in. Next the workman lowers down upon the oil a little cylinder of wood or tin, about 1¾ inches in diameter and 2 inches high, filled with gunpowder. This cylinder is let down by means of a common fuse, which is attached to the cylinder, for the purpose of carrying fire to the powder. Holding the fuse straight, the workman fills the hole with fine sand. No tamping is necessary. The shock caused by the inflammation of the powder explodes the nitro-glycerine. The explosion is so sudden that the sand has no time to be thrown from the hole, and no pieces of rock are projected into the air. Formidable masses of rock are cracked off and slightly displaced; but the rock is not broken into small pieces, and there is but little waste. Herein lies the principal advantage of nitro-glycerine over gunpowder in blasting. M. Kopp is of opinion that the transportation of nitro-glycerine, whether by land or sea, ought to be absolutely prohibited, and that its use in the covered galleries of mines would be dangerous, on account of the very poisonous properties of its vapor; but if manufactured on the spot at the time of using, he believes it may be safely and advantageously employed in all blasting operations conducted in the open air.

Poisoning Vermin.—M. Cloëz has had good success in killing the rats which infested the Jardin des Plantes, at Paris, with bisulphide of carbon, a somewhat oily liquid, volatile at the ordinary temperature, and possessing a most nauseating odor. This liquid, no long time ago a chemical rarity, is now manufactured on a large scale, and, as the materials are cheap and the process simple, it can be bought in Paris, according to M. Cloëz, for less than ten cents a pound. The mode of applying this cheap poison is simple. By means of a flexible leaden tube, a little of the liquid is poured into the holes or other confined spaces in which the rats live, and all exit-holes are stopped with clay, mortar, or loam. The rats are suffocated by the vapor—unless they run away. It is obvious that the method is not universally applicable. In the first place, it kills the rats in their holes and leaves them there—a very undesirable result in many cases; secondly, it is unavailable unless the rats are living in holes in the ground, or similar tight places, from which neither they nor the vapor can escape; thirdly, no one who has ever smelt of bisulphide of carbon would recommend the diffusion of its vapor through a house. In the hold of a vessel the method might be applicable; at anything like the French price of bisulphide of carbon, the operation would not be costly, and it would certainly be effective against the rats; as to the subsequent purification of the hold, there might be a difficulty; moreover, the method now in use, of smoking the rats out by burning sulphur in the hold, is good enough. M. Cloëz found that other burrowing animals besides rats, rabbits for example, died from the effects of breathing the vapor of this liquid, and that birds were killed by it even more promptly than rats and rabbits.

The French Academy, to whom this communication concerning poisoning rats was made, enjoy frequent opportunities of listening to vivid descriptions of the most approved scientific methods of exterminating vermin. We recall a memoir, presented to the Academy some years ago, describing with great zest a wholesale poisoning of rats by sulphuretted hydrogen, in an old conventual building outside of Paris, then occupied as a boarding-school; the amusing agonies of particularly large and fat rats, which came out on the floor and died before the eyes of the delighted experimenters, were vividly pictured. Eleven years ago, Thenard, one of the most eminent of French chemists, read to the Academy a most amusing account of the important practical discovery which he made in 1811, viz.: that boiling soap-suds would exterminate "that horrible insect which not only inflicts painful stings, but, when crushed between the fingers, exhales such a disgusting odor that we are sorry to have killed him." Thenard describes his many fruitless efforts to rid himself of the plague—the last one in these words: "An idea which I thought excellent occurred to my mind; it was to put the bedstead in the middle of the chamber, and plunge the feet into vessels full of water; I thought myself delivered. Not at all; the enemy attacked me as usual—he mounted to the ceiling and dropped down when above me." The simple remedy with which every good housekeeper is now familiar was the precious fruit of Thenard's sufferings.

Irrigation in Australia.—The project of collecting and storing water upon the large scale, so that it may be had in abundance at all seasons for domestic and agricultural purposes, has long been under discussion in Australia. Latterly, it has acquired political importance, and the idea now bids fair to be put in practice. Victoria, the wealthiest and most enterprising of the Australian states, has recently determined to spend a million of pounds sterling towards carrying out the project. The rain-fall of Australia, on an average of years, is ample to supply the wants of all the inhabitants, but the conformation of the country affords little natural storage. If the experiment now in progress prove successful, it may alter the character of the cultivation throughout the entire country. In Queensland, in the districts below the Darling Downs range, it is thought that artesian wells may be found useful, and it is proposed to sink such wells at once, as an experiment. The supporters of this scheme find encouragement in the experience of the French, who have derived great advantage from wells bored in the deserts upon the outskirts of Algeria.

THE LETTERS OF EUGÉNIE DE GUÉRIN.*

Now that the friends and correspondents of Mademoiselle de Guérin have consented to the publication of her letters, there remains no obstacle to a thorough acquaintance not only with the facts of her external life, but with her thoughts and feelings—the life of her soul. It can have been the fortune of few persons to become so widely and intimately known as the author of these letters, and to have evoked sentiments of such unalloyed admiration and tenderness. How small is the proportion either of men or of women who could afford to have the last veil of privacy removed from their daily lives; not for an exceptional moment, a season of violent inspiration or of spasmodic effort, but constantly, uninterruptedly, for a period of seventeen years. Mlle. de Guérin's letters confirm in every particular the consummately pleasing impression left by her journal. A delicate mind, an affectionate heart, a pious soul—the gift of feeling and of expression in equal measure—and this not from the poverty of the former faculty, but from the absolute richness of the latter. The aggregation of these facts again resolves itself under the reader's eyes into a figure of a sweetness so perfect, so uniform, and so simple that it seems to belong rather to the biography of a mediæval saint than to the complex mechanism of our actual life. And, indeed, what was Mlle. de Guérin, after all, but a mediæval saint? No other definition so nearly covers the union of her abundant gentleness and her perfect simplicity. There are saints of various kinds—passionate saints and saints of pure piety. Mlle. de Guérin was one of the latter, and we cannot but think that she needed but a wider field of action to have effectually recommended herself to the formal gratitude of the Church. This collection of her letters seems to us to have every quality requisite to place it beside those *livres édifiants* of which she was so fond—unction, intensity, and orthodoxy.

We have called Mlle. de Guérin a saint perhaps as much from a sense of satisfaction in being able to apply a temporary definition to our predicate as from the desire to qualify our subject. What is a saint? the reader may ask. A saint, we hasten to reply, is—Mlle. de Guérin; read her letters and you will discover. If you are disappointed, the reason will lie not in this admirable woman, but in the saintly idea. Such as this idea is, she answers it—and we have called her, moreover, a mediæval saint. It is true that the organization of society during these latter years has not been favorable to a direct and extensive action on the part of personal sanctity, and that, as we associate the idea of a successful exercise of this distinction with social conditions which have long ceased to exist, it seems almost illogical to imply that saintship is possible among our contemporaries. Yet it is equally certain that men and women of extraordinary purity of character constantly attain to a familiarity with divine things as deep and undisturbed as Mlle. de Guérin's. Her peculiar distinction—that fact through which she evokes the image of an earlier stage of the world's history—is the singular simplicity of her genius and of her circumstances. Nowhere are exquisite moral rectitude and the spirit of devotion more frequent than in New England; but in New England, to a certain extent, virtue and piety seem to be nourished by vice and skepticism. A very good man or a very good woman in New England is an extremely complex being. They are as innocent as you please, but they are anything but ignorant. They travel; they hold political opinions; they are accomplished Abolitionists; they read magazines and newspapers, and write for them; they read novels and police reports; they subscribe to lyceum lectures and to great libraries; in a word, they are enlightened. The result of this freedom of enquiry is that they become profoundly self-conscious. They obtain a notion of the relation of their virtues to a thousand objects of which Mlle. de Guérin had no conception, and, owing to their relations with these objects, they present a myriad of reflected lights and shadows. For Mlle. de Guérin there existed but two objects—the church and the world, of neither of which did it ever occur to her to attempt an analysis. One was all good, the other all evil—although here, perhaps, her rich natural charity arrested in some degree her aversion. Such being her attitude toward external things, Mlle. de Guérin was certainly not enlightened. But she was better than this—she was light itself. Her life—or perhaps we should rather say her faith—is like a small, still taper before a shrine, flickering in no fitful air-current, and steadily burning to its socket.

To busy New Englanders the manners and household habits exhibited in these letters are stamped with all the quaintness of remote antiquity. But for a couple of short sojourns in Paris and in the Nivernais, a journey to Toulouse, and a visit to the Pyrenees shortly before her death, Mlle. de Guérin's life was passed in an isolated château in the heart of an ancient province, without visitors, without books, without diversions; with no society but that of her only sister, a brother, the senior of Maurice, and her father, whom the reader's fancy, kindled by an occasional allusion, depicts as one of the scattered outstanding gentlemen of the old *régime*—proud, incorruptible, austere, devout, and affectionate, and, with his small resources, a keen wine-grower. It is no wonder that, in the social vacuity of her life, Mlle. de Guérin turned so earnestly to letter-writing. Her only other occupations were to think about her brother Maurice, to spin by the kitchen fireside, to read the life of a saint, or at best a stray volume of Scott or Lamartine, or Bernardin de Saint-Pierre; to observe zealously the fasts and festivals and sacraments of the church, and to visit sick peasants. Her greatest social pleasure seems to have been an occasional talk with an ecclesiastic; for to her perception all priests were wise and benignant, and never commonplace. "To-morrow," she writes, "I shall talk sermon. We are to hear the Abbé Roques. He is always my favorite preacher. *It is n't that the others are not excellent.*" There is something very pathetic in the intellectual penury with which Mlle. de Guérin had to struggle, although there is no doubt that the unsuspecting simplicity of vision which charms us in her writing is largely owing to the narrow extent of her reading. The household stock of books was small; it was difficult, both on account of the exiguity of the means of the family and its remoteness from a large town, to procure new ones; and in the case of Mlle. de Guérin herself, the number of available works was further limited by her constant scruples as to their morality. It must be owned that she knew few works of the first excellence. She read St. Augustine and Fénelon and Pascal, but for the most part she got her thoughts very far from the source. Some one gives her Montaigne, but, although she is no longer a young girl, she discreetly declines to open him. "I am reading for a second time," she writes, "Bernardin de Saint-Pierre, an amiable and simple author, whom it is good to read in the country. After this I should like 'Notre Dame de Paris;' but I am afraid. These novels make such havoc that I dread their passage; it terrifies me simply to see their effect on certain hearts. Mine, now so calm, would like to remain as it is." So, instead of the great men, she contents herself with the small. "You see," she elsewhere says, "we are keeping the Month of Mary. I have bought for this purpose at Albi a little book, 'The New Month of Mary,' by the Abbé Le Gaillan; a little book of which I am very fond—soft and sweet, like May itself, and full of flowers of devotion. Whoever should take it well to heart would be agreeable to God and *en admiration aux anges.* . . . . Read it; it is something celestial."

It is difficult to give an idea of the intimacy, the immediacy, of Mlle. de Guérin's relations with the practice of piety. Not an incident but is a motive, a pretext, an occasion, for religious action or reflection of some kind. She looks at the world from over the top of her *prie-dieu*, with her finger in her prayer-book. "Mlle. d'H.," she writes, "comes to edify me every second day; she reaches church early, confesses herself, and takes the communion with an *air d'ange* that ravishes and desolates me. *How I envy her her soul!* . . . . . Her brothers, too, are little saints. The eldest, etc. . . . . Is n't it very edifying?" And again: "I am in every way surrounded with edification, fed upon sermons and discourses. Such a good Lent as I have passed!" Describing to a dear friend, a young lady of her own age, a peculiar ceremony which she had witnessed on a young girl's taking conventual vows: "They say," she concludes, "that everything the novice asks of God at this moment is granted her. One asked to die; she died. Do you know what I would ask? *That you should be a saint.*" The reader will, of course, be prepared to find Mlle. de Guérin a very consistent Catholic—a perfect, an absolute one. This fact explains her, and we may even say excuses her. So complete a spiritual submission, so complete an intellectual self-stultification, would be revolting if they were a matter of choice. It is because they are a matter of authority and necessity, things born to and implicitly accepted, that the reader is able to put away his sense of their fundamental repulsiveness sufficiently to allow him to appreciate their incidental charms. It is the utter consistency of Mlle. de Guérin's faith, the uninterruptedness of her spiritual subjection, that make them beautiful. A question, a doubt, an act of will, the least shadow of a claim to *choice*—these things would instantly break the charm, deprive the letters of their invaluable distinction, and transform them from a delightful book into a merely readable one. That distinction lies in the fact that they form a work of pure, unmitigated *feeling*. The penalty paid by Mlle. de Guérin and those persons who are educated in the same principles, for their spiritual and mental security, is that they are incapable of entertaining or producing ideas. There is not, to our belief, a single idea, a single thought, in the whole of these pages. On the other hand, one grand, supreme idea being tacitly understood and accepted throughout—the idea, namely, of the Church—and a particular direction being thus given to emotion, there

* "Lettres d'Eugénie de Guérin." Paris: Didier. 1866.
"Letters of Eugénie de Guérin." New York: Alexander Strahan & Co. 1866.

is an incalculable host of feelings. Judge how matters are simplified. Genius and pure feeling! No wonder Mlle. de Guérin writes well! There are, doubtless, persons who would be ill-natured enough to call her a bigot; but never would the term have been so ill applied. Is a pure sceptic a bigot? Mlle. de Guérin was the converse of this, a pure believer. A pure sceptic doubts all he knows; Mlle. de Guérin believes all she knows. She knows only the Catholic Church. A bigot refuses; she did nothing all her life but accept.

The two great events of Mlle. de Guérin's life were her visit to Paris on the occasion of the marriage of her brother Maurice, and his death, in Languedoc, eight months afterwards. Paris she took very quietly, as she took everything. What pleased her most was the abundance and splendor of the churches, in which she spent a large portion of her time. She had changed her sky, but she did not change her mind. The profoundest impression, however, that she was destined to receive was that caused by her brother's death. He died on the best of terms with the Church, from which he had suffered a temporary alienation. Her letters on the occasion of this event have an accent of intense emotion which nothing else could arouse. We cannot do better than translate a portion of one, which seems to us to possess a most painful beauty:

"For a week now since he has left us—since he is in heaven and I am on earth—I have n't been able to speak to you of him, to be with you, to unite with you, my tender friend, also so dearly loved. Shall we never be disabused of our affections? Neither sorrows, nor rupture, nor death—nothing changes us. We love, still love—love into the very tomb, love ashes, cling to the body which has borne a soul; but the soul, we know that is in heaven. Oh, yes! there above, where I see thee, my dear Maurice; where thou art awaiting me and saying, 'Eugénie, come hither to God, where one is happy.' My dear friend, all happiness on earth is at an end; I told you so; I have buried the life of my heart; I have lost the charm of my existence. I did not know all that I found in my brother, nor what happiness I had placed in him. Prospects, hopes, my old life beside his, and then a soul that understood me. He and I were two eyes in the same head. Now we 're apart. God has come between us. His will be done! God stood on Calvary for the love of us; let us stand at the foot of the cross for the love of him. This one seems heavy and covered with thorns, but so was that of Jesus. Let him help me to carry mine. We shall at last get to the top, and from Calvary to heaven the road is n't long. Life is short, and indeed what should we do on earth with eternity? My God! so long as we are holy, that we profit by the grace that comes from trials, from tears, from tribulations and anguish, treasures of the Christian! Oh, my friend! you have only to look at these things, this world, with the eye of faith, and all changes. Happy Father Trubert, who sees this so eminently! How I should like to have a little of his soul, so full of faith, so radiant with love! . . . How things change! Let us change, too, my friend; let us disabuse ourselves of the world, of its creatures, of everything. I only ask for complete indifference."

THE TWO WHEATONS.*

Richard H. Dana's edition of "Wheaton's International Law" "contains nothing," Mr. Dana says, "but the text of Mr. Wheaton, according to his last revision, his notes, and the original matter contributed by the editor." This statement Mr. William Beach Lawrence, editor of a previous edition of Wheaton, flatly contradicts. Omit, he says, such of Mr. Dana's notes as relate to events that have occurred since the end of 1862; omit Mr. Dana's quotations from President Woolsey's little book on international law, and there will be nothing left for which Mr. Dana is not directly indebted to his annotations. And, in Mr. Lawrence's opinion, this identity is not due to the fact that he and his rival have studied the same subject, and studied it in the same authorities. It is a case of one man's being robbed by another of the fruits of his toil, and it calls for a suit at law. Mr. Dana has used, without changing a word of the English, his translations of French, Spanish, Italian, and German authors; he has quoted, as if he had specially consulted them, foreign works of which there is in America no other copy than the single copy in Mr. Lawrence's possession; he has made use of facts as familiar illustrations which Mr. Lawrence derived from his own correspondence with the publicists of Europe. To do this is certainly to borrow without leave and without acknowledgment of obligation, even with a denial of obligation, the results of another's labor, and, as we have said, Mr. Lawrence intends to institute legal proceedings for indemnification.

Certainly, it will be a case that must necessarily be full of difficulties for the complainant, to say nothing of the judge or jury. Phillimore or Bello or Hautefeuille, studying a mass of facts, evolves by laborious thought a principle of international law. It is easy to see that no man has a right to quote a passage containing what has been thus excogitated without giving due credit to the thinker. No man at any rate may, for a certain length of time, use such knowledge as his own. Sooner or later, of course, all the literature of mere knowledge becomes common property, and some of it, as, for instance, the literature produced by these annotators, whose work for the most part is to elucidate one author by passages drawn from another, seems hardly to be literature and hardly to be anything else than common property from the beginning. Suppose that one writer to-day quotes a sentence from Hautefeuille as being applicable to a certain passage in Wheaton, and a year hence another writer, annotating the same passage, quotes the same sentence, on what principles shall a judge or jury condemn him for doing so, or how will his predecessor prove that the sentence was taken from Hautefeuille at second hand, was really stolen from himself? The defendant will at once say that the pages of Hautefeuille, Von Martens, Bello, or any other writer on international law, if he is a writer of sufficient importance to be quoted at all, are open to all the world. He may say, too, that, in all probability, if any two men not studious of mere elegance were to translate one or two, or two thousand, sentences from any foreign author, especially from an author with a style abounding in legal forms of speech, their translations would almost certainly be nearly identical in phrase. And in the case of those imported volumes of which Mr. Lawrence speaks, how is a man to prove that he alone, of thirty-odd millions of Americans, has in fact obtained a particular volume which it is possible for any one of the thirty-odd millions to obtain by sending for it?

The case will, therefore, be an interesting one both for the intricate nature of the semi-literary question that is to be decided and because the charge, a very easy one to make, must of necessity be an extremely hard one to establish. We have no right nor any wish to take sides in a controversy which is to be carried on in the courts, in which evidence is to be produced of which we can hardly know anything, and which, indeed, as we have said, relates to a question that is only semi-literary and to a branch of literature that can hardly be said to deserve the name. But some general remarks on the matter in dispute will not be out of place nor altogether without interest.

As a rule, the same passages form the subject of comment and annotation by both the editors, though Mr. Dana has notes, especially in the last chapters, on many passages upon which Mr. Lawrence has none, and upon a less number of passages there are notes by Mr. Lawrence and none by Mr. Dana. The whole body of Mr. Dana's notes, which are two hundred and sixty-eight in number, if printed in The Nation, would make something like ninety pages. The mass of Mr. Lawrence's, of which there are two hundred and forty-nine, is larger, and in his book there is an appendix, in the nature of notes and addenda to these notes, which swells the volume of his contributions considerably more.

As has been seen, Mr. Lawrence admits that a certain part of Mr. Dana's notes, those relating to events that have occurred since the last edition of Lawrence's Wheaton was published, are entirely Mr. Dana's. This at once removes quite a large portion of the matter furnished by the last editor out of the region of controversy. There is another class of the notes which would in part, but not wholly, come under the description above given—the class derived from Mr. Dana's long practice in the prize courts and his intimate familiarity with the law of prize, which also Mr. Lawrence, it is probable, would freely admit to be Mr. Dana's. And to these must be added another and a smaller class, which Mr. Lawrence, we suppose, would hardly challenge as his own, in which many of the general questions growing out of the rebellion are treated of from a very decidedly Northern point of view.

Excluding all notes that Mr. Lawrence, or Mr. Lawrence's counsel for him, would concede to have been not borrowed from his edition, we suppose, after a pretty careful collation of the two volumes, that of Mr. Dana's above-mentioned ninety pages of The Nation, about thirty pages, be the same more or less, would be left as the subject of dispute. The instances upon which he would probably rest his claim are such as these that follow. Of course it is impossible in a short article of this kind to quote the longer notes, and we confine ourselves to the shorter, without, however, as we think, detracting anything from the strength of Mr. Lawrence's case.

On page 30 of Wheaton he speaks of treaties that cease to be obligatory on the parties to them by reason of "a change in the social organization of one of the contracting parties, of such a nature and of such importance as would have prevented the other party from entering into the contract had he foreseen this change." Mr. Dana has the following note upon this passage:

"The separation of Belgium from the kingdom of the Netherlands, and the change wrought thereby in the relations of Holland with the great

* "Elements of International Law. By Henry Wheaton, LL.D. Edited, with notes, by Richard Henry Dana, LL.D." Boston: Little, Brown & Co. Pp. 749.

powers, were held by the United States to justify it in withdrawing from an agreement to accept the King of the Netherlands as an umpire on the north-eastern boundary question. When Texas agreed to unite itself to the Republic of the United States, France and England notified her that she did not thereby cease to be bound by her treaty obligations with those powers. —Lord Aberdeen to Mr. Eliot, Dec. 3, 1845, Sen. Doc. vii., 375." [D.]

Mr. Lawrence has no reference to the King of the Netherlands:

"On the occasion of the annexation of Texas the British Government instructed their minister to call the attention of the Texan Government to the treaties existing between Great Britain and Texas, and to remind them that the voluntary surrender of their independence by the Government and people of Texas will not annul these treaties. On the contrary, that their stipulations will remain in precisely the same situation as if the Texans had remained an independent power.—Earl of Aberdeen to Mr. Eliot, Dec. 3, 1845. Similar representations were made by France through M. Saligny, chargé d'affaires. Senate documents, 29 Cong., 1 sess., Vol. VII., No. 375." [L.]

On page 36, Wheaton is treating of "National and Sovereign States," and speaks of the Ionian Islands. Mr. Dana's note is as follows:

"During the Crimean war the British courts held that the Ionian Islands were not parties, not being so made by Great Britain; and that their vessels were not forbidden to trade in Russian ports.—The Leucade Jurist, i., 549."

"In 1864, the protectorate of Great Britain over the Ionian Islands was withdrawn, and these islands united to the kingdom of Greece. This was effected by the course described in the speech of the Queen of Great Britain to Parliament in that year:

"'Her Majesty having addressed herself to the powers who were contracting parties to the treaty by which the Ionian Republic was placed under the protectorate of Great Britain, and having obtained their consent to the annexation of that republic to the kingdom of Greece, and the states of the Ionian Republic having agreed thereto, the republic of the seven islands has been formally united to the kingdom of Greece; and her Majesty trusts that the union so made will conduce to the welfare and prosperity of all the subjects of his Majesty the King of the Hellenes.'"

Mr. Lawrence wrote before it was possible to give the history of this cession of the seven islands or the extract from the Queen's speech. The following is his note:

"At the commencement of the Russian war an opinion had been given, as announced by Lord John Russell in the House of Commons 2d of June, 1854, by the law officers of the crown, that the Ionian Republic being under the protection of her Majesty, could not be considered as a neutral state, and that the Ionian Republic must take part with Great Britain with respect to the war in which she was engaged, though not bound to carry on active measures of warfare; and that, therefore, vessels sailing under the Ionian flag were not to be considered as sailing under a neutral flag.—'Hosack on Rights of Neutrals, p. 117.'"

"It was, however, subsequently decided in the British Court of Admiralty that the right of Great Britain was drawn from treaty, not from conquest, and that by the seventh article of the convention creating the protectorate the trading flag of the Ionian Islands was acknowledged as the flag of a free and independent state. Great Britain might have included the Ionian Islands in the war, but she had not done so. The Ionian Islands were not included in the treaties made by Great Britain, unless specially named, nor were Ionian vessels within the clause of the order in council of the 15th of April, 1854, which forbade British ships from trading with enemy's ports.—'Jurist,' Vol. I., N. S., p. 549. Leucade. See also Twiss, 'Law of Nations,' Vol. I., p. 55."

On page 220 Wheaton is speaking of the "Rights of Legation," and states that a minister cannot be expected, except in certain cases, to communicate to the government to which he is accredited the instructions that he may have received from his own government. Mr. Dana says in his note:

"It is understood that a minister of foreign affairs may decline to hear a despatch, or other written communication, read to him by a diplomatic agent, unless a copy is left with him. The reason is, that it puts him to the disadvantage of being obliged to trust to his memory, while the other party to the interview has the writing. In cases of verbal communication the two parties are on an equality."

Mr. Lawrence had previously written upon this passage the following note:

"The minister of foreign affairs may refuse to allow a communication to be read to him by a foreign minister from his government, unless a copy is to be left with him. Mr. Canning, in a letter to Lord Grenville, at Paris, dated March 4, 1825, says: 'The last three mornings have been occupied partly in receiving the three successive communications of Count Lieven, Prince Esterhazy, and Baron Maltzahn of the high and weighty displeasure of their courts with respect to Spanish America. Lieven led the way on Wednesday. He began to open a long despatch, evidently with the intention of reading it to me. I stopped him, *in limine*, desiring to know if he was authorized to give a copy of it. He said, No; upon which I declined hearing it unless he would give me his word that no copy would be sent to any other court. He said he could not undertake to say that it would not be sent to other Russian missions, but that he had no notion that a copy of it would be given to the courts at which they were severally accredited. I answered that I was either to have a copy of a despatch which might be quoted to foreign courts (as former despatches had been) as having been communicated to me and remaining unanswered, or to be able to say that no despatch had been communicated to me at all. It was utterly impossible for me, I said, to charge my memory with the expressions of a long despatch once read over to me; or to be able to judge on one such hearing whether it did or did not contain expressions which I ought not to pass over without remark. Yet by the process now proposed I was responsible to the king and to my colleagues, and ultimately, perhaps, to Parliament, for the contents of a paper which might be of the most essentially important character, and of which the text might be quoted hereafter by third parties as bearing a meaning which I did not on the instant attribute to it, and yet which, upon bare recollection, I could not controvert. Lieven was confounded. He asked me what he was to do? I said, What he pleased; but I took the exception now before I heard a word of his despatch, because I would not have it thought that the contents of the despatch, whatever they might be, had anything to do with that exception."

We have not space to multiply examples of this kind, nor to cite any translations from foreign authors. And, of course, we do not profess to know whether or not Mr. Dana has had access to the books from which he makes citations. Of the translations we may safely say that we find no identity of language that can be called "miraculous," as Mr. Lawrence calls it in a published letter which bears marks of having been written hastily. As we have said, if the case goes into court at all, it will have to rest mainly upon such instances of coincidence or appropriation as those which we have given above, and the public will watch the proceedings with interest.

THE WAY OUT OF BARBARISM.*

DETESTATION of the vices and errors incident to the development of the human race has, in these latter days, softened at least into pity, if not into a sort of respect. We have begun to appreciate the furlong of our forefathers as the condition precedent of our league of progress. Hence new judgments of institutions and of men, and clearer conceptions of the times which are past; and, reasoning backwards from this philosophy, a natural belief that the grossest forms and customs now obsolete coincide with the earliest periods of human existence. While it is true, however, that the ancient Germans, for example, were not such models of manhood as some of their descendants, relying on Tacitus, have represented them, it is equally true that the four judicial practices which Mr. Lea studies in their historic sequence, grow more and more cruel and revolting as they approach our civilization, until they are finally abandoned.

The wager of law or compurgation is traced to an age in which the principle of the clan assumed a larger expansion in its peaceful than in its violent aspect. It was a step towards order and a social state. Though seemingly the most absolute recognition of individualism, it was in reality a restraint upon it. Swearing by wholesale took the place of fighting by wholesale, and this lasted till the evils of perjury became unendurable, and men sought some better way of deciding the doubtful issues which arose in the courts. The preposterous exaction of negative proofs was still persevered in, though it was the root of the whole difficulty; but the accuser was encouraged to make good his charges in the *champ clos*, in the *judicial* duel or wager of battle—which was not, apparently, as Guizot pretends, in the beginning a substitute for the right of private vengeance, and so always claimable by law, but was employed like, and as a remedy for, compurgation, when testimony was defective. The notion of God's judgment which it involved was certainly strengthened by the introduction of Christianity, but perhaps belonged to it originally. This, too, had its day in civil and in criminal cases, with extensions not calculated to further the ends of justice, and at last stultifying itself by the admission of champions. The growth of commerce, the rising might of the communes, the decay of feudalism before them both and before the centralizing tendencies of monarchs like St. Louis and Philippe-le-Bel, together especially with the revival of the civil law that followed the discovery at Amalfi of the Pandects of Justinian, in the twelfth century, effected the transition not from superstition to superstition—for that remained the same—but from ruder to more subtle kinds of force. The ordeal was indigenous with the Barbarians, but the Church judiciously fostered it for her own advantage, and to combat with it other Pagan observances which she deemed more objectionable. All the forms of the ordeal were not directed against flesh and nerves, but some, like that of bread and of blood, appealed only to the imagination, though with sufficient impressiveness. The sacredness of the human body, however, is manifestly diminished before such tests as the ordeal of boiling water, of red-hot iron, and of fire itself, when compared

* "Superstition and Force. Essays on the Wager of Law—the Wager of Battle—the Ordeal—Torture. By Henry C. Lea." Philadelphia: Henry C. Lea. 1866. Pp. 407.

with the fair play of an open encounter even with a professional and hired champion. Feudalism clung also to the ordeal in resisting its own overthrow, and protested to the last against the innovation of the torture, which neither China nor India had transmitted, but Greece and Rome, and which was familiar to the Barbarians only in the examination of slaves. Uncivilized Russia was more backward (*because* she was uncivilized) in accepting this practice than the semi-civilized peoples of the west of Europe, who, however, for a full century after the discovery of the Pandects, showed little affection for it. Here the Church, by means of its Inquisition, came in powerfully as an auxiliary, and gave to the torture a far wider application than even corrupt and imperial Rome—an example which the Calvinism of Scotland in the sixteenth century followed only too closely, indeed incredibly.

Mr. Lea, in his very scholarly and truly critical essays, has not failed to notice the duration of the several customs above enumerated. He shows that the wager of law was demanded and allowed in England in 1799 and in 1824, and was not formally abrogated till 1833; that the wager of battle was abrogated in the same country in 1819; that in 1860 the kinsmen of a murdered man in Philadelphia begged the coroner to allow them to bring the suspected assassin to the ordeal of blood, *i. e.*, by making him touch the corpse; that the torture survived in Germany till nigh the middle of the present century; and that, if Garibaldi uncovered what was asserted at Naples and Palermo, we have in Bomba the latest European protector of that atrocious system. Our author also alludes to the use of the cold-bath torture in punishing and even in detecting deserters from our armies during the late war against rebellion—an instrument for which we saw in a slave-pen at Alexandria, converted into a prison for deserters, and whose new application we remember to have thought scarcely less inhuman and indefensible than the old. And, after all, is not war itself—war, we will say, between sovereign states, which admit no arbiter—is not this a remnant both of superstition and impiety, the wager of battle on a frightful scale? Here we have precisely accuser and accused, and no possibility of a decision—because each party is judge in its own case and will allow no other. What is decided by a resort to arms—a right? But is God, then, always on the side of the heaviest battalions, and does he approve this meeting of hired champions while one monarch stays at Vienna and the other at Berlin? We seem to have passed the time when such interpositions should be seriously imputed to a merciful Providence.

"If ever there was a woman," says the mother of Felix Holt, the Radical, "could talk with the open Bible before her and not be afraid, it 's me." This illustration, which reminds us that the ordeal has not yet altogether vanished from our thoughts or lips, at least, shall also remind us of the almost universal ordeal of the witness-oath, for such it is. Leaving out of sight the question whether the oath is a safeguard of truth and the handmaid of justice in our courts, it will not be denied that its administration is in effect to invoke upon the perjurer the special punishment of the Almighty. For ourselves we may attach to it no consequence whatever—to him who is grounded in principle it can be of little worth—but we do avail ourselves of the superstition of those less enlightened and less principled than we, by affecting to believe with them that a lie is more odious to God when he has been called to witness that it is the truth than when no such attention has been requested. In other words, we countenance the idea that God is more alive to certain modes and seasons of offence than to others, as if his all-seeing eye needed the placing of a hand upon the Book to penetrate the secret intention of a deceiver in order to visit upon him the exact measure of his retribution.

TWO BOOKS OF SPANISH TRAVEL.*

Old Spain is tolerably well known to the public, both through Mr. Ford's book and several guides and handbooks which have appeared within the last few years. Mr. Blackburn has, in the handsome volume before us, added little or nothing to our knowledge; and, in fact, it does not appear, judging from what he says in his preface, that he hoped to do so. The only incident of Spanish travel with which he makes us acquainted is the badness, irregularity, and discomfort of Spanish railroads. The book is, in fact, a meagre record of a journey over old and familiar ground, written in an unpretending style; but the illustrations are excellent. The engraver and printer have lavished all the resources of their art on the whole work.

It is difficult to give the reader any account of Mrs. Byrne's book in which we shall not seem to exaggerate its defects. If the rhetoric and moral reflections were taken out of it, it might be compressed into one volume half the size of either of the two before us. We have waded through it, in the hope of finding something about Spain which is not told by Ford or Murray, but in vain. Mrs. Byrne simply relates at great length, and in the most execrable English, the story of a very commonplace journey performed by a lady with apparently ordinary powers of observation. Her style is so vicious and her diffuseness so great that we would advise nobody to follow her in her wanderings who is in search of entertainment, and as a source of information her book is rendered well-nigh worthless by the load of verbiage and "philosophical" reflection in which every fact is buried. Latin quotations are numerous, and most of her pages are studded with French phrases. The Spaniard "wears a look which seems to say, 'après moi le deluge;'" the men "ruunt per vetitum nefas" into the smoking room of the theatre between the acts; being used to tobacco smoke is to be "crassoque sub aere nati." The idlers at the Pyrenean watering-places are "fainéants;" three ladies going on an excursion on donkeys are going on an "asinine expedition;" the party consists of the two girls and their "alma mater," who is elsewhere called their "mater-familias." We are told that, owing to the stubbornness of the donkeys, "the partie was manquée," meaning that the excursion was given up; mutual explanations are "explanations de part et d'autre;" bawling loudly is "bawling à tue-tête;" getting rid of a crowd is "freeing one's self from them vi et armis;" the right of the strongest is the "droit du plus fort;" workmen employed on a railroad seen taking their dinner at noon are "patulae recubans sub tegmine fagi;" Mrs. Byrne's first glimpse of Burgos was "au clair de la lune;" her walk to the inn on foot from the station was her "trajet;" being on foot, her party were "mere piétons," and had not "the usual tests of fourgon and suite;" and the servants who came out to meet them were "valetaille." These specimens of Mrs. Byrne's style have been found in five of her pages opened at haphazard. It may, perhaps, best be characterized as the "shabby-genteel." She considers the Spaniards from a strictly respectable and English point of view.

History of the Atlantic Telegraph. Rev. H. M. Field, D.D. (New York: Scribner, Welford & Co.)—The Atlantic cable, as the cable itself informs us, is doing a business of nine hundred thousand pounds sterling a year, so that if it tells the truth the stockholders are properly jubilant and the world at large is well pleased. And the comic genius who the other day depicted all her sister planets looking with envious eyes upon our earth because we have a cable and they have none, and are not likely to have any, may grasp a firmer brush and paint certain of them wild with jealousy and rushing madly from their spheres, for the old cable, lost in 1865, has been sought for and found, and hereafter, instead of one precarious tie, two electric cords are to connect the American with the vast telegraphic systems of the eastern world. It is a success which no one will begrudge the men who, with noble credulity, sank so many thousands in the sea, and persevered so many years with the patience of heroes. As the writer says, "the story of such an enterprise deserves to be told," and it is a story that can be read with more pleasure than is always to be found in hearing of the "lone inventor by his demon haunted," of his hope deferred, and of other men's reaping his reward. Besides, not only is the termination of the struggle and the labors fortunate enough to gratify the reader, satisfying his sense of justice, but also more than any other enterprise of modern times, not even excepting the adventures of the brave men creeping along the shores of the icy sea in search of Franklin and his crew, this enterprise enlists the sympathies and captivates the imagination.

The book is well written. It begins with a brief account of Mr. F. N. Gisborne's baffled attempt to construct a telegraph across Newfoundland. Mr. Field goes on to tell how his brother, Cyrus W. Field, met Mr. Gisborne at the Astor House, in this city, in the winter of 1853–4; how, as he held the globe in his hands, and listened to Mr. Gisborne's plan of a telegraph overland from Cape Race to Cape Ray, and a service of carrier pigeons, and possibly a submarine telegraph, from Cape Ray to Cape Breton, Mr. Field was struck by the thought that the Atlantic itself might be spanned by the telegraph; how thereupon, perplexed by the problem of how to triumph over the lightning and the ocean, he began to consult with Morse and Maury; how he interested first Peter Cooper, then Moses Taylor, then Marshall O. Roberts, and then Chandler White, being all the time aided by the counsel and encouragement of his brother, David Dudley Field; how Cyrus Field soon made the first of his fifty or sixty ocean voyages, and got from the legislature of Newfoundland the charter of the New York, Newfoundland, and London Telegraph Company. Then we are taken back and forth many times between England and America and into the company of statesmen, and men of science, and captains of ships, till at last disappointments are done, the cable is laid, and we read the despatch which announces peace between Austria and Prussia. It is a fascinating narrative, a record of courage, audacity, cheerful perseverance, wonderful liberality and public spirit, business sagacity, scientific learning, skill, and well-deserved success obtained at last, which should have its thousands of readers, if for no better reason, than for the same reason that the last good novel is read by thousands. Rewritten after a somewhat more popular fashion, it would be one of the best of books for boys.

ONE EXCUSE FOR CONSERVATIVES.

FEW men who pay close attention to politics and read the newspapers can fully appreciate how large the class is who never know exactly the nature of any political issue of the day, who rarely read a newspaper report, or do more than glance through the editorial articles, and whose own political opinions are the products not of knowledge or of reflection, but of prejudices, impressions of childhood, personal antipathies and associations. This class is rarely met with in public movements, is never very earnest or enthusiastic in any political agitation, but it makes itself felt at the polls on great occasions. In this dispute between President and Congress, a very large proportion of this class is opposed to Congress not from any fixed conviction about the merits of the quarrel, but from some undefined personal like or dislike or reminiscence, personal fondness for some Southerners, recollections of a pleasant visit at the South; personal dislike to Abolitionists as "long-haired" people with a twang in their speech and bad manners; personal dislike of the negro, his appearance, or way of speaking and temperament, or from a compound of all these. It would be found, we have no doubt, on examination, that half the "Conservative" party at the North are composed of men of this kind—excellent persons, no doubt, but unfitted either by temperament or habit of mind or pursuits for the examination of any political question, or, in fact, for ever on any subject extricating their understanding from the control of their taste or prepossessions. We might, if we chose, illustrate our proposition very copiously, but we refrain from doing so in order to avoid what would be sure to prove an unprofitable controversy. Every one of our readers can, doubtless, find plenty of Conservatives amongst his neighbors answering to our description.

Now the Republican party carried these people with it during the war. Whatever may be their defects as political thinkers or humanitarians, they are generally patriots, although a large proportion of the Copperhead army was drawn from their ranks. The danger to the Union roused them from their political apathy, and they forgot for the moment their repugnance to the anti-slavery party, and acted heartily with them in preserving the national existence. The issue presented by the secessionists was so distinct that they had no difficulty in apprehending it, and the train of evils that would have followed the success of the rebellion was so clearly traced on the horizon that nobody needed to be a political philosopher or an enthusiast to see and understand it.

But the war is now over, the excitement has disappeared. The national existence is no longer in danger, and this class has relapsed into something like its old apathy and its old vagueness of thinking. It has not followed the debates in Congress very closely, or read the evidence or reports of the various committees of investigation. All it knows is that the war is over, and that the South has submitted, and at first blush—the only "blush" in which political questions present themselves to it—it seems as if the rebel States ought to be brought back to their old places without more ado. It knows there is still trouble about the negro, but it thinks that a great deal has been done for the negro, and that he may now be left to take care of himself. It has probably read the President's messages. The messages were all short; presented the various points of the controversy from his point of view in a small compass, very speciously, and with studied moderation of tone—an excellence which they probably owed to some other hand than Mr. Johnson's—and they were, of course, few in number and appeared at rare intervals.

But what is it that most probably has struck their ear most loudly from the other side? The speeches of those earnest but not very acute persons who, most unfortunately, as we think, partly owing to their zeal and partly to other people's weakness, got into the position of Radical leaders when the war was over, and have flooded the country not with what was wanted—calm, earnest expositions of the Radical position—but with frantic denunciations of the Southern people, which, however well they sound at mass meetings, do not—let us be frank about it—tell at the polls, and frighten and disgust probably two men for every one they rouse into enthusiasm. For instance, orators of this class base all their plans of reconstruction upon the assumption that the Southern people have by their rebellion forfeited all claim to either their lives or property, both of which lie at the mercy of the North; and they insist that in refraining from hanging them all and despoiling them of their goods, we are displaying considerable moderation. Consequently, one of their strong arguments in favor of the reconstruction policy of Congress or in favor of holding the South as it is without reconstruction, is that it falls so far short of wholesale slaughter and confiscation. One most unfortunate result of this kind of talk, as well as of the various expressions of intense abhorrence of the Southern people which Mr. Stevens and men of his class of mind are constantly pouring forth, is that moderate people, the people who do not occupy themselves minutely with politics, have been easily led to believe that if Congress has its way something dreadful will be done to the Southern population; and the earlier favor which Mr. Johnson managed to win was due to the widespread impression that he was opposing himself to shocking violence and oppression meditated by the Radicals. Mr. Raymond is thus enabled to inform the public, in the Philadelphia address, with amusing exaggeration, that if the Southerners could accept "with uncomplaining submissiveness the humiliations thus sought to be imposed on them, they would be unworthy citizens of a free country, degenerate sons of an heroic ancestry, unfit ever to become guardians of the rights and liberties bequeathed to us by the fathers and founders of this Republic;" and Dr. Tyng and Mr. Beecher, and hosts of others, are thus enabled to read lectures to Congress on its want of "magnanimity," and to preach to the public the duty of "forbearance" towards the South with a certain show of justification.

Now, we think all persons interested in the triumph of the policy of Congress at the approaching elections will do well to try and put an end to this misunderstanding by every means in their power. We ought for this purpose to stop at once and for ever that rant about the Southerners "having forfeited their lives by their rebellion" which we are sorry to see Mr. Stevens has just been repeating at Bedford, and which a good many people with more moderation than he now and then indulge in. On no theory of our relations to the South are either the lives and property of the vanquished "at our mercy." If they are subjugated rebels, we have, undoubtedly, a moral and legal right to execute certain persons for treason; but usage, policy, humanity, and religion prescribe that the number of persons thus punished should be small, and that they should be the leaders of the movement and no others. The right of a sovereign to execute a couple of millions of people for rebellion against him has never been claimed by any Christian potentate, and has never been exercised by any heathen one; and for us, of all nations in the world, even to talk of such a thing, is worse than disgusting.

If, on the other hand, the Southerners are conquered enemies, our right to kill and despoil them after they have laid down their arms is all moonshine, and to have any man calling himself even a politician talk of deducing a policy from it, is more than silly. No such right has ever been asserted in the modern world; nobody has ever massacred even thousands of his enemies in cold blood since Christ came, except Genghis Khan and Tamerlane, two dignitaries whom the Christian public of the North are not likely to take for models. It is revolting to hear civilized Americans talk of their abstinence from such a crime as a proof of moderation, and it is time we had an end of this nonsense. It disgraces us, and damages the good cause which the majority of the people of the North have at heart.

The facts of the case are that the South has been beaten in arms when engaged in a most criminal and atrocious attempt to overthrow the Government and found a state on slavery; that justice and sound policy, and a proper regard for our own dignity and for our reputation for sincerity, require the punishment of the chief instigators and agents of this enterprise; but that the community at large are not fit objects for punishment; that no attempt can be made to take vengeance on a whole people which will not debase and degrade the ruler

far more than the ruled. The punishment of nations for national sins God has clearly reserved to himself, and anybody who reads history rightly may see clearly that this punishment is sure, sooner or later, to come. If the South as a community has not yet sufficiently atoned for its iniquities, it will assuredly do so in some form or other; but this matter we may safely leave in the hands of Providence. Our business now is not to punish, not to take vengeance, not to excite or perpetuate hatred or malevolence towards the late rebels, but to take such fair and humane precautions for the future peace and tranquillity of this nation as we may deem fit. This and no other is the power which our victory in war gives us, and we are called upon to exercise it not because the lives and property of six millions of our enemies are at our mercy, but because we are moral beings and patriots who love our country and our kind, and are bound to see justice reign and weakness protected. The terms proposed by Congress are, therefore, not terms of conquest and not signs of humiliation. There is nothing in them to degrade or humiliate any human being, or to indicate any desire for vengeance. They simply regulate representation to suit the altered circumstances of the Southern population; they ask that men who made themselves prominent in the attempt to overthrow the Government shall, in common decency, from common regard for the feelings of the rest of the population, abstain during the remainder of their career from participation in the administration of affairs; that persons who took no part in the rebellion shall not be taxed to repay the money lent to carry it on; lastly, that all persons born in the Union and owing it allegiance shall be treated by Southern law as citizens of the Union. In short, the whole amendment is simply a provision for what? Placing the Southern whites under the feet of the North? making them its vassals, tributaries, serfs, dependents? Nothing of the kind. It is really difficult to keep from laughing when saying that the terms which the vanquished foe cannot accept without "degradation," which it would show want of magnanimity on the part of the North to insist on, and which the New York *Times* tells us they cannot and will not agree to, simply place them on the same level in all respects with their conquerors, and make them freer and more independent than any other community in the world—are perhaps the mildest terms which victory, so dearly bought, ever imposed on the vanquished—furnish perhaps the only instance on record in which the victors, in fixing the terms of peace, forbore to ask for a single advantage for themselves, a foot of ground, a cent of money, or even a formal acknowledgment of defeat, or submission, or repentance.

THE MEXICAN FINANCES.

THERE are circumstances under which communities may subsist for a time without finances, but those conditions are not to be found in the case of governments originating in the schemes of alien speculators, political or pecuniary. The gentlemen who bought up the claims of Jecker at a liberal discount are not the parties to cling to the "country of their choice" at the sacrifice of their lives, their fortunes, and their sacred honors. The political philosopher who has undertaken a conquest to enable the Latin race to make more money than the Teutonic will hardly persevere when every soldier he sends forth is found to destroy more wealth than a whole commune can produce. On the question of the Mexican Empire, therefore, he may claim to speak by the card who speaks by the figures.

Before the expedition was undertaken the annual expenditures of the French Government were about $300,000,000. In 1862 they reached $442,500,000; in 1863, $458,400,000; and in 1864, $454,000,000. The difference for three years is $152,400,000, while another $150,000,000 has been borrowed by Maximilian in France on the guarantee of his imperial brother. American finances might bear such a strain without danger; Napoleon is compelled to look more closely to his safety-valve.

The convention with France, adopted on the eve of Maximilian's accession, exacted from the latter an indemnity of one thousand francs per annum for every French soldier in the country, the number of which Napoleon was at liberty to reduce to 25,000 at once, and then to withdraw at any time, binding himself only to leave the foreign legion of 8,000 troops in Mexico for three years to come. With these "guarantees" the archduke took charge of the independence of a country which had just extinguished the last dollar of its domestic debts by the sale of the ecclesiastical domains, and which acknowledged a debt to Spanish, English, and French subjects (including $1,984,000 to the Swiss, Jean B. Jecker) of $81,632,560, bearing an interest of $2,760,020 per annum, including which its yearly expenses amounted to $11,078,438. For this country he has "adjusted" the Jecker claim at $5,000,000, and has contracted, all in all, an additional burden of $190,103,040, bearing $10,206,182 interest. While the salary of Juarez was $30,000, the civil list of Maximilian, paid monthly, is $1,500,000 per annum, including which the total expenditures have risen to $49,929,326 a year. Of the first eighty millions of additional debt, the bonds of which were issued at 63, and have since sunk to 46, so much was absorbed in advance reservations, differences, brokers' commissions, payments to the French army and navy, and foreign interest, that but $8,000,000 ever reached the country.

The efforts which have been made to meet these demands manifest their futility in their very excess of vigor. It has become impossible, at the present day, in the wildest no less than in the most civilized countries, to draw permanent revenues from a people against their will. On the 26th of May last a decree exacted by way of taxation a sixth of the annual revenue of all town lands, and a seventh of that of country lands. On the 2d of August it was revoked as impracticable, and its place supplied by an impost of eight per mill. upon the capital value. Commercial houses in Vera Cruz are now subjected to license fees ranging from $1,000 to $3,000 per annum. The custom-houses, virtually the sole available sources of revenue, produced about $8,000,000 per annum until about the 1st of June last, when a sort of domestic revolution occurred, the result of which was to pension the Emperor upon the French army-chest in an amount of about 500,000 francs a month for his most urgent expenses, besides the payment of his Austrian and Belgian auxiliaries, in consideration of his surrendering the collection of the customs into the hands of the French subalterns. This at once doubled their productiveness, and induced Marshal Bazaine to declare himself in favor of continuing the occupation if placed permanently in control of this source of supply. The monarchy has not more signally failed in establishing that "order" in society which is its own criterion of perfection than in cultivating that fidelity in public servants with the absence of which it loves to taunt republics. The crown agents peculate as nimbly as the "demagogues."

Even these measures having failed not only to balance the public accounts, but even to satisfy the needs or the rapacity of the French, Maximilian was compelled, on the 15th of July, to consign the ministry of finance to the commissary-in-chief of the French army; and even then his reward has been the declaration of the French paper that "the empire is playing its last card;" that "the penury of the treasury is a secret to no one;" and that unless martial law is proclaimed, even with the most stringent financial measures, "the empire will die of inanition before the first million of dollars can be collected." No commentary could improve the ghastly distinctness of such a text.

But for the foregoing facts, not even the fear of Mr. Seward's despatches would have been required to carry both the Emperors and their Frenchmen across the Atlantic months ago. But the fact is that the financial situation is such as will yet generate volumes of diplomatic correspondence. The French invasion was undertaken on pretence of collecting a debt of five millions of dollars, repudiated by the Republican Government. Now there is an unpaid debt of two hundred millions, which the returning Republican Government will most certainly not acknowledge. How can France pocket the refusal? How can she enforce her claims without remaining? How can she remain without prolonging her invasion? How can she prolong her invasion without our consent? She has already "suggested" to Maximilian the propriety of a pledge of the port duties of Vera Cruz and Tampico (the latter of which towns happens to be, for the nonce, in the hands of the Republicans), to be collected by her own officers, sustained, of course, by her own soldiers. If the port duties of all Mexico produce eight millions per annum, how long will it take French *douaniers* at Vera Cruz and Tampico, protected by garrisons, to defray the expenses of their occupation and extinguish a principal of two hundred and fifty millions, together with its interest? Will it not be necessary to keep Maximilian caged and crowned during the

whole period of the exploitation, in order to keep up appearances? With or without the sequestration of Maximilian to give it color, will not the sequestration of Vera Cruz and Tampico infringe on the Monroe doctrine, and violate the pledge given by the French to the United States Government? Does not the state of things portend a chronic occupation of the coast, irksome to all parties and profitable to none, after the fashion of the interminable Franco-Roman imbroglio? In short, is it not emphatically a case for invoking the assurance of our Secretary of State that "if we keep cool we shall be in the end about right," and that "in sixty days the nation may take hope and courage?"

The French are evidently alive to the position of things. A Paris letter-writer professes to have been enlightened by a journalist who is supposed to receive his inspirations directly from the Department of Foreign Affairs. He would ask the United States, if Maximilian should abdicate, to give them one of our generals or distinguished heroes (provided we can spare one), whom they would appoint chief magistrate of Mexico; and if our heroes cannot be spared, then we shall appoint one of their generals, not by any means to govern Mexico—for which they seem to have lost the taste by experience—but only to protect their residents, and *hold security for their claims against the country.* "In fact, we would conjointly act as guardians of Mexico until that unfortunate country should have learned how to govern itself"—for the sum of two hundred millions of dollars, besides interest and costs, which the honor of France requires her to distrain, while our honor would be satisfied by acting as her co-bailiff. The inspired French journalist's solution of the difficulty is absurd enough, but that is the fault of his inspirations.

THE POLITICAL CRISIS IN ENGLAND.

THERE are numerous signs—and the number increases every day—that a change of some kind in English government and society is not very far distant. It has been foreseen ever since the Crimean war, by the very few Englishmen who are able to look at English society objectively, and the very few foreigners who know England well enough to criticise it intelligently. The symptoms of this change it is difficult to describe. Any one of them by itself would seem insignificant enough; but, nevertheless, in the aggregate they afford abundant food for reflection to those who are sensible of the important part which England plays in European civilization, and the important influence which she has exercised for the last hundred years on European politics. The English press is itself fully alive to the gravity of the situation. Many of the papers talk very much as a Roman philosopher of a humanitarian turn might be supposed to have talked of the fortunes of Rome and of the condition of Roman society in the days of Marcus Aurelius. There is great material prosperity; there is considerable progress in the arts, in the sciences, and in literature; the Government is well-meaning; the upper classes were never so refined, so charitable, and so pious; the condition of the lower classes has greatly improved within the last twenty years; the army is still brave, the navy still unconquered, and the empire still intact; and yet there is a *malaise* through the whole body politic which all feel, but nobody can account for—an extraordinary languor in every department of the Government, so that we are presented with the singular spectacle of a political paralysis accompanied by great commercial and literary activity.

Everybody in England, or nearly everybody, is agreed that the laboring classes ought to be educated, and yet it seems impossible to provide machinery for doing it. Everybody deplores the misery of the agricultural laborers, and yet nobody can devise a remedy. Most people would like a reform bill of some kind, but yet it seems impossible to get one passed either by Whig or Tory. The state of the army is a constant subject of anxiety to the whole nation. It is notoriously inferior in everything but the courage of the men and officers to that of all Continental powers. Recruiting is yearly more difficult, the supply of men falling below the demand as much as ten thousand at a time, but it seems impossible to invent any scheme for improving it. Seventy millions sterling have been spent in reorganizing the navy within the last twelve years. Sailing vessels have been converted into steamers, steamers into iron-clads, and yet Sir John Pakington, the new secretary, confessed the other day that, practically, England had no navy. There is hardly a dissenting voice when it is said that the condition of Ireland is a shame and a scandal, and yet it seems impossible to agree upon and carry out any plan that will improve it. Outside the country clergy, the Irish Church establishment has hardly a defender, and yet no hand is raised to abolish it; and all this, be it remarked, in a time of profound peace, with neither foreign wars nor domestic treason to divert the attention of the country from the work of internal reform.

The men of education, too, who devote themselves to the discussion of public affairs, seem stricken with the prevailing distemper. The metropolitan periodical press has, during the last twenty years, largely fallen into their hands, and all the questions of the day are now treated in their columns by the representatives of the best class of English society—men for whom the universities have supplied the culture which Englishmen believe experience to have shown to be for political life the best in the world. They have immensely improved the newspapers in many respects—in tone, in style, in temper, and in logic; but yet their articles, to one who reads them constantly, are the most melancholy reading possible. They are apparently the productions of men to whom everything in life but literary finish and material comfort is a sham; to whom all enthusiasm is a laughable humbug; to whom all hopes of raising the condition of the mass of mankind above what it is now are chimerical—the dreams of twaddlers and fanatics; and to whom the lowest stage of human existence is that of a "dissenter," or, in other words, of a member of any one of the denominations which compose at least one-half of the Protestant Church of Europe and America. Every exhibition of feeling on the part of an educated man they treat very much as the old French nobility used to treat the engagement of one of their number in trade, and visit it with forfeiture of caste. Thus John Stuart Mill's expression of sympathy with the working classes in their recent demonstrations in London and his co-operation in the movement to bring Governor Eyre to justice, are mourned over in the *Pall Mall Gazette* as signs that the great philosopher has fallen to rise no more. To get "excited" about anything is now, in the eyes of these writers, the proof of a weak mind. Mr. Gladstone became an object of scorn and derision to them from the moment that he was betrayed into that noble burst of enthusiasm in the debate on the reform bill in which he spoke of the working classes as being "of the same flesh and blood" as his hearers, and, therefore, entitled not to the contumely which Mr. Lowe and his followers were nightly heaping upon them, but to attention, consideration, and political partnership. And perhaps nothing contributed so much to drive him from office and make him so unpopular with the young men of the political world as the discovery that he still retained in his mature age a youthful faith in humanity and in progress, and some respect for theories. The intellect of the nation seems, in fact, to have betaken itself to the work of criticism, and to that peculiarly barren kind of criticism which consists in finding fault and jeering at those who seek to provide remedies.

Aristocratic government was tried up to 1830, and was at that period pronounced a failure. It converted the nation into an athlete of prodigious force, a bruiser of incomparable dexterity, who distributed black eyes and bloody noses over the whole earth, but left his wife and family in squalor and misery. Middle-class government has now been tried ever since, and the result is a full and well-to-do merchant, whose muscle has all run to blubber, whose credit on 'Change is immense, but whose movements are so slow and uncertain, and whose will is so feeble that his servants do not obey him and his neighbors laugh at him, and his miserable work-people clamor every day more and more loudly for a share in his profits.

There is, perhaps, nothing which has done so much to fix the attention of Englishmen closely on the condition of the country as the change which has come over the relations of England with the Continent. She has been obliged, evidently very reluctantly, to withdraw from all interference in Continental affairs, or, in other words, to resign her position as one of the five "great powers"—*i. e.*, managing powers of Europe—owing, confessedly, to her inability to support the charges of another great war. Everybody is conscious that she cannot enter on another great struggle without incurring burdens which would make great political changes inevitable. There is not a politician in England

who does not know that it would be impossible to call forth the full power of the country in a great war without admitting a larger proportion of the population to a share in the franchise, and, therefore, its position as a Continental power has been abandoned. Some journals, such as the *Economist* and *Spectator*, strongly doubt whether the Government even in time of peace can be carried on successfully much longer without a greater infusion into it of the democratic element in order to supply it with more nervous force. And what adds to the complication and increases the prevailing anxiety, is the condition of the army. It is barely sufficient for the various garrisons of the empire in time of peace. It is certain it cannot be increased by voluntary enlistment, and it is very much too small for a war. A foreign invasion would, doubtless, call a large body of men to arms; but the spectacle which Prussia has just afforded of the terrible strength which lies in the exact organization and discipline of a great trained force has almost extinguished the confidence which was felt a few years ago in volunteers and militia; and yet the empire must be maintained intact, and English dignity must be upheld, and to do these things as the world is now constituted a large and efficient army, either in *posse* or in *esse*, is absolutely necessary. It is plain to everybody that the only mode of producing it now left open is a conscription. It is pretended by the conservative newspapers that a conscription is not to be thought of because repugnant to English institutions; but this is not the real reason. The conscription for home service or the militia has always been legal, and even the system of "impressment" for the navy—the most brutal and outrageous work of securing recruits ever resorted to in a civilized country—was submitted to for two centuries without a murmur from anybody except its victims. The real reason why the project is not entertained by the ruling class, and why it never will be entertained except in the last extremity, is that the filling of the army by conscription would involve a complete change in its organization. The present system of officering it could not be preserved. The purchase of promotion would have to be abandoned, promotion from the ranks largely increased, and most of the commissions would have to be given to the pupils of military schools, selected both on their admission to the schools and their admission to the army by competitive examination. In other words, the control of it would pass from the hands of the aristocracy, and it would become, as the Prussian and French armies are, a democratic institution. What makes the crisis all the more alarming is, that the total and humiliating defeats which Austria has just sustained seem to give a finishing stroke to the plan of filling the ranks of armies with peasantry, and putting "gentlemen" only in command of them. This was the form which all armies in Europe took, naturally enough, as soon as standing armies were first organized. It lasted without difficulty until the French Revolution, when it disappeared in France. The success of the French led Stein to overthrow it in Prussia. It still survives in England, Austria, and Russia, but in England its days already seem numbered, and it is very doubtful whether it will last in Austria beyond the present year.

FRENCH AND ENGLISH OPINIONS ON THE EFFECTS OF THE GERMAN WAR.

THE language of the English press on the issue of the German war is not very flattering, but is very instructive to our patriotism. All agree in England that if the treaties of 1815 have been destroyed, it is not to our profit. All speak of the victories of Prussia as if those victories had been obtained over France.

The change of language about Prussia is even more astonishing than the change which was produced about America after the taking of Richmond. Do you remember the Macdonald affair? The *Times* wrote then that "the laws of Prussia seem to be made by savages and administered by ruffians." When Bismark was made first minister and bullied the Prussian Parliament, the *Daily Telegraph* compared him to St. Philip of Neri throwing his dirty shoes at the head of the nun; the *Economist* began an article with these words: "Herr von Bismark becomes a public pest;" and ended it thus: "This is why we denounce him as the public enemy of the peace of Europe." During the Danish war, the actions of M. de Bismark were qualified as *atrocious* by Lord Palmerston in the House of Commons.

When the German war began, this note was not changed; but Sadowa has made a great change. There is now not a discordant voice in the concert of praise which salutes the Prussian policy. The *Standard*, a Tory organ, and but yesterday Austrian to the backbone, speaks of Prussia no otherwise than Mr. Gladstone; English Conservatism is but the echo of English Liberalism. It is still acknowledged that the pretensions which Bismark put forward to begin the war were unjust; but does not injustice become justice when it serves the interests of Europe (Europe means England)? Are not all means good for such a result? It is impossible to describe the joy with which was received the news of the Prussian refusal to the French demand for a rectification of frontier. I will not dilate here on the conduct of the French ruler; I prefer not to speak of a sovereign who pleads to the Prussian envoy that he had only made his demand to please public opinion in France, but that he, personally, did not attach importance to it. There was some grandeur in the despotic saying of Louis XIV., "L'état, c'est moi!" but what shall we think of a French Emperor who says, "La France, ce n'est pas moi!"

Let him be satisfied with the ironical praise of the *Times*: "The Emperor Napoleon has disappointed the lovers of evil. He has shown himself faithful to his device: 'The empire is peace.'" It is all well! We also rejoice that peace is secured; but hear the rest: "Nothing can now arrest the great career of Count von Bismark. Even the opposition which it was feared would counteract his plans on the side of France has helped his designs in convincing all Germans of the necessity of union." It is evident that the *Times* would have been very sorry, now that the French demand has been unsuccessful, that it should not have been made. But one thing torments it still. Bismark has worked quickly, and he has conquered fortune, the approbation of Germany, and the *world's opinion* (sic). But the *Times* fears that the iron will of the minister may be unable to conquer *the softer nature of the sovereign*. More Gotharist than the Gothariste, the *Times* is very impatient; it begs Bismark not to let the *golden opportunity* escape; it tells him that the word *impossible* is a *craven word*. The *Times*, it is sometimes said, is not all England. Open the *Daily News*. The *Daily News* condemns, in the most solemn style, the French papers which dare to disbelieve Bismark's liberalism; who are not satisfied with the advances made by the King of Prussia to his Parliament; who do not believe in the constitutional sincerity of the most audacious contemner of constitutional institutions. It is vain to hint that perhaps the actual advances made by Bismark to his Parliament have no other object than to obtain a vote for the reconstitution of the Prussian army, which has been imposed on the nation without a regular law; it is vain to show how much regard the Hohenzollern have for the rights of the people; to point to these characteristic phrases in the message in which the King announces the annexation of Hanover, of Hesse, of Nassau, and of the republic of Frankfort: "We are not ignorant that only a part of the populations of these states partake with us the conviction of this necessity. We honor and respect the sentiments of fidelity and of devotedness which attach these populations to their dynasties and to their autonomous institutions. But we have confidence," etc. It is vain to demonstrate that Prussia, which does not regard the old principles of international right, does not respect any more the new principles, founded on the will and consent of the populations, and that she is satisfied with appealing to the barbarous right of conquest. Prussia has conquered at Sadowa, therefore Prussia is the great Protestant, liberal power which Providence brings forward in order to curb the pride of France. Goldwin Smith, Gladstone, Kinglake, Lord Stanley, Whigs, Tories, and Radicals, all together will applaud. The complaints of the French Liberals are nothing but the groans of national pride, wounded by the successes of Prussia. Let all ears be shut to the murmurs of Frankfort, of the expiring republic given up to the tender mercies of Bismark; let all eyes be shut to the fact that, three months ago, more than one-half of Germany was in arms against Bismark; that German unity was born in civil war, and not, as Italian unity, in a contest against a foreign invader; that the only bond of union which Prussia can find is the prospect of a war of conquest against France, for already we hear of the annexation of Lorraine and Alsace to Germany.

Once more let me tell you what the feelings of French Liberals are in the present instance: We do not wish for any rectification of frontiers, for any conquests. To the possession of the Rhenish provinces we should prefer the friendship of the German people. Belgium covers sufficiently our northern frontier, as long as Belgium does not become the tool of a great power. We do not believe that the nations belong to the princes, and can be bargained with. But we are sorry that the absorption of Germany by Prussia should be a violent absorption; we cannot see without concern the establishment of German unity in the form of a military despotism, because we anticipate a collision between the two great Cæsarisms of the Continent, and that this fatal struggle must involve Europe in ruin and misery, and perhaps bring on our nation the greatest misfortunes; because we already see all our enemies rejoicing at this prospect; because the triumph of force, when liberty

has nothing to gain by it, demoralizes the people; because German unity will be bred not by liberty, but by despotism; and if there is anything detestable it is a tyranny which covers itself with the mask of progress.

A FRENCHMAN.

PARIS GOSSIP.

PARIS, August 24, 1866.

IF the greater number of existing musicians—too great for the amount of learning and of listening to be met in our day—are doomed to vegetate in obscurity and penury, the "stars" contrive to make a very good thing of their profession; and those who, even with a less brilliant individuality, succeed in making some lucky musical "hit" have no cause to complain of any grudgingness in the rewards bestowed on them by Euterpe. Thus, while Thérésa is netting her tens and Patti her hundreds of thousands of pounds per annum, and the other luminaries of the celestial art are following as closely as they can in the steps of the two most popular *dive* of the moment, the organizers of the popular concerts which, both here and in London, are doing so much to bring the very finest classical compositions within the reach of the masses by a happy combination of the best possible rendering with the lowest possible prices, are at the same time building up for themselves handsome fortunes. Musard, who "created" the excellent out-of-door concerts of the Champs Elysées, the rendezvous during the summer months, despite the low price of admission, of all the elegance and fashion of the capital, has just purchased the magnificent château and estate of Villequier, one of the finest of the old "monuments" of Normandy; and his successor, who rejoices in the euphonious appellation of Becdelièvre (harelip), is flourishing so splendidly that he will soon, if his present run of luck continues, be able to rival the magnificences of his predecessor. The managers of the two principal operas also contrive to make a very good thing of the subvention of the Government; but the consummate musicians who compose the orchestra of the "Grand Opera," and who are nearly all professors of their respective instruments at the Conservatory, complain bitterly of the microscopic proportions of the salaries they receive for playing four nights per week through more than half the year, exclusive of their attendance at rehearsals and being kept out of their beds every opera-night till one, two, or—as in the case of Meyerbeer's frightfully long and fatiguing "Africaine"—till three o'clock in the morning. The orchestra of the Italian Opera is somewhat better, though still meagrely, paid; but the "traditions" of the French opera in the matter of salaries seem to imply that the honor of forming part of the orchestra of so renowned a musical temple should suffice to compensate the musicians thus favored without any vulgar admixture of money. The same system of "screwing" is applied to all who figure on the brilliant stage of this establishment except the "stars," who get, of course, pretty much what they choose to ask for. The subordinate actors, the choruses, the dancers and ballet-girls receive pittances so small as to be almost derisory; but the honor of having appeared on the stage of the Opera is eagerly coveted by all, and is useful in many ways to those who have attained to this degree of professional dignity. As for the children, so many of whom figure in the fairy ballets which bring such ample harvests to the managerial pocket, they get a few *sous* only for each night's work; the advantages they receive in the way of training and familiarity with the work of the stage ensuring an abundance of candidates for admission to the *troupe*, even at the miserable pittance which is all that they receive in the way of salary. It seems that these poor children are sometimes made, nevertheless, a little unhappy by their poverty, and a little envious of the superior appointments of the other actors. Thus, on one of the broiling evenings that preceded the sudden cold which has so thoroughly spoiled the present month, these little people were seized with a violent desire to give themselves some ice-cream. Having put their heads together during one of the interludes, they determined to make a general subscription among themselves for the purchase of the desired dainty; but, alas! the pockets of the whole twenty-two, when emptied into the hands of one of the band, only contributed the sum of one franc, the price of a single ice in the refreshment-room in the lobby. However, armed with this franc, one of the little girls went off to the refreshment-room and demanded of the "young lady" who keeps the table "one ice and twenty-two spoons." The "young lady" professed her perfect readiness to sell the ice demanded, but utterly refused to allow the other part of the demand, alleging that only one spoon could be allowed to each ice. The poor little turner of pirouettes was just going away empty-handed in the extremity of disappointment, when a gentleman who had chanced to overhear the demand and the refusal came forward, and, handing two-and-twenty francs to the dispenser of the frigid delicacy, ordered two-and-twenty ices, each with its spoon, to be placed on a tray and carried to the dressing-room of the little dancers, whose amazement and delight at seeing such a glorious and unlooked-for realization of their desire may be "more easily imagined than described." So difficult is it becoming for the mass of professional musicians to squeeze a living out of their art that one cannot but wish that the greater part of those who devote themselves to the musical career, without the exceptional talent which alone can ensure success in this field, had been apprenticed by their fates, or their parents, to some safe trade or manual occupation offering a greater certainty of a moderate pecuniary return for their labor. One of the many hungry pianists who, after devoting eight hours a day for six or eight years to the drilling of their fingers, find, to their cost, that there are too many competitors in the field, being something of a rhymer as well as a wit, has just consoled himself one evening, when he had gone supperless to bed, by composing the following epitaph, which he has ordered, by a will written on purpose, to be inscribed on his tomb, when he shall have succumbed under the attacks of the genius of starvation:

"Ci-git, sous cette planche,
Qui vécut du bémol;
Fut enfant d'une blanche,
Et mourut sur le sol."

Rossini, who, despite the persecutions he has had to endure, and which so cruelly embittered so many of what should have been the best years of his life, may be cited as one of the most fortunate votaries of the divinest of the arts, has deserted his apartment at the corner of the Boulevard and the Rue de la Chaussée d'Autin, and is spending his summer, as usual, at his beautiful villa at Passy, not far from the charming and splendid Château de la Muette, formerly a royal residence, but, for many years past, the property and favorite abode of Madame Erard. The great musician is very anxious and unhappy just now, owing to the malady of a pet dog, of which the author of so many immortal melodies is exceedingly fond. The care and kindness lavished on this quadruped could hardly be exceeded were the little beast Rossini's own child. It is doctored, fed, bathed, taken out on a cushion for an airing twice a day, and as, despite all this care and devotion, it suffers from attacks of pain that nothing seems able to calm but music, the *maestro* (whose highest ambition has always been to excel as a pianist, and who has practised diligently for some years past, without, however, the possibility of making himself more than the "third-rate player" which he modestly declares himself to be) sits down to his piano and plays by the hour together to the dog, who generally ends by falling asleep, to the intense satisfaction of its benevolent master, flattered at being able to accomplish what all the opiates of the dog-doctors have failed to accomplish. Rossini's green old age has also been troubled of late by the racket of the small but noisy sect of the Wagnerians, and so painfully was his melodious soul affected by hearing the tissue of musical inanities and insanities with which Liszt tortured and insulted the ears of his listeners last Good Friday, at St. Eustache, under pretext of giving to the Parisians a glimpse of the glories of "the music of the future," in the shape of a "grand mass in music" inspired by the Wagnerian teaching, and dedicated to Wagner, whom Liszt adores as a demigod, that he has actually written a long letter to the Pope upon the danger with which church music is threatened by the systematic cacophonism of the Wagnerian school! Whether the old melodist went so far as to beseech Pio Nono to launch the thunders of the church against Dr. Wagner, who, as a Protestant, a radical, and one of the vainest of men, would probably be rather gratified than otherwise by such a recognition of his importance, or whether he contented himself with imploring his Holiness to forbid the introduction of the horrible dissonances of "intellectual music" into the Catholic fanes, has not transpired. It is known, however, that the Pope has replied to the musician in a long letter, written with his own hand, in which, passing lightly over the subject which is lying so heavily on the heart of the *maestro*, he indulges in woful lamentations about the impiety of the age and the tempests which "threaten the bark of St. Peter." *Apropos* of which figure of speech, a favorite one with the present Pontiff, it is said that on one occasion, when he had just made use of it in a confidential conversation, his interlocutor replied that his Holiness should not be uneasy, the arm of Providence being pledged to uphold that bark "amidst the waves of evil," on which the Pope, who often commits a mild witticism, and had just then pressing anxieties in regard to pecuniary responsibilities the Papal exchequer had no means of meeting—"True of the bark, but what of the crew?"

That favorite rendezvous of the lovers of equestrian spectacles, the Cirque de l'Impératrice, having been burned a few weeks ago, Franconi has transported his *troupe* and his horses to a new circus, named in honor of the Prince Imperial, and has added to the staple attractions of his establishment a company of learned animals from Germany, said to be unrivalled in their way, and comprising twelve monkeys, who perform equestrian and gym-

nastic feats of the very highest "schools;" twenty-eight dogs, almost more clever than the monkeys; one preternaturally sharp goat, who performs on the tight-rope; eight wonderful ponies, one of whom turns the handle of a barrel-organ with his mouth.

STELLA.

THE GOOD GODDESS.

WE desire to relieve our minds by a complaint concerning the personage who is sometimes styled the "Good Goddess of Poverty," and to dispute her claims to that title "good," which does in our opinion embody a continual misstatement, as her character and conditions are only evil perpetually. She is, in the beginning, an immoderate deity. When she finds you hard pressed, then she presses you out of reason. When she wears the keys, you touch bottom in your purse and the flour-barrel together. The butcher becomes an impossibility, and you find the store-closet is bare also. There is no sugar and no coffee. All the quiet, subjective necessaries, the salt, mustard, pepper, pins, and tacks of existence, are at the same time skilfully withdrawn by the "good goddess." She sees her chance, and is determined not to leave you a leg to stand on. If a letter would help you, there is neither paper nor stamp; and if you would write an article, no foolscap. She believes in hitting you when you are down, and at this impossible time the children's toes work through their shoes, somebody breaks the last pitcher in the house, and all the bills come due; while, falling ill of anxiety and vexation, the money hoarded for the rent goes to the doctor, who, with bitter irony, advises a trip to the sea-side and "to keep your mind perfectly easy."

Of economy the "good goddess" knows nothing. She hinders you from getting in coal and flour when they gravitate towards moderation. She cuts up your wife's old-time silks, that can stand without legs, into coats for the children, and sets out the table with your rare china, having a hundred excellent reasons against providing you with stone ware. She is equally opposed to an economical stove, and you worry on with the old one and double the quantity of fuel. She will have you buy on credit, and loses you the advantage of choice in dealers and market fluctuations; and when the tide comes in your affairs which, if taken at the flood, would lead on to fortune, you may be sure of not taking it, for you will not have the money to hire a boat. She is even a greater waster of bodies than of dumb matter. She keeps your stomach so cold, your liver so dull, and your heart so low that brain and muscle are on half rations, and work like the Israelites at making bricks without straw. Though soul-wheel rust and body-strop grow thin, she will hear to no talk of rest or change, always answering that people must eat, and, barricading herself between store-room and coal-bin, she pelts you from there with wants whenever you hint at getting out of your groove.

She is the worst possible company. She has a knack of making you ashamed in society no better than yourself. She nudges your elbow reprovingly when she finds you in full and hearty enjoyment, and tinkles dolefully your carefully counted pennies, like a passing bell, at your simple feasts. She breaks in on your choicest paragraph with intolerable problems in milk tickets, and calls you off without compunction from your merriest thought to lend a helping hand at stretching the two ends of your income over the last day of the year. She counts out morsels at table lest the meat should not be fairly divided, and hints to you not to ask for a second helping. She ties up your hands on birth-days and at Christmas, and keeps you at home when the rest of the world is agog, while she herself will never be left behind, but must hang on your arm on all occasions. Notwithstanding, she has the art that no unwelcome guest ever had before of making each additional hour an excuse for a longer stay, and every year just three hundred and sixty-five reasons the more for keeping her for ever.

The "good goddess" is an intolerable braggart, and unscrupulously appropriates the fag ends of everybody's credit. When a man or woman gets well up in the arena, and stands a little above the panting crowd, she is the first to slap him on the back, as Pharaoh, if it had not been for that Red Sea affair, might have congratulated Joshua in the promised land:

"Aha! my brave boy! you would never have thought of coming here if it had not been for me!"

If a saint or hero accepts her as the means for a great end, and transfigures her with the glory of self-sacrifice, she sends in her bill thus:

To Poverty, ... Dr.
For so much glory, ... All the credit.

No game is too small for her. If the busy mosses weave their green pile on the sunken roof, or the clerk of the weather does a little painting on the dingy wall, or she finds a house-wife that is a match for her, she commends the fact to the lovers of the picturesque, and makes no mention of that other fact, that it was done in spite of her.

She is a perfect Pumblechook. She gets out touching memoirs of those whom she drove by her shrewishness to fame or holiness and long lists of those whom she has goaded on to honor, and she enjoys in consequence the good word of a number of old proverbs that ought to have known better, and has considerable credit with comfortable people who think her an excellent thing—for others, and with certain poets who either have never had her company or were too much ashamed of it to write her down faithfully. Nor is it to be denied that, as these people assert, she has an agreeable and heroic touch, considered in the abstract. We derive a flattering sense of personal intrepidity from the ease with which we get over—on paper—the early difficulties of prominent personages; and single-herring and-oat-meal, faith-and-perseverance stories are pleasant reading on the piazza after a lunch of peaches and cold chicken, with plenty of shadow tangled in among the vines.

But the piazza view and the face-to-face view of Poverty have few points of resemblance. The poverty that counts twice over the billets of wood on your hearth, and sits at your table with looks of fear, is the bitter storm through which the strong stagger to rest and safety and in which the weak perish—the spur that goads the brave to a frenzy of energetic endeavor and the weak to death, the wolf that urges on the swift and devours the infirm. Do we praise the wolf, the storm, or the spur? Are they the parents of the strength and skill put forth to escape them? Picturesque! so is murder. Heroic! so is war. We are aware that, in accordance with literary canons, we should treat our subject dispassionately; but we have the kind of feeling toward the good goddess that you entertain toward your aunt with the fine furious temper when you hear her discoursing in public on Christian meekness. She has shown a disposition not to leave us a leg to stand on, as we stated in the beginning, and we should like to return the compliment. She had the hardihood to tell dear old Herbert that "she was the mother of health," and compare her bareness to the simplicity of nature; but look at this splendid bee, that has just bounced in and out again without stinging us—for which we beg leave publicly to thank him here. Setting aside his gold and velvet, is he poor? He owns neither a hive nor a superfluous pair of legs, nor an extra pollen-basket, yet, if we know anything of bee physiognomy, the good goddess has never entered his cell; but had he waked up in this world without a honey-bag, say, or had lost it since by his awkwardness, and none of the cocoon spinners would make him one on credit, and if all the good chances in clover were going while he beat uselessly about here, his condition would be a fair case of poverty—of an enforced doing without something that is indispensable; and that is something widely different from nature's economy of abundance.

Here, against the fence, is a row of blackberry bushes. The blackberry is an everyday member of the berry commonwealth; but consider its resources: almost the entire spring was fragrant with its blossoms, and now its ripe berries contain half a dozen distinct reminders—the sweetness drawn back from the blossom, the wholesomeness of the earth mould, the freshness of the air, a taste of dew, the spiciness of the woods, and a strong essence of the sun, in which the clear juices have mellowed away their last touch of tartness. Comfortable bees and blackberries! burly and confident of honey; big and round and rich in the fulness of blackberry life; what would Triplet give to settle down on his dinner, like yellow-jacket yonder, in full assurance of more! And suppose it were possible to bask a month somewhere, watching the clouds and dipping in the sea, and eating one's dinner in utter uncertainty of its market cost! Mr. and Mrs. Triplet talk it over at times, and half cheat themselves into believing that they sniff the fresh salt air in their musty little parlor; and come back with a sigh to the question of how to pay the seven dollars due out of their last five dollar bill, and live three weeks on the balance. Her good goddess-ship has worn Mrs. Triplet's nose almost to a point, and drawn Triplet's face into fine wrinkles, over difficulties in subtraction like this of taking seven from five; and month by month Triplet's cough grows more perceptible. "Poverty the mother of health!" Nay, verily, disease kills its thousands, and Poverty her tens of thousands; and if the good goddess herself had us by the neck under the water, we should go down in the "scissors" spirit, and cry with our latest gasp, "Fellow-citizens, the brilliant effects of Poverty are due to Christianity, to heroism, to pluck, and ambition, exhibited in spite of her. Poverty, pure and simple, produces filth, thieves, and scrofula."

In talking of Triplet we have stumbled on the mathematical expression of the good goddess—the symbol that she should wear on her crest, the copy that she sets all her children, the problem that she urges on them daily: seven from five? How do you take seven from five, and how much does it leave? It is good to have an answer ready, for she calls with her little puzzle at houses where she was never expected. We have seen grey-headed children at her forms. We will not warrant that some fine morning

shall not be handed into you her goddess-ship's little account, and you will please settle and oblige—yourself. There are two ways of settling it. You can muddle over it all your days, or you can dispose of it as Boston did of the tea question. We suppose that men are not made over to ill-success or bound out for life to poverty. It is perfectly possible to show the good goddess to the door. The industrious man who is for ever out of luck, and the man of talent who is unappreciated, are not the victims of circumstances, and by them delivered, bound hand and foot, to poverty. In one sense, there are no victims of circumstance and no unappreciated people. The industrious man wants judgment and balance, or pluck, to break away to a new calling. The unappreciated man is exactly appreciated in the unerring balance of the long run, and settles to his real, not his fancied, level as surely as water. Success is impossible for many men and more women, but the conditions of their failure are in themselves. That, surely, is a more tolerable way of putting it than to suppose half the human race crushed down by an irresistible fate, just as we read that death results from a demand on some vital organ which it is unable to meet.

Correspondence.

"SMALLS" AND "LITTLE-GO."

To the Editor of The Nation:

A slight mistake into which Mr. Marsh has been led by Charles Reade is worth noticing, as it shows, first, the difficulty in accurately localizing slang terms; and, secondly, the necessity of always verifying references. The previous examination of the English universities (called *previous* in its relation to the final degree examination) has a different slang name in each university. At Oxford it is called *the Smalls*, at Cambridge *the Little-Go*; each name is peculiar to its own place.

REOPENING OF THE

MERCANTILE LIBRARY,

Clinton Hall, Astor Place.

Branch Offices—73 West Thirty-fourth Street, near Broadway; 59 Liberty Street, near Post-office.

The Library has been largely increased during the vacation by the addition of many English and American books. It now contains 83,000 volumes, and is the largest Circulating Library in America. Everything possible is done for the convenience of its Members.

The Reading Room is regularly supplied with over 400 Periodicals, including Magazines and Newspapers from Eng and, France, Germany, South America, and nearly every State in the Union.

Every one should be a Member.

Terms—To Clerks, $1 initiation and $3 annual dues; to all others (ladies included), $5 a year.

New York Railroad and Steamboat Time-Tables,

Published Monthly by BENEDICT BROTHERS, 171 Broadway, will be found a convenient Guide to Strangers and Residents. Price 20 cents.

New School-Books.

Price, post-paid.

Monteith's Physical and Intermediate Geography, (No. 4) $1 60

For further particulars and full description of over 300 text-books, consult the "Illustrated Educational Bulletin," published quarterly, or the "Illustrated Descriptive Catalogue." Both sent free to any teacher applying.

A. S. BARNES & CO.,

Publishers of the National Series of Standard School-Books.

111 and 113 William Street, New York.

"American School Institute,"

Founded 1855,

IS A RELIABLE EDUCATIONAL BUREAU.

(1.) To aid all who seek well-qualified teachers. Principals, School Officers, and Heads of Families should send full particulars of what teachers they want, and ask for the "Teachers' Bulletin."

(2.) To represent Educated Teachers who desire positions. The demand for experienced teachers is good, specially for those who teach Classics, Military Tactics, and Music. Professors of Music and superior Female Music Teachers are always in demand. All teachers should have the "Application Form."

(3.) To give Parents information of Good Schools. Facts concerning schools are properly classified, and are promptly submitted to those who seek schools for their children and wards.

The *reliability* of the "Amer. School Inst." is amply vouched for by well-known Educators and business men in all sections of the country. This testimony will be sent when desired.

J. W. SCHERMERHORN, A.M., Actuary,

430 Broome St., New York.

The Week.

THE President has got back to Washington. The rejoicings with which the Parisians greeted the recovery and reappearance in the capital of "Louis the Well-beloved" are recorded in history as a very remarkable display of popular enthusiasm. But we venture to say that, loud as they were, they did not express feelings of relief and satisfaction half as intense as those excited in the breasts of the American people by the return of Andrew Johnson, safe and sound, to the White House last week. We have no poet and no organ or choir capable of doing full justice to the popular delight over this auspicious event. We trust that Mr. Johnson will now treat himself to a long period of silence and repose. He owes it both to himself and the country.

THE New York Convention threw General Dix overboard, and nominated Mr. Hoffman, a step which, in spite of the heavy majority they are sure of in the city, owing to the excise law, will probably ensure their defeat at the polls. They will, probably, generally lose the Irish vote in the State, owing to Mr. Johnson's dealings with the Fenians, which, however, reflected infinite credit on him. And we are sorry to say his opponents, so far from praising him for this vindication of the law at the expense of his popularity, are using it against him all over the country, and cajoling the Fenians with promises of impunity in their next raid, which reflect about equal discredit on the American name whether they are intended to be kept or not.

THE Johnson mass meeting in this city on Monday evening was a very large, but not a particularly enthusiastic, demonstration, the *Times* reporter to the contrary notwithstanding. The Maine election evidently sat heavy on the souls of all the speakers. And the speakers, with the exception of Mr. Raymond, were mostly the old Copperhead veterans, who repeated, with some variations, the old speeches they delivered in 1864. Mr. George Ticknor Curtis, we regret to say, was absent, but Mr. Samuel J. Tilden did the "constitutional" part of the proceedings in his stead. He said no man could understand the Constitution who was not familiar with the writings of Madison. The peculiarities of Mr. Johnson's oratory he ascribed to "an irresistible impulse to give his fellow-citizens his convictions on the great questions which he thinks involve the peace and harmony of the country." Mr. Tilden, as the priest said of Sydney Smith, "has such a way of putting things!" Governor Parsons, of Alabama, also spoke, and met the popular clamor at the North about the want of free speech at the South by a declaration which ought to satisfy all candid minds. "I hear it said," he remarked, "that there is no liberty of speech down there. I will guarantee if the President will visit us he can have a hearing."

CLEVELAND seems to have given the military Johnson convention even a colder reception than Philadelphia gave its greater prototype, the convention of the 14th of August. There is no reason why the city should be particularly enthusiastic. No distinguished names are on the roll of delegates. The prominent men are General Custer, General Steedman, and General Gordon Granger. The convention contains many men—most of them, we dare say, brave men—who look on General McClellan as the ablest and worst used commander of our day; many men who "didn't go into this war to free the nigger;" many who "always found the Southerners they met to be perfect gentlemen;" some extremely respectable men, like the aged General Wool—the oldest major-general in the world, he is said to be—whose opinions upon the issues of the day are not entitled to great weight; and very many men who, to tell the plain truth, are shameless and unprincipled office-hunters, and bad specimens of our worst class of politicians—men whom politics took into the army and kept in the army, and who now seek to trade on their uniform. The convention has given the country an address, and will now go into total eclipse behind the convention which is to meet at Pittsburg on the 25th of the month.

A CORRESPONDENT writes, in a fair and temperate spirit, to ask us why we do not, in our criticisms on Horace Greeley, Thaddeus Stevens, and others, make the same allowances for them, in consideration of their past services, as we ask the *Tribune* to make for Mr. Beecher? We answer, that we do make these very allowances. No word has ever appeared in this journal throwing doubts on the sincerity, honesty, patriotism, or sympathy with freedom of either of these gentlemen. Were we to pursue from our starting-point the same line of argument towards them which the *Tribune* and Boston *Commonwealth* pursue towards Mr. Beecher, we should arrive at the most shocking conclusions with regard to their manners and morals. Our correspondent says he found nothing "coarse or brutal" in the *Tribune's* attack on Mr. Beecher. Very likely not. People's ideas of coarseness and brutality differ. There was a time when good and wise men saw nothing brutal or barbarous in cutting up traitors into four quarters, and sticking the quarters on gate-posts and ends of poles. There are good and wise men who see nothing brutal in strangling men and women in public, before hooting mobs; but these times and notions are, thank God, past or passing away. There are plenty of men in the South who see nothing coarse or brutal in the filthy billingsgate poured out on Parson Brownlow in the Louisville *Journal* by Prentice, and who were not in the least shocked when the Mobile *Tribune* proposed to have Dostie's body boiled down for soap for Yankee "school-marms" to wash their faces with. So, also, there are plenty of very good people at the North who are not outraged by Mr. Greeley's habit of calling people who differ from him in politics "old villains," "scoundrels," "knaves," "liars," "renegades," "traitors." But we hope to see the number of these people diminish every week, and to see the day when all will wonder that the foremost journal in America should have ever used such weapons. If calling attention to his vituperation diminishes in any way the credit accruing to Mr. Greeley for his long and arduous labors in the anti-slavery cause, the fault is his, not ours. Our object really is

to increase his usefulness, by bringing the force of public opinion to bear in favor of an improvement in his manner of discussion.

THE same correspondent thinks it almost "sinful" in us to criticise men like Greeley, Stevens, Sumner, and Phillips, who are laboring in a good cause. We have, probably, as great a horror of "sin" as he has, but we shall, nevertheless, continue to criticise the public acts and public language of every man in America whenever we see fit. We shall do so not from any love of fault-finding, but because we believe it is only by the incessant criticism of the whole community that public men can be kept up to their work or the breed improved; and because we believe it is by the constant utterance and collision of the opinions of all, and not by the speeches of Mr. This or Mr. That, that just and true political ideas are formed or put into force. It is, in short, the habit of criticism, and not the habit of silence, which makes and keeps nations free and great. In despotic countries, all public men are shielded from all fault-finding; in this country, none are, nor ought to be. If it be sinning to speak our mind when we see anything to condemn in the conduct and language of "great leaders," we shall go on sinning to the end; but our correspondent will have the consolation of feeling that proper retribution will be dealt out to us hereafter.

THE President's speech at St. Louis has rarely been equalled in its way, although Mr. S. Parker Coon did say at Milwaukee that "only one person—and he God—had been tempted as Mr. Johnson was, and resisted"—a reference to the vain offer of Congress to clothe the President with more than kingly powers by means of the Freedmen's Bureau bill. At Cincinnati, General Grant refused a separate reception tendered him by former soldiers, and significantly said: "I am no politician. The President of the United States is my commander-in-chief." A perfectly correct inference drawn from this speech, and from that of Farragut in this city, would probably not be the same which Mr. Seward has laboriously drawn from the presence of those officers with the Presidential party. Inferences, however, are unnecessary, as Grant has since stated that during the excursion and previously, when he was present at the meeting between the President and the Philadelphia Convention committee, he was acting under orders from his superior. The behavior of the general has throughout been prudent and delicate, honorable to himself and respectful to the President. He went electioneering because he had to go. On the 15th Mr. Johnson reached Washington, and was received by Mayor Wallach. If any one has been disposed to commiserate him for some of the mortifying scenes through which he has been compelled to pass, they have wasted pity. The President assured the mayor "that through that tour the demonstrations and manifestations of the popular heart were unmistakable," and entirely favorable to his policy. There is nothing to be said to this. As to the journey in general, we remark with the *Herald* correspondent: "The trip was a remarkable one in its very inception, and has proved the event of the season, if not of the age."

RISTORI has arrived, and one of the reporters in chronicling her arrival gave an amusing account of her astonishment at the sight of Broadway and the Fifth Avenue Hotel, which, we are sorry to say, we believe was conceived and composed by the reporter himself. Ristori can hardly have supposed that a people civilized enough to want to hear her lived in wigwams, and unless she came over with that idea, there is nothing in the aspect of Broadway to overwhelm her with admiration. It must not be forgotten, also, that she comes straight from Paris, which is now quite thickly settled and has several streets and hotels which will compare quite favorably with our own. There are, in fact, several clearings in the neighborhood of the Tuileries which show the French to have made considerable progress in city architecture. The demand for tickets is enormous. But to most of the audience, after the first night or two, the entertainment will lie in her tones and gestures, as she knows no English, and the familiarity of the New York public with French and Italian is not great. Tones and gestures will, however, furnish a treat even to those who cannot understand what she says, but anybody who judges her by Rachel's standard will be disappointed.

THE *World* accuses us of having done Mr. Tilden injustice in ascribing certain opinions to him, in the last number of THE NATION, on the subject of the war and slavery. If so, we are sorry for it; but we are not yet satisfied that we are wrong. Mr. Tilden was, we believe, a prominent member of the "Society for the Diffusion of Political Information" which the Democratic leaders organized in this city in 1863. It published certain pamphlets for the information of the Republicans, the first of which, if we remember rightly, was Bishop Hopkins's luminous and exhaustive treatise on slavery, showing the divine origin of that institution, and justifying the practice of flogging negroes by the scourging of the money-changers by Christ in the temple. The bishop was followed by Mr. Morse in a powerful disquisition of the same nature, and we think it not unfair to conclude that Mr. Tilden concurred in the opinions set forth in these remarkable and too little known theses. We should be sorry to press him or any of his fellow-laborers now touching the estimation in which they held Mr. Lincoln in 1863–4. The slightest intimation that allusions to this subject are unpleasant, is sufficient to ensure our silence. We are thankful to say we know what delicacy means.

THE New York *Times* pronounces the State Convention which nominated Mr. Hoffman for the governorship of this State, and which was called with the view of supporting the principles enunciated by the Philadelphia Convention, to have been in reality a Democratic convention, and doubts whether many Republicans will be induced to vote its ticket. Mr. Weed was, we believe, one of its leading spirits, and his precise position under the present aspect of affairs would furnish as curious a subject of enquiry as the exact locality of the magnetic pole. He appears to have got into a region somewhat resembling the Elysium of the ancients—a kind of bare, joyless pasture, where old warriors trot up and down in battered armor, with nothing particular to do and nobody to speak to, and scantily provided with clothing.

IT has been suggested to us that we ought, in our recent notice of the "Two Wheatons," to have dwelt on the improbability thrown over Mr. Lawrence's charges against Mr. Dana, by Mr. Dana's character as a gentleman and lawyer. It was, however, quite unnecessary for us to present this consideration to the audience which THE NATION addresses. Our sole object in the article referred to was to show what amount of color, if any, for his statements Mr. Lawrence could produce in the book itself if he went before a court, because, of course, many people supposed that he must have some sort of foundation for his charges. In fact, it was the probability of its forming the subject of a lawsuit that gave the matter any literary interest whatever. As a mere attack by Mr. Lawrence on Mr. Dana's character, we should never have thought of noticing it. Whether Mr. Lawrence really means to go into court we have no means of knowing.

THE condition of Border State politics grows worse rather than better. At Platte City, Missouri, on the 15th inst., in a fight between what the telegraph styles "rebels" and some members of a "radical" convention, four or five men were killed and a dozen or more wounded, and the Union men driven from the town, which was held and regularly picketed by their assailants. The firmest, most prudent, and most harmonious management by the Federal and State authorities in Missouri will be absolutely necessary to prevent serious trouble at the November elections; but this is to be hoped for rather than confidently expected. Of firmness there will be no lack—at least on Governor Fletcher's part; but what General Hancock's orders may be—upon which side the Federal forces will be ranged in case of conflict—seems to be not certainly known. In Maryland, angry feeling runs high, but as yet blood has not been spilled. The best-informed Unionists concede that the Johnson men will probably carry the State. It will be easy for eight or nine thousand persons now legally disfranchised to technically qualify themselves for voting this fall, Governor Swann's registrars, in the exercise of their discretionary power, having the matter very much in their own hands, and Governor Swann—or he is belied—having been careful to appoint registrars who will judiciously sympathize with a sufficient number of the disfranchised to overcome the small Union majority. It is a wonder that Maryland, when everybody knew that, by means of Governor Swann's too kind registrars, she was already lost to the Union party, could succeed

in forcing her wishes in relation to negro suffrage upon the Southern Loyalists' Convention, upon the plea that proclaiming impartial suffrage would give that State to the Johnson party. In Tennessee, for the moment, affairs are quiet. In Louisiana they have peace of a certain sort between the two parties.

THE activity of the Fenians causes the continued despatch of troops from England to Canada, and continued arming and drilling in Canada, where the excitement has reached such a pitch that the Montreal *Herald*, usually a sensible paper, proposes to declare war on the United States. This would be such an odd way of securing deliverance from invasion that we are driven to the conclusion that the brains of some of the Canadians are becoming addled by the drilling and exposure. The Fenian proceedings are now all shrouded in profound secrecy—no meetings, and no oratory. The next blow is to be terrible and decisive, and we need hardly say will change the face of the world by the destruction of the British Empire. Nevertheless, a good caricaturist either with pen or pencil could, by attending the "Congress" at Troy a few weeks ago, have collected materials for an immortal work. The sight of Fenian generals and statesmen struggling between a desire to display their rank and honors and a desire to avoid publicity would be a godsend to any real humorist.

FOUR despatches by the Cable on Monday from Vienna, Berlin, Prague, and Dresden breathed instant and almost inevitable war—a renewal of hostilities between Prussia and Austria, on the pretext that the latter was playing false in the settlement with Italy. The next day a telegram from Florence simply spoke of a "difficulty" in the way of signing the Austro-Italian treaty, in consequence of the former power's interpretation of the treaty of Prague. Since then we have had nothing more on the subject, and no corroborative signs in the money market or elsewhere. The improbability of further fighting is too great for ready belief in reports to the contrary. We must be prepared to be deceived occasionally by the Cable as we are by the overland telegraph, for truth, though it lie at the bottom of a well, may not always be found at the bottom of the ocean.

EVERYBODY asks, and nobody can tell, why M. Drouyn de Lhuys, the French Minister of Foreign Affairs, has resigned his office for the third time—once under the Republic and twice under the Empire. The only foreign complications about which it is supposed that Napoleon and he may be at variance—not necessarily in principle, but as questions of national policy—are the crises in Germany and in Italy. Some pretend that the ex-minister is of bellicose disposition towards Prussia; others, that the imminent peril of the Papacy, owing to the execution of the September convention, to which he was himself a party, has impelled him to withdraw from political life. Between the Rhine and the Tiber there is thus ample room for inference. The latter explanation seems to us not so good as the former. The acquisitions of the late war have made scarcely any difference in the relation of the new kingdom of Italy to the temporal power of the Pope, and it is little more than an accident that the liberation of Venice precedes that of Rome; or, if the humiliation of Austria is claimed by Napoleon as a continuation of his policy in 1859, interrupted by the peace of Villafranca, his government has suffered no disgrace south of the Alps. On the other hand, he appears to have helped Prussia to a supremacy he as little anticipated as desired, and his almost childish demand for compensation Rhinewards had to be withdrawn as soon as uttered. It is this blundering for which M. Drouyn de Lhuys may assume part of the blame, or he may even be the sacrifice of a hypocritical despot to the appearance of ministerial responsibility in a free country.

THE opponents of the metric system abroad urge frequently an objection which is not so familiar on this side of the water. They quote the adverse opinion of Napoleon I. The opposition, a Bernese wit has replied, which Bonaparte set up between the subdivision by halves and by quarters and the decimal system is in contradiction of himself, for no one was less fond than he of *half-measures*, and no one *decimated* so much (*autant*).

THE FREEDMEN.

FROM the semi-annual report (July, 1866) of the schools and finances of the freedmen, by Rev. J. W. Alvord, Inspector, we extract the following table:

States.	Schools.	Teachers.	Scholars.
Virginia,	123	200	11,784
North Carolina,	119	135	9,084
South Carolina,	75	148	9,017
Georgia,	79	113	7,792
Florida,	38	51	2,663
Alabama,	8*	31	3,338
Mississippi,	50	80	5,407
Louisiana,	73	90	3,389
Texas,	90	43	4,590
Arkansas,	30	28	1,584
Kansas,	15	24	1,500
Missouri,	38	46	2,698
Kentucky,	35	58	4,122
Tennessee,	42	125	9,114
Maryland,	86	101	8,144
District of Columbia,	74	132	6,552
Total,	975	1,405	90,778

* School Districts.

In these figures are embraced only the schools regularly established and duly reported. In every State there are numbers of private schools of all descriptions, spontaneous and self-sustaining, of which it is difficult to obtain statistics. It is estimated that 150,000 freedmen and their children were scholars on the 1st of July, against 125,000 on the 1st of January. There is observable everywhere increased interest in these schools on the part of the better class of the white population; but outrages are still common among the ignorant and degraded, especially in Georgia, Mississippi, and, as is well known, in Tennessee. Religious conventions in Virginia have acknowledged the duty of educating the blacks. In North Carolina titles to real estate for schoolhouses have been obtained in several instances, and efforts are making by the colored people of South Carolina to increase the number of those already held by them, and improved chiefly at their own expense. Fifty of the regular teachers in the latter State are colored, as are most of the teachers of day schools in Florida and in Kentucky; at Wetumpka, Alabama, is a colored teacher of whom particular mention is made. The cost of tuition is paid by the freedmen to a greater or less extent—in Texas altogether. Florida is the only Southern State which has provided by law for the education of the blacks, who are taxed for the necessary funds to establish schools in every county in the State, and to pay the salaries of a superintendent and assistants. The condition of schools in Louisiana is thoroughly disorganized, owing to the suspension of the school-tax levied by Gen. Banks. Kentucky has received least assistance from benevolent associations. The instruction of colored children was not tolerated till after the formal abolition of slavery by constitutional amendment. The only statement of the cost of schools is furnished by South Carolina, being based on the expenses of seventy-five schools whose teachers were supported mainly by Northern associations. These were, in the gross, $72,000; or about $8 for each pupil, and about $40 monthly for every teacher. Mr. Alvord suggests that industrial and normal schools be established, with reform schools at a number of central points; that desks be provided to enable writing and drawing to be taught; and that there be uniformity in the blank reports for superintendents.

—Pursuant to a call of twenty-six ministers and fifty-two laymen of the M. E. Church of Maryland, a meeting was held in the Light Street M. E. Church in Baltimore, on Monday evening last, to denounce the wanton assault on the camp meeting at Shipley's Woods. Testimony was read fixing the responsibility of the outrage entirely upon the whites, and resolutions were unanimously adopted invoking the condemnation of all Christian people, declaring the recent brutal violence to have been instigated by intense hatred to the M. E. Church, and aimed alike at white and colored worshippers; condemning the burning of freedmen's school-houses and the maltreatment of teachers; and asserting the duty of the M. E. Church to aid the civil authorities in arresting, trying, and punishing the late rioters, and to secure their victims, many of whom are in jail in Anne Arundel County, a fair and impartial trial.

Notes.

LITERARY.

Students and teachers alike may be thankful that Prof. Guyot's long promised and long expected series of geographies have begun to appear. The four series of wall maps, which had been previously published, were well executed and well calculated for the purpose of teaching, and the two manuals which are now issued by Messrs. Charles Scribner & Co. are equally well adapted to this end. The books just issued are a "Primary Geography" and a "Common School Geography." The first is intended to give a general idea of the nature of the earth's surface as seen in a series of journeys, the meaning of geographical terms, and the manner of representing the earth's surface by maps, and is perfectly intelligible to small children. The second is an introduction to the study of the maps, together with all the useful matter that is contained in the ordinary text-books of that grade, rejecting all the minor and unimportant details that only serve to obscure the recollection of important facts. The careful study of the maps is the basis of Prof. Guyot's system. The learner is taught how to draw the maps of the continents: first, by learning how to draw in its proper proportions the fundamental form of the continent, then to draw it with more attention to details, finally to fill up the exact outline, and mark the courses of the rivers and mountains. The shape of the continents and their physical features become in this way so impressed upon the memory as never to be forgotten. Having learned the general physical features of the country, the proportion of highland and lowland, the courses of mountain ranges, and the distribution of the internal waters, the student next studies the climates of its various regions, and the causes producing them, and then the vegetation and animals of the continent. Having learned this, he becomes acquainted with the races of man, their civilizations, and the resources for supplying their wants. He is then ready to return to the map, and is able at once to understand the condition and progress of the various countries. This method is very different from that usually employed in presenting this study to the young; but the system is so carefully elaborated in Prof. Guyot's books, and its excellences are so plain, that, if faithfully taught, it cannot help meeting with extraordinary success.

—An incorporated society in New York, the Institute of Reward for Orphans of Patriots, offers a prize of five hundred dollars for the best essay on physiology and hygiene. The award is to be made by a committee of three, to be appointed by the president of the American Medical Association, and is to be made upon the following conditions: Each essay must have been read or presented for reading before some incorporated medical society; the prize will not be awarded until essays have been received from twenty-five States, or such a number of States of the Union and foreign governments as shall be twenty-five in all, or else when not less than fifty-two essays have been presented irrespective of their authors' places of residence; and, finally, if no one essay shall be deemed worthy of the prize, the five hundred dollars shall be distributed to the writers of the best five essays in such manner as to the committee may seem equitable. With such topics as physiology and hygiene the field for selection of subjects must be an exceedingly wide one, and we suppose no one writer need hope to obtain the full sum of five hundred dollars. The rejected essays are to be printed without compensation to the authors in the journal published by the Institute. The address of the society is 49 Bible House, New York.

—On page 184 of the present volume of The Nation we spoke of the memoirs of Pétion and of Barbaroux. Perhaps the most interesting pages of these books were those containing Pétion's account of meeting Charlotte Corday at Caen, and the letters written by her to Barbaroux from prison before her execution. An excellent pendant to those pictures of actors in the French Revolution is the book of M. Adolphe Huard, "Mémoires sur Charlotte Corday," founded on authentic and unpublished documents. Marie Anne Charlotte de Corday d'Armont was not, as many fanciful artists have pictured her, a Normandy peasant girl in a *cauchoise* cap, but a daughter of one of the most ancient and noble families of Normandy. Among her ancestry were a treasurer of France and the youngest sister of Corneille. The family being very poor, the income of Charlotte's father being but 1,500 livres, or $300 a year, the whole family were inured to the greatest economy and self-denial. Charlotte was born in 1768, and was early placed in a convent. In 1790, on the suppression of the religious houses, she came back to the world. Her life was so pure and her ideas so noble that she failed to adopt her father's royalist sentiments and was unwilling to drink the health of a weak king. The political differences between her father, who believed in royalty while he supported constitutional changes, and Charlotte, who thought monarchy worn out in France, at least with Louis XVI. at its head, and her father's diminishing income, led to her leaving, in 1792, the thatched paternal château of Argentan, and going to reside with an aunt in Caen. She writes to a friend: "I do not deserve the harsh words of my father. It is not from a spirit of contradiction that I do not share the opinions of my friends and relatives. I see differently from what they see, because my conscience dictates to me the contrary of what they think." In the same letter she says of the king: "I have no feeling of hatred against him; quite the contrary, because he is full of good intentions; but, as you yourself have told me, hell is full of good intentions, and is none the less hell. His weakness is a misfortune to himself and to us." At the execution of the king she "shuddered with horror and indignation," and expressed her opinions of the Mountain with great freedom. To the warnings of one of her friends she replied: "One can die but once! but what fortifies me in our present perils is that no one will lose by losing me. Besides, I have never valued life but by the good use that can be made of it." She felt Pétion's jests, and, after the deed was done, she wrote from her prison to Barbaroux, pained at being misunderstood: "People here in Paris are unable to conceive how a useless woman, whose long life would be good for nothing, can unreluctantly sacrifice herself to save her country." This conviction of duty she never lost, and from Marat's death until her execution her quiet calmness and gentleness never left her. The Mountain party did not treat her with unnecessary severity. She was allowed to write her justification of the deed and to communicate with her friends. M. Hauer was appointed to sketch her portrait, which is now at Versailles, in consequence of her note to the Committee of Public Safety asking that it be taken as a mark of remembrance to her friends, and adding: "Moreover, as the effigies of good citizens are cherished, curiosity sometimes seeks out those of great criminals, which serve to perpetuate the horror caused by their crimes." By the ballad-singers and the mob she was insulted; but Sampson, the executioner, was softened by her gentleness. He showed her how to sustain herself in the springless cart to avoid its shocks; and when, on reaching the Place de la Révolution, she turned her head to look at the guillotine, he hurriedly placed himself between her and it; but she said in her sweet, low, steady voice, "Let me look on it; my curiosity is natural; I never saw one before." M. Huard devotes considerable space to the discussion of the alleged blush which rose to her cheek when the executioner's assistant smote it as he held up the head. He does not mention the fact, not generally known, that the executioner was punished by imprisonment for having thus exceeded his duty.

—Among books announced as in preparation by Messrs. Longmans we notice the following: A collection of the "Ballads and Legends of Cheshire;" "Some Account of the Life and Opinions of a Fifth-Monarchy Man, chiefly extracted from the writings of John Rogers, Preacher," by Rev. Edward Rogers, M.A.; "Sound," by Professor Tyndall; "The Wild Elephant, its Structure and Habits, with the method of Taking and Training it in Ceylon," by Sir J. Emerson Tennant; Vol. I. of "The Elements: An Investigation of the Forces which determine the Position and Movements of the Ocean and Atmosphere," by William Leighton Jordan; the ninth and tenth volumes of Froude's "History of England;" "The Life and Correspondence of Archbishop Whately," by Miss E. J. Whately; "Florence, the new Capital of Italy," by C. R. Weld; a new work by A. K. H. B., entitled "Sunday Afternoons at the Parish Church of a University City;" the fourth volume of Mr. Eyre Evans Crowe's "History of France from Clovis and Charlemagne

to the Accession of Napoleon III.;" and the third and last volume of Professor Owen's "The Comparative Anatomy and Physiology of the Vertebrate Animals."

NOTES ON THE NEW EDITION OF WEBSTER'S DICTIONARY.

NO. IV.—ETYMOLOGY.

In the first number of this series I spoke of the new edition of Webster as the best general etymologicon we yet possess of the English language, and I propose to examine its merits in this respect more in detail hereafter. In the present article I shall confine myself to some general observations on etymology as a branch of the statistics of speech. In philological science *etymology* is used in two senses: first, as signifying the history of words, including what we know or infer respecting their origin, their primitive form and significance, their composition and coalescence, their successive changes of form and meaning, and their transfer from one to another grammatical category; secondly, as the designation of that part of grammar which concerns the use of inflections or those changes at the beginning, in the body, or in the ending of words by which number, person, gender, degree, time, or syntactical relation is indicated. Used in this latter sense, etymology scarcely belongs to lexicography at all. Hence dictionaries generally omit most of the normal inflections of words, and point out only irregularities in accidence, referring the student to grammatical treatises for regular declension, conjugation, and comparison. Our business, then, is with etymology in its first and most comprehensive meaning.

Of strictly primitive etymology we know very little, because we are acquainted with ancient languages only in that advanced stage when they already possessed a literature; and as to the modern tongues which seem to be of primitive structure and organization, we can scarcely say, from internal evidence, whether they are in process of growth or decay, composition or resolution; nor do we know historically that the tribes with the most unformed dialects have not enjoyed existence and the faculty of speech as long as the oldest of the Aryans. Some words, indeed, can be traced with certainty, very many with the greatest probability, to an imitative or an interjectional origin. With respect to the rest all is conjecture, and though there are in many cases strong arguments against the imitative and the interjectional theory as applied to them, yet no more satisfactory hypothesis has yet been propounded than that which assigns the parentage of all words alike to conscious or unconscious aping of natural sounds or to involuntary and mechanical ejaculation. This doctrine has been maintained with no little ability by Wedgwood in his "Etymological Dictionary and Origin of Language," and by Farrar in his "Origin of Language," and more especially his "Chapters on Language;" and the reasoning of these authors, though certainly not always conclusive, has, at any rate, not yet been by any means confuted.

Although there is, strictly speaking, not even *primâ facie* historical, or, at least, no documentary, proof of any etymological connection between the ancient inhabitants of Central Asia and any of the European races, or of any relation of parentage and descent between the tongues once spoken in India or other Oriental countries and those so long known as Indo-European; yet the evidence of such connection and such relation drawn from linguistic analogy is altogether irresistible, and among those who have weighed that evidence there are not and cannot be two opinions on the subject. It is now past dispute that, whatever may have been the primary aboriginal source, form, and sense of a large proportion of the words and grammatical inflections which make up the vocabularies of the family of languages to which the English and most other European tongues belong, those words and those forms, as we know them, are descended, through a long space of time and with great changes of articulation, from a very ancient speech or group of allied speeches, of which the Sanscrit itself, no longer a living language, is the oldest and purest representative. The Sanscrit, at the same time, presents us these words in forms apparently nearer than any other to their original utterance, and seems to conduct most directly to our rudimental elements of human speech. To the unstudied eye and ear the Sanscrit radical is often very diverse from its alleged derivative. But certain laws of articulation, or rather certain comprehensive and constant physiological facts rising almost to the dignity of laws, have been discovered by which we are enabled to explain very remarkable verbal revolutions, and to trace back, with almost unerring certainty, English words to Sanscrit roots not in the least resembling them. In fact, scholars familiar with these laws or great facts, though not well versed in Sanscrit lexicography, have been able, by reasoning backwards from a given modern word, to arrive at a very differently articulated supposed Sanscrit root, which, upon due search, has been found actually to exist in the vocabulary of that language. Such deductions as these render etymology constructive, and entitle it to rank as a true science; for when a particular knowledge is so far perfected that it can predict unknown results it has become a science.

The principles of investigation which have demonstrated the relationship of languages now living to one long since dead, and between which history has not preserved the faintest tradition of a connection, have also been applied to testing the affinities between still existing speeches. Thus the Celtic, which was formerly supposed not to belong to the Indo-European family, is now shown not only to be a collateral descendant from the same stock as the Gothic and Romance dialects, but to have many hitherto unperceived lexical and grammatical resemblances and analogies to them. To illustrate by a familiar word: *to buck*, to soak in lye preparatory to washing or bleaching, is erroneously referred by Webster to an old German word signifying the *beech-tree*, because beech-wood ashes were used for *bucking*. But this word, *to buck*, is of recent introduction into all the Northern languages, while it is centuries older in those of Southern Europe, and hence the former probably borrowed it from the latter. Wedgwood, following Burguy, conjectures that the word is from the Celtic root *bog*, soft, water-soaked, and the Spanish and Italian forms are *bugada* and *bucato*. Now, in Northern Italy, there is a considerable territory, formerly more extensive, where a Germanic dialect called the Cimbric is still spoken. In this dialect the German *w* is uniformly represented by *b*, the diphthong *ei* very often by *o* or *oa*, so that German *weich*, soft, soaked, *weichen*, to soak, are in Cimbric *boach* or *boc*, *boachen*. Here, then, we have the true etymon of *buck*, and at the same time an illustration of a by no means obvious point of contact between the Celtic and the Germanic tongues. (See American edition of Wedgwood's "Etymological Dictionary," s.v. *Buck*.) In fact, it is only by the application of the same or analogous principles that we can reason with confidence on recent changes of words, and very many etymologies which seemed almost self-evident to scholars of the last century, are now shown to be impossible, because they are contrary to well-established laws of phonetic revolution.

We know the primitive language to which modern linguistic science refers so large a part of the words occurring in European literature is only one ancient form or dialect, the Sanscrit, which, however, has several descendants still spoken in India. The Indo-European tongues, on the contrary, are known to us through a long range of time and in a great number of dialects. The changes which these dialects have undergone, partly, as it is said, by the operation of inherent law, and partly, certainly, by their reciprocal influence on each other, are so great that in many instances we do not recognize the older and the later forms of a given speech as one and the same language. No modern Germanic dialect is considered the same speech as the Mœso-Gothic, or even as descended from it; nor, though there are eminent philologists who identify classic and modern Greek, Anglo-Saxon and English, are Italian, Spanish, Provençal, and Portuguese regarded by grammarians as simply modified forms of Latin. The European languages have not only affected the forms, structure, and articulation of each other, but some of them have contributed very largely to the vocabularies of others not descended from them. English, for example, though grammatically belonging to the Gothic stock, owes a majority of its words to Latin, the modern Romance languages, and other foreign tongues. The same remark is more or less true of all the dialects employed in European literature, and, accordingly, besides the Oriental genealogy common to nearly all, every vocabulary has its special family record, its table of affinities with relatively modern or contemporaneous speeches, its books of verbal debit and credit, with a large circle of linguistic neighbors.

From all this it is evident that etymology, using the word in the first of the senses I have ascribed to it, may be divided into two branches, or lines of inquiry: first, the theoretical, or, so to speak, transcendental, as when from a derivative form we infer a descent from a radical either not known to exist at all, or found only in an ancient and remote language, which can be shown to be related to that we are investigating by more or less of verbal and grammatical coincidences alone, not by direct proof; and secondly, the historical, as when we are able to trace particular words by documentary evidence, through their successive changes of form and significance, if not to primitive roots, at least to comparatively ancient forms and meanings, or to show positively that they have been introduced from foreign tongues. The distinction between the two, it will be seen, lies mainly in the nature of the proof to which they appeal; the one relying on physiological laws of cause and effect, the other on the testimony of witnesses. It, however, very often happens that, in the pursuit of historical etymologies, links are wanting in the chain of evidence. Where this occurs, where the formation we are following is interrupted by a *fault* in the stratification, we must resort to theo

ry to teach us where to look for the connection and how to reunite the broken series. The latter or more practical branch of etymology is, therefore, in a considerable degree, really dependent on the former or speculative division, and cannot be pursued successfully without a knowledge of its principles.

Scholars who occupy themselves with etymological theory are inclined to exalt unduly the worth and dignity of their own studies as being more truly scientific in object and character, and to depreciate historical enquiry into the actual biography of words as little better than mere empiricism. But the so-called *laws* of Grimm are but generalizations based on observed physiological, or, to speak more specifically, phonetic facts, and they remain nothing more than material generalizations, not necessary principles, however wide their range of application. The question between the two modes of investigation is rather a matter of taste and special aptitude in the enquirer, and it may well be insisted that studies which involve a knowledge of the great concrete facts of humanity and demand wide research in the annals of industry and commerce and navigation and missionary effort and conquest and colonization and domestic life and jurisprudence, in all branches of literature and science, and, in short, in every field where the intellect of man has been brought to act either on the mind of his fellow-man or on the products and working of material nature—such studies cannot be less noble in themselves or less elevating in their tendency than investigations into the laws of vocal articulation, which carry us back, indeed, to a remote antiquity, but concern themselves little with collateral facts of great past or present interest to man. Besides, historical etymology is of great importance as serving to control, test, and often to correct the deductions of theoretical enquirers, who are constantly tempted to infer a relationship between words derived from very different roots upon the strength of accidental resemblance in form. This was the source of very many of Webster's grossest errors, though he certainly cannot be said to have been led into them by true or false doctrines as to the laws of phonetic change. The etymology upon which Webster most valued himself was that of the verb *to preach*, and the words which he held to be cognate with it because they contain the same radical consonants. An hour of enquiry into the history of this word would have saved him the extraordinary mistake into which he fell concerning it, as well as many of the other errors of that singular discussion. And yet upon theory alone many of his widest deviations from etymological truth could not have been denied to be sound. In like manner false derivations of *buoy*, *camlet*, and hundreds of other words, are almost universally adopted, because lexicographers have found it easier to imagine a connection between vocables so like each other as *boja*, a fetter or chain, and *buoy*, *camel* and *camlet*, than to search out the actual history of the derivatives in question.

Theoretical etymology belongs rather to the general history of the Indo-European languages, and throws comparatively little light on the distinctive features or the special vicissitudes of any one of them. These must be illustrated by the historical method, and consequently the etymological part of a dictionary of a given speech, English, for example, and more especially in the case of a manual not extending beyond a volume, must confine itself chiefly to that which is peculiar to the language it explains, or at least only accidentally common to other more or less remotely allied tongues, and hence it can generally embrace only the proximate etymology and the relatively recent migrations and revolutions of vocables. Further, it can ordinarily afford space only for results and conclusions, not for historical deduction, and its statements must be not reasoned but positive and authoritative, argument and evidence being reserved for special treatises, like those of Wedgwood, Schaler, Terwen, Diaz, and others. Max Müller, in the second series of his "Lectures on Language," devotes eighteen octavo pages to the historical etymology of the word *barnacle*, and yet overlooks the earliest examples of the use of the word, some of which tend to show, what may be better proved by direct evidence, that in one of its senses, though not that which Müller most carefully investigates, it is of Oriental origin. There are hundreds, not to say thousands, of English words the source and various meanings of which cannot be satisfactorily discussed in a smaller space, and in Wedgwood's "Etymological Dictionary" not above three or four etymologies upon the average are contained within the limits of a single page.

In a dictionary on the plan of that before us there must also be a limit to the amount of collateral etymological illustration, and space is occupied which might be better employed whenever facts are stated which serve to explain neither the history, the form, nor the meaning of a word. The former editions of Webster were very extravagant in this respect, and though the revisers have, in most cases, retrenched such superfluities, they have sometimes, from inadvertence, no doubt, rather than deliberate intention, suffered them to remain. Thus, the etymology of *profession* refers us to the French *profession*, the Provençal *professio*, the Spanish *profesion*, the Italian *professione*, and the Latin *professio*. Now the French word is important, because it accounts for the form of the English, the Latin because it gives us the proximate source of the French; the other three explain nothing whatever, and are of no more use or instruction to the English student than totally unrelated Russian, Hungarian, or Turkish equivalents of the same word would be.

G. P. M.

A SWISS HISTORY OF OUR WAR.*

It is said that the Swiss, beyond any other people in Europe, were unfriendly to our cause in the late war, and that, from its commencement, Colonel Lecomte did his best to correct their ideas and bring them to a better state of feeling. For this reason alone, a book from his pen is entitled to a kindly reception among us. He has written, besides his book upon the war of secession, two upon the war in Italy in 1859 and 1860, one upon the war in Denmark in 1864, one upon the life and writings of Jomini, and a report to the Swiss Department of War upon the late war in this country, and he has translated into the French the official documents submitted to Congress upon the Virginia and Maryland campaigns of 1862, with an introduction and notes of his own. He is also the editor of the "Revue Militaire Suisse."

The book before us is an octavo volume of nearly three hundred pages, in the beginning of which Colonel Lecomte presents to his readers a brief description of the geographical features of the country occupied by the United States, some account of the settlement of the country, and the course of events that led to the formation of the Federal Union, a few statistical details, a chapter on the causes of the late war, and another on the preparations that were made for it. In an appendix he has printed his translation into the French language of the Constitution of the United States, of the Ordinance of 1787, of the Declaration of Independence of South Carolina and the Ordinance of Secession of Alabama, 1860, and of Mr. Stephens's speeches against secession of the same year. The introductory chapters and the *pièces annexes* make up, together, about one-third of the book. The rest of it is devoted to a description of the course of military operations in this country from the outbreak of the war down to and including the battle of Antietam.

We are nowhere told of how many volumes this is the first; but, if we may judge from the present one, it should be followed by at least three, to make the history of the "Guerre de la Sécession" complete. We may well hope that the author's plan is no less extensive, and that he may carry it out. It is not likely that his readers in this country will be numerous. Books on the war in the English language are too plenty to leave much room for one in French, even if all foreign books were not so expensive as they are now. But it is probable that abroad Colonel Lecomte will find many readers, and we in this country may well be pleased to know that our friends upon the Continent of Europe have within their reach so sensible, so fair, and so accurate a book as this; for the work of a foreigner it is singularly free from errors. Indeed, we know of no book which would give to a reader of any nation, not excluding our own, in the same compass, a more correct idea of the course of events in the first year and a half of the war. But it is not to be read by those whose interest in war is confined to the picturesque element. It is the work of a well-informed, business-like soldier, and from its clearness, accuracy, and good sense, is satisfactory reading; but it is as colorless, from beginning to end, as the writings of Jomini. It looks at all things from the Northern point of view, as matter of actual position of the observer, but in tone it displays the impartiality of the student and not the enthusiasm of the partisan.

The military events of the first eighteen months of the war were not very numerous, and the newspapers were read so faithfully in those days that almost every American is familiar with them. Therefore it is enough to say of Colonel Lecomte's description of them that, for a very brief one, it is, with few exceptions, as good a one as could be wished. We have a few words to say, however, on some matters that have attracted our notice.

We are somewhat surprised to find that the author does not seem to have formed a very high opinion of the utility of our military academy. He speaks of it as if he regarded it as a good school of engineering, and little else, and he attributes to its influence the undue readiness to use pick and spade which he thinks he observed, and, in general, too great devotion to "traditions trop techniques." He is as much disposed to overrate the value of the foreign element in our army as to underrate the value of West Point,

* "Guerre de la Sécession. Esquisse des Événements Militaires et Politiques des Etats-Unis de 1861 à 1865. Par Ferdinand Lecomte, lieutenant-colonel à l'état-major fédéral Suisse." Tome i. Paris. 1866.

and equally wide of the truth, in our opinion, in each case. Certainly we should have been strengthened rather than weakened by the absence of such troops as the "belle brigade" of Blenker and such generals as Sigel.

There are errors in the book, but not by any means so many as might be expected. Thus, McClellan is said to have been made a major-general of the regular army in May, 1861, and lieutenant-general in November of the same year. The battle of June 1, 1862, is said to have been renewed "aux premières lueurs du jour . . . sur la rive *gauche*" of the Chickahominy, and the artillery "placée en arrière dans les clairières" to have fired "pardessus les combattants." The real fighting of that day did not begin till about nine o'clock, and this battle of Fair Oaks was distinguished by the silence of the artillery. The circumstances of the engagement were such that it had hardly a chance to fire a shot. The picture which the reader forms in his mind of the battle of Antietam is quite discolored by the author's statement that "un soleil dans tout son éclat annonça la journée du 17." The morning of that day "si grande par ses résultats," was dark and lowering, and it was not till well into the forenoon that the sun came out.

But the most serious error in the book is the statement on page 222 that General Hooker, at the time he received his wound at this same battle, "en fût d'autant plus chagriné qu'il voyait les choses se dérouler favorablement en somme, et qu'il espérait jeter toute l'armée de Lee au Potomac, s'il était bien secondé." There is no doubt, we believe, that General Hooker afterwards said that he entertained such a hope at the time he received his wound, but every one who was there that morning and still survives, knows that he could have had no such hope at the time. His command was beaten when the columns of Sumner began to arrive on the field, and it was only with the loss of thousands of the best troops in the army that the battle was restored in that quarter. It is said that General Hooker owed his promotion to the command of the Army of the Potomac to the extravagant assertions he made as to the fighting he had done and the successes he would have achieved but for his wound. General Hooker was a brave and brilliant soldier. His courtesy, *bonhomie*, and gallantry made it a pleasure to serve under him; but he never had a better piece of luck in his lucky life than the slight wound that drove him from the field he was losing at Antietam, unless we except the shot that struck the pillar against which he was leaning at Chancellorsville, and gave his adherents a chance to throw the decent mantle of physical misfortune over the most lamentable failure of the war. It ought not to pass into history that Hooker was fighting a winning battle at Antietam when he was forced to leave the field.

Colonel Lecomte has shown a great deal of judgment in the selection of his materials, but he is sometimes led astray by them. Thus, his brief description of the affair of Ball's Bluff is quite erroneous. But we should feel no surprise at that; no one who was not there, and few of those who were, seem to have anything like a correct idea of that melancholy episode, and its true history is yet to be written.

Colonel Lecomte, we believe, was in this country, and serving as a volunteer aid on the staff of General McClellan, till after the "Seven Days'" battles. This was no long service, but it ought to have taught him enough to hesitate before he pronounced that the chief of staff of the Army of the Potomac was "parfaitement digne" of the honor of his position.

The suggestions scattered through the book are usually very sensible, but we have noticed nothing striking from its originality. All good soldiers in this country lamented the mania for forming new regiments instead of filling old ones. Colonel Lecomte noticed this error and remarked upon it: "Lorsqu' un régiment de volontaires Américains part pour la guerre, il y va tout entier, et ne laisse rien après lui. Pas de dépôt, pas de renouvellement du personnel, à mesure qu'il se consomme, par des recrues exercés venants réparer les pertes et grossir l'effectif."

The most striking passage in the book is that in which the author charges the Government with carrying on a "petite guerre" against McClellan while waging a "grande guerre" against the South. He makes the point that the Government felt sure of success, and speedy success, and was fearful of letting McClellan gather all the laurels, upon the theory that his achievements would all redound to the credit of the Democratic and pro-slavery party, to which he was believed to have attached himself. (Page 119.) To this feeling he attributes the withdrawal of McDowell, and has noticed the fact that at every point of the theatre of war which was distant from Washington things went to our wish, while in Virginia, under the eyes of the Government, all went otherwise.

We are inclined to think that the author has failed to apprehend the significance of the siege of Yorktown, but that subject is too large to enter upon here. We think that he is also in error when he pronounces that McClellan ought, as soon as he heard of the destruction of the *Merrimac*, to have moved across to the James River, and established himself on that. He still had reason to count upon a junction with McDowell, and the advantages that would have followed from that can hardly be over-estimated. His criticisms upon the position of the Chickahominy seem to us altogether judicious, and we may say the same of his remark on page 182, after describing the battle of Gaines's Mill: "Il fut fâcheux qu' après avoir pris tant de peine à améliorer les positions du Chickahominy, une meilleure partié n'ait pu en être tirée par l'armée Fédérale au jour même de la bataille." Among the many errors justly chargeable upon General McClellan, his conduct on the day of the battle of Gaines's Mills seems to us among the most lamentable. The lines before Richmond had been drawn under his eyes, and the patient labor of his large army had been strengthening them for close upon four weeks. Accomplished engineer as he was, no man in the army was more capable than he of estimating their strength and the number of troops required to hold them. On the day of battle he should not have asked his corps commanders how many troops they could spare, as he did, but should have told them how many they must send. Those commanders had been assigned to their positions by the Government not only not at his request, but against his wishes, and he ought to have known what answers he might expect from them, at least from such officers as Keyes and Heintzelman; while the *vieux sabreur* Sumner, brave as he was, was hardly a fit judge of the question proposed to him. There the Federal army lay all day behind its high, revetted parapets, with strong redoubts strengthening the works at short intervals, and cannon in emplacements all along the lines, protected, moreover, by acres of slashings in front, and only two brigades could be spared from three army corps to reinforce the hardly pressed right, and not a movement was made to so much as threaten the lines of Magruder, who lay trembling in his "critical position" in our front.

The volume concludes with a statement that the author sees neither pleasure nor profit to be derived from more extended criticism upon the military events of the first two summers of the war, for the reasons that the combatants were confederations of republics, the theatre of war immense, the vast majority of the actors were serving their apprenticeship to the "grande guerre," and the minority, who were better instructed, were made distrustful by their knowledge of the defectiveness of the means at their command. He is of opinion that a general less accomplished than McClellan might have been more successful than he, and that he was unfortunate in aiming at an impossible ideal—an army of regulars. His closing paragraph expresses his belief that his succeeding volumes will show that the American nation knew how to profit by the lessons of experience, and that the operations of the following years, without showing more talent in conception on the part of generals or the Government, were infinitely better executed, because there was a better understanding among those who took part in them.

SPARE HOURS.*

We are glad to meet Dr. Brown again in literature. His former books have made a place for him in every family circle where genial and enjoyable life is appreciated; and the new series of his papers will be gladly welcomed by all who have ever read the first story, "Rab and his Friends," which gave the author a wide acquaintance with American readers. From that pathetic little sketch how the race of Rabs has multiplied! Our own Rab wags his tail in grateful response to the fact, as he lies, with one eye half closed, at our feet under the library table.

Why is it that Dr. Brown is popular? He has only written those light, sketchy papers made up from the odds and ends of everything. He is only a gossippy story-teller; his thinking is of an exceedingly light order; he never completes or finishes anything; you can read his books as well from the last page backward as from the first page forward. Why, then, is he popular? Because he is a man of genuine humor; one who is not only humorous, but who enjoys humor; one who has a large, full, sympathetic nature; one who is open to all beautiful and deep impressions; one who has the happy talent of enjoyment; one who, with his favorites, becomes even hilarious. Add to this his style, which has the singular felicity of reflecting the man as much as Charles Lamb's letters do the gentle "Elia," and a bright, quick imagination which seizes upon the salient features of his subjects with strong grasp, and you have the qualities which make Dr. Brown an acceptable author. Grant, indeed, that this is not a very substantial basis for authorship, that his papers are all brief and all in the same vein; yet they are all well and inimitably done, and there is just that grace of personality which makes them pleasant reading for old and young. They harm nobody (which can

* "Spare Hours. By John Brown, M.D." First Series. Boston: Ticknor & Fields. 1866. 16mo, pp. 458. Second Series. The same. 16mo, pp. 426.

be said of few books belonging to the literature of amusement) and they fill the mind with genial, pleasant pictures, and widen one's appreciation of good books and his own kind.

We honor Dr. Brown, too, because he is something else than an author. He is a doctor in successful practice, and these papers have been written, as were those of the lamented "Delta," amid the absorbing cares of a constant daily occupation. They are, therefore, an example to literary men, and to those who would be such in a country which does not yet support literature single-handed, of the way in which literature may be successfully tacked on to another profession without in the least impairing its proper pursuit. The poet Perceval, however, said with much truth, when in South Carolina attempting to practise medicine without patients: "When a man is really ill he will not send for a *poet* to cure him." But in Perceval's case the literary man had, unfortunately, preceded the doctor in reputation. We hold that every calling has a narrowing influence in itself. It absorbs a man. This is true equally of law, medicine, theology, or mechanics. Unless one reads, writes, thinks beyond his profession, he becomes the man of one idea, who soon dries up and withers away. This is the secret of the vegetation of country parsons, country lawyers, country doctors. They drop fast asleep thinking upon nothing. In contrast with this Dr. Brown has become all the better for using his pen, and we are not sure but that he has cured as many patients with his quills as with his pills.

Dr. Brown excels in two lines of writing—story-telling and biography. We are willing to match his "Father's Memoir," the paper on Arthur Hallam, and those on Marjorie Fleming, John Leech, and Thackeray with any biographical writing in the language. They are as peculiarly done as "honest Izaak's" George Herbert or Richard Hooker. The writer appreciates his subject, and he does not let it go till he has brought you to see as he does. His "Father's Memoir" is only equalled (if equalled) by Carlyle's "Life of Sterling" and Boswell's "Johnson." We have never seen a sketch of an artist which so beautifully brings the very man in his art before you as does his paper on John Leech. It is all that reverence and love and honesty could do. But the first series is not excelled by the second in any respect. The biography of Arthur Hallam, now the father's memoir of his son has been published, and we can compare them, is not equal to Dr. Brown's paper, which was made from it. He has the indispensable quality of a biographer—an appreciative heart. He loves, admires, knows—then writes. But his stories are also interesting. There is no constructive art about them; but they always have a point. The story of "Rab" has made that honest dog famous wherever English is spoken, and the moral is delicately woven into its very marrow. The author's love of dogs makes him true brother to Christopher North and Walter Scott, both of whom he admires, and his sympathy for the race crops out in the new volume in a touching plea for a "Dog Home." His pictures of dogs must be read in their setting to be appreciated, but we have never met with their like. Such papers as "Minchmoor," "The Enterkin," "The Jacobite Family," "Her Last Half-Crown," and "Presence of Mind and Happy Guessing," show his peculiar ar t as a story-teller, and the reader will always remember them as choice bits of character and scene-painting.

The author attempts, in the second series, a more serious class of papers, entitled "Health," or lay sermons, and one on "Jeems the Doorkeeper," to which should be added, "With Brains, Sir," and "Education through the Senses," in the former book. They are full of pleasant advice, given not without a dry humor, which assists the reader to take in the sense. The thoughts are not very deep, but they are inimitably put. His sketches of character also demand a word. The papers on "Dr. Chalmers," "George Wilson," "The Duke of Athole," "Thackeray's Death," and "Struan" are among the happiest summaries of character which we have met with. The author knew and loved the men, and when he writes of them it is as if they were brothers, concerning whom every word must be true yet tender. They are worth more than all the biographies that could be written. The real truth and presence of the life are given in few words, and every word has power.

Yet, much as we like Dr. Brown, we hope, for his own reputation, that he will not write much more in the same vein in which he has indulged, lest the same disgust overtake the public which has met the recent volumes of the "Country Parson," whose "Recreations" were really good and a new thing in literature, but whose abundance has wearied us all. We say this with some hesitation, because Dr. Brown is a far abler man, but yet his literary reputation, so far, is established upon a very slender reed. He pipes one rune perpetually, and even the music of the spheres becomes tiresome without variation. We are glad to see the kindly face of the good doctor in front of the new volume, which shows the same fine traits of character that we find in his writings.

MR. JAMES FREEMAN CLARKE ON ORTHODOXY.*

ADMIRABLE in intention, kind in temper, candid in spirit, earnest in purpose, this volume occupies a place in theological literature which ought to have been filled before, but which until now has remained empty. What is more remarkable than the character of the book, is the fact that it is written in the interest of a body of Christian believers as the tender of an olive-branch to the other sects. The government of the American Unitarian Association, by the hand of Dr. Clarke, makes an honest attempt to find and to state the truth contained in the doctrines of their opponents. Such an endeavor merits praise, as indicating an attitude worthy to be called Christian, if peace and conciliation are Christian, if *eirenics* are a good substitute for *polemics* in the treatment of sectarian controversies. The association could not have selected for this good work a more suitable man than Mr. Clarke—a man fitted for its performance both by gifts and acquirements. He has the requisite erudition and the necessary familiarity with all the lines of thought. His mind is comprehensive, systematic, and exact; his judgment is just. He is singularly free from personal and from theological prejudice, not because he is indifferent to modes of belief, but because he is strong in fundamental convictions. He is catholic from the depth of his spiritual fervor, not from the shallowness of his sceptical understanding; and he seems to be able to appreciate what is true in systems and good in men, however divergent the forms of truth and goodness may be. In addition to all these qualifications, he possesses a rare power of terse and vigorous statement, almost dangerous from its neatness, but balanced in his case by an intellectual fidelity which is on its guard against deception by verbal ingenuities. The volume before us, in copiousness of material, punctiliousness of arrangement, formality of definition, resembles a German treatise on systematic theology, but the freshness of its thought marks it truly American. But for an occasional positiveness, verging on dogmatism, an absence here and there of philosophical perception, and an artificial cast in its logic, we should say that the theme was handled as well as we have a right to expect from anybody. No more satisfactory book of like tendency may be looked for. The chief point of question is, whether the attempt itself can be considered legitimate. By orthodoxy, Dr. Clarke does not mean the opinions held by any particular denomination in New England or elsewhere; he means "that great system of belief which gradually took form in the Christian church in the course of centuries as its standard theology." This, he says, is substantially identical with the Protestant principle. That principle generates the heresies as necessarily as the beliefs. "Heresies are as true as orthodoxy, and make part, indeed, of a higher orthodoxy." It follows that each form of doctrine, and each doctrine singly, covers some truth of experience, some solid fact of utmost importance to Christendom. Every system has its share of essential truth; every sect is orthodox after its manner; all sects are needed to make Protestantism. "Only by contributions from all quarters can a final judgment be reached." The work in hand on this theory is to distinguish between the substance of truth and the form of truth, to detect the spirit beneath the letter, to analyze all the statements and get at the last residuum of verity.

But this will not satisfy the philosophic believer in orthodoxy. He will take issue at the very start with Dr. Clarke's theory, and charge him with begging the whole question. He will say that reasoning is impossible on Dr. Clarke's ground. It is generally understood that orthodoxy *is* a definite system, from which all heresy is a dangerous departure; that orthodoxy and heterodoxy are not different modes of statement for the same substantial truths, but modes of statement of different principles, one of which excludes the other; the difference being one that cannot be split. Nor is this all; for it is an equally stubborn opinion that the natural reason is utterly incompetent to interpret or to understand the orthodox system, it being instituted by omniscience, inspired by supernal wisdom, and apprehensible by none but supernaturally illuminated minds. Hence Dr. Clarke's endeavor is, of necessity, futile. He assumes that he can penetrate mysteries which human wit cannot reach. In saying, as he does with emphasis, as if he were laying down an indubitable verity, that "there is a power in man by which he can see spiritual facts, as with his earthly senses he can perceive sensible facts," Dr. Clarke takes ground frankly with the transcendentalists; but transcendentalism and orthodoxy are utter foes; and when either undertakes to find the substantial truth that is common to both, it is as if one should try to discover the common base of two mutually destructive salts.

The special results of Dr. Clarke's analysis are such as might be expected from his philosophical principle. The discussions are minute and elaborate.

* "Orthodoxy: its Truths and Errors. By James Freeman Clarke." Boston: Walker, Fuller & Co. 1 vol., pp. 512.

They show a complete acquaintance with all the technical points in controversy; they display great learning and acuteness. They are scrupulously fair; but, in the conclusion, the transcendental philosophy claims much the largest share of the spoils, and orthodoxy comes to its title by abandoning its rights. Positions which it would disclaim are attributed to it as its residuum of truth, and beliefs which it will never let go are kindly taken away from it as being errors. Thus, orthodoxy is right in making the free and independent sight of truth the root of all religion; it is wrong in confounding truth with doctrine. It is right in affirming that influences come into the world from above the world, *supernatural* influences supplementing nature; it is wrong in raising an opposition between the natural and the supernatural, in making nature and spirit foes. It is right in maintaining the supreme excellence and value of the Christian Scriptures; but wrong in claiming for them infallible accuracy. It is right in laying stress on natural depravity, the natural alienation of the will from God, the fact of sin; but wrong in insisting on man's total depravity, and his natural subjection to a law of evil. It is right in declaring that God was in Christ; it is wrong in declaring that Christ was God; right in teaching that Christ was divine; wrong in teaching that he was Deity. It is right in asserting that man is justified by faith; wrong in asserting that he is justified by belief—the faith that justifies does not come from the acceptance of correct opinions, but the correct opinions proceed from the faith that justifies. It is right in contending that Christ, in his death, effected something by means of which we obtain God's forgiveness for our sins; it is wrong in contending that this agency was exerted on God instead of on man, and in holding up its vicarious character as constituting its saving peculiarity. It is right in asseverating that man lives under a law of election; but wrong in pronouncing this election to be an appointment to happiness or misery hereafter, instead of being a call to opportunity and duty here. It is right in expecting the coming of Christ in this world, a *personal* coming, too, and not merely his impersonal coming in his truth; it is wrong in supposing that coming to be future instead of present, and material to the senses instead of spiritual to the soul. It is right in affirming the eternal distinction between good and evil, and in laying stress on the soul as eternally suffering for sin; it is wrong in laying down the doctrine of everlasting punishment or of hopeless doom. It is right in proclaiming a trinity of manifestations; it is wrong in maintaining a trinity of persons. In each one of these instances the special characteristic of orthodoxy seems to be abandoned, and, as a substitute for it, a belief is put in which not only is no equivalent but which is its contradiction.

While, therefore, the purpose of the book is so good and its ability so conspicuous, its success is not eminent. The questions at issue lie deeper than Mr. Clarke's scalpel goes. Orthodoxy and anti-orthodoxy rest on opposite principles. If one is true, the other is not. The kindest overtures towards them, looking to a reconciliation and a marriage kiss, will probably be thrown away.

A Woman's Thoughts about Women. Miss Mulock. (Philadelphia: T. B. Peterson & Brothers.)—When, some years ago, Miss Mulock's brief essays first appeared, the topics she discusses had much of freshness and interest which they have since lost. On servant-galism, for instance, we have not by any means got to our last word—witness the proposal on another page that our poor relation the monkey be utilized and made menial—but certainly within the last ten years we have heard an infinite deal on the subject, and all that Miss Mulock says in her chapters upon "Female Servants" and "The Mistress of the Family" has been repeated with rather wearisome iteration, and has ceased to be amusing. Still, if it is true that ladies never grow old, it is also true that young ladies grow older, and each year a new generation of brides, attended by raw regiments of Irish and other mercenaries, go down into the battle of life in lodgings and first-class tenements, and each year there will be new need of the old counsel and reproof and warning. And no kinder, more sympathetic, more honest adviser, and, so far as we know, none more capable than Miss Mulock will easily be found. She is equally full of housewifely sense and of womanly sweetness. And we commend her book to all young gentlemen meditating matrimony as a very good book for the general average of young ladies contemplating the same prospect. For in Miss Mulock husbands, an unfortunate class whom it is too much the fashion nowadays to abuse without stint, will find a friend. She is no innovator or woman's rights woman. More than that, she concedes that women are human beings, and not altogether free from wickedness, silliness, and meanness. She seems not willing to assert the female superiority in soul, and hardly willing to assert their equality with man in intellect, though, to be sure, she does make some rather extravagant remarks about Aurora Leigh. These may be forgiven, however, as being ten or a dozen years old, and made when more people than Miss Mulock were too enthusiastic about Mrs. Browning. But, as we say, in general she is very sensible and reasonable. Indeed, acrimonious men who should read her book without remembering that she is specifically engaged in pointing out errors in women's conduct of life, and urging them to improvement, might think the writer a believer in some of the harsher creeds of wilful misogynists. They might conclude that she supported that plausible theory which supposes our original parents, those first *hostes humani generis*, to have been unequally guilty in bringing about the fall of man; that the man, on account of mitigating circumstances, was permitted to earn his own and the woman's bread by the sweat of his brow; that the woman's exclusion from toil was penal, and that in her idleness and the consequent deterioration of her morals and her mind she reaps the reward of her greater sin in the garden. It is life in the world of business that forces men to justice—man solitary cannot be just. Justice is at the base of every other virtue. Without justice morality is impossible. Women, notoriously, are destitute of justice, and are, then, profoundly immoral, in the strict sense of that word. Such goodness as they confessedly have they have at the dictum of religious teachers. It is so in morals, and in mind it is the same, these people say, and, for the same reason, "curis acuuntur mortalia corda." If the revolving world, rightly considered, is nothing more than the grindstone on which the human faculties are sharpened and brightened, it is not to be wondered at that men are as far superior to women in intellect as in the moral nature.

It is not necessary to enquire whether this is true doctrine, or whether Miss Mulock is a disciple of this school. Practically, she urges women to enroll themselves among "that crowned band who, whether or not they are the happy ones, are elected to the heaven-given honor of being the workers of the world;" she is not afraid to recommend their following any and every honest profession or trade for which they are competent, and is severe upon the frivolous laziness and helpless dependence which is commonly thought to be the proper thing for women; she candidly confesses the tendency of women to be dreadfully stingy, tyrannical in a small way, inconstant in friendship, and sadly empty-headed; she speaks well, delicately, tenderly, and sensibly about "lost women," "unhappy women," and "women of the world," and on the whole has given to her sisters a large-hearted, pretty large-minded woman's desultory, not very deep but very useful, "Thoughts about Women."

Hillard's Primer. Edited, in pronouncing Orthography, by Edwin Leigh. (Brewer & Tileston, Boston.)—The history of this book, if it were told, would be something romantic. The editor speaks in his preface of "the labors of years" as culminating in this small volume, which it is safe to say a casual observer might never suspect of any peculiarity, though in this very fact lies the triumph of the educator. Mr. Leigh has worked long, persistently, with an enthusiasm and a degree of hopefulness which sometimes are called fanaticism, sometimes, when a new world is to be discovered or two worlds united by a cable, heroism. He has endured disappointments and privations like other discoverers—the imperfections of his own system, the indifference of educators, the doubts of publishers, the delays of his font-makers. He has lived on a crust, but he has lived, and here is his reward, or ought to be. What, in brief, is his system? Mr. Leigh went from Massachusetts and Horace Mann to Missouri, to pursue the high calling of a teacher. He had long taught the phonetic method of orthography and orthoepy, and knew by experience how much it saved the pupil in time and the teacher in patience. But the odd characters and the new-fangled spelling never commended themselves to the general public. What the child has learned here, it was said, he must unlearn when he returns to the ordinary text. The objection was not fatal to the theory, but it was to its practical success. Mr. Leigh thought it not impossible to get the Roman characters so little modified that the transition in them would be imperceptible, and in spelling, *nil*. And this he has done, in the most ingenious and thorough manner, and he has persuaded Messrs. Brewer & Tileston to adapt a popular primer to his lettering. The system commends itself on its face; it is simple, easy, interesting, *familiar*. It is compatible with any mode of teaching, though here it is combined with that which employs words before single letters. We commend it to the teachers of primary schools and to the mothers of young children everywhere. If employed at the South, it would, we are persuaded, render the greatest assistance to the teachers of the freedmen, and shorten for the latter the interval (which it is so desirable to shorten) between them and the culture of civilization.

The Red Doctor. Translated from the French of J. P. Latfitte, by Huon D. Aramis. (Philadelphia: J. B. Lippincott & Co. 1866.)—This singular farrago of mystery, murder, and mesmerism belongs to the sensation school of modern French fiction. The main story is founded upon that period of Danish history in which the weak-minded and debauched Christian VII. was swayed by his clever but unprincipled favorite, Struensée, to whom the author ascribes the development of that theory of animal magnetism with which the name of Mesmer is commonly associated. The latter is the "Red Doctor" of the tale; but the central character is the royal favorite, whom M. Latitte depicts as a glorified impersonation of genius struggling against *convention* and oppression, and seeking the sources of hidden knowledge with the enthusiasm of a youthful Faust or Paracelsus, and whom he reluctantly transforms, when he comes to describe his amour with Queen Caroline Matilda, into a sort of fallen archangel. The idea of the character is historically false, but it helps the story, the effect of which is further heightened by a busy throng of intriguing courtiers, clairvoyants, assassins, spies, and other stock characters of the historical romance, who swarm through the scenes. The plot is involved and difficult to follow, and, to add to the confusion, a second plot, having no connection with the main story, is woven into it in a manner little creditable to the constructive skill of the author. The hero of the latter story is a murderer, rejoicing in the name of "Pierre the Assassin," whose end affords an apt illustration of that retributive justice which overtakes the conventional stage villain. As a historical novel the book is worthless, but it contains an abundance of highly-wrought and exciting passages, which, in spite of their violation of truth, probability, or even possibility, absorb the reader's attention until, to his surprise, he finds himself at the last page, when very likely he will throw the "Red Doctor" into a corner, in pure disgust of having wasted valuable time in its perusal. The translation is rather clumsily executed.

Articles on any of the subjects usually discussed in this journal will be received from any quarter. If used, they will be liberally paid for; if rejected, they will be returned to the writers on the receipt of the requisite amount of postage stamps.

All Communications which pertain to the literary management of THE NATION *should be addressed to the Editor.*

THE WAY TO SECURE PEACE.

EVERYBODY is just now speculating with more or less earnestness upon the probable course of events when the new Congress meets next spring. Nearly two months ago we ventured to suggest in an article, which we believe many of our readers at the time considered almost extravagant, that Mr. Johnson would probably—if a majority of the whole number of members of Congress could be secured by the union of the Southerners claiming seats with the Democrats favorable to "his policy"—refuse to recognize the Radical minority representing the majority of the Northern electors, treat the others as the real Congress, and, if necessary, put them in possession of the Capitol by force. All thought of any such plan was, however, indignantly repudiated by Mr. Johnson and his friends, and the idea that he had even entertained it was treated as a wicked Radical invention, and the public was reminded that he had acknowledged the legality of the present Congress in spite of the exclusion of the Southern members by approving and vetoing its bills.

It very soon after began to appear, however, that the Presidential mind was beginning to be affected by the theories so zealously propounded by the *World* and *Daily News*, that the present Congress was a "rump Congress," whose authority it would be a meritorious act, or at most only a venial sin, to disregard. He began to talk, in each stump speech, a little more contemptuously of it, and a little more respectfully of his own high and mighty position as a "department of the Government." At last he blurted out, what had probably long been fermenting in his breast, his belief that the present Congress was not a department of the Government, but only "a body hanging on the verge of the Government;" "calling itself the Congress of the United States," but being only in reality a "Congress of part of the States." This was a considerable step in advance. There is only one other to make in order to prepare him to treat representatives of the States which have put down the rebellion and saved the Union as entitled to no share in the Government, unless they choose to admit to their body members from such States as he shall pronounce entitled to representation. How soon he will take this step we, of course, cannot say; but the precise mode in which he will make it seems to have been sketched out by the *World* and *Times* last week.

Both these journals have been a good deal puzzled about the claim of the President to exercise legislative functions in this matter of reconstruction, and have occupied themselves very busily in defending "his policy," so as to avoid having to answer the very inconvenient question of how he came to have a policy at all. The *World*, however, had the good fortune to disinter last week an act of Congress of 1862, fixing the number of representatives at 241, and then rushed triumphantly to the conclusion that any Congress from which a portion of this number was excluded was no Congress at all, and that the President, as an executive officer, was bound to execute the laws, and this law amongst others; therefore he was bound to introduce the full number of members, if need be, by force. The *Times* the next day took up the wondrous tale, and told us exactly how the thing was to be done, and actually announced that Mr. Johnson would certainly treat any Congress which did not contain the full number of members fixed by law as what he in his concise and luminous diction calls "an illegal and unlawful assembly."

We need hardly point out that for the President to undertake to put members into Congress in supposed execution of this act, or to refuse to recognize as Congress a body which failed to fill its ranks up to the legal number, would be to deny it the power both of deciding what constituencies may elect members and what members are really elected, and would put it in the power of any State to paralyze the legislature by failing to elect. In fact, the whole argument is that of men whom much trouble has bewildered, and who are at their wits' ends to avert the catastrophe which is impending over the "policy" and its supporters. If the case they suppose should arise, we have no doubt the country will deal in a very summary manner with all these fine-spun theories of the President's powers, and the authors of them, if Mr. Johnson should be fool enough to follow their advice, will be perfectly astounded by the popular contempt for their logic. The one thing on which all parties may count as certain is that the Northern people consider the Congress elected by the Northern States the only true Congress, and will see that its authority is respected.

We are now more disposed to take a hopeful view of the future than we were two months ago. The very fact that the people are becoming awakened to a sense of the danger is a healthy symptom. Such perils are averted by preparing for them, not by ignoring them; and we have reason to believe that the necessary preparations are being made; while we know that the people are being thoroughly aroused to the situation. Two months ago, moreover, we did not foresee the New Orleans massacre or Mr. Johnson's stump speeches, or, to speak correctly, his *speech*, which he repeats everywhere with as much gusto as Mr. Everett repeated his oration on Washington. The mob at Indianapolis showed an amazing ignorance of party tactics when they refused to hear the Presidential orator. If we could look at the matter in a partisan aspect only (as we trust we do not), we should rejoice to have a speech from Mr. Johnson at every railroad station, and would have every speech printed *verbatim*, in large type, in all the newspapers. General Scott was thought to have reached the climax of suicide by speech-making in 1852, but it has been reserved for Mr. Johnson to attain to a height of achievement unequalled even by Daniel Pratt, Jr., the great American traveller.

This stupendous combination of folly and outrage will save the nation while humiliating it. The result is distinctly foreshadowed by the victory in Maine. We desire to use moderate language, but no ordinary phrases will do justice to that election. It was an exciting one, in which the State was thoroughly canvassed, and in which official influence and money were freely used. All the chances of gain seemed to be on the side of the Johnsonian party. The pressure which they brought to bear may be judged from the single fact that in Kittery, where there is a large navy yard, the vote in 1864 was 465 Republican to 181 Democratic; whereas now it is 345 Republican to 304 Democratic. But such influences are of less account than many suppose. Every other town in the same county shows large Republican gains. And it should be observed that the victory is not owing to any diminution of the general vote or the absence of popular interest. The conglomerate party fully expected to gain one Congressman, and hoped for two. They struggled hard for this purpose, but signally failed. The Republican vote is larger than ever before, except possibly at the gubernatorial elections of 1856 and 1860, when the party polled almost exactly 70,000 votes. It polls now at least 69,000, and probably over 70,000. Mr. Lincoln, in 1864, received only 62,000. This large vote, in a State almost stationary in population, is of itself a triumph. But the majority is far larger than was ever given by the State before to any party or candidate whatever. The largest majority ever given to any governor at a previous election was less than 18,000, and the Republican majority in 1862 was less than 6,000. Now it is close upon 30,000.

We have dwelt upon these figures because all experience has shown the important influence of the Maine elections, especially for the past twelve years, during which they have accurately foreshadowed the state of Northern feeling. In 1854, 1856, 1860, 1863, and 1864, this was specially noticeable; while in 1862 the loss of a Congressman in Maine gave warning of the accumulation of political disasters which followed.

We regard this overwhelming victory in Maine as a precursor of similar victories throughout the North. And if we are right in believing that New York, Pennsylvania, Ohio, and the West will take their stand beside Maine, the war-cloud will pass over, and the now rampant office-hunters will become mild as doves. Such victories will secure the all-important point, *the election of at least* 122 *Republicans to the next House of Representatives;* the only way, in our view, by which the country can be saved from the outbreak of violence. That will *certainly* avoid the peril now contemplated, and it is at least doubtful whether anything else will. We hope for this result now with more confidence than we have ever felt before.

We desire to add a word of advice to those conservatives and

cautious men who seek peace above all things, and who may be influenced by the appeals or threats of Mr. Johnson's organs to believe that peace can be most easily secured by letting him have his way; and that they can best help to that end by supporting his candidates. This is an utter delusion. The recent elections have demonstrated the absolute impossibility of carrying the North in favor of Mr. Johnson's policy. We admit that a temporary peace might be secured by the election of ninety-seven Johnson men to Congress, since they would form a majority of the members from the states legally organized; and the minority would submit at once. But no man in his senses, acquainted with politics, believes such a result to be possible. Peace cannot be secured this way. Of the 192 recognized members of the lower House, the coalition cannot, by any conceivable turn in politics, carry more than ninety, while it is wholly improbable that they will carry seventy-five. The co-operation of the class of men who are anxious for peace with the majority who adhere to principle will give the Republicans 125 or 130 members, and thus overwhelm the plot to organize a separate Congress under the sanction of the President. This is now the only practicable road to peace.

What will the South then do? it may be asked. Will it not refuse to accept the terms offered by Congress, stay "out in the cold" for an indefinite period, irritated, discontented, requiring continued military rule, murdering and battering freedmen and Northern men, and keeping open a perennial sore in the body politic, as Mr. Beecher and the New York *Times* would have us believe? Political prophecy is dangerous work; but we have no hesitation in answering to all these questions emphatically, No. The South has assumed its present attitude of resistance because it relies on Mr. Johnson and his friends to carry it through, as it relied on Mr. Pierce and his friends to create a "war of neighborhoods" in 1860, and as it relied on the Chicago Convention in 1864. It is now waiting for the result of the coming elections. Let it be once demonstrated by those elections that Mr. Johnson's promises and advice are worthless, that he and his supporters are powerless, that behind the Congressional majority there stands the Northern people firm and unshaken, and as determined to reap the fruits of the war as it was two years ago to carry the war on, and, our word for it, we shall have peace, and permanent peace, in the spring. The South will accept the Constitutional Amendment, in spite of its present threats, just as placidly and gracefully as it gave up the intention, so long entertained, of "dying in the last ditch," and waging guerrilla warfare "down the ages." There is nothing in the amendment intrinsically humiliating or unjust. Even Mr. Beecher acknowledges that, and, therefore, it will be swallowed without a qualm. The Southern representatives will take their seats next winter as good-humoredly as if nothing had happened, and Mr. Johnson be left no more exciting duty than giving a revised edition of his old speeches, with annotations by Mr. Thurlow Weed, and an appendix by Montgomery Blair, clearing up the more doubtful points in the President's metaphysics and political economy.

MR. BEECHER'S GENERAL LAWS.

There was probably nothing in Mr. Beecher's recent letter to the Cleveland Convention so grateful to its admirers as that portion of it which proposed to leave the improvement of the negro's condition at the South to the operation of general laws, such as the laws of political economy, the law of progress, the spread of feelings of humanity and justice among the whites, and so forth. This fondness for leaving things to be effected by natural agencies, or, in other words, of getting along with the least possible amount of government, is, in part, the result of a general reaction against the excess of government from which the world has always hitherto suffered, and not excess of government only, but excess of villanously bad government. But it is due in part also, and in our opinion in the case before us in still larger part, to the desire of the natural man to shirk disagreeable and troublesome duties. Clergymen are apt to have great fondness for "general laws," although they rarely call them by that name. Both they and their hearers find a certain comfort in taking as large a number as possible of the problems of human existence out of the hands of men, and committing their solution to Providence. This gets rid of a world of troublesome details, disposes of a multitude of ugly facts, and saves a great deal of repulsive labor—although we have no doubt very few pulpit orators are conscious of any such intention when preaching the helplessness of "the world." "The world" is, however, by no means sorry very often to believe in its own helplessness, and to agree to leave things to "the general course of events," and put abuses of all kinds under the protection of a divine law with which it is foolish or useless for human legislators to attempt to meddle. When slaveholders were hard pressed by public opinion to do something to prepare the negroes for freedom, they, after much tribulation, resorted to the old expedient of making slavery a part of the natural order of the world, as ordained by God. Those who did not venture to such lengths of extravagance, however, declared that, although slavery was an abuse, it was an abuse which human legislation could do nothing to remove. Its abolition had to be left to "Providence" (*i. e.*, Mr. Beecher's laws of political economy), who would bring it about "in his own good time"—a time, however, which was plainly considered so indefinitely remote that its approach never probably diminished the market value of a "likely nigger" one cent in the estimation of the devoutest believer in the progress of society.

Now what we think governments had better leave to general laws is the improvement of individual character. We are opposed to making men pious, or temperate, or generous, or forgiving by law. The moral training of the citizen is not, in our opinion, the business of government. But his protection from all violence, from all abuse, from all attempts by his fellows to injure him in mind, body, or estate, to prevent the free exercise of his faculties, or, in other words, the provision for him of perfect security, is emphatically the business of government. Government has not and ought not to have any other business; and any government which confesses its inability or unwillingness to do this thing, confesses that it is an usurpation, that there is no reason for its existence, and that in collecting taxes it commits a robbery. A government which tells a citizen or subject who complains to it that he is oppressed or maltreated by his fellow-citizens, as Mr. Beecher wants our Government to tell the Southern freedmen, that he must look for an improvement in his condition to the general progress of Southern society, absolves him from his allegiance. We all believe that robbery and murder and embezzlement will diminish as the world grows older and better and as religion and education become more widely diffused, but it has not occurred to any one yet to tell the victims of burglars and assassins that there is no use in having courts and policemen, inasmuch as crime cannot be wholly prevented, and that they must be patient under their afflictions, as the time is coming when there will be no more thieving or housebreaking, when the criminal population will come to see that honesty is the best policy, and betake themselves to industrial pursuits.

This, however, is in effect what Mr. Beecher and his friends would have the Northern public say to the freedmen. There are say 200,000 of them who have served in the Union armies. These men have gone home and find that by the legislation of our late enemies the rights of buying, selling, teaching, preaching, leasing and owning land, and entering on various callings, and even suing in court, are curtailed. They apply to us for redress, and Mr. Beecher wants us to tell them that we are sorry for them, but the world moves, and that we doubt not the South will yet see the propriety of treating them fairly; that if we interfere it would "irritate" their oppressors; and that the laws of political economy are at work.

Another of the fallacies of Mr. Beecher's letter is contained in the remark that the negroes must share in the prosperity of the South. This is by no means certain. The South has prospered greatly materially in the days of slavery, and yet the laboring population grew every day more and more miserable. The middle and upper classes in England have acquired enormous wealth within the last two hundred years; but the condition of the working classes has relatively not improved. Land, for instance, has doubled, in many counties quadrupled, in value within one hundred years; but the agricultural laborer is worse off than he has ever been at any period of English history. The condition of the French peasantry was never so horrible as when the court and the châteaux were gayest. The wealth of the Indian zemindars was proverbial for ages, when the ryots lived year after year on

the verge of starvation. In short, there is nothing better settled, both by political economy and by history, than that, if you have a privileged class, or race, or caste in any country, there is no necessary connection whatever between its prosperity and that of the classes below it. The prosperity of the laboring class in all countries depends on its numbers in proportion to the amount of capital available for the employment of labor. Its number may be increased in two ways. One is by improvident and reckless multiplication, such as is often seen amongst degraded populations, whose standard of living is low, and in whom long misery has extinguished hope and ambition. The other is multiplication created by artificial obstacles to a change of condition. What makes labor high at the North is, that the number of workmen is always kept down by the cheapness of land, which every year draws off a large number of those who labor for hire, and the facility afforded by the manners and institutions of the country for rising out of the ranks of laborers into that of employers. Thousands and thousands of Northern laborers every year become farmers of their own land, or else rise from the position of journeymen into that of "bosses," and this process, so far from being impeded by legislation, or by public opinion, is encouraged and promoted by both in every possible way. Shut the schools on the Northern working-men; shut them out from many of the most honorable callings and from all political privileges; diminish the amount of protection afforded them by the courts, and make them and their callings objects of contempt or loathing to the class exercising the power of government, and refuse them the right of owning or leasing land, and we should soon see whether they would share in the prosperity of their employers; whether the ranks of labor, and, above all, of unskilled labor, would not be crowded to excess; and whether we should not witness all over the country, in spite of our boundless resources, those shocking inequalities of condition which meet the eye in some of the most fertile and prosperous districts of the Old World, and which, in our opinion, nothing but an equality of rights, secured not by an act of Congress only, but by the fundamental law of the Union, can prevent our seeing perpetuated at the South.

PRUSSIA AND AUSTRIA AFTER WAR.

King William of Prussia and his Prime Minister came home to Berlin, a few days ago, after a political victory far more complete than that recently gained by the English Adullamites, and a campaign of arms more splendid than any since Marengo, and they, like the Adullamites, had in their hands for decision the question what citizens of their country should vote. The Tories of free England might learn at least one useful lesson in government from the example set by the King of despotic Prussia.

The King's decree provides for an election to a parliament for the new North German Confederation, and, among other regulations, makes the following:

First. Every Prussian subject not convicted of high crime, who has reached his twenty-fifth year, has the right to vote. The following classes of persons are excepted, to wit: All those who are under guardianship; all whose property is under assignment for bankruptcy (until the assignment is completed); paupers supported either by public or private charity, or who have been so supported within a year next preceding the election. Every one from whom the right of citizenship has been withdrawn (a punishment for certain crimes) is also prohibited from voting. Every Prussian permitted to vote is also eligible as a candidate for deputy, and is not excluded from the poll for any past political offences, provided these have been pardoned by the King. Every 100,000 of the population, and any additional number above 50,000, elect one deputy. In every election district lists of the voters will be made out and posted in public places four weeks before the day of election; eight days are given in which to make corrections and additions, after which the lists are closed and all unregistered persons are excluded from the polls. The election will be conducted by ballot openly; a majority of votes in each district is required to elect; in case there is no absolute majority the election will fall to the one receiving a plurality, and in case of a tie between two they will cast lots.

The only difference between this law and that of 1848, which has been the ideal of every German Liberal, is that the present one everywhere uses the word *Prussian* instead of German. Either the King intends that all the inhabitants of the North German Confederation shall be called Prussians, or that his confederates shall make their own election laws. Our latest advices, however, by Atlantic Telegraph, say that "the Prussian Chamber of Deputies has voted a parliament and electoral law for Saxony." It is a somewhat significant circumstance that in Saxony the Prussian military officers are preparing the lists and making all other preparations for the election. And yet Saxony has not entered into a "personal union" with Prussia.

It would be a labor of no little interest, as well as profit, if one had full facilities to make out the complete table of profit and loss which the needle-gun and good strategy have ciphered out for the Prussians. In Leipsic a firm of booksellers, Messrs. Biederman, Freytag & Co., have offered a prize of two hundred dollars for a pamphlet "which shall show briefly, conclusively, and in a popular style, that the only salvation for Saxony is to be found in the closest possible union with Prussia." This in the second city of a kingdom which, if it was anything before the war, was Prussian-hating! The marked falling off of Napoleonic favor from beaten Austria toward her victorious neighbor; the conclusion already of a secret treaty (so it is whispered in "high diplomatic circles") between Count Bismark and the Russian ambassador, Von Dalwigk, and the near approach of a probable alliance between Prussia and Austria herself against the territorial hungerings which the Germans will persist in attributing to Frenchmen—these are additional "golden opinions" won by the needle-gun.

The more substantial earnings of the Prussian army may be set down as follows, though there are many others of small amount that have never been published or heard of outside of the army itself:

Austria,	$70,000,000
Saxony,	12,500,000
Bavaria,	14,000,000
Frankfort,	8,500,000
Würtemberg,	8,000,000
Baden (estimated),	5,500,000
Total,	$118,500,000

No reckoning is here taken of the numerous small German states that opposed Prussia with arms, on whom, it is to be supposed, proportionate burdens were laid, nor of the vast quantities of supplies that have been furnished on requisition. For instance, $40,000 worth of cigars have been smoked by the Prussians in Frankfort, and their officers have spent $28,800 in the different hotels of that unhappy city, all at the expense of the citizens.

After reckoning up the sums extorted by Prussia from her defeated enemies, that is hardly an incredible statement which was made a few days ago in the Prussian Lower House by the Finance Minister, Von der Heydt, that he needed a grant of only 154,000,000 thalers (a thaler is 70 cents in silver) to cover the deficit from the beginning of 1862 to the end of 1866, and an extraordinary grant of 60,000,000 to cover the expenses of the war just ended. It will not be forgotten that the King and his Parliament have been at loggerheads since 1862, and that during all this time the Government has been conducted without a single vote of supplies.

But this wind of war that has blown so much good to Prussia has been a terribly ill wind to her rival. The truce of Nikolsburg, though it delivered the Kaiser from further fear of the devouring needle-gun, opened up for him a ghastly future of intestine quarrels, of wasting strife between the diverse races of which his patchwork empire is made up. While it was yet a part of the German Bund, the German element, though inferior in numbers, always had a reserve outside of the empire upon which to fall back, and with its superior culture and intellect kept the Sclave, the Tzech, the Magyar, the Croat, and the Pole always in subordination. The army, the schools, the laws were German institutions, not Sclavonian or Hungarian, and those intractable and haughty tribes have never ceased to chafe under this foreign yoke. The battle of Königgrätz cast Austria adrift for ever, dissevered the German from his kindred in Fatherland, and there begins now to come up to Vienna from all parts of the motley empire a fierce, polyglot cry: 'Down with the German!"

The Tzechs were the first to give this signal, so full of peril for Austria. When the Prussians invaded Bohemia the King caused a proclamation to be issued to them, promising them that he would "perhaps" strike off from them the hated bonds, and give them their long-sought independence. For this act the "Beseda," a fraternity of Bohemians in Berlin, gave him a cordial vote of thanks, though there is no people in Europe that hate the Prussians more intensely than the Tzechs. The promise, however, was not fulfilled, and now the doubly exasperated Bohemians are preparing to avenge themselves with their own hands. Not long ago the Cologne *Zeitung* predicted that there would soon be a terrible uprising in that wild kingdom of the mountains, and that the Germans would be massacred by thousands. But this is improbable. In Bohemia there are 3,000,000 Tzechs, 1,910,000 Germans, and 90,000 Jews—the Jews, strangely enough, always siding with the Germans. The enmity between Tzech and German is as old as the Austrian Empire, and more persistent, perhaps, than any other recorded in history. As long ago as 1630 the Bohemian parliament forbade any one's entering the kingdom who could not speak Tzech. As short a time since as 1861 the Council of Prague voted that there were no German children in that city, and that no language should be taught in the schools but the Tzech. Last January the Tzechs, with the help of Belcredi, a member of the Imperial cabinet, procured for entire Bohemia a similar law. In Pilsen they have declared that the language of business also shall be only the Tzech, and there are many instances where the Germans are compelled to pay taxes for Catholic Tzech churches. The latter, led on by the miserable, bigoted priests, justify all this for the conclusive reason that "they eat Tzech bread."

The prospect for the Germans of Bohemia, Moravia, and Silesia is, then, gloomy enough; for in all these provinces the Tzech element is greatly in the ascendency, and, exulting now at the prospect of reducing still lower the hated German, is preparing for new encroachments and outrages. Bohemia has always been a favorite of the empire—"the hot-bed of Austrian intelligence," it has been called; two-thirds of all the Austrian officials are Bohemians; the choicest steeds for the Imperial stables are found there; and the people, now exasperated with defeat, famine, and disease, are clamorous for Francis Joseph to come to Prague and have himself crowned King of Bohemia. This ceremony he dare not much longer neglect. On the other hand come up deep and ominous mutterings from Hungary and the Croats. The Croats are Sclavonians and are devoted to the principle of federalism or downright despotism, while the Hungarians have liberal tendencies and clamor for a free parliament and a responsible ministry. The hatred that a Croat bears towards a Magyar is a proverb that the whole world uses; and he, too, sees this as his opportunity to be separated from Magyar and German alike, and is sullenly muttering about independence.

The Hungarians, displeased with the favoritism shown to the Tzechs, and with the general tendencies of the empire to Panslavism and despotism, swore a great oath that they would not volunteer to retrieve Königgrätz unless they were put on an equality with Bohemia, and allowed to have a free parliament. They are ably and fearlessly represented in the cabinet by Count Esterhazy, a liberal and a bitter personal enemy of Majlath, an advocate of federalism, and it is said that the strife between the two has come to such extremities that Majlath will be forced to retire. Vienna and the Germans have joined with the Hungarians in a stern demand for a constitution and a responsible ministry, and the Tzech faction of the cabinet, heretofore so powerful, find themselves falling in the rear, and Vienna is filled with rumors of ministerial quarrels and approaching changes.

Meantime Francis Joseph, distracted in the presence of the gigantic and tangled questions that press upon him, one day sends Elizabeth down to Pesth to appease the Hungarians, the next he calls her back to take her advice as to cabinet changes or the new loan. The situation is one of appalling earnestness for the Germans of Austria. They are hated by Tzechs, Poles, and Croats alike, allied to the Hungarians only by the weak bond of a common political necessity, cut off from their former reliance on Germany, and about to be made a common prey of the haughty, indolent, bigoted tribes to whom they have imparted whatever of civilization they possess. This is the condition of Austria today: she is ordered out of Germany and has to obey; her army is terribly beaten and demoralized; her finances, always in a miserable condition, are worse than ever, and Prussia drains off the bullion; the Poles hold themselves proudly aloof to see what their despoiler will do in her extremity, the Tzechs are plotting vengeance on the Germans, the Ruthenians openly sympathize with Russia, the Magyars will have a constitution or rend the empire asunder, and the Croats seek nothing so much as to be permitted to unleash their hounds of war upon the Magyars.

A LEADER WITHOUT A PARTY.

It has been sufficiently humiliating to every American, having any sense and patriotism, to read the daily reiterations of Mr. Johnson's single speech, and to reflect that this coarse, egotistic, intemperate orator is the President of the United States. But there is some consolation in the thought that his elevation was in every respect accidental. He was nominated for Vice-President not on account of his personal qualifications, not because he was the kind of man that the electors wished for the place, but simply for the reason that he was the only man occupying a position of any prominence who was at once a Southerner, a Democrat up to 1861, and a loyalist in 1864; and that there was a wide-spread desire in the Union party to pay signal honor to some man who should combine these three characters. Mr. Lincoln was an old Whig and a Northern man, and it was appropriate that his associate on the ticket should be of opposite antecedents, so that together they might be fairly emblematic of their party. How unexpected was the elevation of Mr. Johnson to the Presidency, all men know.

This accidental President, moreover, was well known to be an uncouth and uneducated man. No one expected from him any graces of manner or polish of speech. But for his intolerable snobbishness, we could bear his rough speeches and undignified ways with more patience, although they go far beyond the license allowed even to a backwoodsman under the responsibility of office.

But there has been for some time past a more melancholy spectacle, and one for which indulgence can furnish no such excuses. William H. Seward is no accident, no backwoodsman, no village tailor, no uneducated man. He is a gentleman by birth and by training, and in private manners. He is a scholar of full academic qualifications. He is a man long versed in politics, with the highest presumptive claims to the name of statesman. He was for years the acknowledged and freely chosen leader of a great party, and only failed to become President because he was supposed to represent his party too faithfully to command the suffrages of certain doubtful states, holding the balance of power. The world is justified in holding such a man to be a fair example of American statesmanship, sagacity, and dignity.

Yet what has been the history of this eminent statesman for the last six years, and in what attitude does he stand to-day? After a series of speeches which, considering the state of public feeling in 1860, were violently radical, the first serious manifestation of warlike tendencies at the South cooled all Mr. Seward's zeal for liberty. Taking into view his close affiliation with Mr. Weed, and his subsequent course, there can be no reasonable doubt that Mr. Weed's endorsement of the Crittenden "Compromise," as that scheme was ludicrously misnamed, was really a feeler put forward on behalf of his chief; and that Mr. Seward would have acceded to any scheme for the joint preservation of the Union and slavery to which he could have secured the assent of a considerable portion of his party. But if there is any doubt upon this point, which there certainly is not in our mind, there can be no doubt as to the miserable small talk, the absurd predictions, the vain affectation of cheerfulness, the untimely and insincere frivolity, of Mr. Seward's public speeches during the momentous winter of 1860-61. It is painful to look back to that time, and to think of a reputed statesman descending to such pitiful expedients to tide over difficulties.

The official career of Mr. Seward was early distinguished by two ugly incidents, neither of which has been fully cleared, or, we suspect, ever can be. His temporizing policy, if not positive duplicity, in dealing with the rebel commissioners, and his co-operation with James E. Harvey in betraying to the Charlestonians the destination of the relieving fleet, are facts which indicate the great tortuousness of his mind.

On the outbreak of the war, Mr. Seward devoted himself with un-
